This will take a lot of doing at this late date, and I realize that it cannot be done suddenly. But I am convinced by my own careful study of the whole Federal fiscal situation and all of the Government's programs that a start on Federal retrenchment can be accomplished now with neither harm nor great inconvenience to anyone involved, and the plan I have submitted with great detail would achieve this immediate objective. The plan requires only that Members of Congress be encouraged by their constituents to retrench within existing Federal policies and programs and to allow no unnecessary new ones.

This is not all that I desire and it is not all that is required to put this Nation on a long-term program of sound prosperity and constructive achievement, but it would balance the budget in the coming fiscal year, break the strangle hold of chronic deficit financing, and snatch the Nation from the clutches of the irresponsible spenders who would stifle us into socialism.

THE FOLLOW-THROUGH

To follow through from this beginning we must search every Federal program and policy and throw out all of those which were not soundly conceived and all those which our economy cannot afford.

It is true that more than $27,500,000,000 of the President's $42,500,000,000 expenditure budget for the coming fiscal year is for items tied to long-term commitments or other obligations carried over from prior years. Relatively few people regard all these programs as sacrosanct; but millions of people regard one or more of these programs (those affecting them) as sacrosanct.

To accomplish the job which has to be done to make this Nation sound for the future will require some personal unselfishness on the part of the vast majority of us.

For example, businessmen must withdraw from the easy money of some of the Federal subsidies, nonessential Federal contracts, and their advocacy of useless expansion of Federal activities to their localities.

States and localities must withdraw from Federal aid which has been increased from little over $1,500,000,000 in 1947 to nearly $3,500,000,000 proposed by the President for the year beginning in July.

Farmers must withdraw from some of the lucrative Federal payments which are not required as insurance against price decline that would precipitate depression.

Young and able-bodied veterans must withdraw from political pap programs having no connection with the bona fide obligation the Nation owes them for war-connected sacrifices.

Government employees must withdraw from nonessential public jobs and we must see to it that they are not refilled.

And the Government itself must withdraw from competition with private enterprise in the name of housing, banking, development of natural resources, etc.

A NEW GENERATION

These are the things required to make this country financially sound, to guarantee our permanent solvency, and to provide the true democratic progress of which this country is capable.

But it cannot be overlooked that in the coming fiscal year a whole new generation will have reached its majority under a deficit-financed Federal Government, and while children have been growing up young men have been growing old. Two decades of Federal hand-outs by a paternalistic Government are bound to influence the philosophy of all of us.

To change this philosophy, now so deeply rooted, may require some individual sacrifice during the period of readjustment, and it certainly will require complete and continuous devotion to the objectives, and the constant dissemination of facts presented in a manner which may be universally understood.

I know we do not want to go the way of England and I believe that so long as we can

keep this country financially sound the door will not be closed to recovery of the freedoms of private enterprise in democracy.

We must keep constantly before us the fact that the last hope of freedom-loving people in the world hangs upon maintaining the integrity of American money. The key to our fiscal solvency is balanced budgets when there are no domestic emergencies.

Thus, balancing the Federal budget is the first and vital requirement for the preservation of our own security and the security of democracy throughout the world.

The Coal Situation and 1952 Politics

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. WHERRY. Mr. President, no matter how hot a man may get under the collar, it will not warm his family hearth or keep the fire burning in his shop or factory.

But millions of Americans are hot under the collar because of the temporizing with the coal situation, which continues in almost every interest—except the public interest.

The editor of the Omaha World-Herald, in my opinion, has stated the situation most pungently, and I ask unanimous consent to include in the CONGRESSIONAL RECORD his editorial appearing in the February 1 issue of the Omaha World-Herald under the title, "Into 1952 Politics."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTO 1952 POLITICS

Following the precedent set in the steel strike, President Truman is seeking to settle the coal strike by unofficial persuasion.

He has asked the miners to go back to work and the operators to reopen the mines for a period of 70 days while a Presidential fact-finding board studies the problem. After the fact-finders make their report, according to this proposal, the miners and operators will sit down with Cyrus Ching, Director of the Federal Mediation and Conciliation Service, and decide what to do about it.

"The parties or either of them," said the President, "would be free to accept or reject the recommendations of the board as they see fit."

That is about the same thing he said in the steel strike. In that case the union quickly accepted the recommendations of the fact-finders, and the operators, under considerable pressure, capitulated one by one. They were free to accept or reject—provided they accepted.

In his letter offering the fact-finding plan, the President stressed that this would be "voluntary action, not compulsion," in accordance with "not only my personal conviction but the national policy."

That is not quite an accurate statement of the case. National policy is defined by laws passed by Congress, and there is no law which provides for a fact-finding board.

There is a law—the Taft-Hartley Act—which provides how the President shall proceed to end a strike which jeopardizes the Nation's well-being. That law provides that the President may obtain a court order requiring the strikers to go back to work for a period of 80 days.

As in the case of the steel strike, the President chose to ignore that law. He did so, not because of national policy, but because it is Harry Truman's policy to ignore and try to discredit the Taft-Hartley Act.

Yet that act is the only real weapon. If it were not on the books, if the President did not have that club in reserve, the fact-finding proposal would be only a scrap of paper.

Whether it will prove to be more than that, even under present circumstances, remains to be seen. At this writing neither the union nor the operators have replied to the Presidential letter.

But whatever their replies may be, it is clear that the coal strike has been thrown all the way into 1952 Presidential politics.

John L. Lewis has no more liking for Mr. Truman than Mr. Truman has for John L. Lewis. But their mutual and aggravated dislike is complicated by an equally mutual disapproval of the Taft-Hartley Act.

So:

How can the President get as much as possible for the miners, and thereby prove himself a stout friend of labor, without allowing credit for the victory to go to Lewis?

And how can Lewis now win a famous victory for his men, and thereby reinstate himself in their graces, without permitting Harry Truman to reap political benefits?

A large-sized dilemma. And if it is to be solved it must be done without recourse to the despised Taft-Hartley Act.

The fact-finders, if they are appointed, will have their work cut out for them. And that work will be enormously complicated by the fact that nobody but John L. Lewis himself knows precisely what the miners are demanding. In the protracted negotiations with the operators, he has talked about almost everything except the issues.

The seams of fact, in this case, are overlaid with hard strata of political rock. Whoever tries to dig them out will be engaged in hazardous work.

Value of High Dams

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Value of High Dams," published in the Paris (Tenn.) Post-Intelligencer, of January 18, 1950, which, I submit, supports my bill, S. 338.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VALUE OF HIGH DAMS

The mighty Mississippi River has reached the highest mark since 1937, but there is no cause for alarm as it is still several feet below the crest of that flood year.

What would be happening along the lower reaches of the Ohio and the Mississippi if the Tennessee were not harnessed with a series of high dams running its full length is anybody's guess.

The Tennessee development was not completed in 1937 and it poured all its floodwaters into the Ohio at Paducah, including the swollen current of the Cumberland. We all remember the consequences.

Opponents of TVA have accused the Government of tricky bookkeeping by charging a part of construction costs of dams and locks along the river to flood control.

It takes an emergency such as the present one to remind us flood control is actually one of the major functions of TVA. Cheap power is only a side line.

When we think of folks living in Paducah and Cairo we are reminded of something we heard a young woman say during the war.

The American Army started to cross the Rhine River into Germany and the papers said it was costing the Army something like $5,000,000 a mile to lay down an effective smoke screen to permit soldiers to cross the river in safety.

This report was causing the usual criticizm of Government waste when the young lady spoke and said she thought the smoke screen was cheap.

Being questioned as to the basis for her opinion it was disclosed her husband was among the soldiers crossing the Rhine.

We suspect folks in Paducah and Cairo think about like she did so far as the Government's investments in locks and dams is concerned.

Editorial Comment on the Hiss Case

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Acheson Should Resign," from the Indianapolis Star, January 27, 1950; another editorial entitled "They Must Be Impeached," from the Tulsa Tribune, January 28, 1950; another editorial entitled "A Dramatic Scene From the 'Inside' at Yalta," from the Wheeling Intelligencer, January 27, 1950; and another editorial entitled "How Naive Can You Be?", from the Indianapolis Star, January 29, 1950.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Indianapolis Star of January 27, 1950]

ACHESON SHOULD RESIGN

The depth to which morality and principle in Government have sunk was strikingly revealed by the position taken by Secretary of State Dean Acheson in regard to Alger Hiss. Acheson publicly defends Hiss as his friend, he publicly casts doubt on the court that convicted him, and the judge that sentenced him. He states unequivocably that he will not turn his back on a man convicted of lying, exposed as a traitor to his country. Thus he either condones Hiss' actions in stealing State Department secrets on the grounds of friendship in case Hiss' conviction is upheld, or he is using his high office to influence the decisions of higher courts before those decisions have been made.

Men in public office owe a higher loyalty than mere friendship. They owe their first loyalty to the institutions and to the people they serve. Does friendship with a murderer justify the murder? Does friendship with a traitor justify treason? This is what Acheson implies. He is saying clearly that he either believes Hiss innocent despite the decision of the courts, or else he is saying that

his friendship with Hiss condones Hiss' perjury and his treason. By what moral standard can he justify this stand? His invocation of the Sermon on the Mount borders on blasphemy.

Precedent for Acheson's defense of his friend has been well established in Washington by an even higher public official. The President of the United States publicly defended a convicted tax dodger, a vote stealer, a cynical and dangerous political boss, Pendergast of Kansas City. Out of friendship or loyalty to the boss he even punished the man who sent that criminal to prison. The morals of those in highest positions sink down through to the lowest and we are not surprised at the low state of morality and principle in the administration which now governs the American people.

The first loyalty of the President and the Secretary of State should be to the people of the United States, regardless of friendship, regardless of their political beliefs, regardless of what they think of the courts, or of the people, or of themselves. Hiss has been convicted, as Pendergast was convicted. If that conviction is upheld he is a traitor to his country. Dean Acheson has no right to use his high office to influence the coming decisions of the higher courts. He has no right to cast doubt on the decision of the jury that convicted Hiss, nor on the sentence of the judge. He has no right to put his friendship for Hiss above his responsibility to his Government and the people of the United States.

Acheson has disqualified himself for service to the American people, not only because he defends Hiss, but because he contributed to the campaign of secrecy and protection of Hiss while Hiss was in the Department of State. Henceforth every action of his will be suspect by the American people. He should resign.

[From the Tulsa Tribune of January 28, 1950]

THEY MUST BE IMPEACHED

(By Richard Lloyd Jones)

What's happened to our country? The Hiss conviction has revealed something more than an individual traitor. It has revealed men in offices of high public trust who are defenders of treason.

Justice Felix Frankfurter, one of Harvard's collection of cultural curiosities, should resign from the highest court in our country. And if he hasn't the decency to do that he should be impeached.

Frankfurter is only one of our high officials who has indicated his own intellect and integrity by sponsoring and repeatedly publicly professing his warm personal friendship for a traitor.

Justice Stanley Reed, also of our highest court, is another friend of traitor Hiss. He should resign, or be thrown out of his judicial robes by impeachment. Our courts and our Congress should be above suspicion.

Frankfurter was the exalted scholar whom the late President Franklin Roosevelt picked as his adviser.

It was Frankfurter who picked Hiss as the prodigy of the Roosevelt administration. It was Frankfurter and Roosevelt who made this traitor Hiss the closest adviser of the President of the United States at a time when not only the security of the American people was imperiled, but the peace of the whole world. Roosevelt put the fate of nations in the hands of Hiss.

Added to all this our Secretary of State, Dean Acheson, after the traitor is convicted, reiterates that he is the traitor's friend. If he is the traitor's friend, he is not fit to be our Secretary of State.

The people's Representatives in their Congress should lose no time to impeach and remove this man who could be a friend to a traitor.

This Hiss who helped our enemy was authorized by our Secretary of State and our President to shape the tragic policies that have brought China into communism, and an ally of Russia.

For 10 years, through the interest of the late President Roosevelt, Frankfurter and others, this fellow Hiss has gone from one position of power to a new position of greater power. For 10 years this intrigue against our Government has been going on and for 10 years high officials in Washington, with full knowledge of these infamous operations, have protected and covered all these trails of treason. The treason story does not end with Hiss. It begins with Hiss. Washington is now filled with frightened public officials.

Even the President of the United States so far forgot his obligations to the American people that when the facts of treason began to be talked about he assured the people that it was nothing but a political trick to distract their attention by dragging "red herrings" before them.

The President should have been the first to authorize and insist upon full investigation. He should have been the first to ferret out the truth. But instead of that, our President, and his lieutenants, did everything they could to hide the truth and to keep the people in ignorance of their betrayal.

What is the matter with the Democratic Party that it, professing to be a political champion of the American people, should lend itself to the suppression of the truth and make every effort to smear and ridicule those who, in the defense of our country, have sought to establish the truth?

Senator CONNALLY, of Texas, to his disgrace, is just one of the Democratic Senators who have tried to ridicule those who have brought the truths of the Hiss infamies to light.

On February 11, 1945, at Yalta, Franklin D. Roosevelt was a dying man. He had just been reelected without the strength to go through an exhaustive hard political campaign. Yet there at Yalta, this sick man, the choice of his party, was to determine the fate of nations. Of all the able men in America not one was chosen to be his adviser. He chose Hiss and Hiss alone. And it was at Yalta, under the influence of Hiss, that millions upon millions of people were flippantly handed over into slavery under Stalin.

It was this Hiss who, given the power by a Democratic Party and a Democratic President, gave to Russia three votes to our one in the newly formed United Nations. Everything that Hiss did was done to strengthen communism and to weaken America. And he is still the dear friend of our Secretary of State. And to two of the judges on our Supreme Court. And he is just a piece of "red herring" to the President.

Where are the Americans that they witness this with flippant disinterest? Where is our Congress, every Member of which has taken his solemn oath to defend the interests and protect the integrities of our Republic?

Every loyal citizen of this Republic should write every Congressman he knows or who represents him, Senate and House, and demand the impeachment of Frankfurter and Reed and Acheson. Command every Representative and Senator to command the President of the United States to reveal the names of those who have concealed this Hiss, and his associates, in the betrayal of this Republic for the last 10 years.

Already, from the floor of the United States Senate, President Truman has been challenged to reveal the identity of those in our Government who, for 10 years, have engineered the concealment of the espionage evidence that convicted Hiss.

But a challenge is not enough. The whole country is now alerted to the fact that our State Department is honeycombed with trusted and confidential workers who have the funny idea that it is intellectually smart to betray America to the communistic forces.

The Senate should do more than challenge. It should command President Truman to come clean with everything, and himself clean out the traitors and the near-traitors and the friends of traitors in all the departments of our Government.

Senator CAPEHART, of Indiana, has demanded the resignation of Acheson and Frankfurter. We would like to see one of Oklahoma's Senators lead the fight for a clean and honest national administration that is above suspicion. It is time that ELMER THOMAS and BOB KERR became articulate with righteous indignation at the red-herring hypocrisy of Truman.

Cheap and shallow are the gentlemen who sit in the Senate of the United States more concerned with their reelection than they are with the security of the American people. Shallow and sad are the American voters who think betrayal of a public trust is a clever political trick that merits political award.

Our Congress is what we voters make it. This Hiss trial has proven many things. Chief of which is that we, the voters, have failed to do our duty. We have elected a President and a Congress that have tried to shield a traitor to the Republic.

The Hiss trial has put ELMER THOMAS and BOB KERR on the spot. This Hiss story will reveal them. Do we expect statesmanship performance? Or are we to listen, as do the Texans, to a Senator who said that those who brought this Hiss to trial and those who convicted him are just "trying to make a burlesque out of this."

Betraying your country is not burlesque, Mr. CONNALLY. Oklahoma waits for her Senators to speak.

[From the Wheeling (W. Va.) Intelligencer of January 27, 1950]

A DRAMATIC SCENE FROM THE INSIDE AT YALTA

A challenging and dramatic inside picture of the scenes at Yalta has just been given by United States Senator HOMER E. CAPEHART, Republican, Indiana, in relation to the part allegedly played there by Alger Hiss, who has just been convicted by a jury on two counts of perjury to conceal his turning over to a Communist espionage apparatus certain documents of the United States Department of State. For the traitorous offense of which he was convicted, Hiss, former aide of the late President Roosevelt at Yalta, has been sentenced to 5 years in prison. Senator CAPEHART says:

"At one meeting, Stalin, President Roosevelt, Alger Hiss, and a Russian interpreter were the only ones in the conference room. When Mr. Roosevelt and Alger Hiss came out of that room, they advised those waiting outside that an agreement had been reached to give Russia three votes against one for the United States in the United Nations organization."

Can you not call up this picture in your own mind? How Generalissimo Stalin appeared in his new uniform, with the sleeves too long, and the bottoms of his trousers flopping somewhat about his ankles for the same reason? And Alger Hiss with his confident, audacious, and even infectious grin? And the late F. D. R. with his long, tragic-looking cape of Navy blue, his wan and emaciated face, betokening the strain of the war years, and possibly the imminence of the malady which was to end his life a few months later? Mr. Roosevelt was in full possession of his mental faculties, however, according to his biographer, Robert Sherwood, in the voluminous book, Roosevelt and Hopkins.

Were there some knowing looks and glances exchanged between Presidential Aide Hiss and Generalissimo Stalin behind the back of F. D. R. while the best interests of the United States and China were being sacrificed at these Yalta conferences? We believe this a fair question in view of all the circumstances. Mr. Roosevelt, according to Mr. Sherwood's biography, was a tired man when he consented to turn over to Soviet Russia dominance in Manchuria, all of Saghalin, the Kuriles, Outer Mongolia—yielding to Moscow unnecessarily, and without General Chiang's knowledge, what virtually amounted to handing China to the Soviets on a silver platter. We believe it no more than right and just to the American people to be given the full part played by Alger Hiss at the Yalta parley, which did so much to aggrandize Soviet Russia, increasing its total dominion over the nations to 750,000,000 people. We should know, in full if possible what part Alger Hiss played in influencing Mr. Roosevelt, when the latter trusted Hiss implicitly, and apparently had no idea that Hiss had been betraying United States State Department secrets to the Soviet Government of Russia.

It is not too often that we find ourselves in agreement with the Chicago Tribune, but the following editorial from the Tribune, relating to the admitted friendship between Hiss and United States Secretary of State Dean Acheson, we believe will be of profound interest to the American people. Twice, in recent months under the same heading "Acheson must go," we have contended in the Intelligencer that Mr. Acheson has demonstrated his unfitness for the vital post he holds. The Tribune bases its demand for his removal on somewhat different grounds, as follows:

"ACHESON MUST GO

"The dismissal of Dean Acheson from his post as Secretary of State should follow automatically on the conviction of Alger Hiss.

"The relations between the two men were and are intimate. Mr. Acheson has described Hiss as his friend and, in this connection, has noted that he does not give his friendship lightly. The Secretary found in the traitor not only a sympathetic personality but also a helpful collaborator whose views on foreign policy he shared. We know this from the testimony of Adolf Berle who said that when there was division in the State Department in 1944 on a policy toward Russia, Acheson favored the soft line and Hiss was Acheson's principal assistant in promoting it.

"In the circumstances, the best that can be said for Acheson is that he has shown himself to be so poor a judge of men and events as to be disqualified for the management of this country's foreign relations. He misread Russia and Hiss. Or did he?

"Either way, Acheson's continuance in office is a danger to the Nation and an affront to every loyal American."

Notwithstanding the above editorial, Mr. Acheson persists in avowing his friendship for Hiss, even after Hiss has been convicted by a jury and before a judge who was scrupulously fair to give the defendant every resource to attempt to prove his innocence. Mr. Acheson now goes even further than he did in the interview quoted yesterday from the New York Times. A later United Press dispatch quotes Mr. Acheson as saying:

"Whatever the outcome of the appeal, I do not intend to turn my back on Alger Hiss. I think every person who has known him has on his conscience the serious task of deciding what his attitude will be. Each must decide according to his own standards and principles. For me there is no doubt as to these standards and principles. They were stated a long time ago on the Mount of Olives."

It seems rather strange that Mr. Acheson would say that he feels constrained by Christian principles to stand by a man who has been convicted of aiding the espionage of Communists, who if they had their way, and are permitted to triumph by treason in our own State Department, would crush all religion, including the Christian religion in the United States. Does Mr. Acheson have no awareness whatever of such dangers to our traditional religious freedoms here in America? It would seem to us that the normal man, confronted by the evidence of such treachery in his own household would wax exceedingly wroth and indignant, especially when the convicted traitor was found in alliance with Communists and as a cog in the top Communist apparatus would be required to subscribe to the tenets of militant atheism.

It raises a series of questions: If Mr. Acheson is so quick to deal lightly with Communist aides in his own Department, and turn the other cheek, is he himself a proper person to be entrusted with policies that could mean the life and death of our Republic? The people also have a right to ask, in view of Mr. Acheson's tolerance of the author of Communist machinations in his own Department, does he know more about Alger Hiss than he has revealed? What is the reason for this strange friendship, in which some will see a perilous mesalliance?

The long delays before the sinister role of Alger Hiss was recognized by Washington officialdom have justifiably aroused the suspicions of the United States people. They will not be content now until the full glare of research is turned into every nook of the United States Department of State.

[From the Indianapolis Star of January 29, 1950]

HOW NAIVE CAN YOU BE?

Like addle-headed Dean Acheson, Mrs. Eleanor Roosevelt now throws up her hands in horror that such a nice boy as Alger Hiss should have been convicted as a liar and a traitor to his country. "I just don't like it at all," she says. "It seems rather horrible to condemn someone on the testimony of another person who by his own admission is a perjurer and a former Communist." Whittaker Chambers is the one who is guilty in her mind, for doing dirt to Alger Hiss.

Let's keep the record clear. Whittaker Chambers' testimony wasn't what convicted Alger Hiss. The facts convicted him. There were documents in his own handwriting. There was his typewriter which had been used to type other secret papers. There was the testimony of Hede Massing and of Edith Murray. There were facts aplenty, facts which Hiss tried to deny, but which kept coming back to haunt him.

As prosecutor Robert Murphy said to the jury, "I told you * * * that the facts would be proven by immutable documents. * * * What do they prove? Treason."

The jury of 12 honest American men and women decided after careful deliberation that that was exactly what they did prove. Treason. And Mrs. Roosevelt says that people are overhysterical because they attack Dean Acheson for publicly defending this convicted liar.

Who's overhysterical? If anybody is emotionally tangled up it is Eleanor Roosevelt and Dean Acheson. They have allowed their feelings to blind them to the simple fact that a jury of his peers convicted Alger Hiss of lying, stealing state secrets, and treachery to his country. There is nothing hysterical about the conviction. And there is nothing hysterical about scorn for a traitor. That is the normal reaction of Americans since the time of Benedict Arnold. If Mrs. Roosevelt and Mr. Acheson don't feel it there is something wrong with their heads.

Proposed Fair Employment Practices Legislation

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. STENNIS. Mr. President, my attention has been called to a splendid editorial entitled "A Problem for the States," which appeared in the February 2, 1950, issue of the New York Journal American. This editorial is in reference to the so-called Fair Employment Practices Commission bill. It is so clear and logical and so soundly states a fundamental principle of American Government that I believe it will be of value, and will command itself to the thinking of the Members of the Congress. I therefore ask unanimous consent that it be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PROBLEM FOR THE STATES

I would be a sensible action if both parties in Congress should agree to drop the controversial legislative proposal for a Federal Fair Employment Practices Commission, and return the issue to the States where it belongs.

Of course, there should be be no discrimination between citizens in such matters as employment and wages, just as there should be no such thing as prejudices because of differences of race, color, or religion.

But if these faults occur, they are faults of the mind and of the heart, or of social inheritance, which can be eradicated only by education and example.

They are not faults that can be corrected by compulsion.

Furthermore, no law can be effective if it is not acceptable to the people affected, and a national FEPC law would be unenforceable in a very large section of the country.

Such a law would provoke resentment and lawlessness, and be worse than no law at all.

Even assuming, however, that legislation of this nature is practicable it is extremely doubtful if Congress has jurisdiction.

Under the Constitution, Congress has no powers not delegated to it, and it would seem clear that the States—which alone may determine the qualifications of voters— have also reserved to themselves jurisdiction in the field of social relationships.

And, since these relationships are necessarily local to every community and various as among the States, the legislatures and the local councils would be the proper agencies to act.

If legislation, is desirable, therefore, the place in which to strive for it is in the self-governing areas that would be affected.

The persistent effort to obtain congressional legislation, uniformly applying to every area of this diverse country, is essentially demagogic and rabble-rousing.

One of its most vociferous advocates is the Communist Party.

The loudest supporters must realize this truth, although it would be politically inconvenient for them to say so.

As regards Congress itself, it is quite intolerable that its important business should be continually rolled and frustrated over an issue that does not arise in Congress under the doctrine of States' rights.

Relations Between Coal Operators and Coal Miners

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the negotiating representatives of the United Mine Workers of America, by John L. Lewis, to the President of the United States, regarding conditions in the coal mines.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED MINE WORKERS OF AMERICA,
Washington, D. C., February 4, 1950.
Hon. HARRY S. TRUMAN,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: We represent great numbers of men. They are citizens and taxpayers. They are men with family responsibilities. They perform an essential service. They serve a harsh and brutal industry. Its toll of broken men and its usage of human flesh are without parallel in modern industry. Their employers are, in a controlling sense, greedy, grasping, and devoid of ordinary compassion.

The mine workers have the same ideals and dreams as other Americans. They wish to provide for their families, and serve their God and their country without reserve. To do so, they must eat and have shelter to face the menace of the years and to retain the courage to combat the terrifying vicissitudes of their toil.

The industry contract expired June 30, 1949. For 8 months, the organized coal operators have refused to execute a successor agreement. For 8 months, the operators have gloried in the protection given them by an oppressive Federal statute. For 8 months, Mr. President, they have boasted that the abomination, known as the Taft-Hartley Act, rendered it unnecessary to concede anything, and that in the end your high office, wielding TAFT's club, would beat the mine workers into submission.

So now it comes to pass, Mr. President, that as a penalty for refusing the coal operators' dictated terms your office offers arbitration by three strangers, who know not of the industry nor the human beings who delve in it.

With due respect, Mr. President, the mine workers do not wish three strangers, however well-intentioned but necessarily ill-informed, to fix their wages, decree their working conditions, define their living standards, and limit the educational opportunities of their children. Such strangers cannot see into a mine worker's home, nor peer into the hearts of his loved ones. The mine workers believe that as free citizens in a free country they have an inherent right to pass upon these vital considerations themselves, and that no stranger, however situate, should be given such power over their lives.

It is no answer, Mr. President, to suggest that your plan, as set forth in your telegram of January 31, permits acceptance or rejection by either party, after rendition of judgment by your agents. The mine workers know that any rejection of your agents' findings, after issuance, would cause them to face the oppressive legal sanctions of TAFT's bill of attainder against labor unions. The mine workers know also, Mr. President, that the heavy hand of Government would not be laid concurrently on the shoulders of the coal operators as they make wassail in the privacy of their exclusive clubs.

For 7 months since the expiration of the agreement, the mine workers have made personal sacrifices to insure the country sufficient coal. It is a travesty upon justice that they should now be slugged by a legal blackjack to satisfy the overweening avarice of their reactionary employers.

To use the power of the state to drive men into the mines, on the terms and for the profit of private employers, is involuntary servitude, violative of the spirit, and perhaps of the literal text, of the thirteenth amendment. It is questionable whether one could postulate that such mass coercion would insure enthusiastic service from grateful men.

Respectfully submitted.

NEGOTIATING REPRESENTATIVES, UNITED MINE WORKERS OF AMERICA,
JOHN L. LEWIS.

Tribute to Lt. Col. Albert L. Vreeland

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an announcement of a presentation of the Army's commendation to Mr. Albert L. Vreeland, an ex-Congressman from New Jersey, and a lieutenant colonel in the Organized Reserve Corps. I am making this insertion at the request of the Bronx County Disabled American Veterans and ANU.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Albert L. Vreeland, ex-Congressman from New Jersey, and a lieutenant colonel in the Organized Reserve Corps, received the Army's Commendation Medal at a ceremony held January 23, at 11 a. m., in the office of Col. H. A. Cooney, chief, New York military district, 90 Church Street. The presentation was made by Colonel Cooney.

Colonel Vreeland, who is vice president of the Celanese Corp. of America, as well as general counsel for the same firm, receives the decoration for his wartime service.

A Member of Congress at the time of the United States entry into war, Colonel Vreeland first served with the Military Intelligence Division of the War Department, then was recalled to Congress to finish out his legislative term.

When returned to duty with the Army, Colonel Vreeland became commanding officer of the Counter Intelligence Corps of the Southwest Pacific area.

Colonel Vreeland is currently assigned to the One Thousand Five Hundred and Sixty-Eighth JAGC Training Center, New York City, and lives at 415 Prospect Street, East Orange, N. J.

Minnesota Welcomes the President

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD some remarks of mine at the time of the President's visit to the State of Minnesota.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

MINNESOTA WELCOMES THE PRESIDENT

Mr. President, the people of Minnesota welcome you to their great and progressive North Star State. You have honored us by your visit on this historic occasion.

Tonight we celebrate two great events in the history of a growing and expanding American democracy—the Minnesota Centennial and your miraculous victory in November 1948.

One hundred years ago America was in the midst of a great internal controversy over the issue of slavery versus freedom. The establishment of Minnesota as a Territory and her subsequent admission as a State gave strength to the forces of liberty and emancipation in the tragic conflict which later on convulsed our Nation. Then, as now, there was a struggle for the minds of men. Then, as now, the principles of democracy were being challenged within and without.

In the year 1948 we saw a world in the midst of a great controversy. The issue now, as a century ago, was whether or not a people can live half slave and half free. To be sure, the stage for the great human drama was in the dimensions of a world and not merely a nation, but the principle in our generation is the same as that of a hundred years past. And as if history would repeat itself, the people of Minnesota again made a great contribution to the cause of human freedom. That contribution, Mr. President, was their confidence and faith in you. That contribution was made real and tangible by the overwhelming vote you received from the people of Minnesota in that crucial election of 1948. Our people now, as 100 years ago, place their faith and hope in the principles of the dignity of the individual, freedom of conscience, and a brotherhood of man.

These are not merely idealistic pronouncements or comforting phrases of a democratic ritual. The dignity of the individual has real meaning in the social, economic, and political fabric of our State. We jealously guard and protect as inviolate that sacred principle of freedom of conscience. We not only preach and proclaim the brotherhood of man, but as a State of almost 3,000,000 people we tirelessly work toward its realization.

Yes, Mr. President, if ever one State could justifiably claim that it represented the dynamic spirit of America, our State of Minnesota feels justified in making that claim. Permit me to indulge myself in a recitation of our case for this honor.

Here in Minnesota people from all sections of the world have learned how to live, to build, and to work together. Our people represent the finest qualities of every race, creed, and nationality. Our standard of honor and respect is not that of birth or

race. Our standard of honor and respect is that of achievement and of individual ability.

We have placed our faith, Mr. President, in the people. That faith has been justified by the accomplishments of our people in a free America. Here before you tonight you see living testimony to the virtues and truth of the democratic way of life.

Less than a century ago this vast expanse of land which now is known as Minnesota was an undeveloped and almost unknown region. Today it stands out as one of the most progressive and prosperous areas of a strong and mighty Nation.

The pioneers, the immigrants, the sons and daughters of those who came from many lands, have applied their minds and bodies to creating a prosperous and democratic society. Our people have taken the iron ore from the earth to supply the steel furnaces of the industrial East. Our woodsmen have cut the forests to produce the timber and the lumber required by growing America.

Our seamen have sailed the ships from the great harbor of Duluth, Minn., to carry the iron ore, the grain, and the lumber to the processing and manufacturing plants in other areas of our Nation.

Our farmers have tilled the soil and produced the food that was needed by a growing population.

Yes, Mr. President, there is no place in all the world where one will find a more industrious, a more enlightened, a more devoted, and a more patriotic people than here in middle America.

We have created new industries. We are rich with a supply of skilled labor. Our workmen take justifiable pride in their productive skill and ability.

Our industry and business community have demonstrated unusual initiative and ingenuity.

Minnesota points with pride to its hospitals, its clinics, its programs of public health and recreation, its great State university and its many colleges, its splendid system of public and parochial schools.

We have emphasized the human values. We have believed, and will continue to believe, that the richness of America is in its people. It is because of this faith of the people in themselves that we have placed particular emphasis upon the health and the welfare and the education of our people.

Like you, Mr. President, we believe in human welfare and we have dedicated much of our efforts and a sizable portion of our resources to the creation of a social, economic, and political environment that is conducive to the betterment of the people.

We in this State know that a deep concern for human welfare yields dividends. This emphasis upon the welfare of people has given us a rich and productive economy. It has given us an enlightened citizenry that is capable of conserving and improving the great storehouse of natural resources in land, water, forests, and mines with which God so generously blessed us.

We in Minnesota in this generation have repudiated not only the exploitation of human and physical resources—we have likewise repudiated for once and for all the false doctrine of isolationism.

We are of the people—yes, of the people of all the world. Therefore we are interested in people no matter where they may be or who they may be.

We do not need to ask ourselves the question, "Am I my brother's keeper?" We already know the answer. Our political and social convictions are deeply rooted in a religious faith. We gratefully acknowledge our humility before one God. We know that man does not live by bread alone. Our strength is not merely that of material blessings. Our strength and faith are guarded and protected by a sense of religious and spiritual obligations and principles.

It is in this spirit, Mr. President, that we welcome you. What has been said of our State typifies your character, your philosophy and your program.

You, too, are of the people. You have placed your confidence in the people. Your great victory in 1948 was made possible because you went to the people with your message. They received you and gave you inspiration to carry on.

You, too, Mr. President, are known for those sterling qualities of honor, integrity, industry and a man of deep faith.

You are in the midst of many friends—friends not only in the social sense, but friends in spirit and mind.

There is a bond of fellowship between our people and their President.

I have the honor and the privilege of presenting to you the President of the United States, the Honorable Harry S. Truman.

Tribute to Harry Hopkins by Winston Churchill

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tribute by Hon. Winston Churchill to Mr. Harry Hopkins, appearing in the New York Times under date of January 26, 1950.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

On January 10 a gentleman arrived to see me at Downing Street with the highest credentials. Telegrams had been received from Washington stating that he was the closest confidant and personal agent of the President. I therefore arranged that he should be met by Mr. Brendan Bracken on his arrival at Poole Airport, and that we should lunch together alone the next day. Thus I met Harry Hopkins, that extraordinary man, who played, and was to play, a sometimes decisive part in the whole movement of the war. His was a soul that flamed out of a frail and failing body. He was a crumbling lighthouse from which there shone the beams that led great fleets to harbor. He had also a gift of sardonic humor. I always enjoyed his company, especially when things went ill. He could also be very disagreeable and say hard and sour things. My experiences were teaching me to be able to do this too, if need be.

At our first meeting we were about 3 hours together, and I soon comprehended his personal dynamism and the outstanding importance of his mission. This was the height of the London bombing, and many local worries imposed themselves upon us. But it was evident to me that here was an envoy from the President of supreme importance to our life. With gleaming eye and quiet, constrained passion he said:

"The President is determined that we shall win the war together. Make no mistake about it.

"He has sent me here to tell you that at all costs and by all means he will carry you through, no matter what happens to him—there is nothing that he will not do so far as he has human power."

Everyone who came in contact with Harry Hopkins in the long struggle will confirm what I have set down about his remarkable personality. And from this hour began a friendship between us which sailed serenely over all earthquakes and convulsions. He was the most faithful and perfect channel of communication between the President and me. But far more than that, he was for several years the main prop and animator of Roosevelt himself. Together these two men, the one a subordinate without public office, the other commanding the mighty Republic, were capable of making decisions of the highest consequence over the whole area of the English-speaking world. Hopkins was, of course, jealous about his personal influence with his Chief and did not encourage American competitors. He therefore, in some ways, bore out the poet Gray's line, "A favorite has no friend." But this was not my affair. There he sat, slim, frail, ill, but absolutely glowing with refined comprehension of the cause. It was to be the defeat, ruin, and slaughter of Hitler, to the exclusion of all other purposes, loyalties, or aims. In the history of the United States few brighter flames have burned.

Harry Hopkins always went to the root of the matter. I have been present at several great conferences, where 20 or more of the most important executive personages were gathered together. When the discussion flagged and all seemed baffled, it was on these occasions he would rap out the deadly question, "Surely, Mr. President, here is the point we have got to settle. Are we going to face it or not?" Faced it always was, and, being faced, was conquered. He was a true leader of men, and alike in ardor and in wisdom in times of crisis he has rarely been excelled. His love for the causes of the weak and poor was matched by his passion against tyranny, especially when tyranny was, for the time, triumphant.

Federal Employees in Politics

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in the Washington Post of February 1, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EMPLOYEES IN POLITICS

With some reservations, this newspaper has supported the broadening of the Hatch Act to permit nearby Federal employees to participate in local partisan political campaigns. Understandably, leaders of the nonpartisan movement in Arlington view this extension as a device whereby the Democratic machine can renew its hold on local offices. Their discomfiture is increased by the apparent glee of the machine over the amendment. Our feeling is, however, that legislation cannot be particularistic. It would be unfair to Federal workers living in areas where the nonpartisan movement does not prevail to deny them participation in local Government because of the possible bad effects in Arlington. The answer is to strengthen the nonpartisan movement.

Now, however, serious questions have been raised about both the workability of the Senate amendment as now phrased and the means by which it was accomplished. Apparently public hearings were not held on this particular section of the amendment (which was not even considered in the House) and many groups which have sought an opportunity to be heard have not been given the chance. This is an unhealthy situation which should be remedied, and the best way is for conferees to remand the entire amendment for full discussion. Certainly nothing could discredit the Hatch Act more than to have it distorted by sneak amendment.

Welcome to White County

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the White County Democrat, of Monticello, Ind.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WELCOME TO WHITE COUNTY

The White County Democrat takes pleasure in introducing two new residents of White County, two young women, displaced persons from Europe, who recently arrived to make their home with two Chalmers farm families. Both are very pleasant and are anxious to do things the American way.

Miss Troosh Agafia, native of Ukraine, is right at home with the O. C. Parks family, neighbors of the Shells. She likes farm life, and did field labor in Germany. No weeds grow in her garden. Troosh is fond of knitting. She has a number of articles she brought with her. Before coming to the States, she worked in a Baptist mission.

Meet Mrs. Alexandra Kiritschenko from Yugoslavia, who is at the home of Mr. and Mrs. B. C. Shell, just a mile north of Chalmers. She has a fine education, and has lived in a number of European countries. She speaks understandable English, but very fluent in German and Russian, and knows some French.

Two displaced persons from Europe are happily situated in two Big Creek township farm homesteads located, across the road from each other, at the homes of Mr. and Mrs. B. C. Shell and O. C. Parks and family. The families sponsoring them in their new homes are just as happy as the two young women.

First to arrive in the county was Miss Troosh Agafia, native of the Ukraine, who is with the Parks family. She reached here on June 4. Mrs. Alexandra Kiritschenko from Yugoslavia arrived at the home of Mr. and Mrs. Shell on August 15.

After Congress passed the law June 16, 1949, permitting displaced persons from Europe to come to the United States, announcement was made that 205,000 DP's could come here. The Shells made application June 24 with the Church World Service, through which Protestant churches worked. They requested that they would like a girl 25 to 50, capable of assisting with the housework as Mrs. Shell was crippled with arthritis, and a Protestant. On March 3, this year, they received notice that the girl had been selected and would be ready to come soon. However Mrs. Kiritschenko became ill with the flu and her voyage was slowed up for 3 months.

LAND AT BOSTON

Applicants who sponsor the DP, must furnish inland transportation from the ports of arrival, Boston, New York, or New Orleans. In June the Shells mailed the transportation. Mrs. Kiritschenko went to Bremen in June and sailed on July 19, on the *General Sturgis*, in which there were 885 DP's. It took them 9 days. The travel bureaus were responsible for taking care of them en route to their destinations over the country. Mrs. Kiritschenko was routed to Detroit, and from there took the Wabash to Lafayette, where the Shells met her.

Miss Agafia landed at Boston, and then came by train to Lafayette.

Mr. Parks put in their application in July 1948, a couple weeks later than the Shells. Their letter was sent to the Ukranian-American Relief, and their application was acted upon quicker than through the other agency.

Born in 1913, near Moscow, Mrs. Kiritschenko was the daughter of a railroad engineer. When a little girl she went to live with her uncle and aunt, and they traveled quite extensively as the aunt was a Russian consular, comparable to an American ambassador. They lived in Turkey, Greece, Yugoslavia, and Italy. When a little girl she learned some English from an American lady. Mrs. Kiritschenko speaks fluent German and Russian and some French. She is a member of a family of six children, three boys and three girls. The family is well educated and holds responsible positions.

TRAINED NURSE

Mrs. Kiritschenko was married to an officer in the Russian Army, but had not heard from him since the war. She had 2 years' nurses' training and worked as a nurse in an X-ray laboratory for 4½ years in Belgrade, Yugoslavia. Since liberation she had been a nurse in a kindergarten for the last 4 years in Munich, Germany. She stated that first she was in charge of three infants, and then was responsible for seven children, ages 2½ to 3, all war orphans.

In the hospital she became acquainted with modern appliances found today in the kitchens of American housewives. She did not hesitate to use the appliances found in the Shell home. She had no trouble in learning. Pat Doremire, a Chalmers High School pupil, assisted her in showing where the things were in the house. She can manage the household very well, and has prepared some fine meals.

Mrs. Kiritschenko is a member of the Greek Orthodox Church, but has attended the Chalmers Community Church regularly since she came here.

She is an attractive blonde and has natural curly hair. The clothing brought with her is like American women wear. She brought several trunks full, which she described as "my house." She has worn her hair bobbed for a number of years, but when a girl it was long.

Shortly after her arrival at the Shell home, Mrs. Kiritschenko received a letter of welcome to the State of Indiana from Gov. Henry F. Schricker, which she prizes greatly.

Mrs. Kiritschenko enjoys reading the newspapers, but remarked that she has learned more about what is happening in Europe since she came to the States than during the time she was a resident.

Being able to speak some English, it was possible to secure considerable information from Mrs. Kiritschenko. However, in the case of Miss Agafia, it was difficult. Both young women were at the Shell home the afternoon of the interview. While they both speak Russian, they are different. Miss Agafia is Ukraine Russian or Polish. Mrs. Kiritschenko assisted with the interview.

NATIVE OF UKRAINE

It was learned that Miss Agafia was a native of Ukraine, but she has no living relatives to her knowledge. She went to Poland, then Czechoslovakia, and then to Germany, where she did field labor.

The clothing that she brought had been sent through missions to Germany. Before coming to the States, she worked in the Baptist mission in Munich.

Asked if she was happy in the United States, she replied, "Like it here," with a big broad smile.

She is an expert gardener and flower lover. No weeds grow in her garden. She likes to knit, and has some beautiful sweaters that she made which she brought with her.

The Parks family has a dairy and the cows are milked by machine. Miss Agafia took a delight in seeing the machine work. Afterwards she stripped some of the cows, and a member of the family is quoted as saying that "she stripped the cows so dry they had to prime them the next time to milk 'em." She also enjoys hunting eggs, in fact any kind of out of door work. Practically all of her 42 years has been spent on a farm.

Roosevelt's Promise to Churchill

EXTENSION OF REMARKS
OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

ROOSEVELT'S PROMISE TO CHURCHILL

Winston Churchill's war memoirs have reached the year 1941. This was the period in which Mr. Roosevelt took the final steps to push the United States into a war to which the overwhelming majority were opposed.

HOPKINS CARRIES THE "FIRE HOSE"

On January 10, 1941, Mr. Churchill recalls, Harry Hopkins arrived in London as the emissary of Roosevelt to Churchill. Hopkins bore a personal message from the President. It was that Roosevelt would aid Britain at all costs. There was nothing he would not do.

This, almost to the day, coincided with Roosevelt's successful campaign to get the lend-lease bill through Congress. That, he told the American people, was to be regarded as the lending of a fire hose to a neighbor to keep the fire from spreading to our own house. Lend-lease was going to keep America out of war.

The Roosevelt deception went farther back than that. Churchill discloses that the mission of Vice Adm. Robert L. Ghormley, sent to London in July 1940, as American naval observer, was not merely to coordinate with the British Admiralty all American aid short of war. Ghormley was also to consult with the British on American participation as a belligerent.

This was 4 months before candidate Roosevelt, speaking at Boston, assured the mothers of America "again and again and again" that he was not going to send their sons into any foreign war.

MATSUOKA'S MANEUVERS

Perhaps, the most important of Churchill's current disclosures, however, concern the former Japanese foreign minister, Yosuke Matsuoka, and his unsuccessful effort to get Japan into the war 6 months before Pearl Harbor. The incident is vital because Churchill's account plainly demonstrates the means by which the United States could

have remained at peace had not Roosevelt been so avid for war.

Matsuoka was one of the real warmongers. It was he who negotiated the treaty that put Japan into the Axis. In March 1941, he set out on a journey to Moscow and Berlin. Hitler and his aids besought him to get Japan into the war against Britain. At the same time they disclosed that their relations with Russia were uncertain, and that they wanted at all costs to avoid war with the United States.

Matsuoka stopped in Moscow long enough to negotiate a nonaggression pact. Like Stalin, he had no taste for two-front war. According to Churchill, he assumed Roosevelt would have the same sensible aversion, therefore saw no reason to conciliate America, which Roosevelt was pushing toward war with Germany.

On his return to Tokyo, however, he found the remainder of the cabinet of Prince Konoye arrayed against him. Instead of seeking war with this country, Konoye and his government were at that very moment seeking a general Pacific settlement, which they hoped would be started by American mediation between Japan and China.

Matsuoka not only lost his argument for war, he lost his job. He lost prestige tremendously when Hitler attacked Russia 7 weeks later.

AXIS EFFORTS TO DUCK WAR

Thus, in Churchill's view, confirmed by the documents we found after the occupation of Tokyo, the Konoye government was genuinely anxious to avoid war with the United States. It was unable to do so because Roosevelt was beginning to realize about that time that neither lend-lease nor the active participation of the American Navy in the battle of the Atlantic was going to goad Hitler into attack.

Lend-lease was followed by Roosevelt's proclamation of an American security zone in the Atlantic. He informed Churchill, the latter says, that the American Atlantic Fleet would actively seek out German submarines and surface raiders in the area so that the British could attack them. Following the occupation of Iceland, American ships were assigned to actual convoy duty. Some of them were placed under British command.

These were acts of war under any possible interpretation of international law, but Hitler refused to rise to the bait. Instead, he ordered his submarines not to fight back against American destroyers.

Roosevelt did not have to be particularly bright, after a few months of this, to recognize that if he was going to fulfill his pledge that there was nothing he would not do to aid Churchill, he would have to find his war somewhere else than with Hitler directly. The Japanese negotiations gave him his opportunity.

Churchill notes that the great obstacle to Japanese-American understanding was the American demand that, as a preliminary to any peace discussions, Japan should withdraw from China.

Complete withdrawal would have caused the immediate fall of any cabinet that proposed it. Yet Roosevelt and Secretary Hull stuck to that demand in all the negotiations through the summer and fall of 1941, and incorporated it in the ultimatum by Secretary Hull on November 26, 1941, that started the Jap Fleet for Pearl Harbor.

If our mission in the Pacific was the protection of China, as the Roosevelt idolators say, it is incumbent upon them to explain why Roosevelt's aides and his successor, having got their war and crushed Japan, have now abandoned China to the Communists. Was that, also, the intended fruit of his far-seeing foreign policy?

Report to the People of the Fifth District of Michigan

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I set forth herewith a report to the people of the Fifth Congressional District of Michigan of my voting and attendance record during the first session of the Eighty-first Congress.

The purpose of this report is to make available, in concise form, information which is scattered over thousands of pages of the CONGRESSIONAL RECORD, information which, from a practical point of view, would not be available to the majority of the voters of the district which I am honored to represent here in the House.

It is my hope that this report, which includes all roll calls in the covered period, will enable my constituents to be intelligently informed of the voting record of their Representative in Congress.

If more complete information on any measure considered, or an explanation of any particular vote, is desired, I shall be glad to furnish that information to those who may so request:

Roll Call No.	Date (1949)	Identification and result of vote	My vote
1	Jan. 3	Quorum call	Present.
2	...do	Selection of Speaker of the House (Rayburn, 255 to 160)	Martin.
3	...do	H. Res. 5: Amendment to House Rules, permitting committee chairmen to bring to floor any measure not reported by Rules Committee within 21 days (adopted 275 to 142).	Yea.
4	Feb. 7	H. Con. Res. 22: Postponed date of submission of legislative budget from Feb. 15, as required by 1946 Reorganization Act, to May 1 (passed 230 to 142).	Nay.
5	...do	H. R. 2361: To provide for reorganization of Government agencies (passed 356 to 9)	Yea.
6	Feb. 9	H. Res. 78: To provide $200,000 for investigations by House Committee on Un-American Activities (passed 353 to 29)	Do.
7	...do	Motion to recommit H. R. 1211: Reciprocal trade agreements bill, to committee with instructions to retain peril-point provision in law (motion lost, 151 to 241).	Do.
8	...do	H. R. 1211: Extending authority to President to enter into reciprocal trade agreements (passed 319 to 69)	Do.
9	Feb. 15	Quorum call	Present.
10	...do	H. Res. 99: Waiving all points of order against H. R. 2632, first deficiency appropriation bill (adopted 242 to 121)	Nay.
11	...do	Quorum call	Present.
12	...do	...do	Do.
13	Feb. 16	...do	Do.
14	...do	Motion to recommit H. R. 2632: First deficiency appropriation bill to committee with instructions to insert $9,000,000 to handle State backlog of unemployment claims (lost 148 to 237).	Yea.
15	...do	H. R. 2632: First deficiency appropriation bill (passed 367 to 19)	Do.
16	Feb. 17	Quorum call	Present.
17	...do	Motion to recommit to committee, H. R. 1661: Continuing Presidential authority for control of exports, instructing committee to report bill deleting such authority for agricultural commodities, supply of which certified to be in excess of domestic needs (motion lost 139 to 222).	Yea.
18	...do	H. R. 1661: Continuing Presidential authority for control of exports (passed 259 to 102)	Nay.
19	Feb. 21	Quorum call	Present.
20	...do	H. Res. 75: Authorizing Committee on Education and Labor to conduct studies and investigations (passed 331 to 4)	Yea.
21	Feb. 22	Quorum call	Present.
22	Mar. 1	Motion to recommit H. R. 199: To provide immigration quotas to Asian and Pacific peoples (defeated 39 to 336)	Nay.
23	Mar. 7	H. R. 2663: To provide for administration of Central Intelligence Agency (passed 348 to 4)	Yea.
24	Mar. 10	Quorum call	Present.
25	Mar. 11	...do	Do.
26	Mar. 14	...do	Do.
27	...do	Motion to recommit H. R. 3347: To provide additional revenue for the District of Columbia (defeated 163 to 181)	Yea.
28	...do	H. R. 3347: To provide additional revenue for the District of Columbia (defeated 166 to 176)	Nay.
29	Mar. 15	Quorum call	Present.
30	...do	Williams "home rule" amendment to H. R. 1731: To extend rent control (adopted 227 to 188)	Yea.
31	...do	Rains amendment to delete authority to recontrol hotels which had been decontrolled (adopted 237 to 175)	Do.
32	...do	Motion to recommit H. R. 1731. Rent control bill, instructing committee to extend existing law 3 months (defeated 154 to 260)	Do.
33	...do	H. R. 1731: Extending time and scope of Federal rent control (passed 261 to 153)	Nay.
34	Mar. 16	H. Res. 148: Providing for consideration of H. R. 1437, authorizing composition of Army and Air Force (adopted 368 to 1)	Yea.
35	...do	Quorum call	Present.
36	Mar. 21	...do	Do.
37	...do	H. R. 1757: Extension of District of Columbia rent control (passed 247 to 117)	Nay.
38	Mar. 22	Quorum call	Present.
39	...do	H. R. 1437: Authorizing composition of Army and Air Force (passed 395 to 4)	Yea.
40	...do	Motion to recommit H. R. 2681: To provide pensions for veterans of World Wars I and II, to committee (failed, 187 to 223)	Do.
41	...do	Motion to strike out the enacting clause of H. R. 2681: To provide pensions for veterans of World Wars I and II (failed 120 to 291)	Do.

Republican Principles and Objectives

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include the following statement of principles and objectives adopted by the Republican Members of the House of Representatives and the Republican Members of the Senate, and concurred in by the members of the Republican National Committee on February 6, 1950:

To win lasting peace, to build a country in which every citizen may make the most of his skill, initiative, and enterprise, and to hold aloft the inspiring torch of American freedom, opportunity, and justice, assuring better and happier life for all our people, we dedicate our efforts and issue this statement of principles and objectives supplementing the Republican platform of 1948.

We shall not passively defend the principles stated here, but shall fight for them with all the vigor with which our forefathers fought to establish what we now seek to advance and perpetuate—human liberty and individual dignity.

We pledge that in all we will advocate and in all that we will perform the first test shall be: Does this conduct enlarge and strengthen or does it undermine and lessen human liberty and individual dignity.

FOREIGN AFFAIRS

The American people face the hard fact that though they won the war nearly 5 years ago they have not yet won the peace. We offer them leadership in new efforts to achieve this vital end.

We favor a foreign policy in which all Americans, regardless of party, will join to assure peace with justice in a free world while maintaining the independence and the rights of the American people.

We insist upon restoration of our foreign agreements to their proper place inside the Constitution and we insist that the United States shall not be bound to any course of action unless the spirit and letter of our constitutional procedure are followed.

We oppose secret commitments, and we denounce the refusal of the administration to furnish accurate and adequate information to the Congress.

Under our indispensable two-party system, we shall be vigilant in critical exploration of administration foreign policy. We favor consultation between executive and members of both major parties in the legislative branch of Government in the initiation and development of a united American foreign policy; and we deplore the tragic consequences of the administration's failure to pursue these objectives in many fields, particularly in the secret agreements of Yalta, subsequently confirmed at Potsdam, which have created new injustices and new dangers throughout the world.

We favor full support of the United Nations and the improvement of its Charter so that it may be an effective international organization of independent states prepared to mobilize public opinion and the armed forces of the world against aggression. We favor full support of the inter-American system as an integral part of the international organization, and of our treaty obligations in the North Atlantic community.

We advocate a strong policy against the spread of Communism or Fascism at home and abroad, and we insist that America's efforts toward this end be directed by those who have no sympathy either with communism or fascism.

We support aid to those states resisting communism but such aid should be given only if it is essential to our national security, if it is within the total limits which the American economy can afford, if it will be effective, if it is beyond the ability of the aided nation to supply for itself, and if there is a program for progressive reduction.

The Republican Party has always believed in a strong national defense. We must maintain our armed forces at a strength completely adequate for the security of our people.

We favor the promotion of world trade on the basis of fair and reasonable competition and we assert that this can be done within the Republican principle that foreign products of underpaid foreign labor shall not be admitted to this country on terms which imperil the living standards of the American workman or the American farmer, or threaten serious injury to a domestic industry. A strong American economy is a vital factor for our security.

DOMESTIC AFFAIRS

The major domestic issue today is liberty agains socialism: whether we shall remain in this country a free people in constant control of our governments, or whether we shall delegate to an all-powerful Federal Government with unlimited power to tax and spend, the rights to direct and operate our agriculture, industry, labor, and local communities and the daily lives of our citizens. We believe there is no frontier beyond which devotion to the American system may not increase our knowledge, character, and material welfare; but we believe these goals can only be secured in a framework of liberty, equality, and justice, with adequate incentive and rewards to workmen and to industry for ability, knowledge, character, hard work, daring, and genius.

Basic American principles are threatened by the administration's program for a planned economy modeled on the Socialist governments of Europe, including price and wage control, rationing, socialized medicine, regional authorities, and the Brannan plan with its controls, penalties, fines, and jail sentences. This program is dictated by a small but powerful group of persons who believe in socialism, who have no concept of the true foundation of American progress, and whose proposals are wholly out of accord with the true interests and real wishes of the workers, farmers, and businessmen.

As the iron curtain descends on half the globe, and as nation after nation samples the drug of totalitarianism, the Republican Party is the champion of human liberty and the essential dignity of the individual. To it falls the task of offering not only its opposition but of proposing a program to restore faith in free institutions, and bring about stability, opportunity, and progress.

We hold that government can use its just powers to foster national health, promote real security for the aged, develop sound agricultural and labor-management policies, and advance civil rights. These ideas are in keeping with the earliest and finest Republican traditions, and can be achieved without establishing socialism or discipline or dependence. The Democrats have also professed these ideals, but the stark truth is that after 18 years of Democratic control and endless talk, they have reduced this whole field to confusion and futility. The administration is seeking to make demagogic appeals rather than enact sound legislation. It seeks to keep glittering goals intact to lure votes in anticipation of favors to come. Such a cynical procedure raises the naked issue of sincerity, of responsibility, and of achievement.

To achieve our objectives, we offer certain fundamental proposals, and constructive undertakings to rebuild a prosperous and progressive America:

I. The economy

Liberty cannot breathe the air of bankruptcy and live.

Reckless and extravagant spending by the Federal Government, as now advocated by the Democratic administration, with recurring annual deficits or continually increasing taxes, can result only in disaster and ruin for our country. It will further cheapen the dollar, rob the wage earner, impoverish the farmer, and destroy the savings, pensions, insurance, and investments of millions of people. Therefore we urge:

A. An end of deficit spending and a return to a balanced budget.

B. That Federal spending be materially reduced.

C. The achievement of efficiency and economy in Government especially by adoption of measures along the lines of the Hoover report.

D. A policy of general tax reduction to be accomplished as rapidly as reduction in Federal expenditures will permit. We favor immediate repeal of oppressive wartime excises and reduction of taxes on small business to stimulate new industry and growth. This will create new jobs, new wealth, and eventually greater tax revenue. It will provide opportunity for youth, furnish incentives for stable employment and retention of older employees and encourage lower prices.

E. Strict enforcement of the laws against monopoly and unfair competition.

F. Establishment of a nonpartisan commission to study and recommend a sensible redistribution of governmental functions and sources of revenue between the Federal, State and local entities, to secure the sovereignty of the several States with as much decentralization as is compatible with the national welfare.

II. Agriculture

A prosperous agriculture is fundamental to a prosperous America. We join farm organizations in condemning the Brannan plan which would regiment our farmers, cost untold billions of the taxpayers' money, and would mean the ultimate nationalization of agriculture. Its inefficiency and increased costs would adversely affect both the producer and the consumer. It would place every farmer in a state of complete dependency on Government for a large part of his income from uncertain annual congressional appropriations. We deplore the maladministration for political purposes of the present agricultural law by the Department of Agriculture.

We will continue to work with the farmers, farm organizations, and all friends of agriculture to bring about a sound solution of the many problems confronting the farmers of this country. Such farm policies must be developed in the interest of the farmer, the consumer, and the national economy. Agriculture is a growing and dynamic industry undergoing constant change and improvement. No farm program can succeed which is not in harmony with this concept. Specifically we propose the following:

A. A program to provide a fair price for the farmers' products in the market place, aided by a system of price supports and by protection against the dumping of competitive commodities produced by underpaid foreign labor, to the end that the farmer's standard of living will be in line with the contribution he makes to the national economy.

B. Continue and enlarge programs of research and education, both in production and marketing, with particular attention to cheaper and more effective production, a better and more effective marketing system, especially for perishable commodities, sound cooperative marketing, and the development and expansion of industrial uses for agricultural products and byproducts.

C. Continued development and restoration of our soil and water resources through soil conservation and reclamation.

UNIVERSITY OF MICHIGAN LIBRARIES

D. Expansion of animal agriculture as a means of reducing surpluses, rebuilding the soil, and providing a better diet for our people.

E. Special encouragement for the development and ownership of family-sized farms, improvement of rural living conditions, and completion of the rural electrification program.

F. Development of export markets for the surplus crops which can be efficiently produced in this country.

III. Labor-management relations

Industrial harmony and justice are essential to the country's well-being. To that end, government should encourage and promote free collective bargaining. On management and unions falls an equal responsibility to act in good faith toward each other and toward the country. We favor:

A. Continuation of the Taft-Hartley law because it has restored equality between employer and employees, guaranteed the right of collective bargaining, the recognition of unions and the right to strike, while protecting the rights of the public and the union members. Under this law union membership has increased to new highs, wages have risen to record levels, and strikes have decreased.

B. Continuation of our efforts to enact such improvements in the law as have been shown to be necessary to accomplish its purposes more effectively and achieve more complete equality. We deplore the action of the administration in playing politics in this vital area of human relations, thereby blocking the enactment of necessary amendments to the law.

IV. Civil rights

The right of equal opportunity to work, to vote, to advance in life and to be protected under the law should never be limited in any individual because of race, religion, color, or country of origin. Therefore, we shall continue to sponsor legislation to protect the rights of minorities.

V. Social responsibility

The obligation of Government to those in need has long been recognized. Recognizing the inequities and injustices of the present program of social security, we urge:

A. The extension of the coverage of the Federal old-age and survivors insurance program, reduction of eligibility requirements, and increase of benefits to a more generous level, with due regard to the tax burden on those who labor.

B. A thoroughgoing study of a program of more nearly universal coverage including the principle of pay as you go.

C. Federal aid, where the need is clearly demonstrated, to States and through States to their subdivisions, to assist them in affording subsistence, shelter, and medical care to their citizens who are unable to provide for themselves. Such aid, including unemployment compensation, must be based on State and local initiative, operation, contribution, and responsibility without Federal bureaucratic interference. It must avoid socialization of the medical profession or of any other activity. Federal aid must be in amounts which do not impose an unreasonable burden of taxation on the American people who pay the bills.

VI. Veterans

A grateful nation demands that those who fought in its defense, their widows and orphans, must never be forgotten. We urge:

A. Continuing and sympathetic consideration of the rights and deserts of the veterans and their dependents.

B. Prompt and efficient handling of claims and other problems of veterans.

VII. Loyalty

Communism is an international conspiracy aiming at world-wide dictatorship and the suppression of religious, political, and economic freedoms throughout the world. It corrupts ideals, corrodes basic religious teachings, destroys the fiber of man, and denies the existence of God. It is imperative that the nations of the world develop new methods to offset this frontal attack on civilization.

We condemn the failure of the administration to recognize the full implications of this threat to our security. We deplore the dangerous degree to which Communists and their fellow-travelers have been employed in important Government posts and the fact that information vital to our security has been made available to alien agents and persons of questionable loyalty. We denounce the soft attitude of this administration toward Government employees and officials who hold or support Communist attitudes. We pledge immediate action to bring about:

A. A complete overhaul of the so-called loyalty and security checks of Federal personnel.

B. The prompt elimination of all Communists, fellow-travelers, and Communist sympathizers from our Federal pay roll.

C. Closer coordination between our intelligence agencies, with full use of the facilities of the FBI for protecting our security.

CONCLUSION

To this program we subscribe, confident that the overwhelming majority of Americans cherish our heritage of freedom and will join us in this crusade to see that it shall not perish from the earth.

Our people must arouse themselves to preserve our precious liberties and freedoms—the right to worship God in our own way; to speak freely our minds without fear; to conduct our lives and our affairs without officious meddling by too-powerful government. We must revivify those qualities of diligence, economy, courage, initiative, and patriotism which enabled our forefathers to make this Nation great.

This Republic is the custodian of human liberty. The Republican Party will endeavor to see to it that we are worthy of this guardianship.

President Truman and the Budget

EXTENSION OF REMARKS
OF
HON. CLARE MAGEE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. MAGEE. Mr. Speaker, the other day I received a letter from a business executive at St. Louis, Mo., wherein he discussed President Truman and the budget. Under permission to extend my remarks, I include his letter and my reply:

AMERICAN REFRIGERATOR TRANSIT CO.,
St. Louis, Mo., February 2, 1950.

Hon. ELMER MAGEE,
Representative in Congress,
House Office Building,
Washington, D. C.

DEAR MR. CONGRESSMAN: If there is any financial responsibility whatever in the present Congress as a whole, something which, reluctantly, I am beginning to doubt, it will certainly tell our financially irresponsible psuedo President what to do with his nightmare budget.

May I hope, as one of your constitutents but more as an American, that you will display financial responsbility when Congress comes to pass upon the fearful spending so blithely proposed by this shallow executive.

Won't you tell him by your vote that it is his job to trim that budget by not less than $7,000,000,000 and that it is his job, not that of the Congress, to do the trimming. Won't you do your part to pin this President to his responsibility for being specific and not vague about the taxes he asks the Congress to eliminate and about those he wants increased to support his intolerable spending. Won't you tell him by your vote that in this peace year, 5 years after war ended, when production is at high level, the Nation's budget not only must be balanced but that, besides, substantial reduction must be made in the national debt.

Above all, won't you, by your vote, tell this President that if he is honest—as of course he is not—in blaming the tax reduction of the Eightieth Congress for the deficit he now proposes, that he should be equally honest to propose restoration of the taxes that responsible Congress eliminated.

People generally, Mr. Congressman, even fuzzy-minded neoliberals, the get-something-for-nothing people who applaud spending, are beginning to wake up to the fact that Government can spend no money it does not first take in taxes from the people. They are beginning to see also that they are "the people." In my opinion, a rude surprise is rapidly building up for the planners, promisers, and spenders—a surprise package which they will dislike opening come next election.

I would be pleased and proud to hear that you stand for fiscal sanity.

Yours truly,

O. M. STEVENS.

FEBRUARY 6, 1950.

Mr. O. M. STEVENS,
President and Manager, American Refrigerator Transit Co.,
St. Louis, Mo.

DEAR SIR: Your letter addressed to Hon. Elmer Magee has been received at my office. My first name is not Elmer, but maybe you had a purpose in mind by so addressing me. I recall that at Legion conventions the boys would go around saying: "Where's Elmer?" It appears he was always an elusive character who was lost. Perhaps you have considered my record in Congress and think I'm lost.

Yours was quite an interesting letter; but I just wonder if you haven't been in the refrigeration business so long that it's chilled your heart. You refer to our "financially irresponsible pseudo President." You mention the "nightmare budget," and then proceed: "May I hope, as one of your constituents but more as an American, that you will display financial responsibility when Congress comes to pass upon the fearful spending so blithely proposed by this shallow Executive."

You then suggest that by my vote I tell him that the budget should be trimmed by $7,000,000,000. In a later reference you question the honesty of the President.

Most legislators appreciate getting helpful, constructive letters and suggestions. We desire the viewpoints of people, even though they may not coincide with our own. All this is democracy in action. However, your letter was none such. It was mean and hateful, full of venom and calculated to reflect dishonor on our fellow Missourian who holds the high office of President.

My inclination was to reply in like vein and call you a factious facsimile Fascist, attempting to play the role of a modern Fafnir. However, I will be kinder than that. No doubt, you have just paid some income tax and it has made you ill. I'll just say that you are a pained paleface in need of paregoric because you can't have your pie and eat it, too.

Of course, I never met you, never heard of you before, and if I never meet you it will be soon enough; but to you, the American who refers to Mr. Truman as "shallow" and "dishonest" and a "pseudo" or sham and fake President, I address these questions: Where

were you when Harry Truman was leading his troops in the Vosges operations, in bloody combat at St. Mihiel, or the offensive in the Meuse-Argonne? Where were you when Harry Truman was trying to get in active service in the Second World War? Where were you when Harry Truman headed a Senate investigation committee and worked his heart out to save the taxpayers a few billions?

Oh, I've heard this song of hate before. I've heard Harry Truman called "the small man from Missouri." Let me say to you and ilk that this small man stays with his own class. He's for the small people all over the world. The late mother of the President once said: "Harry could always plow the straightest furrow of any farmer in our community." Harry Truman is still plowing a straight furrow—a straight furrow for the American people, a straight furrow for democratic ideals everywhere.

Of course, we all want a balanced budget when we can safely have it, and we are working with that goal in mind. We are attempting to correct some tax inequities. We want to restore some agents in the Department of Revenue so that we can check up on some tax evaders. You may recall that your friend, the Eightieth Congress, was responsible for our not having the men to do this. We expect to effect substantial savings by passage of the Hoover Commission recommendations.

There is one thing you may have overlooked. The Government's system of bookkeeping is different from what it was a few years back. It now lists as expenditures all loans made by such lending agencies as the RFC, Commodity Credit Corporation, etc. There are some $4,000,000,000 of such loans now listed as expenditures. We hope that most of these will be repaid. For example, you might be interested in knowing that in our State of Missouri no electric cooperative is in default one cent, and the REA loans will probably total about one-half billion this year. Actually, the deficit spending is nearer $1,000,000,000 than $5,000,000,000.

It would be interesting to know just where you would cut off $7,000,000,000 of the present budget. Out of every budget dollar, 31.9 cents will go directly for national defense. How much would you cut this? The interest on the national debt is 13.2 cents. Of course, no cut can be made here. Veterans' benefits account for 14.3 cents. How much would you take from the defenders of our country? Security grants to foreign nations take 11.1 cents. How much would you reduce that? There is earmarked for atomic energy development 1.9 cents. Is communism a threat? Is national defense necessary? If not, we can beat your suggestion for a savings. We can quadruple the amount you suggest.

You will note that the above accounts for 72.4 cents out of every dollar of Federal spending.

In a subsequent paragraph of your letter you speak of "fuzzy-minded neoliberals, the get-something-for-nothing people." I assume you refer to the aged, the blind, and otherwise handicapped who get 3.6 cents out of every budget dollar. The average payment made to the aged who draw assistance is something over $40 per month. Just how much do you think these payments should be reduced? Or would you take something off of other social and health services which account for 2.8 cents? Purchase of housing mortgages is 2.3 cents; housing and slum clearance is 1 cent; aid to agriculture is 3.6 cents; REA and rural housing is 1.6 cents; and subsidies to business is 3.9 cents. The items total 18.8 cents of the budget dollar, and include the loans which we trust will be mostly repaid.

What do we have left? If I figure correctly, this leaves only 8.8 cents for the ordinary costs of Government. You have the figures. Now, Mr. Stevens, you can take pencil in hand and start lopping off that $7,000,000,000.

I wonder if you have ever thought that even though taxes are high the average businessman or property owner could pay the present tax rate for two or three decades and it wouldn't cost him as much as one good old depression would cost. You probably recall a depression such as we had when your friends were running this Government under the old theory of "free enterprise" and "individual initiative."

You close your exhortative epistle with the statement that "a rude surprise is rapidly building up for the planners, promisers, and spenders—a surprise package which they will dislike opening come next election." I haven't gone and won't go 100 percent with this administration; but I believe in a planned economy within our democratic framework, so I might be labeled a "planner." I made certain promises to my folks back home on how I would vote, so no doubt I am a "promiser." I believe that in a great country such as ours, with its vast wealth and resources, no one should be in want. I believe in opposing communism. I believe in national defense. Therefore, I am a "spender." So I come in the category you mention. Now, Mr. Stevens, I'll take back what I said about not wanting to meet you. I've decided it would be a pleasure. It would be nice to meet you in public debate in my district in the next campaign, and certainly I want you present when I open that "surprise package come next election."

I believe it was Lord Beaconsfield who said, "The man who does not look up will look down, and the spirit which does not dare to soar is destined to grovel." I think Harry Truman is looking upward. I think the spirit of America is looking upward as it seeks to lead the way to a fuller life and to portray to all the world a type of government that grants the greatest good to the greatest number.

Sincerely yours,

CLARE MAGEE,
Member of Congress.

The Brannan Plan

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. HOEVEN. Mr. Speaker, Successful Farming, the magazine of farm business and farm homes, is published in Des Moines, Iowa. In the January 1950, issue of that popular and well-known magazine appeared a most interesting and thought-provoking article entitled "We're Not Through With the Brannan Plan." Under leave to extend my remarks in the RECORD, I submit the article herewith:

(EDITOR'S NOTE.—For almost 30 years Congress and farm organizations have debated solutions for farm problems, chiefly surpluses. Intervention of World War II absorbed surpluses which had been steadily mounting in spite of crop controls, marketing quotas, and other expedients calling for heavy outlay of tax money (yours). Again there is growing concern that farm production may exceed our effective needs. Like all other business, farming must make adjustments.

(Has experience taught us anything? Must farmers surrender their freedom of action and decision? Will free market price no longer perform its function of guiding production? And from the taxpayer must we draw increasing sums of money to cover up the errors of judgment of the planners? We may escape the short-time adjustment that way. In the long run we will have achieved growing inefficiency and frustration.)

Guaranteed high income to farmers and low-cost food to consumers. That's the basis of the farm-price-support plan Secretary of Agriculture Charles Brannan proposed to Congress. And that's probably what 148,000,000 of us Americans would want if that were all there were to it. Certainly no one could ask for anything more.

The question is, How would it work? Is the plan in your long-time interest as a farmer? What about the rest of the people and the national economy as a whole? How much will the Brannan plan really help the low-income farmers? Or just how will it fill the Nation's bread basket with cheap food? What about the cost to the Government (which means tax costs to you)? And would you want to put up with all the Government controls you are certain to run into under such a plan?

These are some of the questions you should answer before definitely deciding whether the Brannan plan is or is not the long-time answer to the problem of maintaining your farm income at a satisfactory level.

Frankly the Brannan plan promises to be the most marvelous program to strike this or any other country—that is, if it could be made to work and if Congress could or would tax enough money away from you, your neighbors, and city people to keep it going.

First, let's take a look at this farm income support proposal Secretary Brannan recommended to Congress last summer. Let's remember, too, that despite set-backs, the present administration in Washington hopes to hammer away in an attempt to have the plan or some version of it passed by the Eighty-second Congress.

Briefly, here's how the plan would have applied in 1950: It would be an attempt to support your farm income at a figure that would buy as much as your average annual income did during the period 1939–48.

To do this, you and the other 6,000,000 people classified as farmers in the United States, need a total cash farm income of around $26,000,000,000 next year. In order to achieve this national income figure, support prices on commodities next year would need to be 25 percent higher than the average price received by farmers during the last 10 years, 1940–49.

As examples, wheat support prices would be around $1.88 a bushel; corn, $1.46; potatoes, $1.59; milk, $4 a hundred; eggs, 46 cents a dozen; beef cattle, $16.90 a hundred; and hogs, at $19. Anyone who wants to know the detailed plan which Brannan used to figure the income support standard, may turn to page 94.

The big problem in any price-support program has been to find a way to support prices to farmers at the guaranteed level. Brannan proposes to continue the use of commodity loans and purchase agreements for storable commodities such as wheat, corn, and cotton. Prices for your nonstorable commodities such as hogs, eggs, and milk, on the other hand, would be permitted to seek the open-market level determined by supply and demand. Then you would receive a Government check for the difference between the market price and the price-support standard determined by the plan.

As an illustration, the price of hogs would be left free to rise or fall on a free market. But Mr. Brannan is thinking of a farm price-support standard of $19 on hogs. Under his plan, if you sold hogs for only $17, the Government would dig down and pay you the $2 a hundred difference between the standard and the market price.

To be eligible for price supports you would need to meet certain demands. First, Bran-

UNIVERSITY OF MICHIGAN LIBRARIES

nan believes farmers should be required to follow certain soil-conservation practices as determined by Government officials. Second, they would have to comply with whatever control programs are found necessary, such as acreage allotments, marketing quotas, and marketing agreements. And third, he would limit all farms to a certain specified volume of production on which price supports would apply.

That's the Brannan plan conjured up in Washington's agricultural bureaucracy. That's the plan they're trying to sell to the Nation's millions as the panacea for most of this country's economic ills. "An effective farm-production and price-stabilization program to serve the interests of all the people."

In his plan, Brannan first recommended that not more than 1,800 comparative units of production per farm be made eligible for price supports. Production beyond 1,800 units on any farm, regardless of acres or type of farm, would not be supported.

Here are several farm commodities and the pounds, bushels, or dozens equivalent to Mr. Brannan's unit of production:

Corn	bushels	10
Wheat	do	7.77
Soybeans	do	5.75
Potatoes	do	9.18
Flaxseed	do	3.40
Oats	do	17.70
Butterfat	pounds	21.82
Hogs	do	76.00
Cattle	do	86.00
Whole milk	do	346.09
Lambs	do	79.00
Chickens	do	50.34
Cotton	do	52.16
Eggs	dozens	31.88

In other words, supports on any farm would be limited to 18,000 bushels of corn, 13,986 bushels of wheat, or a combination of any commodities whose unit-of-production values don't go over the 1,800 limit. This 1,800-unit idea was worked out in such a way that price supports on any farm would be limited to a total production with a cash value around $26,000.

Mr. Brannan figures the 1,800-unit top would be reached by only about 2 percent of the Nation's farms. But let's remember that these farms account for nearly 25 percent of all the agricultural products marketed.

As you think over Brannan's ideas, there are many other things to consider. And those things will have far-reaching effects outside the strictly farm field.

Remember, for one thing, that it was only last year that city consumers were howling that price supports were responsible for 90-cent steaks and 70-cent pork chops. Actually, your hog market prices were far above the support level and you had no support on cattle. But pressure for repeal of farm price supports neared the danger mark.

In the face of all that, Secretary Brannan comes along with a plan that not only would support your farm prices at levels considerably above the old 90 percent of parity but also pegs farm prices to the highest support level on record.

The Brannan plan proposes to abandon the old parity formula which has been used for the last 20 years in measuring farm prices. It substitutes a new formula tied to an abnormal wartime-postwar period of distorted prices, incomes, and price controls. Thus, the plan sets up a goal of wartime purchasing power for farmers. And it allows little or no way for farm prices to adjust along with other prices in our country. A farm-income standard is the objective of the plan, but even so, the same old type of price supports and production controls are the means of reaching this goal.

Aside from the fact that the plan defies simple and basic economics that must accompany a good farm program, farmers are beginning to realize little could be worse than turning the problem into a political football. That is exactly what Brannan has done. They fear it means that any farm program in this country is destined to be picked up and cut up at every opportunity by opposing parties. Obviously if this happens, there will be little to which farmers can look forward with certainty. Already, this has been apparent in Congress.

The board of directors of the American Farm Bureau Federation are unanimous in their opposition to Brannan's plan. They have said, "The philosophy of the Brannan plan is so dangerous to agriculture that we vigorously oppose * * *

"Under this proposal, the farmer's only hope for a fair income would depend on Government hand-outs from annual appropriations by Congress. We maintain that it's unreasonable to stake the welfare of agriculture upon such a hazardous possibility.

"Cost of the program would be staggering. There is no good reason why the Government should pay part of the grocery bill for every citizen.

"Price goals of the plan are so high that farmers constantly would be under rigid controls in production and marketing.

"Whenever Government undertakes to make the decisions on which volume and quality of production must depend, the result is inefficient and costly production with continuously increasing Government subsidies."

Of course, labor-union spokesmen have been loud in their support of the Brannan proposal. They welcome the idea of cheap food at the expense of the Government Treasury. More than that, they served notice on farmers that labor expects and demands farmer support in the fight for repeal of the Taft-Hartley Act—a sharp political swap.

But after all, there is only just so much production and national income each year. What income there is results from the labor, capital, and the brains of all the people. The Government, itself, doesn't produce the wealth it has to spend. Every dollar that goes into any support program has to be taken away from the people in taxes.

Mr. Brannan proposes to guarantee prices to farmers which are high enough to yield around 100 percent of parity in 1950. Under his formula, supports would rise still further in the years ahead. That would happen as the relatively low prewar years are dropped from the computations and higher years following the war are added. This means that the Government would be called upon to support your farm products and farm income far above the free-market level. There would be little or no drop in the farm-income standard until there would be an appreciable drop in prices paid by farmers. And that's regardless of the general economic conditions, unemployment, and hard times outside the farm field. Even arm-chair economists know it is nonsense not to provide for adjustments to weaker demands or a supply that is too great.

Although Mr. Brannan himself failed to venture a guess as to cost, several agricultural economists have estimated the cost of the Brannan plan could run well over $5,000,000,000 in 1950—maybe 7 to 15 times the average cost of the entire farm program each year from 1935–1939. And taxes, we don't have to remind you, are pretty high already. Also, during last year, the most prosperous year on record, the Federal Government spent nearly $2,000,000,000 more than it was able to take in from taxes.

Another argument against Charlie Brannan: Price supports before the war were never higher than 75 percent of parity. Even so, by the time the war came along, huge stocks of Government-owned corn, wheat, and cotton were becoming a real headache. The big question in the Department of Agriculture was fast becoming one of what to do with all the surpluses. So, can anyone doubt the necessity of regimentation and control of every farmer under such high supports? How long would Mr. Brannan's promise of $19 for hogs continue without limiting farmers on the number of pigs they could farrow or sell?

Also, if you think you can operate outside any Government program of controlling agricultural prices and products, you had better think again. Once marketing quotas are approved by two-thirds of the producers voting, all farmers producing that crop must go along or pay a stiff penalty. In the case of wheat, the fine is 50 percent of the support price for any production in excess of the allotment. The Brannan plan would expand the penalty provisions under present laws. For example, it would make farmers liable for fines up to $500 for failure to keep and furnish records as requested by the Secretary of Agriculture.

Nor can we overlook what these artificially high support-price levels would do to our foreign-trade policy of encouraging more and freer trade among nations. The world dollar shortage already has been cutting in on American exports. Flax, which has been obtained by our Government through price-support operations, is finding no market abroad right now. Other countries are able to get it at a cheaper price than this country is asking for it. And whenever we sell food or fiber such as this abroad at less than cost, we actually are subsidizing foreign consumers at the expense of American taxpayers, which means all of us.

Our tremendous export-market demand for wheat is not expected to continue, either. When wheat prices in this country are supported at around $1.90 a bushel and the world price is less, the only way we can expect to export wheat is to dump it abroad. In a dumping operation, the Government takes the loss between the prices here at home and the world market. Other countries don't like this and neither do we.

Brannan bases the need for his own particular plan on a comparison of income of farm and nonfarm people. He says the per capita, average, net farm income in this country last year amounted to $909. The average, per capita, net nonfarm income was $1,569. And the plan, of course, would work to bring them together.

But the average, net farm income for all farmers is far from a fair basis for comparison. The last United States census taken in 1944 reported more than 2,500,000, or more than 40 percent, of the Nation's 5,858,889 farmers were small or part-time farmers. (Anything more than 3 acres in the country is considered a farm.) Really not farmers at all, this group reported an average gross production of $544.

The same census reported more than 3,200,000 family-sized farms with an average, gross farm production of $3,966. In 1948, subscribers to Successful Farming had an average, gross farm income of around $10,000. Mr. Brannan's shotgun approach of $909 includes all kinds of farmers and people who live on acreages. It includes the very largest operators as well as hundreds of thousands of acreages that produce only a few dollars of food for market.

Isn't it apparent that real market prices for farm products are important to only about half of the people classified as farmers? The other half raises only about 10 percent of our total agricultural production, and they consume at home most of what they grow. In point of view of workers there are more consumers of agricultural products than there are producers. Actually they stand to lose more than they gain from high support prices through taxes and controls, as does everyone else. You see, this is a fine example of taxing ourselves in order to pay ourselves. And that's not good business.

So, in the end, we are beginning to realize more and more that real, permanent, long-range aid to farmers could better be brought about through greater stability in the general price level than through tinkering with

individual commodities. This calls for intelligent management of the public debt, of the tax, credit, and fiscal policies of our National Government.

Finally, it was only a few years ago that Joseph S. Davis, director of the Food Research Institute at Stanford University, Calif., asked the question: "What kind of an agriculture does America want?" His answer was then and would be now: "America wants an agriculture that earns its way, instead of being continually and increasingly dependent on Government props, vulnerable to political shifts, and forced to accept the accompanying regimentation. It wants an agriculture that, proud of its strength, competes in domestic and foreign markets on the basis of efficiency and fair play, independent of import restrictions and export subsidies. America wants well-tested programs continued and improved, and ill-starred and dangerous programs abandoned or replaced by better ones. America wants genuine, nonpolitical soil conservation, economically achieved. America wants redress of flagrant inequities, wherever they appear, but no truck with guaranties of equality for any individuals, groups, or occupations.

Acheson Speaks Unwisely

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the editorial which appeared in my own daily newspaper, the Racine Journal Times, at Racine, Wis., reflects my own views on Mr. Acheson's attitude toward Alger Hiss. I am including it at this point in the RECORD:

As an individual Dean Acheson had a perfect right to his own opinions on the conviction and sentencing of Alger Hiss. But because he is Secretary of State, and, as such, a shaper of American policy against the expansion of communism, his public defense of Hiss was unwise and unfortunate.

Acheson's remarks can only confuse the American people and foreign governments with whom he must deal. Hiss was convicted of perjury by an American jury after a fair trial. In effect, the decision meant that he was guilty of treason back in 1938, though he could not be tried on that charge because of the 3-year statute of limitations.

It is not appropriate for the head of the State Department to defend a man who committed the acts of a traitor while working in that same Department—a man who was branded by the Government prosecutor as an aide of spies for the Soviet Union and found by a jury to have been guilty of lying about it.

The Hiss case is being appealed and may be heard by the United States Supreme Court before it is finished. But it would have been much better if Secretary Acheson had refrained from comment as an official, instead of throwing suspicion and casting aspersions on the judicial system. He has placed himself in the untenable position of defending a perjurer duly convicted according to the law of the land.

This Nation today faces a problem of revising its foreign policy because of communistic expansion in the Far East. This policy must be worked out by the State Department in cooperation with the Senate. Secretary Acheson's remarks about the Hiss case certainly will not contribute toward the harmony and understanding in his relations with the Senators. Dissension and distrust already voiced in the upper House may imperil this Nation's foreign policy. If a Secretary of State does not have the confidence and respect of the Senate, he loses his usefulness to the Nation.

What Is Kansas?

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. MEYER. Mr. Speaker, on January 29, 1950, the great State of Kansas celebrated her eighty-ninth birthday. In the years following her admission to statehood she has in her high type of citizenry met and fulfilled the challenge of her proud motto—"Ad astra per aspera"—"To the stars through difficulties."

One of her devoted and loyal sons, Gordon P. Martin, a young newspaperman of Topeka, in commemoration of this birthday event, has painted a word picture that so beautifully portrays the true meaning and substance of Kansas. I feel it should have the widest dissemination possible. To that end, under leave to extend my remarks in the RECORD, I quote it herewith:

WHAT IS KANSAS?

You ask me: What is Kansas?

And I reply: Kansas is all things to her sons and daughters.

Kansas is the lilting call of the meadowlark wafted across a meadow where a rock-cradled creek beckons sheep to water; the shrill whistle of the bobwhite, a bird dog frozen on point, and the silence-shattering explosion of a shotgun.

Kansas is the smell of moist earth in springtime, the puffing labor of a farmer's tractor, and the cheery call of a driver to his willing horses.

Kansas is the redbud of the Elk River Valley, the rocky glens of Atchison, and the silent wildness of Scott County.

Kansas is the mass of wheat that rolls for miles like a golden ocean under the driving, growing rays of a summer sun, the sweat-soaked shirt of a harvest hand who pauses for a cooling drink from the water barrel.

Kansas is the frosty morning when frisky animals welcome the bite of the late October air, the swirl of snow which beats against windows while a family gathers 'round the hearth.

Kansas is appreciation for the public schoolhouse as the first great hope of a living democracy, the swelling roar of Rock Chalk Jayhawk K. U. booming down from Mount Oread.

Kansas is the stubborn belief in moderation and the reluctance to depart from innate conservatism, but having chosen new ways, seizes upon them with a zest to know the truth.

Kansas is the guts to fight drought and pestilence and all adversity with a will to win.

Kansas is the political fight that asks no quarter and gives none, the reason why the mayor of the town declares that on his main street are the most solid citizens of the Nation, the reason why the weatherman says his elements demand and breed a vigorous people.

Kansas is the return of the native who has wandered far and comes home with full heart to the earthly strength of his forebears.

You ask me: What is Kansas?

Why, Kansas is all these things, and more, as she goes onward, sometimes inching, sometimes marching, sometimes rushing, but moving, always moving, toward a greater dawn tomorrow.

GORDON P. MARTIN.

Future of Rehabilitation

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial appearing in the Washington Evening Star of December 26, 1949, under the title of "Future of Rehabilitation."

The editorial is timely, dealing as it does with a problem now under consideration by the Congress. That problem in my opinion is not that of a reorganization of the Office of Vocational Rehabilitation—OVR—for such an effort, unless thoroughly and advisedly considered, might well result in disorganization. And, as the editorial aptly says, neither is the problem that of whether the OVR shall be maintained in action. All persons everywhere who know of the accomplishments of this organization are agreed that its great work should not only be continued, but it should be expanded.

During the last fiscal year alone, 2,400 disabled persons were processed by this service in the District of Columbia. The work load of the agency in the District is steadily increasing, and it is extremely doubtful whether or not the agency can meet this increased work load without an increase in its appropriation. It is hoped that the Congress presently in session will give to this matter its sympathetic consideration.

The editorial referred to is as follows:

FUTURE OF REHABILITATION

When the Congress meets again in January, one of the problems which it will be asked to consider will be that of the expansion of the Office of Vocational Rehabilitation. This useful and helpful agency now is a part of the Federal security establishment. It serves handicapped men and women seeking to improve their opportunities to live normal lives through the exercise of their own capacities. Naturally, its major objective is to make these citizens self-supporting. There are economic reasons, social reasons, spiritual reasons why it is desirable that they should not be dependent upon others. They themselves want self-sufficiency. The OVR program from its inception in 1920 has operated in the direction of promoting wage-earning abilities. Its success has been noteworthy.

During the fiscal year 1949, 58,000 persons were rehabilitated. Seventy-four percent were unemployed at the time rehabilitation was started, 100 percent had jobs when it was completed. The wages paid to these people reached $94,000,000, or almost five times the previous earnings of the entire

UNIVERSITY OF MICHIGAN LIBRARIES

group. More than 400 disabled residents of the District of Columbia were included in the roster. The cost of the services rendered to them was $202,346, of which amount $177,346 came from the Federal Treasury, $25,000 from District funds.

In this connection, it should be remembered that the expense of vocational rehabilitation is not a continuing burden upon taxpayers. Once it is paid, the cost becomes merely a matter of history. What continues is the increasing economic worth, the improved wage- and salary-earning power of the beneficiaries. A blind man who is taught how to operate a vending stand has to be instructed during only a few weeks or months. Thereafter he is on his own—a productive worker. The same rule applies to handicapped fellow Americans who are taught the techniques necessary for employment in sheltered workshops and at home. Any investment of public funds which adds to their ability to earn a living yields abundant dividends in the form of taxes which they themselves soon are able to meet.

The gain in morale, of course, cannot be measured or computed. It goes beyond statistical tables and charts and is best appreciated when it is witnessed in process of development—as it easily may be in many neighborhoods. The problem which Congress must face is not that of whether the OVR shall be maintained in action. Rather, it is whether it shall be reorganized. Several proposals to that effect have been offered. Before Congress decides upon any revolutionary change, it should be demonstrated that it is desired and will be justified, not simply in political advantages but in larger benefits to the handicapped and the Nation as a whole. Change for the sake of change might disorganize the OVR in such fashion as to require years for the correction of the mistake.

Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. JAMES S. GOLDEN
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. GOLDEN. Mr. Speaker, we learned from members of the great Committee on Education and Labor that this committee has heretofore passed a resolution to go into executive session on tomorrow and stay in session from day to day endeavoring to agree upon, and report, a bill providing for Federal aid to our public schools.

I believe that this committee will work diligently and faithfully to accomplish this great purpose. There is no bill pending before the Congress from a domestic standpoint that will confer greater benefits upon the American people and go further in strengthening the moral, intellectual, and economic fiber of our Nation than this bill. No state or nation can rise above the intellectual and educational standards of its people.

Because of economic conditions prevailing in this great Nation of ours, educational opportunity for the children of the various States are not equally distributed. If we are to have one united nation with equal opportunity for all of its citizens, we must have Federal aid to our public schools. It has been heretofore demonstrated and it is a fact that many States of this great Nation do not have and cannot obtain sufficient economic strength within the borders of the States to properly and equally support their public schools. If we could elevate and equalize the educational opportunities of the youth of this entire Nation, it would bring into society many young men and young women able to earn more and contribute a much larger share to the economic welfare of the entire Nation.

Because of the lack of educational opportunities in many of the States, many thousands of physically fit young men were excluded from the draft during World War II and the extra burden thus caused was thrown onto the youth of the more-favored States that possessed a better primary and secondary education. This is a national problem from every viewpoint.

In my own good State of Kentucky a much greater effort has been and is being made by the citizens and taxpayers than the national average to provide our children with an adequate education. Our economic wealth and our yearly income are not sufficient without Federal aid to public schools to accomplish this.

Many other States of this great Nation are in the same situation that Kentucky finds itself in. There is a direct effect upon the wealthier States by permitting the youth of the poorer States to grow up in ignorance and without an adequate education. A very large percent of the young men and young women from Kentucky and many other States situated as she is migrate into other States where opportunities for work and employment are better. Most of them spend their adult life in and become citizens of other States.

Kentucky, like many other border and Southern and some Western States, has many more children to educate per thousand of the total population than the richer, more prosperous Northern and Eastern States. There are approximately 260 children of school age in Kentucky per thousand population as compared to approximately 200 children per thousand population on a national average. While our per capita income in Kentucky is less than $900 per year and less than $4,000 per school child, the national average income for the entire United States is much higher and in some of our great wealthy States there is an income in excess of $10,000 per school child, yet Kentucky spends a greater percent of her average income upon the education of her children than does the average State of the Union. This condition has prevailed for many years in Kentucky and in other less fortunate States. Although these things are true, it has been demonstrated throughout the history of this great Nation when some few of the Kentucky young men and young women do obtain proper training, equipment, and education the product is most satisfying and they have contributed a great deal to the leadership and welfare of this entire Nation and to many of her sister States by Kentuckians going to the very top in our national life and in the affairs of other States where native-born Kentuckians migrate and live in other States.

Our people have the native ability, the intellectual strength, and the moral fiber to become great contributors to the American way of life if they can obtain a fair and equal education. There is now a great shortage of qualified teachers in Kentucky. Other fields of endeavor that pay more have been a constant drain upon the teaching profession, yet many loyal qualified teachers have remained in the teaching profession at great personal sacrifice to themselves.

We should turn our attention as a Nation to the lost generation of youth that is growing up among us. Additional strains are being placed upon the education systems of many States because of the tremendous increase in the birth rate over the past several years. The condition, in the absence of Federal aid, is growing worse instead of better. We have lost, in the Eighty-first Congress, much valuable time. I believe this great committee that has jurisdiction over this vital subject is aware of their tremendous responsibilities. Every friend of the public schools of this Nation should unite together to encourage this committee to allow nothing to divert them from their determination to bring out a good bill to public education as soon as reasonably possible. Of course, we are all agreed that in such a bill there should be no Federal interference.

What the school systems of the various States of the Union need is Federal money to supplement the money raised by taxes on the local level. This great Nation of ours takes in taxes approximately $800,000,000 per year from the citizens of my great State. Yet, in contributions back to the State of Kentucky, our great Nation furnishes less than $150,000,000 per year.

Considering our great need, the good that can be accomplished to all the Nation, there is no reason why there should not be passed at the present session of this Congress a Federal-aid-to-public-schools bill that would furnish to the school teachers and children of Kentucky the small comparative sum of approximately $16,000,000.

This Nation has been generous with other nations throughout the world. I think it should be our first consideration to look after and improve the young people of America.

American Small Business, Constituting the Warp and Woof of Our Nation's Economy, Is the Very Keystone of Private Enterprise; 90 Percent of All RFC Loans Go to Such Small Business and Industrial Enterprises, Thereby Saving More Than 30 Small Concerns From Financial Disaster Every Working Day

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. BOYKIN. Mr. Speaker, who is there among us brash enough to say,

"Let us repeal the Federal Deposit Insurance Act, do away with the Coast Guard Service, abate all safety laws in these United States, take down the lightning rod from off the Washington Monument, or terminate the wonderful work being done by the Reconstruction Finance Corporation"?

Mr. Speaker, I have just received a letter from one of our leading, most representative, public-minded, and contemplative citizens in the State of Alabama. It was written with respect to and in appreciation of the wonderful work that is being carried on today by the Reconstruction Finance Corporation.

It is a short, terse communication. It puts down, ink on paper, the opinion held by millions of our citizens, businessmen, and labor leaders concerning the need not alone for continuing but for perpetuating the operation of the Reconstruction Finance Corporation.

Originally published in Forbes Magazine of Business under date of November 15, 1949, a copy was sent to me by my good and lifelong friend, Howard Scott. Mr. Scott is a member of the law firm of Scott & Porter in the town of Chatom, Washington County, Ala.

His letter reads in part as follows:

Now, Congressman FRANK, as you so well know, here in the Southland we are desperate in our need for credit. One of the reasons we have such low wages in the South is that we have to do much of all labor by hand, inasmuch as we do not have available capital with which to buy machinery. We need sound term credit. Our complaint, if we have any to make, is that RFC is too conservative.

I live, as you well know, in a small town and consequently my perspective is necessarily limited. The few bankers with whom I have been associated recognize only the salvage value of the security. They exclude entirely the going concern value of the business in question. This evidences an entire lack of confidence in the American spirit of business success and capital venture.

Were RFC to be eliminated, it would mean the immediate closing down of many small businesses here in the South, with the net effect of considerable additional unemployment. Some of the larger companies would gobble up the assets of the smaller ones for little or nothing. Particularly would this be true as applied to the lumber industry, inasmuch as 65 percent of the lumber manufactured in the South is by small concerns, many of which, though basically sound, cannot possibly get a loan from a bank. This is entirely due to the enactment of both Federal and State banking laws which narrowly limit available banking facilities.

In order to comply with the new 75-cent-minimum-wage law it is going to be necessary here in Washington County for the smaller mills to immediately get new, labor-saving equipment. I know personally of several concerns who simply cannot buy this much-needed equipment without the assistance of the RFC.

We certainly agree with your general philosophy that the Government should not engage in business activities, but if private business does not choose to, or for some reason beyond its control, cannot assume the privilege and duty of financing fundamentally and factually worth-while undertakings at reasonable rates * * * then it should not complain if the Government recognizes this absolute need for credit and does something about it.

Yours very sincerely,

SCOTT & PORTER,
HOWARD SCOTT.

CHATOM, ALA.

Mr. Speaker, I would have you believe with me that Mr. Scott expresses the sentiments held by the little-business men throughout the entire cotton-producing South inasmuch as our small-business enterprises have in general long depended upon the facilities of the congressionally established RFC to prosper them in their business activities.

Conceived during the dark days of the world-wide depression in 1932, the Reconstruction Finance Corporation has long since proved itself to be of inestimable value to all business—large or small—in the First District of Alabama.

Time, and time again, when the merchants, manufacturers, and agricultural processors in my district, due to restrictive banking laws, were not able to avail themselves of the credit facilities of local banking institutions, the facilities of the RFC saved their employees from unemployment and the borrowing business concern from receivership, if not from insolvency.

It is because of these facts that every citizen in every town and village throughout the land, be he employer or employee, has a vital stake in its continued existence. In the brief time I have allotted myself for this discussion I am not going even to attempt to trace back, through the 18 years that the RFC has been engaged in its beneficent work, the benefits that have accrued to small-business concerns that have availed themselves of the unique and peculiar credit facilities provided by this Congress to help them in times of financial difficulties. Any fiscal agency that merely accomplished this task would have done a good job. Certainly a financial agent of Government, the policies of which have proven so factually, economicaly, and financially sound as to do the job at no cost to the taxpayers or to the Federal Treasury, is deserving of recognition and merit. Charging but low interest rates on their loans, the RFC, because of the enormous volume of business done, actually made a profit of more than $573,000,000, of which $308,000,000 profit has been paid into the United States Treasury as a dividend on the investment made by the Government which holds the preferred stock of that Corporation.

In accordance with good business practices, ample reserve had been established and been provided even before that huge sum was covered into the Treasury of the United States.

Mr. Speaker, I will grant that at times it is seemingly difficult for business to negotiate a loan with the RFC and, moreover, that sometimes those who have made application become disheartened by the demands made upon them—income, expense, sales, and other statements—in order to obtain the credit.

That, Mr. Speaker, is because those historically charged with its operations and loan approvals have lived within both the letter and the spirit of laws as we here in Congress laid them down—and the further fact that its every function has been administered in accordance with the rules and practices—of good, sound fiscal policies established, ardently adhered to, in negotiation of its every last loan.

Mr. Speaker, this Congress placed the Reconstruction Finance Corporation on a peacetime basis beginning July 1, 1947. In the short 2½ years that have elapsed, the RFC as now constituted has already made a total of 10,770 loans, aggregating $1,022,000,000.

Of that sum $884,000,000 were advanced by the RFC while local banks participated to the extent of $138,000,000.

Mr. Speaker, now hear me well on this. In order to more fully inform my own mind with respect to the facts in the case, I took time to make inquiry as to just what number of the total loans approved had been made to small-business houses and came upon the following:

Out of the total of 10,770 loans, a total of 9,695, or more than 90 percent of all were loans of less than $100,000 and of that number 10,646 or 98.9 percent of all were under the $1,000,000 mark.

Thus it becomes clear that by far the greatest number of loans effected by RFC even in those last 2½ years were made to the small-business men whose enterprise constitutes the warp and the woof of a national economy fabric which reflects every shade of its colorful occupation design.

I seriously doubt if in the history of our Nation any department agency ever established in Government has made a more enviable record of public service than that which distinguishes the operations of the RFC and its subsidiary organizations.

A study of the high character of every man who has served on its board—or participated in the direction of its fiscal policies—from the time of its establishment is reflected in each succeeding financial report of its successful administration and operation.

Marked as have been the successes of his predecessors, this great governmental Corporation was never chaired by one more capable than by the good friend of every Member of this House, the Honorable Harley Hise, now Chairman of the Board of the Reconstruction Finance Corporation.

Mr. Speaker, there are very few public officials that have ever brought to their office the demonstrated resourcefulness, ability, skill, and tact that characterize the present chairman, Mr. Harley Hise.

When President Truman nominated Harley Hise to be the Chairman of the RFC, he knew he was no hereditary banker. He did know however that he was schooled in law and a highly skilled accountant. He knew that the honors and successes which are his were earned by him in the hard school of long experience and, I would have you know with me, that there is no type or phase of the banking business—as we know that great profession—in which Harley Hise has not acquitted himself with distinction.

He is well and thoroughly acquainted with the financial needs of agriculture, mining, industry, banking, long-term as well as short-term loans, home-owners loans, farm land banks, small homes and business properties, and construction loans.

These are but a few of the many, many banking experiences which enrich Harley Hise's abilities and make him one

of the most valued men holding public office in these United States today.

As it is with Harley Hise, so it is also with all members of the Board of Directors of the RFC. The membership of both Houses of Congress know these estimable gentlemen—Mr. Walter L. Dunham, Mr. Harvey J. Gunderson, Mr. Henry A. Mulligan, and Mr. William E. Willett. They know them to be men of exceedingly rare abilities, experience, and talents. Individually and collectively you will find no group of directors in the field of banking—possessed of superior qualifications—either in or out of government.

Not alone do I know of no other agency which has more carefully and successfully carried out the fiscal principles and policies declared by the Congress, but I know of no other agency that was called upon to engage in such a multiplicity of diverse activities carried on by its subsidiaries, in peace as well as in war. Its every congressionally imposed function has been discharged, not alone with dispatch, economy, and efficiency, but with great distinction and credit to the Reconstruction Finance Corporation.

The problem of quickly, economically, and efficiently expanding the tremendous armament, war plant, and production necessary to the successful conclusion of World War II is not alone a tribute to the work accomplished by RFC and its skilled personnel—but, the fact that the industries of this country were able by and with its fiscal aid, technical advices, and financial help—to reconvert to peacetime affairs from wartime activities constitutes a record of industrial banking by the RFC of which this Congress and Nation is justly proud.

Mr. Speaker, one frequently hears it said that "the Reconstruction Finance Corporation does not make small loans." That impression, however, is far from fact. Established in the dark days of 1932, one of the principal banking activities carried on by that organization has been the making of loans to small-business enterprises—despite the fact that only the few larger advances to banks, railroads, and huge industrial enterprises are the ones that always get the headlines in the press.

Mr. Speaker, there are those among us who are inclined to feel that the need for the activities which have engaged the Reconstruction Finance Corporation for the last 18 years no longer exists. To them I would say that the activities carried on by the RFC are in a manner more or less comparable to the lightning rod that protects the Washington Monument or all other great structures throughout these United States. The Washington Monument is capped by an apex of metal to which is welded a stout cable, the other end of the cable being buried deep in the wet bowels of the earth.

Thousands of lightning and electrical storms of greater or lesser magnitude assail that great structure, and have during its long life. Any single bolt was possessed of power enough to crack it asunder and cause it to come tumbling to the ground. But there, silently functioning, doing its work throughout every night and day of the year is the "lightning rod" to attract and absorb enormous currents that accumulate and dart through the heavens. These charges were absorbed. They were silently and imperceptibly conducted into the earth without any injury whatever to the great structure itself.

Every great electric-generating station in these United States, as well as the huge high lines, are likewise equipped with lightning rods or as they are sometimes called, lightning arrestors. Silently, they also keep the electrical energy continually flowing out of the generators over the wires into the mines, the mills, the factories, and the farms of our Nation, despite the great electrical surcharges of lightning which constantly assail them from the heavens. It is only when they fail to do their allotted work that we begin to appreciate the great service which they render in caring for our normal operations and normal life.

Mr. Speaker, as it is with the lightning rods that protect our monumental structures and the lines that power this Nation from the sources of nature, so it is with the Reconstruction Finance Corporation, an agency that protects the financial economy and stability of the Nation and, particularly its small business concerns when they find themselves confronted with financial problems, which although based upon sound credit, cannot be handled by local banking institutions and facilities. Moreover, the RFC, like the lightning rod does its allotted task, silently and without ballyhoo or fanfare.

Mr. Speaker, hear me well on this point. The great volume of the financial assistance handled by the RFC does not in any way mean that the loans which it has made have been granted indiscriminately. The fact is that more than 50 percent of the loans which are applied for are either withdrawn or declined.

Out of the years of experience in this highly specialized and technical field of credit, the RFC set up a group of expert analysts or examiners charged with determining whether an applicant should be given financial assistance. Often a business loan would prove a great disservice to a borrower. This would be particularly true where the examination discloses that despite the fact that a loan was granted to the business, for one of many reasons, it could not hope to succeed.

Conversely, there are thousands of instances where the applicant had figured his financial needs too closely and had not allowed himself sufficient capital for various requirements and aspects of his business. Here again the RFC is helpful and may, as is sometimes the case, recommend that the application be increased by an amount sufficient to provide the margin of safety that will definitely insure success of the venture and the consequent repayment of the loan.

But whatever the action on any application, it receives consideration only because the financial aid requested was not otherwise locally available and at reasonable rates.

Local banking facilities must participate in making the loans to the full measure of their legal and fiscal abilities.

The Congress recognized the importance of protecting the established lending institutions as the foundation of our national economic structure and has wisely made provision that only after a bank or other lending institution had determined that it could not make the loan could the businessman expect assistance from the RFC.

There are, as all well know, many, many reasons why a bank cannot or will not make a loan. Among them are statutory loan limitations enacted by both the Federal and State governments, the local requirements of a diversified portfolio and the type of loan requested. One of the most common problems arises from the fact that most banks today as never before desire to be liquid in order to meet any contingency. As a consequence thereof, there is little money available locally for loans running for more than 180 days. Whether the borrowers realize it or not, experience has long since proved that a loan for such a short time is of little or no value to most businesses.

Concomitant with the drying up of the main well springs of long-term credit is the distressing fact that the principal sources of venture capital are also being exhausted. It is in this field—the furnishing of venture capital and as a source of long-term loans—that the RFC can and is proving of inestimable value. So long as there is a lack of ready funds in either of these fiscal areas, there is a needful place in our national financial structure for an agency like the RFC in all of the foreseeable future.

Mr. Speaker, all of the foregoing is representative of the feeling of the business people of not alone my district in Alabama, but throughout the country. It is, indeed, fortunate in this connection that we have available in the RFC a highly qualified personnel whose years of experience is backed and complemented by an able Board of Directors, each of whom, after great study, was appointed by the President and confirmed by the Senate.

Three of the Board members have come up through the ranks of the Corporation they so well serve. They are, therefore, well acquainted through first-hand knowledge with its purposes, policies, and aims, past, present, and prospective. Their long experiences and day-by-day contact with the difficulties reflected in the thousands of cases that have come to their notice make them most sympathetic and understanding of the problems of the little fellow diligently trying to operate a small business so as to support himself and his family.

It is an incontrovertible fact that the economic stability of the country can best be fostered and maintained if the small fires of business adversity which dot our economic landscape are promptly extinguished. Unfortunately some, however, feel that the ends of our economy would be served if small business or the small flickering flames of private enterprise were allowed to burn themselves out of existence. They who belong to that school hold that the RFC should be called only to the five-alarm financial conflagrations, and to where a real and readily recognizable financial crisis already exists. The latter view, more often

UNIVERSITY OF MICHIGAN LIBRARIES

than not, means that we arrive with too little too late, padlocking the barn as it were when the horses are gone.

The question has been asked: Should the RFC concentrate on helping new enterprises or should it extend assistance only to old-established ventures? Here again the question cannot be answered categorically. Important as new activities might prove to our well-being, newness alone does not warrant financial assistance. The RFC extends aid to a business which has a reasonable possibility of being successful and of contributing to the national welfare. On the other hand, when an established business finding itself in financial straits makes application for a loan merely for that reason, it cannot be dismissed lightly. If this course of reasoning were to prevail and become the accepted policy, much valuable experience and know-how would be irretrievably lost. An old business, even though in financial distress, might well be essentially sound but harassed with easily corrected weaknesses and poor management, overproduction or lax collections could be readily relieved of its financial distress. In any event, whether the business be old or new, RFC has one steadfast policy: a policy of deciding each case individually and on its own merits.

Mr. Speaker, we have heard more or less furor over loans made for the national defense in World War II and which, under a law passed by the Congress, were not required to be as fully secured as reasonable to assure payment. The lack of understanding as to these transactions has given rise to a din which drowns the purring hum of the vast array of smooth-running machines in thousands of factories, which together with their operators would be idle but for RFC.

Mr. Speaker, and you, my colleagues, hear me now well on this.

When the Board of Directors of the RFC tells me that "the Kaiser-Frazer loans are well secured and will be repaid," that "they will insure a level of production which will insure a profitable operation," that "they will provide employment for thousands of workers," that "they will assist and encourage many small businesses and will increase production in a number of fields," who am I, in all fairness, to say that such is not the case?

None but one other with the same fund of factual information, knowledge, and experience as possessed by the Board could speak authoritatively on that subject. What we hear to the contrary is but one man's opinion. It is entitled to be given that much weight, not one grain more.

Whatever problems yet remain to be solved, it is a noteworthy fact that direct attempts are being made to meet issues squarely. One fact stands out above all others—that is that the RFC is the sole certain source of venture capital available to American small-business establishment, development, and the security of private enterprise today, without putting the United States Government itself into the management of business.

It is in the best American tradition and in accordance with the history of our democracy. It is essential to the future of that democracy that the trust and faith imposed in our public servants be truly warranted and zealously guarded to the end that we may work and walk together toward the goal of world leadership which is our destiny.

Mr. Speaker, on February 2 the great RFC celebrated its eighteenth birthday. I know I speak the sentiments of this House when I extend to that great financial organization the congratulations and best wishes from the people in general and small-business men of these United States in particular.

Mr. Speaker, it is only in part because of the foregoing that I want to see the RFC made a permanent institution in the forward and progressive march toward preserving private initiative in these United States.

Percentage Depletion Not Tax Loophole as Applied to Mining

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. BARING. Mr. Speaker, I must vigorously criticize any portion of the administration's viewpoint on taxes which calls percentage depletion a loophole in the tax laws.

One would think the mining industry was taking advantage of some slick technicality in the tax regulations, barely legal and certainly immoral. This is plain nonsense. The 15-percent depletion allowance was specifically granted the mining industry by law after long study by the Ways and Means Committee. It is a legitimate way for a mining enterprise to recover its capital, ore being a wasting asset. Mr. Chapman's industry advisory committee on mining has pointed this out clearly, calling not only for adequate depletion allowances but insisting further that such allowances should be made to the stockholder as well as to the corporation. In fact, the committee advises increases in allowances by a change increasing the present percentage of gross income and the limitation in reference to net income.

I wonder why the agencies have these industry advisory committees, spending good time in Washington several times a year and giving the benefit of their brains and experience free to the Government, if their recommendations are to be so blatantly ignored.

It is certain that all Members of the House who understand these matters will stand up valiantly against this new onslaught against the mining industry—an onslought calculated to sap away its very lifeblood. I have pointed out many times the disadvantages our domestic mining industry is laboring under. It is, outside of the very substantial operators, dying out. We need encouragement, not abuse. We need more aid, not less.

When the mining industry is taxed out of business, priced out of business by rising costs, and put out of business by low prices, an attack on such a fundamental point as percentage depletion may well be the blow which will render it impotent to supply our commercial needs, let alone those of war.

I, for one, will never rest until the foes of domestic mining within the administration—an administration of which I am in general an ardent supporter—are ejected from their high places or at least told bluntly by the Congress that they are wasting their time in these abominable attacks upon the industry most vital to our basic economy and security.

Court Picketing Should Be Outlawed

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans States:

COURT PICKETING SHOULD BE OUTLAWED

We understand that the bill outlawing picketing of Federal courts has not yet been placed upon the Senate Calendar.

It certainly should be.

And it ought to be enacted, as soon as possible.

It is a matter of record that this measure, which was conceived and drafted by Cuthbert Baldwin of New Orleans, passed the House of Representatives during the first session of the Eighty-first Congress by unanimous vote. It was introduced by Representative BOGGS.

Introduced by Senator ELLENDER in the upper Chamber, the bill was blocked by Senator LANGER of North Dakota when the Louisianian asked that it be brought up to a vote on unanimous consent.

One man and one man alone, Senator LANGER, defeated the measure last year.

Most Federal judges and most lawyers are for this bill. It was approved by the Judicial Conference of the United States and the American Bar Association. What it does is to prevent the picketing of Federal courts where a trial is in progress, and where picketing might tend to influence the judge, the jury, or officers of the court. The practice of court picketing is only a recent development; it has occurred at least twice on the west coast, but it reached its peak in the picketing of Judge Medina's court in New York during the trial of the 11 Communists.

Pictures printed at the time showed proponents of the defendants massed shoulder to shoulder on the sidewalk completely surrounding the front entrances of the Federal building. All bore signs, some very inflammatory.

What will be the ultimate of this sort of pressure to sway the path of justice?

What is to prevent these goons from picketing the homes of jurors? Or their places of business, or the schools of their children? Or their wives going to market?

Those who believe that this picketing ought to be allowed will point to the conviction of the Communists and say: "You see, no harm was done. Nobody was swayed by these tactics."

That is quite true.

But it is true only because Judge Medina was the sort of judge and man he proved to

be. He was patient, he wouldn't be badgered into a situation which might cause a mistrial or a reversal; and all of this was bound to become reflected in the jury's actions. But Judge Medina is a rather unusual man. There is no guaranty that just because the Red tactics failed to pay off in the picketing of his court that they won't pay off by influencing a jury trying a case before a hesitant or a hot-tempered jurist.

This picketing bill ought to become law. And it is up to the United States Senate to enact it. The House already has. The Senate shouldn't let Senator LANGER hold up this necessary legislation. Majority Leader Senator LUCAS ought to place it on the calendar.

Choosing a President

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an exceedingly interesting and enlightening letter in the Sunday New York Times by a distinguished Princeton professor of history and constitutional law, Dr. Edward S. Corwin, concerning reform of the electoral college system.

CHOOSING A PRESIDENT—SHORTCOMINGS SEEN IN PROPOSAL TO REFORM ELECTORAL SYSTEM

(The writer of the following letter is McCormick, professor of jurisprudence, emeritus, at Princeton University. He is at present an editor in the Legislative Reference Bureau of the Library of Congress, directing a project in international law.)

To the EDITOR OF THE NEW YORK TIMES:

Congress is at last seriously considering the Lodge-Gossett joint resolution to reform the present constitutional machinery for choosing a President. There are some commendable features to the proposal, but there are some which, in the opinion of this writer, might lead to undesirable results.

The word "elector" means one who has the power to elect; that is, one who exercises a choice. Save for two or three instances when their doing so made not the least difference in the world even to themselves, no presidential elector has ever exercised the smallest conceivable particle of independent judgment in the casting of his vote for a President of the United States.

In the first two elections George Washington was the universal choice of the American citizenry. Since that time electors have been party stooges taking their orders from the party higher-ups. The proposal to abolish the college, so-called, which is one feature of the pending joint resolution is, therefore, considered for itself alone, not open to serious criticism. By the same token, the adoption of this feature of the proposal would of itself make no practical difference.

PRESENT METHOD

Nor, on the other hand, is the effort to get rid of the present method for determining a presidential contest in which no candidate has received a majority in the electoral college open to important challenge. In that event the House of Representatives, voting by States, today chooses from among the three top contestants in the college.

For its negative features alone the Lodge-Gossett proposal—which, in the main, only repeats several previous ones—is not open to important adverse criticism. But how about its positive features? These are three in number: First, while the electoral college is abolished, each State remains an electoral unit; and, as such, is entitled to the same electoral vote as before in the choice of a President; secondly, this electoral vote is to be divided in each State among the political parties which are recognized by it, in proportion to their popular vote for President; thirdly, a plurality of electoral votes suffices to choose a President.

What the proposal does, therefore, is to apply the principle of proportional representation in the election of President; and this, it is objected, favors the rise of splinter parties, a tendency which the provision that a President may be chosen by a mere plurality of electoral votes will further encourage.

TENDENCY TO INSTABILITY

What is more, it is argued, once introduced into our system, the proportional representation principle may be adapted to the choice of Representatives, which could easily be done by requiring that Representatives be chosen, not by districts, as at present, but as they once were in some of the States, on State-wide tickets. And, the argument proceeds, splinter parties, being pressure-group parties, are inveterate foes both of political moderation and—since their tendency is to regroup—of political stability, lessons with which the annals of parliamentary government on the Continent of Europe are replete.

This argument certainly has some force. At the same time, it must be recollected that splinter parties are by no means beyond the realm of possibility under the present system, as was shown in the last election.

What, however, are the chief advantages that the sponsors of the Lodge-Gossett proposal urge for it? Aside from the fact that it would eliminate the participation of the House of Representatives in the choice of a President when no candidate has an electoral majority, there appear to be two. The first is that under the proposed amendment electoral strength would directly reflect popular strength, whereas under the present system the successful candidate in the electoral college may have been the choice of a minority of the voters.

The argument seems to me to have little weight. It is true that when a strong third party has appeared on the scene a majority in the electoral college has been backed by only a plurality of the voters. But this fact hardly constitutes an argument for the Lodge-Gossett proposal, which provides in terms for plurality Presidents.

EFFECT OF STATE-WIDE TICKETS

The other argument for the Lodge-Gossett proposal is weightier, although the fact that makes it so is probably an illegitimate feature of the present system. Owing to the now well-established practice of choosing presidential electors on State-wide tickets, the entire electoral vote of say New York may be swung for the Republican candidate by a few hundred votes, while the heavy Democratic vote in New York would count as nothing toward the choice of President.

One consequence of this is that in the so-called one-party States no effort is made by the other parties to educate the electorate in their various points of view, whereas under the Lodge-Gossett proposal there would be every inducement for minority parties in a State to roll up as big a vote as possible, since this would be converted automatically into electoral strength. But this desirable result could, it seems to me, be achieved, or at least approximated, much more simply, namely, by doing away with the State-wide ticket system and instituting in its place the choice of electors by districts, which—if we are to believe Madison—was the system the framers had in mind, and which was in fact employed in several of the States in early days.

CHOICE BY DISTRICTS

It is my own belief regarding reform of the electoral system, first, that, ridiculous as it is in some aspects, the electoral college, so-called, should be retained, but that its members should be chosen in districts, to be laid out by Congress every 10 years; secondly, that the requirement that the President receive a majority of electoral votes should be retained; thirdly, that when any candidate fails to receive such a majority, the House of Representatives should choose, as at present, except for the important change that it vote per capita and not per State.

A President thus chosen would come near at least to being the people's choice and, moreover, would probably be guaranteed at the outset of his term a House of the same political complexion as himself.

Presidential influence has become the most prominent, the most dominant, element of our constitutional system, and this fact of itself forbids the idea of our instituting a system of presidential election which might make plurality Presidents the rule rather than the exception. It also forbids the idea of supplanting geographical parties with pressure-group parties which a President can at any time wheel into action to do battle for his pet schemes provided he concedes them theirs. The proposal is careless of both these dangers.

EDWARD S. CORWIN.

PRINCETON, N. J., *January 31, 1950.*

Honor for Dr. Montgomery

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of February 3, 1950:

HONOR FOR DR. MONTGOMERY

The House of Representatives honored itself when it made the Reverend Dr. James Shera Montgomery its Chaplain Emeritus at the regular salary of the position. He came to the service of the lower branch of Congress in 1921 and has grown old in his ministry to it. Eighty-seven now, he merits as much rest as he may desire. But the House very properly does not wish to let him go in the sense of parting with him definitely, finally, and altogether. It has told him in effect to stay around. And the whole community of Washington is glad to hear of its decision.

Dr. Montgomery arrived here in 1911 to be pastor of Metropolitan Memorial Church. Later he preached at Calvary. Then he returned to Metropolitan. The summons to the chaplaincy of the House resulted from popular response to his work as a missionary. He was known as a gifted pulpit orator whom ordinary people could understand—and did. A keen sense of humor was one of the qualities for which he was appreciated. He still loves a joke even when it happens to be at his own expense.

But Dr. Montgomery is serious enough where his vocation is concerned. No man of his time has cared more deeply for religion as such. He has been a Bible Christian, striving to accomplish the great spiritual objectives of the Gospels in a world rife with confusion and turmoil. If the prospect of achievement generally has been bleak, he has been undiscouraged. A friend who

knows him well and values him devotedly says of him that he personifies fellowship and the capacity of the human soul to press on to an ideal goal. When the House rose in tribute to him, it gave expression to its realization of the worth of the example he has set.

Dr. Montgomery's successor, the Reverend Dr. Bernard Braskamp, of Gunton-Temple Church, will carry on the chaplain's duties in the same spirit.

Cut in Tax Leeway for Oil Wildcatters Seen as Death Blow

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. BARRETT of Wyoming. Mr. Speaker, under leave to extend my remarks, I include in the appendix of the RECORD a statement by Col. C. H. Reimerth, on the question of the reduction of depletion allowances presently in force for oil and gas operators, as published in the Casper Tribune, of Casper, Wyo., on January 30 last. Casper is the center of the oil and gas industry in the Rocky Mountain area. Colonel Reimerth is an authority on the matter, and I am sure that his statement will be of great interest to Members of Congress.

The Secretary of the Treasury appeared before the Ways and Means Committee on Friday last and appeared again before the committee today. The Secretary proposes to make two cuts in the depletion deduction presently allowed to oil and gas operators. In the first instance, the Secretary proposes to reduce the depletion allowance from 27½ percent to 15 percent and, secondly, he proposes legislation requiring the deduction of intangibles from the gross income and then applying the depletion exemption of 15 percent to the balance.

There is no question, Mr. Speaker, that thousands of small independent oil operators throughout the country will be forced out of business if this legislation is enacted.

It is very unfortunate that the Ways and Means Committee has determined to hear oil and gas representatives on Tuesday, February 7, and I have requested the distinguished chairman of that committee to give these small operators of my State at least 2 weeks to prepare their case and present it to the committee. The following statement of Colonel Reimerth is ample proof of the devastating effect of this proposed legislation on a vital industry of my State:

CUT IN TAX LEEWAY FOR OIL WILDCATTERS SEEN AS DEATH BLOW

"Reduction or removal of depletion allowances for the oil industry will spell the death of wildcatting for new oil fields in Wyoming and the Rocky Mountain Region," Col. C. H. Reimerth, prominent Casper income-tax expert, told the Tribune-Herald today.

He referred to President Truman's recent reference to excessive depletion exemptions now enjoyed by the oil and mining interests.

Loss or whittling down of this 27½-percent exemption from payment of income taxes, which was set up to compensate for the hazards of wildcat drilling, will dry up most of the risk capital coming into Wyoming for drilling, exploration, and other costs, the accountant declared.

RISKS TOO GREAT

"No sensible person will invest money in a wildcat promotion in the belief that it is a safe or conservative investment," Mr. Reimerth said. "It takes venture or speculative capital to do this and the reward must be commensurate with the risk involved. This depletion allowance is, and has been, the inducement for all of this venture capital which has brought outside money into the search for new oil fields in Wyoming. It has also brought all of these small, independent operators, drilling contractors, supply houses, and thousands of technical and field workers into the State."

He went on to say that the allowance has also made it possible for landowners to realize returns on previously undeveloped lands, through oil royalties, and has brought millions of dollars to the people of the State through additional royalties for schools, the universities, and roads.

"Without the depletion allowance," he asserted, "the hazards of wildcatting would be so great that only the major companies could survive and even they would have to curtail any wildcatting and limit themselves to known and proven structures. That's a conjecture but I believe a very reasonable one, for the reason of the high cost of labor and materials in operating even producing fields.

NOT SELF-SUFFICIENT

"If it were President Truman's idea to curtail new oil-field discoveries for some reason of his own, the elimination or reduction of the depletion allowance will surely accomplish this purpose. It is not any military secret that this country is not self-sufficient in oil reserves in the event of war and now in peace it resolves on us as a Nation to develop to the maximum degree all of our potential oil reserves."

Mr. Reimerth pointed out that Canada, with a higher tax structure than the United States, gives oil operators a depletion allowance of 30 percent to develop large new oil reserves in Alberta.

Removal of the exemption, coupled with heavy foreign imports of oil, would cripple independent producers in this country, Mr. Reimerth added. Many would be forced out of business.

The accountant recommended that the President, in seeking additional tax revenues, turn his attention to the recommendations of the Hoover committee for reorganization of the Government. So far, he said, only 20 percent of the Hoover committee's recommendation has been adopted. Enactment of the other 80 percent will save more than $1,000,000,000, he declared.

The speaker urged all civic groups and individuals in the State to contact Wyoming's Senators and Representatives protesting any change in the income-tax laws which would alter the present depletion provisions.

Needed Reform of Our Electoral System

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I wish to insert an exceedingly valuable contribution to the debate about proposed changes in the method of electing Presidents. It is by a distinguished Princeton scholar, Lucius Wilmerding, Jr. It will well repay the reading by Members of the House and others vitally interested in this question. It follows:

NEEDED REFORM OF OUR ELECTORAL SYSTEM

FOREWORD

One of the most important reforms is in the method of electing a President and Vice President of the United States. Section 1 of article II of the Federal Constitution provides that—

"Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress."

In all of the States today the method of choosing electors is by general ticket. It is also the practice for the electoral vote of a State to be cast as a unit. As a result, even though the plurality for a Presidential candidate in a State should be only one, that State's entire electoral vote would be cast for that candidate. In the case of the State of New York this would mean 47 votes, which is about 10 percent of the total of 531 votes in the electoral college. The harmful results of such a system are obvious.

Two methods of remedying this defect are proposed in resolutions now pending in Congress. The first is a system of proportional voting contained in a joint resolution introduced in the Senate by Senator LODGE and in the House by Representative GOSSETT. The second is contained in a joint resolution (H. J. Res. 192) introduced in the House by Representative COUDERT, providing for the election of each Presidential elector in the same manner as his counterpart Member of the Congress. With the exception of a few Congressmen elected at large, the Representatives are elected by districts.

Lucius Wilmerding, Jr., has written an excellent article on this subject under the title "Reform of the Electoral System," which has been published in the March 1949 issue of the Political Science Quarterly.

In this article Mr. Wilmerding argues very convincingly that the district system of election is to be preferred to both the system of proportional voting prescribed by the Lodge-Gossett amendment and the present system of election by general ticket.

In his article he says:

"I would suggest that the system of proportional voting be dropped from the Lodge amendment and the district system substituted. This, I repeat, is the mode which was mostly, if not exclusively, in view when the Constitution was framed and adopted. It is also the mode which was advocated after some experience with the Constitution by Hamilton, Jefferson, Madison, Gallatin, James A. Bayard, J. Q. Adams, Van Buren, Benton, Webster, Story, and many others."

ROBERT B. DRESSER.

PROVIDENCE, R. I., *June 2, 1949.*

REFORM OF THE ELECTORAL SYSTEM

INTRODUCTION

It is my purpose in this article to examine those features of our electoral system which have been singled out for reform in the amendment to the Constitution recently proposed by Senator LODGE and now under public debate.[1] I must begin, however, by pointing out and commenting upon two things which the Lodge amendment does not do, but in respect of which there has been much popular misconception.

In the first place the Lodge amendment does not provide for a direct election of the President of the United States by the people at large. The intermediate electors are

[1] 81st Cong., 1st sess., S. J. Res. 2 (Jan. 5, 1949).

UNIVERSITY OF MICHIGAN LIBRARIES

abolished, but the electoral vote is retained. This means that it would still be possible for a candidate receiving a minority of the popular vote to receive a majority of the electoral vote. Take two States each having 24 electoral votes, and assume that 4,000,000 popular votes are cast in one, 2,400,000 in the other. In State A the Republican receives three-fourths of the popular vote, the Democrat one-fourth; in State B the Republican receives one-eighth, the Democrat seven-eighths. The popular vote in the two States together is 3,300,000 for the Republican, 3,100,000 for the Democrat. But under the Lodge amendment—which provides for prorating the electoral votes of each State between the candidates in proportion to their popular votes therein—the Democrat is credited with 27 electoral votes to the Republican's 21. The proportional voting system may therefore reflect the Nation-wide popular vote even less accurately than the currently used general ticket—winner-take-all—system, under which in the given case the two candidates would be credited with 24 electoral votes apiece.

In the second place the Lodge amendment does not get rid of the present unequal weighting of the electoral vote in favor of the small States. Each State will continue to have the number of electoral votes to which its population entitles it, plus 2. Vermont, entitled to 1 vote, will still have 3; New York, entitled to 45 votes, will still have 47. This means that, other things being equal, a voter in Vermont will still have the weight of almost 3 voters in New York.

These facts being understood, it may be asked why Senator LODGE's amendment should not be criticized on the ground that it does not sweep away the whole system of electoral voting and substitute a system of Nation-wide popular voting. The answer is complex but will probably satisfy most minds.

To begin with, a good case can be made for the proposition that each equal mass of persons (comprising voters and nonvoters alike) is entitled to an equal voice in the choice of a President. If the qualifications requisite for voting are higher in one mass than in another;[2] if, in order to express their disapproval of their party's policy, the voters in one mass stay away from the polls while those in another cast their ballots for opposition candidates; if local issues vary the proportions of the electorate voting in different masses; if stormy weather keeps more voters at home in rural areas than in urban areas—none of these is a valid reason for reducing the weight of the masses casting the fewer votes. The electoral vote may reflect the will of the people—of all the people not merely of the active voters—more correctly than the popular vote.

This argument, it is true, does not go to prove the propriety of allowing masses in small States a greater weight than equal masses in large States; and I, for one, regard it as a constitutional solecism that one mass in Delaware should count for as much as three in New York. It is frequently asserted, indeed, that the two extra votes allotted to each State are given to it on the Federal principle and reflect the equality of the States as corporate entities. But the alleged equality is a figment of the legal imagination, invented to justify what was in its origin a mere act of force. When the Thirteen States first associated themselves in the Continental Congress, each was given a single vote. The arrangement was intended to be temporary, however. As was pointed out by Benjamin Franklin in the Federal Convention, the method of voting by States "was submitted to originally by Congress, under a conviction of its impropriety, inequality, and injustice. This appears in the words of their resolution. It is of September 6, 1774. The words are: '*Resolved*, That in determining questions in this Congress each colony or province shall have one vote: the Congress not being possessed of or at present able to procure materials for ascertaining the importance of each colony.' "[3]

That force, not principle, was the controlling factor in the allotment of two Senators and two additional electors to each State will be plain to anyone who will bother to read the debates.

Hamilton said:

"The truth is it is a contest for power, not for liberty. Will the men composing the small States be less free than those composing the larger? The State of Delaware, having 40,000 souls, will lose power, if she has [in the Senate] one-tenth only of the votes allotted to Pennsylvania, having 400,000; but will the people of Delaware be less free, if each citizen has an equal vote with each citizen of Pennsylvania?[4]

Paterson, of New Jersey, speaking for the small States, admitted the charge:

"It was observed (by Mr. Wilson) that the larger State gave up the point (in the Continental Congress), not because it was right, but because the circumstances of the moment urged the concession. Be it so. Are they for that reason at liberty to take it back? Can the donor resume his gift without the consent of the donee?"[5]

The retention in the Lodge amendment of the unequal weighting of the electoral vote in favor of the small States cannot therefore be justified on grounds of justice. The reason for retaining it is expediency: no proposition could at the present time pass the Senate which would deprive the small States of their privileged position.

This same consideration, it is plain, also makes it useless to propose any scheme for electing the President by direct Nation-wide popular vote; for the continuance of the small States' privilege depends on the continuance of an electoral voting system. Senator LODGE is entirely right when he says that "to eliminate the credit given for Senators (that is, the two extra electoral votes), or to eliminate any electoral allotment to e ch State, would destroy any possibility at all of electoral reform."[6]

So much for what the Lodge amendment does not do. Its positive proposals may be arranged under three heads. If adopted it would (1) require the electoral votes of each State to be divided between the several candidates for President in proportion to the popular votes cast for each within the State; (2) discontinue the use of intermediate electors; (3) discontinue the umpirage of the House of Representatives in all cases where no candidate has received a majority of the whole number of electoral votes, leaving a plurality sufficient to elect. Mutatis mutandis, it would do the same things in respect of the Vice President.

THE MODE OF VOTING

Let us begin with a bit of history. The Constitution of the United States provides that each State shall appoint, in such manner as the legislature thereof may direct, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; these electors are to meet in their respective States and vote for President and Vice President; and so on. In the early elections no uniform mode of appointing electors was followed. The three most usual modes were: (1) election by the legislatures; (2) election by the people in districts; (3) election by the people on a general ticket. Of these only the third is at present practiced. According to Madison the district mode—which "was mostly, if not exclusively, in view when the Constitution was framed and adopted"—was "exchanged for the general ticket and the legislative election, as the only expedient for baffling the policy of the particular States which had set the example."[7] The legislative election—under attack from the beginning as violating the spirit and perhaps the letter of the Constitution—gave way to the general ticket in Jackson's time.

That the general ticket is an improper mode of election is not to be denied. Its evils were never better set out than by Senator Benton in 1824:

"The general ticket system, now existing in 10 States was the offspring of policy, and not of any disposition to give fair play to the will of the people. It was adopted by the leading men of those States, to enable them to consolidate the vote of the State. * * * It contributes to give power and consequence to the leaders who manage the elections, but it is a departure from the intention of the Constitution; violates the rights of minorities, and is attended with many other evils. The intention of the Constitution is violated, because it was the intention of that instrument, to give to each mass of persons, entitled to one elector, the power of giving that electoral vote to any candidate they preferred. The rights of minorities are violated, because a majority of one will carry the vote of the whole State. * * * In New York 36 electors are chosen; 19 is a majority, and the candidate receiving this majority is fairly entitled to count 19 votes; but he counts, in reality, 36; because the minority of 17 are added to the majority. These 17 votes belong to 17 masses of people, of 40,000 souls each, in all 680,000 people, whose votes are seized upon, taken away and presented to whom the majority pleases. * * * To lose their votes, is the fate of all minorities, and it is their duty to submit; but this is not a case of votes lost, but of votes taken away, added to those of the majority, and given to a person to whom the minority is opposed."[8]

Jefferson, it is true, may be quoted to the countrary. Defending in 1800 the action of Virginia in exchanging the district system for the general ticket, he declared that it was

[2] On July 25, 1787, in the Federal Convention, Madison, arguing that a choice of the President by the people, or rather by the qualified part of them, was the best mode of appointment that could be devised, noticed the difficulty which arose from the disproportion of qualified voters in the Northern and Southern States, and the disadvantages which this mode would throw on the latter. In replying to this objection he remarked, "(1) that this disproportion would be continually decreasing under the influence of the republican laws introduced in the Southern States, and the more rapid increase of their population; (2) that local considerations must give way to the general interest. As an individual from the Southern States he was willing to make the sacrifice." Max Farrand, editor, Records of the Federal Convention, II, 111. The acceptance of electoral voting made the sacrifice unnecessary.

[3] Farrand, I, 200 (Franklin). For the remarks of Wilson, Gerry, Gouverneur Morris and Madison condemning the equal vote of unequal States as improper and founded on coercion, see ibid., I, 166, 467, 522; II, 8.

[4] Ibid., I, 466.

[5] Farrand, I, 250.

[6] See his letter of January 12, 1949, in the New York Times of January 18. In a letter to the author dated November 4, 1948, Senator LODGE indicated that he was personally in favor of a direct popular election of the President and Vice President, but he knew that such proposals had never made any headway in the past and he thought that they would make no headway in the future.

[7] Madison to Hay, August 23, 1823. Gaillard Hunt, editor, The Writings of James Madison (New York and London, 1910), IX, 151–152.

[8] 41 Annals of Congress, 169–170.

"merely a question whether we will divide the United States into 16 or 137 districts." [9] The reasoning is, however, fallacious. It would be valid only if the States were roughly equal in population and had each an equal number of electoral votes. Besides, as Jefferson himself knew, the number of districts is much more than a mere question. Madison, writing in 1823, pointed out:

"The States when voting for President by general tickets or by their legislatures, are a string of beads; when they make their elections by districts, some of these differing in sentiment from others, and sympathizing with that of districts in other States, they are so knit together as to break the force of those geographical and other noxious parties which might render the repulsive too strong for the cohesive tendencies within the political system." [10]

Senator LODGE proposes to get rid of the evils of the general ticket by a mode which has often been advocated before: proportional voting, that is to say, the division of each State's electoral votes between the candidates in proportion to their popular votes. In 1912, for example, New York's 45 electoral votes, instead of all going to Wilson, would have been cast (to the nearest whole number) 19 for Wilson, 13 for Taft, 11 for Roosevelt, and 2 for Debs.

At first blush this might seem an eminently fair arrangement, and indeed there are probably few today who would not sympathize with the complaint of the Federalist minority of Virginia when the legislature of that State changed in 1800 from the district mode to the general ticket: "We are apt to fancy ourselves called, as citizens of the United States, to vote for the highest officers of the Government. But the late assembly has separated us from our fellow citizens of the Union, and compels us to speak the voice of Virginia only." [11] Second thoughts, however, may lead us to believe that, though the object of the Lodge amendment is sound, its method is faulty.

I would point out, to begin with, that the principle upon which this amendment would divide a State's votes is the same as that which underlies the system of proportional representation—PR as it is briefly called. Carried to its logical extreme it would require the creation of a plural executive (as recommended by Benjamin Franklin and others in the Federal Convention) in order that the several parties might share in it in proportion to their numbers. The reasoning is simple. If it is unfair for a candidate who has received 54 percent of the Nation-wide popular vote to receive 84 percent of the Nation-wide electoral vote, why is it not even more unfair for him to receive 100 percent of the prize?

It is, to be sure, unlikely that the adoption of the Lodge amendment would actually lead to the creation of a plural Executive. There is more danger that it might give countenance to a move for some form of proportional representation in our legislative bodies, National, State, and local. If the electoral vote of a State should be divided between the several parties in the same proportions as its popular vote, why not its representation in Congress also? Why should the votes of minorities in geographical constituencies be lost instead of combined with the votes of like minorities in other districts to make up mathematical constituencies or quotas? The answer I think is this: If a legislative body is to work, its mass must be men of moderate sentiments; for, without compromise between like-minded men of unlike parties, nothing but violent legislation would result. A Member whose constituency is geographic must almost perforce be a moderate man; he must have regard for the opinions of the minorities within his district or risk defeat at the next election. But a Member whose constituency is mathematical—all Democrats, all Republicans, all antivivisectionists or what have you—must almost necessarily be immoderate; he must be wholly subservient to the wishes of his party managers, or of the splinter ism which elects him, or risk being replaced at the next constituency making by someone who is.[12]

The connection between electoral voting and representation in Congress is very close. The electoral body has often been likened to Congress in joint convention.[13] Senator Baldwin, of Georgia, who had been a member of the Federal Convention, once remarked that the electors were a constitutional branch of the Government as respectable as Congress, and in whom the Constitution in the business of electing a President, had more confidence than in Congress.[14] Many of the early amendments, proposing the establishment of a uniform mode of appointing electors by the people in districts, suggested the same mode for choosing representatives. Many of the plans introduced in the 1870's, similar in principle to Senator LODGE's, but continuing the electors, would have worked equally well for Representatives; Senator LODGE's own plan could be adapted to Representatives by giving the odd congressional seats remaining after each party's integral quota had been filled to the parties having the largest fractions.

I submit, therefore, that the danger to be apprehended from the adoption of proportional voting for the Presidency is real. It ought not to be ignored merely because the mode of choosing representatives is not dealt with in the amendment. We must remember the remark with which Senator Hillhouse, in 1808, introduced the set of constitutional amendments which some have supposed were meant as the framework for a new confederacy: "All (partial amendments) are aimed at particular detached parts; which, without examining or regarding the bearing on other parts, like partial alterations in a curious complicated machine, may, instead of benefiting, destroy its utility." [15]

What then should be done? I would suggest that the system of proportional voting be dropped from the Lodge amendment and the district system substituted. This, I repeat, is the mode which "was mostly, if not exclusively, in view when the Constitution was framed and adopted." It is also the mode which was advocated after some experience with the Constitution by Hamilton, Jefferson, Madison, Gallatin, James A. Bayard, J. Q. Adams, Van Buren, Benton, Webster, Story, and many others. Senator Benton explained it very well in 1824:

"It would divide every State into districts, equal to the whole number of votes to be given, and the people of each district would be governed by its own majority, and not by a majority existing in some remote part of the State. This would be agreeable to the rights of individuals: for, in entering into society, and submitting to be bound by the decision of the majority, each individual retained the right of voting for himself wherever it was practicable, and of being governed by a majority of the vicinage, and not by majorities brought from remote sections to overwhelm him with their accumulated numbers. It would be agreeable to the interests of all parts of the States; for each State may have different interests in different parts; one part may be agricultural, another manufacturing, another commercial; and it would be unjust that the strongest should govern, or that two should combine and sacrifice the third. The district system would be agreeable to the intention of our present Constitution, which, in giving to each elector a separate vote, instead of giving to each State a consolidated vote, composed of all its electoral suffrages, clearly intended that each mass of persons entitled to one elector, should have the right of giving one vote, according to their own sense of their own interest." [16]

All the objects of the Lodge amendment would be attained equally well by the district system as by the proportional voting system. It is correct to say with Senator Dickerson, author of what used to be called the New Jersey plan of districting, that "upon a calculation of chances, the probabilities of a fair expression of the public will are increased by dividing the States into districts, and in the ratio of the number of districts to the number of States." [17] But the district system is preferable to proportional voting because it maintains the geographical constituencies and gives an equal voice to equal units of population rather than to equal aggregations of actual voters.

The significance of this last consideration in the distribution of a State's electoral votes should not be overlooked. Under the district system each group of, say, 300,000 persons residing in contiguous territory would be entitled to cast one electoral vote, and it would cast this vote regardless of how many of its citizens actually went to the polls. Under the proportional voting system the weight of these equal groups would vary with the turnout. Bad weather, for instance, might give the urban communities a fortuitous advantage over rural communities, as it does today under the general ticket system. Or an unusual interest in some local issue might lead to a community's exercising a disproportionate influence in the choice of a President. In fact, all the arguments which I have brought together in my introduction to justify the principle of electoral voting as against Nation-wide popular voting apply with equal force to the system of voting within a State—excepting only that which is based on the disproportion of the qualifications requisite for voting.

The manner of dividing a State into districts should present no special difficulties. Most of the early district system amendments provided for the establishment of as many districts in each State as that State was entitled to electors—the qualifications requisite for voting to be the same as those prescribed for congressional elections. The mode is inconvenient only insofar as it prevents the States from using the congressional district as the unit of voting. It might be better, therefore, if each State were divided by the legislature thereof into as many districts as will equal the number of representatives to which such State may be entitled in Congress. This would enable though it would not compel a State to use its congressional districts as its voting units. The two extra electoral votes to which each State is entitled under the Constitution might be given as a sort of game-winning bonus to the candidate carrying the State as

[9] Jefferson to Monroe, January 12, 1800, P. L. Ford, editor, The Works of Thomas Jefferson (New York and London, 1905), IX, 90–91. Jefferson's point was that it would be better for all the States to use the general ticket than for some to use it and others the district system: "All agree that an election by districts would be best, if it could be general; but while 10 States choose either by their legislatures or by a general ticket, it is folly and worse than folly for the other 6 not to do it."

[10] Madison to Hay, August 23, 1823.

[11] Daily Advertiser, June 6, 1800. Quoted from C. A. O'Neil, The American Electoral System (New York and London, 1887), p. 75—an invaluable work.

[12] The fallacies of PR are ably set forth in Bagehot's English Constitution, ch. vi.

[13] E. g., 33 Annals, 142.

[14] 10 Annals, 30 (1800).

[16] 41 Annals, 169.

[17] 33 Annals, 142.

a whole, or the State might be divided into two superdistricts, each to cast one vote. In this connection I would point out that in Michigan in 1892 the election was by the people in districts, with the exception of two electors, one of whom was chosen by the eastern, the other by the western part of the State. Such an arrangement has the advantage of bringing into a clear view the principle of equal masses, equal votes. It also exhibits the compromise in the electoral system between the popular and Federal principles.

One objection to the district system ought not to pass unnoticed. It is possible, indeed probable, that in districting a State for presidential elections the legislature thereof might resort to the iniquitous practice of gerrymandering.

"What is to become," asked Edward Everett in 1826, "of the minorities on the district system? I could here tell the gentleman something about that arrangement in my own State, to which he alluded by a name—which, out of respect to a venerable patriot and statesman of the Revolution, now no more, and who had nothing to do with the transaction, I shall not repeat. At a time when the parties in the State were nearly balanced, there was a small majority on the Federal side; 51,000, perhaps, on one side, and 49,000 on the other. In that state of public feeling, by virtue of a system of districts, consisting of adjacent territory, and the same amount of population (for in all these details, I believe the division was perfectly fair). It was so contrived that the minority chose 29 State senators, and the majority chose 11; and more votes were given for these 11 than were given for the 29. This is, indeed, an effectual protection afforded by the district system to the minority."[18]

The solution would be, in the first place, to provide in the Constitution that the districts should be compact and contiguous territories containing, as nearly as practicable, equal numbers of inhabitants—language which appears in the act of 1911 prescribing a single-member district system for Representatives. In the second place, it would be to entrust to Congress the same power to make and alter the State regulations regarding presidential elections that it now has in respect to the election of Representatives.

Every argument advanced by Hamilton in Nos. 59, 60, and 61 of the Federalist to justify the power of Congress to regulate the election of Members applies with equal force to the appointment of electors or, in the event of their abolition, to the casting of electoral votes. The same may be said of the arguments of Madison in the Federal Convention:

"The policy of referring the appointment of the House of Representatives to the people and not to the legislatures of the States, supposes that the result will be somewhat influenced by the mode. This view of the question seems to decide that the legislatures of the State ought not to have the uncontrolled right of regulating the times, places, and manner of holding elections. These were words of great latitude. It was impossible to foresee all the abuses that might be made of the discretionary power. Whether the electors (that is, the voters) should vote by ballot or viva voce; should assemble at this place or that place; should be divided into districts or all meet at one place; should all vote for all the Representatives; or all in a district vote for a number allotted to the district; these and many other points would depend on the legislatures, and might materially affect the appointments. Whenever the State legislatures had a favorite measure to carry, they would take care so to mold their regulations as to favor the candidates they wished to succeed. * * * It seemed as improper in principle—though it might be less inconvenient in practice—to give the State legislatures this great authority over the election of Representatives of the people in the General Legislature, as it would be to give to the latter a like power over the election of their representatives in the State legislature." [19]

Against this it ought to be said that Congress has not been very successful in preventing the gerrymandering of congressional districts and would probably be no more successful in respect of electoral districts. Perhaps so. But the evil would be less. Congressional gerrymandering affects measures; presidential gerrymandering could affect but a single individual. At the very worst it could result in the choice of a man who was considered by the second largest group of persons in the country as the best fitted for the office. And even here it might have a countervailing merit. If the electoral districts were gerrymandered on the same plan as the congressional districts (as they probably would be), the result of the election would be to produce a President in political sympathy with the majority of the House of Representatives.

I would conclude, therefore, that, on a relative view of the merits and demerits of the district system and the proportional-voting system, respectively, the palm must be awarded to the former. The district system is clearly to be preferred to the present general-ticket system. Of the proportional-voting system we must speak more doubtfully.

THE INTERMEDIATE ELECTORS

The idea of abolishing the intermediate electors and committing the choice of the President and Vice President to the people voting in districts, in States, or in the United States at large, is an old one. First advanced in the shape of a constitutional amendment by Senator Benton, of Missouri, in 1823,[20] it had long been hinted at. In 1801 Jefferson wrote to Gallatin of an "amendment which I know will be proposed, to wit, to have no electors, but let the people vote directly, and the ticket which has the plurality of the votes of any State to be considered as receiving the whole vote of the State." [21] And in 1803 Representative Holland declared that he would "have preferred an immediate suffrage to this indirect mode of electing by electors." [22]

The argument which is usually brought forward to support the proposal is very plausible, if not altogether sound. I give it in the words of the report of a select committee of the Senate made January 19, 1826:

"It was the intention of the Constitution that these electors should be an independent body of men, chosen by the people from among themselves, on account of their superior discernment, virtue, and information; and that this select body should be left to make the election according to their own will, without the slightest control from the body of the people. That this intention has failed of its object in every election, is a fact of such universal notoriety, that no one can dispute it. * * * Electors, therefore, have not answered the design of their institution. They are not the independent body and superior characters which they were intended to be. They are not left to the exercise of their own judgment; on the contrary, they give their vote, or bind themselves to give it, according to the will of their constituents. They have degenerated into mere agents in a case which requires no agency, and where the agent is useless if he is faithful, and dangerous if he is not. Instead of being chosen for their noble qualities set forth in the Federalist, candidates for electors are now most usually selected for their devotion to a party, their popular manners, and a supposed talent at electioneering, which the framers of the Constitution would have been ashamed to possess." [23]

There are some things about this argument which call for comment. While it is doubtless true that the character of the electors has sunk from the standard of perfection visualized by the framers of the Constitution, it is very doubtful that these electors were ever intended to act a part wholly independent of the people. The electoral system was not the invention of that part of the Federal Convention which distrusted the people [24] but of that part which trusted them. First proposed by James Wilson, it seems to have been regarded by him as an equivalent to an election by the people.[25] In the debates it was advocated not so much as a means of correcting the judgment of the people (and never as a means of ignoring or superseding it) but as a device for getting over the difficulties of disproportionate voting qualifications and Negro representation.[26] And when it was finally adopted, Madison had no hesitancy in saying that "the President is now to be elected by the people." [27]

However this may be, it cannot be denied that the electors at the present time exercise much less discretion than was originally expected of them. The founding fathers regarded the electors as analogous to representatives. Hamilton called them "a special body of representatives, deputed by the society for the single purpose of making the important choice." [28] Abraham Baldwin, as we have

[21] Jefferson to Gallatin, September 18, 1801. Such an amendment would have fixed the general ticket system on the States. The Norris amendment of 1934, as finally voted on by the Senate, was of the same type.

[22] 13 Annals, 735.

[23] 2 Register of Debates, Appendix, p. 121. Nowadays, in States using the Australian (or short) ballot, the names of the candidates for electors are not printed, so that the people have no idea for what agents they are voting.

[24] When George Mason declared "that it would be as unnatural to refer the choice of a proper character for chief magistrate to the people, as it would to refer a trial of colors to a blind man," he spoke for the minority.

[25] Wilson's plan, seldom or never correctly explained in secondary works, was to divide the United States as a whole into a certain number of districts, each to consist of one or more States, and each to elect a certain number of persons who, meeting as a single body, would choose the Executive. This plan, submitted June 2, 1787, was an elaboration of his proposal of the preceding day that the Executive be chosen by the people at large. Nowadays, to be sure, an election by the people at large means a direct vote by Nation-wide referendum, but it was not necessarily so in the eighteenth century. Madison, in the Virginia convention, declared that under the scheme actually adopted the President would be "the choice of the people at large" (Elliott's Debates, III, 487). And in the First Congress he spoke of the President as being "appointed at present by the suffrages of 3,000,000 people" (1 Annals, 461).

[26] "There was one difficulty, however, of a serious nature attending an immediate choice by the people. The right of suffrage was much more diffusive in the Northern than the Southern States; and the latter could have no influence in the election on the score of the Negroes. The substitution of electors obviated this difficulty" (Madison, July '9, 1787; Farrand, II, 57).

[27] Farrand, II, 587.

[28] Federalist, No. 68.

already seen, referred to them as a constitutional branch of the government "as respectable as Congress and in whom the Constitution on this business has more confidence than in Congress." [29] And representatives were regarded by the founding fathers, not as State ambassadors to be "the mere agents and advocates of State interests and views," but as "the impartial umpires and guardians of justice and general good." [30] "We stand not here," said Thomas Sedgwick in the First Congress, "as the representatives of the State legislatures * * * but as the representatives of the great body of the people." [31] Nothing of this idea remains today as regards the electors. An elector is viewed as an automaton, a mere organ for conveying the wishes of his constituents to the electoral college. A notable proof of this fact was given in 1876 when James Russell Lowell, being asked to cast his vote for Tilden in order to prevent the success of a gigantic electoral swindle, replied that he was a mere delegate of his constituents, a trustee to carry out definite instructions, and that to refuse to comply with his mandate would be "treacherous, dishonorable, and immoral." To the founding fathers it is the countenancing of a fraud that would have seemed "treacherous, dishonorable, and immoral."

In the light of these considerations the proposal to abolish the intermediate electors is a reform which must appear very reasonable. If the electors are automata, merely registering the will of their constituents, why not ascertain that will directly? The case is not so simple, however. Madison, first consulted on this subject in 1823, later made a very pertinent remark:

"One advantage of electors is, that altho' generally the mere mouths of their constituents, they may be intentionally left sometimes to their own judgment, guided by further information that may be acquired by them: and finally, what is of material importance, they will be able, when ascertaining, which may not be till a late hour, that the first choice of their constituents is utterly hopeless, to substitute in the electoral vote the name known to be their second choice." [32]

There have been cases where exactly this course has been followed. In 1824, for example, the electors of North Carolina were pledged both to Jackson and Adams with the understanding that they would vote for the one who had the best chance of success.[33] And as recently as 1912 the Roosevelt ticket of electors declared before election that, if Theodore Roosevelt could not be elected and it should become a contest between Taft and Wilson, they would vote for Taft.[34]

Under the present arrangements this advantage of electors may be thought a small one. The operation of the general-ticket system has been such as invariably to give some candidate a majority of the electoral vote. No combination of minority parties could affect the result. But if the general ticket were to be broken up—either by the district system or by proportional voting—occasions might frequently arise when a majority opposition to a plurality candidate might make itself felt. On such occasions the advantage mentioned by Madison would be very considerable.

A second advantage of electors is that they act as a connecting link between the Presidency and Vice Presidency. Being pledged to support the candidates of their parties for both offices, it can seldom happen that the popular election will result in the choice of a President of one party and a Vice President of another. It is conceivable, however, that in a close election under the Lodge amendment a popular Vice Presidential candidate of a minority party might succeed where his principal failed. The twelfth amendment to the Constitution, it will be remembered, was adopted precisely to prevent such a result.

Against these advantages there are, to be sure, disadvantages. Perhaps the most serious is this. The use of intermediate electors limits the choice of voters in each State to those candidates who have electoral tickets, and, more particularly, to those candidates whose electoral tickets appear on the printed ballots. In 1856, for example, it proved impossible for the voters in most of the Southern States to cast a single vote for Fremont and Dayton. In 1912 a Californian could vote for Taft and his unnamed colleague [35] only by writing in the names of 13 electors. In 1948 the Alabama voters were precluded from voting for Truman and Barkley.

It would appear then that the desirability of abolishing the intermediate electors is not quite so self-evident as it seemed at first glance. What should be done depends mainly on what changes are made in other parts of the electoral system. Principally, as we shall see in the next section, it depends on whether or not some proper mode is introduced of taking the sense of the Nation in cases where no candidate for President or Vice President has obtained a majority of the electoral vote. With such a mode most of the advantages of electors would disappear. Without it, the case might be different.

THE UMPIRAGE OF CONGRESS

The twelfth amendment to the Constitution provides that the person having the greatest number of electoral votes shall be the President, if such number be a majority of the whole number of electors appointed; but if no person have such majority, then the Houes of Representatives, voting by States and not by heads, shall immediately, by ballot, elect the President from the persons having the highest numbers not exceeding three on the list of those voted for as President.[36] A majority of all the States is necessary to a choice. The same rule controls the election of the Vice President, except that the Senate, voting by heads, makes the choice from the two highest numbers on the list, a majority of the whole number of Senators being necessary to a choice.

The impropriety of this mode of determining the eventual choice of the Executive has long been noticed. Jefferson, writing to George Hay in 1823, had no hesitation in saying that he had "ever considered the constitutional mode of election ultimately by the legislature voting by States as the most dangerous blot in our Constitution, and one which some unlucky chance will someday hit and give us a pope and antipope." [37] Madison was of the same opinion:

"The present rule of voting for President by the House of Representatives is so great a departure from the republican principle of numerical equality, and even from the Federal rule which qualifies the numerical by a State equality, and is so pregnant also with a mischievous tendency in practice, that an amendment of the Constitution on this point is justly called for by all its considerate and best friends." [38]

Senator LODGE has proposed precisely such an amendment. He would provide simply that the person having the greater number of electoral votes for President shall be President. In the event of a tie (an impossible case under the decimal system of computing the electoral vote [39] but quite possible if the electors were to be continued), then the one for whom the greatest number of popular votes was cast shall be President. A similar rule would control the election of the Vice President.

High authority can be quoted for the idea of making a plurality sufficient to elect. James Wilson, perhaps the leading member of the Federal Convention, when the subject was under debate, once declared that the concurrence of a majority of people is not a necessary principle of election, nor required as such in any of our States.[40] Mason and Williamson preferred making the highest though not having a majority of the votes, President, to a reference of the matter to the Senate.[41] Madison and Williamson moved to strike out the word "majority" and insert "one-third" so that the eventual power might not be exercised if so many as one-third of the electors should vote for the same person.[42]

High authority and strong arguments, however, can likewise be brought forward to sustain a different view. The members of the Federal Convention as a body decided that a majority vote would be necessary for the choice of a President both in the first election by electors and in the contingent election by the House of Representatives. The Eighth Congress and the States, in passing the twelfth amendment, extended the majority principal to the case of the Vice

---

[29] Annals, 30. On the other hand, the Supreme Court in *Fitzgerald* v. *Green* (134 U. S. 379 (1890)) has said that "Presidential electors, although they are appointed and act under and pursuant to the Constitution, are no more officers or agents of the United States than are the members of State legislatures when acting as electors of Federal Senators, or the people of the States when acting as electors of Representatives in Congress." The founding fathers would have denied the analogy; for they likened the electoral body to the persons chosen (Senators and Representatives) rather than to the persons choosing them (State legislatures and the people).

[30] Farrand, I, 428.

[31] I Annals, 743.

[32] Madison to Robert Taylor, January 30, 1826.

[33] C. O. Paullin, Atlas of Historical Geography of the United States (Washington and New York, 1932), p. 96.

[34] Ibid., p. 103.

[35] The Republican candidate for Vice President died before election day. It was not until after the election that the Republican National Committee determined that the Republican electors should vote for Nicholas Murray Butler.

[36] The quoted language is very obscure. "I will venture to say that three-fourths of the people who shall read it, will think it is intended to confine the election to three persons; and yet, I understand, it is the intention of the Senate only to confine it to three classes. * * * The three highest numbers may refer to 40 persons, if they should be equal." (Representative Griswold, December 7, 1803; 13 Annals, 677, 678.) It has also been suggested that the words "not exceeding three" imply that the House might, if it chose, confine the election to the persons having the two highest numbers on the list or to the persons tied with the highest number. (Representative Baldwin, December 7, 1803; ibid., p. 679.)

[37] Jefferson to Hay, August 17, 1823. Works, XII, 303.

[38] Madison to Hay, August 23, 1823. Similar sentiments may be found in the debates of Congress on the twelfth amendment, notably in the remarks of Senator Taylor, of Virginia (John Taylor, of Caroline).

[39] In prorating the electoral vote of each State the calculations are to be carried to three decimal places, "unless a more detailed calculation would change the result of the election." The probability of two candidates receiving an equal vote to an infinite number of decimal places is virtually nil.

[40] July 17, 1787.

[41] September 5, 1787.

President.[43] Madison, commenting in 1823 on a proposal identical with that of Senator LODGE, remarked:

"The mode which you seem to approve, of making a plurality of electoral votes a definitive appointment would have the merit of avoiding the legislative agency in appointing the Executive; but might it not, by multiplying hopes and chances, stimulate intrigue and exertion, as well as incur too great a risk of success to a very inferior candidate? Next to the propriety of having a President the real choice of a majority of his constituents, it is desirable that he should inspire respect and acquiescence by qualifications not suffering too much by comparison." [44]

It is worth observing that these arguments would gain in force by the introduction of a system of proportional voting and the abolition of the intermediate electors; for the former would tend to multiply the number of candidates and the latter would make impossible the subsequent reduction of that number by the device of electors voting their constituents' second choices. It might happen that the leading candidate might have a very small proportion indeed of the popular or electoral vote. He might even be totally obnoxious to a great majority of the Nation. As Madison stated to Henry Lee:

"In what degree a plurality of votes is evidence of the will of the majority of voters, must depend on circumstances more easily estimated in a given case than susceptible of general definition. The greater the number of candidates among whom the votes are divided, the more uncertain must, of course, be the inference from the plurality with respect to the majority." [45]

This consideration alone may be thought sufficient to decide the issue. We must also take into account, however, the certainty that it will not be debated solely on its merits. The present mode of voting in the contingent election is advantageous to the small States. The present mode of appointing electors is advantageous to the large States. The abolition or modification of the one may therefore be regarded as a political equivalent for the abolition or modification of the other. The connection has long been noticed. As early as 1826 Representative McDuffe declared that "the small States will never consent to give up their eventual equality in voting for the President, in this House, unless the large States will consent to break their power of concentration and combination" in the initial electoral voting.[46]

If then, we accept the desirability, or even the political necessity, of retaining some mechanism of taking the final sense of the majority of the Nation, we may briefly review the modes which might reasonably be adopted.

A mode first recommended by Representative McDuffie in 1826 deserves consideration: "In case the primary vote of the electoral colleges shall fail to decide the election, I propose that the two highest candidates, respectively, shall be referred back to the people, voting directly for the President and Vice President by districts." [47] Such a scheme could be operated without the intervention of electors at all, and the obstacles to it, being chiefly temporal, could easily be overcome.

An amendment introduced by Senator Van Buren in 1823 proposed that, in like circumstances, the electors should meet again and choose the President from the two persons receiving the highest number of votes at the first election.[48] Such a scheme would transfer the umpirage of elections from the Congress to the electoral college. In view of the present character of electors, it has not perhaps much to commend it.

Assuming that the umpirage is retained by Congress, the most proper mode of deciding presidential contests is that which Representative Tucker is said to have suggested in 1819—that in electing a President the House of Representatives should vote by heads and not by States.[49] The overriding advantage of this mode is that the President and House of Representatives would surely be of the same political sympathies. It would, however, utterly deprive the small States of the over-representation to which they have become accustomed in the choice of a President.

Perhaps then the mode which has the best chance of success is that which was voted by the Federal Convention when it contemplated allowing the national legislature to choose the President in the first instance—an election by joint ballot of the two Houses, each Member to have one vote. Such an arrangement would preserve to the small States the advantage which they now have in the electoral college but would deprive them of any additional advantage.

As regards the Vice President, we need only say that his appointment should depend on the same body that appoints the President. Under the present system, the House might choose a President of one party and the Senate a Vice President of another.

One point remains: From how many persons should the eventual selection be made? In effect, the question is between 3 and 2, for none, I suppose, will wish to restore the number, 5, prescribed in the original Constitution, or advocate 7 or 13, as did Sherman, Spaight, and Rutledge in the Federal Convention. Here again Madison has supplied the answer:

"It might be a question, whether the three instead of the two highest names might not be put within the choice of Congress, inasmuch as it not unfrequently happens, that the candidate third on the list of votes would in a question with either of the two first outvote him, and consequently be the real preference of the voters. But this advantage of opening a wider door and better chance to merit may be outweighed by an increased difficulty in obtaining a prompt and quiet decision by Congress with three candidates before them, supported by three parties, no one of them making a majority of the whole." [50]

Whether any provision should be made for the case where there is an equality of votes among several highest on the list is a moot question. The original Constitution made none, and John Taylor, of Caroline, thought that none was necessary.[51] Others have thought otherwise.

LUCIUS WILMERDING, Jr.

PRINCETON, N. J.

[43] The Constitution, as originally adopted, never notices a vote for Vice President, and no vote was in fact given for such an office. Each elector wrote the names of two persons on a piece of paper called a ballot: these were his alternative choices for President; either of them might become President. The Vice President was, in effect, the runner-up in the Presidential contest. He might or might not be the choice of a majority of the electors, depending on whether his vote was or was not in excess of one-fourth of the electoral vote.

Restoration of Citizenship

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to comment upon the passage by the House of H. R. 6616, a bill which restores citizenship to persons who, while citizens of the United States lost their citizenship solely by having voted in a political election in Italy after October 13, 1943, and before January 1, 1949.

I am truly delighted that the House took this action.

As you may recall, during the months immediately preceding the Italian election of April 18, 1948, I did everything in my power to assist those millions of Italians who were attempting to resist the godless tide of Communist oppression. It was my privilege to speak on short wave to Italy on a number of occasions. My wife also gave much of her time to this effort. All right thinking Americans recognized that the Italian election of 1948 was of tremendous consequence to the people of the United States. If Italy had succumbed to the Communist tyranny at that time the national security of the United States would have been vitally impaired.

Several thousand American citizens, including many from Connecticut, native born and naturalized, in Italy on either business or travel, cast their votes in the Italian elections thereby losing their American citizenship. All were urged to participate in the elections by friends in the United States and by various authorities. Many cast their votes because of their conviction that by so doing they were acting in the common interest of all freedom-loving peoples. The pressure on these American citizens in Italy to vote was very great indeed. That they did so is a credit to them. Yet by so doing they have lost their citizenship.

In an effort to remedy this situation, I introduced H. R. 6777, which is similar to H. R. 6616, the bill which passed the House.

I did so in order to unite American families which have been cruelly separated by virtue of their participation in this historic election.

I did so in an effort to reward those who understood the grim necessities of the hour and who acted to preserve all that we hold dear.

The letter killeth and the spirit giveth life.

This favorable action on this legislation by the House of Representatives corresponds with the relentless realities of the world in which we live. It is in the true spirit of the heritage and culture

which in such large measure is shared by the American and Italian people.

I believe that just as the United States and Italy have many common traditions so shall we partake of a common destiny.

It is my hope that the Senate will soon consider and pass this bill, thereby enabling these expatriated Americans to return to their homes in America and rejoin their families here.

Formosa Folly

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William Henry Chamberlin from the New Leader of January 21, 1950. I do not agree with Mr. Chamberlin's suggestion that the United States should establish American bases on Formosa—such action would be neither wise nor necessary. But it is of vital importance to our security that we give effective assistance to those defending the island in order to deny it to the Communists and the Kremlin—our avowed enemies:

FORMOSA FOLLY

(By William Henry Chamberlin)

The decision to take no action calculated to keep the island of Formosa out of the hands of the Chinese Communists is the biggest political, moral, and strategic blunder the American Government has committed since the days when appeasement of Soviet communism dominated our foreign policy. Everything about this decision was wrong: the substance, the manner and the timing.

The opinion of the military experts, of whom General MacArthur was the most prominent, that Formosa is essential to America security in the Far East was brushed aside. There was no sounding of Congressional opinion through consultation with the Senate and House Committees on Foreign Relations. A heavy blow was struck at the basis of bipartisan foreign policy.

Senator VANDENBERG, who has always taken a national, not a party view in this field, and who has come under the heavy fire of some of his fellow-Republicans for that reason, was fully justified in the measured criticism which he offered:

"Like Yalta and Potsdam, and many other unhappy chapters in China policy, Congressional advice is precluded. I regret that these conclusions precede the factual reports which have been anticipated from the Jessup mission and particularly from the Far East conference between our Chiefs of Staff and General MacArthur."

This last point was certainly worth emphasizing. The President gave the abandonship signal in regard to Formosa without waiting for the results of the military conference between the Joint Chiefs of Staff and General MacArthur.

What serious reason was there for this haste to announce a decision certainly calculated to excite joy in Moscow and in every Communist satellite capital in the world? Secretary Acheson's lame explanation is that "there was a good deal of confusion in the minds of our people." But this confusion was rather intensified by a curious statement emanating from Mr. Jessup in Tokyo. He asserted that we do not intend to abandon China (could it be that the China of Mao Tse-tung has abandoned us?) and that the United States opposes Communist practices of overthrowing governments by subversion.

But at the very moment Mr. Jessup was announcing this opposition, Truman and Acheson were declaring a policy which can only help the Communists to consolidate their grip on China and to extend that grip to Formosa.

These two issues, China and Formosa, should be kept strictly separate. It would probably be beyond our power, and would certainly be an unwarranted commitment of American military strength to try to reconquer China for Chiang Kai-shek.

Formosa, on the other hand, as an island a hundred miles off the China coast, could easily be held with a very moderate display of American naval and air power. Suggestions that this would mean war, even a third world war, are ridiculous. How could the Chinese Reds capture Formosa when they have neither a navy nor an air force worthy of the name? Far from promoting war, the establishment on Formosa of American naval and air bases would be the surest means of preventing the extension of war to the island. It would be an obvious, practical, and bloodless means of containing communism in Asia.

But, so the apologists for the administration's do-nothing policy argue, this would be imperialism and violation of the supposed right of China to rule Formosa. However, this right, from any moral standpoint, is nonexistent. The decision of Roosevelt and Churchill at Cairo to hand over Formosa to China was one of the many blunders of the war and was a cruel injustice to the 6,000,000 inhabitants of the island.

* * * * *

An independent Formosa, secured by American naval and air power, bolstered in its formative period by American technical advice and economic aid, would be the best solution of the problem posed by this rich and beautiful island. Economically there are natural links between Japan, with its surplus manufactures, and Formosa, with its surplus of sugar, rice and citrus fruits, all of which find a ready market in Japan.

From the strategic standpoint, it is an act of grave irresponsibility to let Formosa pass in to the hands of a hostile power. And Communist China must be considered a hostile power until there has been a drastic change in its policies and methods. A submarine base in Formosa could endanger all our communications with Japan. An air base could be a constant threat to the Philippines. From the southernmost promontory of Formosa one can see the northernmost islands of the Philippine archipelago.

The Chinese Communists, of course, have neither airplanes nor submarines at the present time. But there is nothing in their record to suggest that, once they are in possession of the island, they would refuse a fraternal offer from Moscow to build such bases—and stock them with the necessary weapons.

The passive abandonment of Formosa to Mao Tse-tung's dictatorship is defended on the ground that Mao is a potential Tito. But Titoism is something that must first be proved by deeds. If and when Mao breaks with Moscow, there will be other means of rewarding and supporting him, without handing over to his rule an island which there are the strongest political, economic and strategic reasons for keeping outside the Asiatic iron curtain.

Secretary of State Acheson

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. FURCOLO. Mr. Speaker, the Nation is entitled to a detailed statement by Dean Acheson making crystal clear that he recognizes all the ramifications of the dual capacity in which he says he finds himself by virtue of his position a Secretary of State.

His right to some private life as an individual has not been questioned. But he also has certain duties and obligations as an official of the Government.

As an individual, Dean Acheson may be granted the right to choose his personal friends. However, as Secretary of State, he has no personal choice of either friends or enemies—the United States selects those for him and he must abide by that selection.

Probably not many people would object if Acheson said that—as far as his private life as an individual is concerned—he would not "turn his back" on any friend. That, for example, if his friend's children had no food, clothing, or shelter, he would help them as one friend helps another. But—and Acheson should make this emphatic—that as Secretary of State he cannot regard Alger Hiss as a loyal citizen unless and until Hiss is able to satisfy the people of the Nation that he—Hiss—is a loyal citizen of this country. That must be established to the satisfaction of the people of the Nation, not simply to the satisfaction of Dean Acheson.

Whether we accept the best or the worst that can be said of Hiss at the present time, we arrive at the same conclusion. At worst, he is a traitor who has betrayed his country; at best, his loyalty to this Nation is in grave doubt. By either viewpoint, Secretary of State Acheson must not now regard Hiss as a loyal citizen.

I have been told that the above is exactly the position of Acheson. If so, Acheson should make that clear to the country.

General Romulo Honored

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. STEFAN. Mr. Speaker, a distinguished gathering of military and civilian personnel participated in an unusual ceremony on January 31 at 9:30 a. m. in room 3E912, Pentagon Building, Washington, D. C. The occasion was the presentation of the Legion of Merit (degree

of commander) to His Excellency Carlos P. Romulo, president of the General Assembly, United Nations. General Romulo, who served in this body as a resident commissioner from the Philippine Islands, is known to most Members of this House. I feel that it is fitting that the statement in connection with this ceremony and the citation itself be made a part of the official CONGRESSIONAL RECORD, and by leave granted me by the Speaker, I include it herewith as part of my remarks:

GEN. CARLOS P. ROMULO AWARDED LEGION OF MERIT

Gen. Carlos P. Romulo, President of the General Assembly, United Nations, today received the Legion of Merit (Degree of Commander) from Secretary of Defense Louis Johnson, who made the presentation on behalf of President Truman.

General Romulo was discharged yesterday from Walter Reed General Hospital, where he had been under treatment for a throat ailment.

The award to General Romulo was accompanied by a citation that it was made because of his exceptionally meritorious military services to the United States during World War II.

Called to active duty as a major in the Philippine Army Reserve in 1941, General Romulo became press aide to Gen. Douglas MacArthur. In 1942 he served on Bataan and Corregidor and from January to April 1942 operated the Voice of Freedom.

General Romulo continued to serve as General MacArthur's aide in Australia after the general ordered him out of Bataan in April 1942.

In September 1944, while serving as Resident Commissioner in Washington, D. C., he was appointed brigadier general. He was chairman of the Philippine delegation to the San Francisco Conference on International Organization in 1945.

General Romulo was appointed chairman of the Philippine delegation to UNRRA in 1946, and later became permanent delegate from the Philippines to the United Nations and to the United Nations General Assembly.

Born in Manila January 14, 1899, General Romulo received a bachelor of arts degree at the University of the Philippines, a master of arts degree at Columbia University, and doctor of laws (honoris causa) at Notre Dame University. He has been a newspaper editor, publisher, and a professor of English. Articles which he wrote while on a tour of the Orient addressing Rotary Clubs won for him the Pulitzer prize.

The Legion of Merit citation follows:

"Brigadier General Romulo, Philippine Armed Forces (Reserve), formerly Philippine Army, performed exceptionally meritorious services to the United States as an officer on the staffs of the commanding general, United States Army Forces in the Far East, and of the commanding general, United States forces in the Philippines from December 12, 1941, until April 12, 1942. As press aide to the respective commanding generals of the United States Army Forces in the Far East from early December 1941 until he was ordered to escape from Bataan on April 12, 1942, Brigadier General Romulo (then lieutenant colonel) was in charge of the Public Relations Section for the United States forces in the Philippines. He was responsible for radio broadcasts, censorship of news, propaganda material, and all matters dealing with the press. He displayed remarkable skill and unusual judgment in all matters connected with those responsibilities. His daily articles, which were broadcast over the local radio station on the Voice of Freedom programs, contributed immensely to the maintenance of a high state of morale among all of the troops in the Philippine Islands. His work was so outstandingly thorough and his judgment so unfailingly sound that the commanding general frequently consulted him on matters pertaining to the Philippine Army. His work in all branches connected with his office contributed greatly to the defense of the Philippines."

Facts and Figures on Lobbying Activities

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. BUCHANAN. Mr. Speaker, as chairman of the House Select Committee on Lobbying Activities, I would like to call the attention of Members of Congress to the section of the CONGRESSIONAL RECORD of Tuesday, January 31, devoted to reports filed under the Federal Regulation of Lobbying Act of 1946.

This section, which runs to about 47 pages of fine print in the RECORD, contains 870 quarterly reports on Form C filed by active registered lobbyists for the fourth quarter of 1949. Also included in Tuesday's RECORD were 68 new registration statements on Form B received by the Clerk of the House and the Secretary of the Senate in the preceding 3 months, up to and including January 20 of this year.

As the Members know, Mr. Speaker, the registrations on Form B are in the nature merely of notices of intent to engage in lobbying activities "for pay or for any other consideration," while the quarterly reports, on the other hand, on Form C, are the periodic disclosures of income and expenditures, and so forth, of those who have previously registered and who acknowledged engaging during the particular calendar quarter in actual lobbying activities or in activities which might be regarded as constituting lobbying.

A TOTAL OF 2,074 REGISTERED LOBBYISTS

As of January 20, when the list of registrations contained in Tuesday's RECORD was made up, a total of 2,045 persons, mostly individuals, but including also law firms, public-relations firms, corporations, and some pressure-group organizations, had registered since the act went into effect in 1946, complying with section 308, which requires that—

Any person who shall engage himself for pay or for any other consideration for the purpose of attempting to influence the passage or defeat of any legislation by the Congress of the United States shall, before doing anything in furtherance of such object, register with the Clerk of the House of Representatives and the Secretary of the Senate and shall give to those officers in writing and under oath, his name and business address, the name and address of the person by whom he is employed, and in whose interest he appears or works, the duration of such employment, how much he is paid and is to receive, by whom he is paid or is to be paid, how much he is to be paid for expenses, and what expenses are to be included.

The number of such persons who had registered stood at 1,999 as of December 31, 1949, but went over the 2,000 mark on January 2. By January 20, when the current list of 68 new registrations appearing in the RECORD of January 31 was sent to the printers, the number stood at 2,045. I checked this morning, and the number is now 2,074.

NO MACHINERY FOR WITHDRAWAL

These figures by themselves are a little misleading, for the simple reason that some registrants have registered two, three or even more different times for separate accounts or employer interests. Some have died, others have retired or changed jobs or are otherwise no longer subject to the act. A few of these have withdrawn their registrations, but there is no official machinery provided for that purpose and so they are still carried in the total number of registrants.

Our committee staff is now in the process of cataloging these various registrations for the purpose of arriving at more definitive figures.

In any event, however, it is obvious that less than half of the approximately 2,000 registrants now on the books have acknowledged engaging in actual lobbying activities, or in activities which might be regarded as coming within the scope of the act, during the calendar quarter recently ended, since the RECORD of January 31, as I said, contains only 870 quarterly reports, and some of those are multiple reports from the same registrants for the same employer interests but covering different calendar quarters. And, of course, the multiple purpose registrants who represent a number of different interests filed separate quarterly reports for each. Those who did not file for this past quarter presumably were not active as lobbyists during that period.

Nevertheless the reports contained in the RECORD of January 31 reflect a significant picture of tremendous amounts of time and money being expended by pressure groups and pressure interests throughout the country in seeking to influence actions by the Congress of the United States. For that reason the 47-page section of that RECORD is of great importance and warrants study by each Member of Congress.

EACH MEMBER OF CONGRESS SHOULD SAVE THE LOBBY REPORTS PRINTED IN THE RECORD OF JANUARY 31, 1950

I would suggest, Mr. Speaker, that each Member clip out of Tuesday's RECORD the section containing the lobbying reports and keep those pages on his desk for future—and I hope frequent—reference. This is about the only handy reference material readily available to us and to the public on the activities of individual lobbyists who have registered under the act—their employer interests, their salaries and expenses, and, where this fact is included, the legislation which

they are engaged in promoting or retarding or otherwise influencing in the Congress.

Although the information contained in many of these reports is extremely sketchy, they can still be helpful to us and should be utilized constantly by the Members.

We are all fairly well acquainted with the citizens in our own districts who take more than a casual interest in pending legislation and who inform us of their views or speak on behalf of organized groups or for various social, economic, or political interests in our own districts. But each of us, in our capacities as national legislators and as members of committees dealing with important national issues, are subject at all times to constant pressures from a multitude of other sources. The lobby registration statements and quarterly reports provide us with one of the few instruments we have for assessing the representations made to us in regard to legislation by the various spokesmen—official, unofficial, self-appointed, or pretended spokesmen—for this or that pressure group or economic interest.

So, limited as some of these reports might be in the information they provide, they are still a useful guide and should be used by the Members in checking the claims of lobbyists and lobbying groups against the statements they have filed under oath.

ADDITIONAL INFORMATION ON PRESSURE GROUPS FILED WITH CLERK OF THE HOUSE

In addition to the material printed in the CONGRESSIONAL RECORD, however, there is a wealth of additional information on lobbying and lobbying activities on file with the Clerk of the House, submitted by organizations, associations, and other pressure groups which solicit or spend money for the purpose of influencing legislative action by Congress, and which have decided to report under section 305 of the act. These reports, made on Form A—as distinct from the Form C reports made by registered agents and which are printed each quarter in the RECORD—are not printed but are available to the public for inspection in the Clerk's office.

They show the amounts of money collected by these organizations, during each quarter and cumulatively for each calendar year, the names of all contributors of $500 or more, and usually a complete break-down of all expenditures of $10 or more, showing to whom the money was paid and for what purpose.

These Form A reports tell a whole lot more about lobbying activities on the larger scale than do the individual Form C quarterly reports filed by those who file as paid agents of these various pressure groups. It is my hope that our committee can devise some practical method for making the information contained in these organizational reports more generally available to the Congress and to the public. In their present form, many of these reports are quite voluminous, and printing them in full would probably be impractical and uneconomic. But I believe we can devise a form for pressure groups to file which we could then print in the RECORD along with the others.

REPORTS SHOW FIFTY-FIVE MILLION COLLECTED—TWENTY-SEVEN MILLION SPENT IN 3½-YEAR PERIOD

I have had some preliminary studies made in connection with these Form A—pressure group—reports and the data we have accumulated so far is most interesting. A few significant facts emerge:

First. A total of 490 organizations, associations, corporations, firms, or other groups which acknowledge receiving and expending money for purposes of influencing legislation under the terms of the Lobbying Act, and which, in most cases, employ one or more paid lobbyists, have filed quarterly reports on Form A at one time or another in the past 3½ years. Actually, however, no more than 291 of them had filed for any single quarter, and that was for the second quarter of 1949. For the fourth quarter, only 249 such pressure groups had reported. The rest have not indicated whether they were operating in that quarter. Presumbably they were not.

Second. These various pressure groups—and it will be noted that not all of them file for every quarter of every year—have reported collecting more than $55,000,000 since this act went into effect in 1946 and of spending $27,304,952.10. In many cases receipts and expenditures of all kinds, whether bearing on legislative activities or not, are reported in the total, but in a great many other cases, and particularly those of many of the big lobby groups, the receipts and expenditures reported are carefully segregated to include only those regarded as dealing with legislative matters. The figures, in any event, are startling in reflecting the size of America's pressure-group industry operating on the Congress of the United States.

It is my hope, Mr. Speaker, and I believe it is shared by Representatives LANHAM, ALBERT, DOYLE, HALLECK, BROWN, and O'HARA of Minnesota, the other members of the House Select Committee on Lobbying Activities, that before we finish our work we will be able to give the Congress a more complete and a more definitive picture of this so-called Third House of Congress—the lobbyists—than is presently ascertainable.

LOBBYING LAW REQUIRES ONLY THAT ACTIVITIES BE OUT IN THE OPEN

I personally believe, as do a lot of other Members, that lobbying is necessary and essential. Most lobbyists, I believe, perform a real service, not only to their own employer groups but to the Congress in keeping the Congress informed, with informed facts and informed opinion, on pending legislative issues in which those groups are not only interested but on which they are expert.

Nevertheless, the Congress has decreed that this activity designed to influence legislative action by Congress be carried on out in the open where we can all see it and assess it and recognize the special interest aspects of it. That is all that the Lobbying Act requires. It will be the purpose of my committee, I feel safe in saying, to make sure that the principle of full disclosure and open and aboveboard activity be adhered to.

Lost Tribe of Indians in North Carolina

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. POULSON. Mr. Speaker, I am introducing a bill today which, in effect, will recognize what might be called a lost tribe of Indians in North Carolina. The story of these Indians is both interesting and tragic. James Evan Alexander has written me a letter telling this story and, under leave to extend my remarks, I am inserting it in the RECORD:

WILMINGTON, N. C., *February 5, 1950.*
Hon. NORRIS POULSON,
House of Representatives,
Washington, D. C.

DEAR MR. POULSON: Attached to this letter you will find a draft of a bill designed to transfer certain lands into a Federal trust status and grant a small group of Indian people the privileges and benefits of the Indian Reorganization Act of 1934. I am taking the liberty of asking you to introduce this bill because I am one of your constituents, although the people to be benefited by the proposed legislation are located in the Seventh Congressional District of North Carolina.

My first knowledge of these Indians was acquired while visiting my wife's family who have a farm within 40 miles of the Indian village. Hoping to find a saleable story or article, I contacted the chief of the tribe and after hearing a brief account of their troubled existence, I offered to assist them in any way I could in exchange for their cooperation in my writing project. To accomplish this purpose my wife and I moved into the Indian village where we have been residing with one of the families for the past 4½ months. Thus the project, on which we had originally intended to spend 30 days, stretched out over this long period of time. As our investigation revealed the conditions of oppression, prejudice, fear, and actual want, our interests were gradually transposed from an ordinary business deal to an association full of warm human understanding and a strong feeling of kinship.

Our research has proved to our own satisfaction that these people are descendants of a tribe known as the Waccamaw, and a member of the eastern Siouan Nation. I will not burden you with an attempt to prove the rights of these people to Federal recognition, but rather the need for recognition and the protection and aid such recognition would afford.

The present members of the tribe reside on approximately 2,000 acres of land in one of the swampiest regions of the coastal plain, 4 miles north of Bolton in southeastern North Carolina. This land straddles the county line of Columbus and Bladen and lies in the swamps of Buckhead, Doehead, and Ricefield. Of the 2,000 acres, less than one-fifth is arable land. This arable land being a series of islands that dot the swamp which surrounds them. Not to be misled by the word "island," it must be stated that these so-called islands are merely patches of higher ground which rise a foot or two above the water level of the swamp. The excessive amount of moisture keeps the production of crops far below that which would be considered economically profitable. Inasmuch as this area has an average of 40 inches of rainfall per year, it is not unusual for the waters of the swamps to rise and inundate the islands, thus destroying the

UNIVERSITY OF MICHIGAN LIBRARIES

entire season's crop. These crops consist chiefly of field peas, corn, sweet potatoes, and collards, which are raised for the sustenance of the tribe and not as a market crop. Little tobacco is grown due to the nature of the soil and extremely small tobacco allotments. Some hogs are raised, but these too are mostly for tribal consumption.

Hunting, which at one time provided much of their food, is now extremely limited. This limitation is due to the fact that the woodland surrounding the Indian land has been acquired by several large paper companies, and hunting privileges are granted only to recognized hunting clubs upon application and payment of fees of several hundred dollars per year. Hunting was further restricted by the setting aside of a large tract of land as a game refuge of the State of North Carolina where no hunting is permitted.

The principal source of cash income for the tribe is from logging and pulpwood. Due to the lack of nearby markets, the Indians are, for the most part, dependent upon truckers who scour the swampland regions and buy the timber products at the side of the road. My investigation reveals that the Indians are paid approximately $3.50 per cord for pulpwood decked and ready for delivery.

The unproductivity of the land, plus the extremely low prices paid for their labor, presents a dismal economic picture. These factors are translated into a condition the result of which is malnutrition, frequent epidemics of diseases, high infant-mortality rate, and a short life expectancy. Though these conditions are the result of the Indians' economic condition, the economic condition itself is not a cause but rather an effect. The cause can be attributed to the social environment in which they exist.

This social problem is a complex one in which these Indians are caught between the color lines of a South which is predominately and almost equally divided, white and black. Exhibiting the fierce racial pride which is the trait of Indians generally, the Waccamaws have consistently resisted all efforts of their white neighbors to designate them as Negroes. This resistance brought further indignities upon them. I should like to note that from my experiences with these people I am sure that they would have resisted with equal determination any effort to designate them as white.

Instead of generalizing on the social problem of these Indians, I will cite some specific cases for the purpose of acquainting you with the social conditions under which these people live.

The first remembered attempt to institute a system of education in the Indian settlement was made by tribal members in 1891. A school committee was formed and a one-room, 16-by-20-foot building was constructed to serve as a schoolhouse. Tribal members furnished the material and labor for this structure. Each family, having children of school age, were assessed the sum of $40 per school year to create a fund for payment of a teacher's wages. Many of the families were unable to contribute this amount, so the school operated sporadically, more frequently closed than open. At a later date, now unobtainable, aid toward paying the teacher was granted by the State. In 1921, at the beginning of the school year, a new teacher arrived prepared to take up her duties. She was a Negro. Joe Patrick, then head of the school committee, ordered the teacher to leave the community and nailed up the schoolhouse door. This was the first knowledge the Indian people had that, under the State-aid program, their school was classified as Negro. Following this, the parents threatened armed resistance to the attempts on the part of white school officials to force the Indian children to attend colored schools.

The church served as a school from the year 1924 to the year 1930. Indian teachers were procured from Robeson County. They were boarded in turn by members of the community and paid, when the school committee had money to pay them, the sum of $40 per month.

Early in the thirties a collection was taken from the tribe members, and the money pooled to sue the county of Columbus. The Indians, having no educated people in their group, hired a white attorney and suit was filed, naming the county school board as defendants in the action, and praying that the county would provide the Indian settlement with a school. On the day of the court hearing, the attorney, for reasons known only to himself, arose in court and asked for a nonsuit in the case of the Indian inhabitants of the *Ricefield-Buckhead Section* v. *the County of Columbus.*

Not to be daunted by such a set-back, they again collected a sum of money and hired another attorney who proposed taking their case directly to the State capital, Raleigh. This attorney, with a delegation of four members of the tribe, proceeded to Raleigh and registered at a hotel. Their case was to be heard the following morning. During the evening the attorney received a telephone call. He informed the delegation that it was imperative that he go to Lumberton at once, but he would return to present their case at the designated time. Exit attorney, period.

Though the plight of these people is a pathetic one, there are certain incidents not without their humorous side. A vivid imagination is not required to visualize rotund Robert Jacobs firmly wedged by the tail of his coat in the hotel's revolving door, or lanky Joe Patrick standing outside in his frozen oilskin raincoat, refusing to attempt to negotiate its frightful circle of travel. As one of the delegates, R. T. Freeman, so aptly expressed it, "Ole Mr. Joe jes' stood out there in the wind rattlin' like a mess 'o corn shuks."

There was no humor in the situation that existed the following morning. The attorney failed to return, and the Indians had no idea where the alleged hearing was to be held, so they started their long trek home in a blinding snowstorm. Their mode of travel was a battered and ancient model T Ford touring car. The Indians took turns in running along side of the car to keep from freezing to death. It was only after they had reached familiar territory near home that they dared stop, find wood, and build a fire to warm themselves.

Inasmuch as a portion of the Indian land lies in Bladen County, Alex Patrick picked up the fight with the Bladen County school officials. He was granted the privilege of tearing down an old condemned "white" school building in the town of Council for the purpose of building a school in the Indian settlement. The Bladen County Board of Education agreed to furnish teachers if the community would construct the school building.

The task of wrecking the building was accomplished by volunteer Indian labor, and the material transferred to the new school site by mule and wagon. The project took 15 months to complete. The building consisted of two rooms. A community with a cooperative spirit is evidenced by the fact that much of the labor was contributed by the fathers of the Columbus County children who would not be eligible to attend this school. In 1941, Bladen County agreed to accept the students from the Columbus County side of the line, provided additional land and rooms were added to the existing school. The tribal members again dug into their scanty resources to purchase material for an additional two rooms. This, too, was built with volunteer labor from the community.

The school was put into full operation in 1942, and consisted of four rooms, four teachers, and an enrollment of 208 students. It included grades through the eighth. There is no means of acquiring an education above this grade except by establishing residence in one of the counties that provide Indian schools and defraying all of the costs attached thereto. This is an effective barrier to a higher education for the Waccamaw Indians.

The present school is inadequate. It is poorly constructed, drafty, overcrowded, lacking in books and desks, and portions of it have never been ceiled on the inside. Bare studs in the rooms add to the general dismal appearance. There are no cloak rooms; no entry halls. Access to certain rooms are only through another. No playground or playground equipment. Three of the rooms have an ordinary tin, wood heater. The fourth is provided with no heat at all. Its construction, as well as lack of exits, create an extremely dangerous fire hazard. There is no fire-fighting equipment or extinguishers. The only source of water is a hand-pumped well which requires priming.

There are presently enrolled in the school a total of 117 students. An additional 20 students, who have completed the eighth grade, have no place to go.

Even though the Indians took a certain amount of pride in finally having acquired an Indian school, they fully realized its inadequacy and know that it falls far short of being equal to the other schools in the nearby territories.

One blow to their pride happened very recently. They found that the Wide Awake Indian School in Bladen County (their own school), was listed on the State rolls as being a white school. At the same time Columbus County officials sit back and declare that if they get any school at all it will be colored.

Additional current problems are roads and drainage. The majority of the families live on roads that transverse the community. Others live off the main roads, deeper in the swamp. These families are frequently marooned several days at a time during storms when the swamps are in flood stages. The land is fertile, but the excessive amount of water frequently destroys the crops. The WPA drained most of the land in the vicinity of the Indian settlement, but did not include their area. Due to this excessive moisture, Robert Jacobs harvested less than 20 bushels of corn per acre this year on deep rich topsoil that, properly drained, could have produced in excess of 100 bushels per acre.

Medicine and hospitalization is another problem of long standing. Due to the nature of the roads and distances to travel, it is extremely difficult to get doctors to attend the sick or injured in the settlement. Infant mortality rate is high, and many of the adults meet an untimely end due to the lack of proper medical attendance. The following case occurred in August of 1949 and is set forth as a typical example.

Penny, the aging wife of Robert Jacobs, had been under the care of a doctor at Lake Waccamaw for a liver complaint. During one of the longest and hardest storms of the rainy season, her condition took a turn for the worse. The land of Robert Jacobs is on an island in the swamp and off the main road. In order to reach this main road it is necessary to cross the Ricefield Branch. Unable to get a doctor to call on the patient, and the roads being impassable to automobiles, Mrs. Jacobs was loaded into a wagon drawn by a mule. The swamp was forded as the patient lay on boards across the wagon sides to keep her out of the water that came up into the bed of the wagon. Upon reaching the road, she was transferred to a car and driven by her sons to Lake Waccamaw. The doctor prescribed some medicine; advised rest, and told

the young men to take their mother home. They explained the road conditions and pleaded that she be hospitalized. The doctor declared that it was unnecessary, inasmuch as she would be all right in a day or two. The patient was returned to her home in the same manner she was taken from it.

Three days later the storm had not abated. It was obvious to the family in attendance that Mrs. Jacobs was, not only critically ill, but on the verge of death. An Indian was sent to Clarkton in an attempt to reach a doctor there and ask his assistance, but the doctor was out on a baby case. Another went for the doctor at Lake Waccamaw. This doctor assured them that he would come except for the fact he suffered from an asthmatic condition that prevented him going out in the wet night air.

Someone waded out from the island to the residence of W. J. Freeman (this was late in the evening) and W. J. returned to the island to offer his assistance. As he waded back through the swamp the water rose over the top of his hip boots. Another person was sent to Chadbourn to get the ambulance from the Peacock Funeral Home. The men of the community rallied around W. J. and they all began a futile attempt to build a bridge across the black, waist-deep waters.

At 11 p. m. death came.

At 7 a. m. the following morning the ambulance crossed the rickety structure and took away the last remains of Penny Jacobs.

Early in 1943, six Indians from the settlement were drafted. They appeared on the specified day and learned they were classified as Negroes. They advised the head of the draft board that they would not be inducted as Negroes but sought the privilege of being inducted as Indians. When refused this privilege they returned home. In the subsequent trial in which these six young men were charged with violation of the Selective Service Act, Judge I. M. Meekins summarily dismissed the charges against them. M. Butler Prescott, who was the probation officer for the Federal court, in a recent letter to R. T. Freeman, summed it up as follows:

"My presentence investigation led me to conclude as a fact, that these young men, members of the group of Indians living in the vicinity of Bolton, N. C., were Indians, and that the efforts to designate and induct them as Negroes was due primarily to the prejudice of the white people in that vicinity."

The ultimate solution of the local draft board's problem of disposing of the Indians was a simple device. All subsequent Indian draftees were classified as 4–F.

On November 21, 1949, my wife and I brought a delegation from the tribe to Washington, D. C. There we met with John Provinse and D'Arcy McNickle of the Office of Indian Affairs, and presented them with the compiled history of their right to be recognized and aided by the Federal Government. Mr. Provinse advised us that in the absence of a treaty with the Waccamaws it would be impossible to render any assistance without legislation in their behalf. He further advised we contact other people including Representative F. ERTEL CARLYLE from the Seventh Congressional District of North Carolina and Senators CLYDE R. HOEY and FRANK P. GRAHAM also of North Carolina. This we did and received prompt assurance of their interest and willingness to assist in the case of the Waccamaw Indians. On December 9, 1949, Senator Hoey forwarded to me a copy of a letter from John H. Provinse of the Office of Indian Affairs. I am setting forth the last paragraph here inasmuch as the course of action suggested by Mr. Provinse is the procedure I have attempted to follow:

"Congress, of course, has authority to provide for the welfare of the people in question by legislating in their behalf. I should be happy to discuss the problems of these Indians with you, if you desire. It is my impression that the group is in need of educational facilities, and perhaps some assistance in making better use of the resources they now possess.

"I appreciate you bringing this matter to my attention.

"JOHN H. PROVINSE,
"Assistant Commissioner."

Just before Christmas my wife and I went to New York and secured the promise of assistance from several organizations, including the Civil Liberties Union, the Home Missions Council of North America, and the Association on American Indian Affairs, Inc. The board of directors of the Association on American Indian Affairs, Inc., met on December 19, 1949, and agreed to support and sponsor the necessary legislation in behalf of the Waccamaw Indians. Dr. Alexander Lesser of the association, directed Felix Cohen, their Washington counsel to prepare a draft of a bill to accomplish this purpose.

I discussed the matter of introducing this proposed legislation with Senator HOEY on January 12, 1950, and he advised that he would not introduce the bill unless he could be assured that it was the desire of the entire tribe to have this legislation enacted. I returned to North Carolina and procured the following resolution:

"The Council of the Waccamaw Tribe, having met on January 15, 1950, to consider the attached bill to grant Federal recognition and help to our tribe, respectfully petition the Congress of the United States to enact this bill.

"We have submitted this bill to the referendum vote of our tribe. Of 157 adult members, 157 voted. Of the votes cast, 157 were in favor of the bill and none were opposed.

"We are attaching to this resolution the papers showing all votes cast on this proposition. The marks of those who could not write were witnessed by this Council."

This was signed by the Council of Waccamaw Indians and certified by Chief Freeman.

The original resolution and petition was delivered to Senator HOEY on January 18, 1950, and typed copies were delivered to Senator FRANK P. GRAHAM and Representative F. ERTEL CARLYLE.

I have discussed this matter with Dr. Alexander Lesser of the Association on American Indian Affairs, Inc., and Felix Cohen, counsel for the association. We feel that this bill should be introduced in order that the claims of these Indian people can be investigated by the proper authorities and Federal legislation enacted in their behalf.

Mr. POULSON, 340 people, including babies and children, are anxiously awaiting the outcome of this activity in their behalf. My wife and I know that these people's problems seem insignificant in a world concerned with H-bombs, Marshall plans, and Atlantic pacts, but when your world only encompasses a small area of poverty-ridden green swamp, these problems assume gigantic proportions. They become the opponents in the battle for survival against the all-to-frequent winners: malnutrition, exposure, and disease.

We have nothing to offer in the way of recompense other than our thanks and the gratitude of an humble and industrious band of people—the Waccamaw Indians.

Very truly yours,

JAMES EVAN ALEXANDER.

Policy Statement by New York Young Republican Club

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD, the sections on labor, health, old-age pensions, education, and housing from a policy statement by the New York Young Republican Club entitled "Blueprint for a Better America."

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

LABOR

LABOR-MANAGEMENT RELATIONS

Problem: Young Republicans believe that the free collective-bargaining process offers the best means by which employers and employees can meet and resolve their mutual problems. Constant and direct participation by the National Government in the settlement of industrial disputes is inconsistent with our system of private enterprise and is rejected both by labor and by Government as a solution to the problem. The role of Government should be limited to enacting legislation which will foster and encourage free collective bargaining, and will remove, whenever possible, existing causes of friction.

There have been two major legislative attempts to achieve these ends—the Wagner Act and the Taft-Hartley Act. Both have proved inadequate. The Wagner Act of 1935 was hailed as labor's "bill of rights." This act guaranteed to the individual worker and his union, for the first time, many of the rights which are now regarded as fundamental in a free society. There are few, if any, who today mourn the departure under the Wagner Act of the yellow-dog contract and the blacklist. However, the legislators who enacted the Wagner Act failed to impose responsibilities correlative with the rights granted. The period of unprecedented industrial conflict which followed was coupled in many instances with union irresponsibility that made a mockery of the collective-bargaining process and the integrity of contract. The Taft-Hartley Act sought to impose certain responsibilities upon unions and union leaders, equated to the rights which they had enjoyed and continued to enjoy. The act was designed to be a bill of rights and responsibilities.

However, the experience of the last year and a half has revealed that the American economy is still being subjected to frequent and wasteful industrial conflict and that many of the problems of labor-management relations are not met, or are improperly dealt with, under the later act. Several of the provisions of the act have proved to be unnecessarily restrictive and in some cases superfluous.

WORKER-UNION RELATIONS

In view of the economic pressure which unions can bring to bear upon employers to discourage the use of nonunion labor, the ability of an individual worker to join a union is in some cases tantamount to his ability to get a job. Yet many workers today find that union membership, and con-

UNIVERSITY OF MICHIGAN LIBRARIES

sequently job opportunities, are closed to them by reason of the discriminatory and exclusionary practices employed by some unions.

There are at least 32 unions, with a total membership of 2,500,000, which exclude Negroes.

Over 70 unions deny the right to join either because of citizenship, sex, religious creed, or closed membership policies.

The constitutions of 17 unions require that all members be white and Christian.

Particularly in the craft unions there has developed a complex but effective pattern of exclusion from union membership through apprenticeship requirements, competency tests, work permits, licensing requirements, and prohibitive entrance fees. As a result of such exclusionary techniques, many workers are denied the opportunity of pursuing a vocation of their own choosing and the Nation is confronted with a shortage of skilled craftsmen.

While the collective action of unions should be protected against the inroads of an unorganized labor market, the denial of job opportunity through the denial of union membership is inconsistent with an opportunity society. The right of another to work must be respected by those who have already gained that right for themselves.

Even after union membership is attained, the individual worker is frequently denied any voice in the affairs of his own organization. In some unions the rank and file is subject to disciplinary action, including expulsion, for such vague offenses as undermining the union and creating dissension. In these unions the official hierarchy usually has the last word on what constitutes a punishable offense under the union's constitution.

Many unions which have clearly defined and narrow grounds for punishment of their members lack adequate procedural safeguards against arbitrary conviction. In a few unions the union leadership acts as grand jury, prosecutor, and judge, denying to the accused member any semblance of an impartial hearing.

In some cases financial accountability to the members has been either skimpy or nonexistent. A financial report by the national office of one union at a recent convention purported to cover a period of 30 years, in just three lines.

Member participation in national policy making is almost completely foreclosed by the concentration of power in the hands of a few top officials of certain national unions. Moreover, reports of convention proceedings indicate that the top officials of many unions do not hesitate to depart from parliamentary rules where an important issue is involved or their own power is threatened. One union constitution gives the president absolute power to abrogate both the constitution and the bylaws whenever he sees fit.

This lack of internal democracy in the unions leads inevitably to irresponsibility on the part of union leaders and exploitation of the individual union member. Regardless of the frequency or infrequency of actual abuses, the importance of the individual rights at stake demands all possible safeguards.

While the Taft-Hartley Act attempted to meet some of the problems of worker-union relations, it failed to provide adequate protection for the rights of the individual worker. Moreover, since the act as a whole does not have the support of the worker himself, a new legislative approach to the problem is required.

THE PUBLIC INTEREST

We firmly believe that the United States cannot enjoy increasing prosperity so long as our economy is subjected to frequent and wasteful industrial conflict. In 1946, the peak year for strikes in the United States, there were 4,985 work stoppages, involving 4,600,000 workers and resulting in a loss of 116,000,000 man-days of production. The gravity of frequent and prolonged work stoppages, in terms of lost wages and lost goods and services, cannot be over-emphasized. The cost of strikes runs into millions of dollars annually and results in a lower standard of living for the entire country.

The interests of the general public have also been adversely affected by the recent development of large national or international unions representing for collective bargaining purposes the employees of many competing employers. In most of our basic industries a single national or international union and its locals represents all or nearly all of the workers in the industry.

This centralization of function and concentration of power in a few national unions has led to the developmet of "pattern bargaining" and "industry-wide bargaining," both of which have hurt the American consumer. When the industry-wide demands of national unions are resisted by the competing members of an industry, the strikes which occasionally follow are national in scope and catastrophic in effect. In the case of basic industries, the national health and safety may be immediatel endangered. On the other hand, when these demands are not resisted but are willingly accepted, competition is stifled and prices become fixed at the expense of the consumer.

Proposals: 1. A bipartisan nonlegislative commission, similar to the Hoover Commission, should be established to investigate all phases of labor relations, to conduct public hearings, and to make specific recommendations to the President and to Congress for the enactment of a new comprehensive labor law.

This recommendation is made in recognition of the fact that many of the problems in the labor field today urgently require resolution if our private-enterprise system is to survive; and in further recognition of the fact that the labor issue has now become so hopelessly complicated by political issues that clear and dispassionate legislative action is practically impossible.

2. As an interim measure, pending the return of the commission's report, the Taft-Hartley Act should be amended immediately to resolve more pressing problems now arising out of labor-management relations and worker-union relations.

HEALTH

Problem: The level of health in the United States is superior to that of almost every other country in the world. There are at present 6,335 hospitals of which 1,900 are operated by Federal or State agencies. The United States has 140 doctors per 100,000 population, one of the highest per capita ratios in the world. The life expectancy of the American male has increased from 48 years in 1900 to 70 years in 1950. In the last 33 years, the rate of infant mortality has been cut by about two-thirds.

However, the health in certain economic groups and geographic areas continues to be substandard. While this condition is due in part to poor diet, overcrowding, and lack of health education, it is also due to inadequate medical care. In certain areas, there is a severe shortage of medical personnel and hospital facilities. Indeed, the country as a whole does not now have facilities to furnish complete medical care to the entire population.

More important, however, is the inability of large segments of the population to pay for adequate medical attention. It has been shown that families with an annual income of $3,000 or less are not medically self-sustaining. Two groups in particular require financial assistance. One group, while able to pay routine medical expenses, is unable to provide against the catastrophe of serious illness or accident. The second group, composed principally of the aged and incapacitated, and those with many dependents, is unable to afford the cost of even minimum medical care.

The public medical facilities of the Federal Government currently serve about 24,000,000 people free of charge. However, this includes about 18,500,000 veterans, most of whom receive such assistance only to the extent that facilities are available. In view of this, more and more people are turning to private health insurance.

The highest estimate of membership in some kind of voluntary health insurance plan in 1949 was 61,000,000 persons. Nineteen forty-eight saw an increase of 8,500,000 persons, or 16 percent, in the number covered with regard to hospital expense. However, most voluntary health insurance plans provide only limited protection. The average monthly cost of voluntary health insurance is estimated to be $2.50 per individual and $5.50 per family.

Estimates regarding the initial yearly cost of proposed compulsory health insurance legislation vary from the administration's figure of between four and six billion dollars to the American Medical Association estimate of $18,000,000,000. Both predict subsequent increases in cost. In Great Britain, it was originally estimated that the health program would cost about $620,000,000 for the first year. Yet expenditures for the first 9 months exceeded estimates by $234,000,000.

Proposals: 1. Sufficient tax sources should be returned to the States to enable them to supplement the contributions of their citizens to voluntary non-profit-health-insurance plans. Where local tax sources are insufficient, Federal funds should be made available to the States. This would result in increased coverage and expanded benefits.

2. Dental education and examination at the primary school level and the expansion of facilities for the treatment of chronic and mental illnesses (which should not be included within the coverage of health-insurance plans at the present time) should be encouraged by Federal grants-in-aid to the States.

3. Federal funds should be made available to the States to enable them to maintain and expand medical facilities for those unable to afford voluntary health insurance.

4. Any shortage or maldistribution of medical personnel or facilities can best be corrected by proper administration at the State and local level. A reallocation of public-health personnel should be effected to supplement available medical service in substandard areas.

These recommendations assure a program which will preserve to the patient his right of privacy and free choice of physician, and will preserve to the medical profession the valuable incentive of private practice free from political control.

OLD-AGE PENSIONS

Problem: Today 11,000,000 persons are over 65. By 1980 this figure may rise to 22,000,000. How can we assure a living standard consistent with human dignity to our aged population?

At present old-age pensions do not afford even a minimum level of subsistence. The average pension payment for a retired worker is less than $26 a month and for a retired worker and his wife only $41 a month. Many persons who are eligible and might otherwise desire to retire are forced to stay at work. Nearly 25 percent of those who do retire are

compelled, with great damage to their morale, to seek old-age relief from local authorities to avoid destitution. The problem is even more alarming since over 25,000,000 employed and self-employed are not covered by any old-age law at all. The largest groups now excluded are farmers, farm workers and the self-employed.

Industry pension plans also leave much to be desired. A depression might destroy many such plans. Workers are covered only so long as they remain with a particular employer. If they change jobs, their pension rights are lost. This discourages a fluid labor force and reduces opportunity for young people. A great percentage of workers go unprotected because their companies cannot afford pension plans for them.

No American feels that the aged should be left to destitution in their nonproductive years. Yet, while provision for the aged is a responsibility of the community, no plan to date has proved adequate. None will prove adequate until it is apparent that (1) the national productivity is sufficient to provide for the needs of the retired aged without unduly burdening the productive members of our society, and (2) we as a Nation accept the responsibility of maintaining an equitable balance between the needs of the productive and the nonproductive members of our society.

If each aged man or woman were to be paid $100 per month, the cost would be $13,500,000,000 in 1950.

If such pensions were financed entirely by employer-employee contributions it would be necessary to establish reserves far out of proportion to our present national wealth.

If pensions were financed entirely out of current Government funds, the burden would fall more and more heavily on the younger person. There are today 8 young people for every individual over 65; by 2000 this ratio will be reduced to about 4.9 to 1 if the life span continues to lengthen.

Proposals:

1. The Federal old-age pension system should be geared to our rising national income so that our society can quickly guarantee at least a subsistence income to every person who reaches the age of retirement.

2. Twenty-five million employed and self-employed, who are not presently covered, should be brought immediately into the existing program. But, thereafter, no further implementation of the present system should be undertaken until a sound workable program has been achieved.

3. We propose that Federal funds now granted to States on a matching basis for old-age relief be devoted to increasing Federal old-age pension payments.

4. We urge a comprehensive investigation and analysis by qualified technicians of old-age pensions, provisions for full employment, and other social security measures.

EDUCATION

Problem: A good education is the birthright of every American child. To this end education has traditionally been the responsibility of the entire community. The strongest assurance we have that our free society shall endure is education for all its members in an atmosphere free from governmental control.

The initial problem is at the primary and secondary school levels. In this field the educational facilities provided by local communities have not kept pace with the Nation's need. The demand for qualified teachers exceeds the supply; rising birth rates require more new teachers; because of low salaries many teachers have been lost to higher-paid jobs outside the teaching profession; the rising cost of living has nullified past pay increases; many school facilities are inadequate.

Although the problem varies in intensity from one area of the country to another, the lack of adequate educational facilities can be attributed in large part to the insufficiency of State tax sources. The virtual monopoly of the Federal Government on present tax sources has accentuated the problem for all States.

Today, at least 2,000,000 children are suffering a major impairment in their education due to inadequate teaching facilities.

In 1947 about 5,000,000 children between the ages of 5 and 17 attended no school whatsoever.

A teacher's average annual salary was $900 in 1920, $1,515 in 1930, $1,565 in 1940 and $2,375 in 1947.

The States are spending $3,000,000,000, or almost one-third of their total revenues, for education, but this is less than 2 percent of our national income.

On a national basis the average sum spent to educate one child for 1 year is $148. Most southern States fall below this average; North Carolina, which spends $89 per child, tops the southern States.

Proposal: Federal funds should be made available to States unable to raise sufficient funds from their own revenue sources to provide for the expenditure of an amount per child at least equal to the present national educational average. Each State receiving a share of these funds should have complete control over the administration, personnel, curriculum, instruction, and methods and materials of instruction, but subject to the following conditions:

1. It must expend such funds for education at the primary and secondary school levels.

2. It must continue to utilize at least the same proportion of its taxable resources for education as at the present time.

3. It must expend such funds without discrimination as to race, creed or color.

HOUSING

Problem: There are two major aspects of the housing problem, each of which needs solution in order properly to attack the fundamental question of adequate, decent shelter for all of the American people. These are (a) subsidy of low cost housing and (b) fostering of private building.

It is regarded as axiomatic that inadequate, unsanitary, congested housing is a breeding ground for crime and disease. Somewhat less dire in its results, but none the less serious, is the effect on young families having to double up with in-laws, or else devote a disproportionate share of their income to housing.

About 1,500,000, families in this country are doubled up against their wishes.

There are over 5,000,000 housing units in this country so badly in need of repair as to be considered substandard.

Twenty-two percent of nonfarm families in this country have incomes of $2,000 or less and cannot afford more than a very small rental. For example, approximately 4,000,000 housing units rent for $20 per month or less—a return so inadequate that private landlords cannot afford to make even essential repairs to existing buildings, much less build new housing units for this income group. The result is further deterioration of already substandard housing, and no new building by private industry for low income groups.

At present it costs between $6,000 and $7,000, in most parts of this country to build even a simple four-room house, making new housing prohibitive in cost to families whose incomes are less than $3,000.

We feel that there is a way completely consonant with the private-enterprise system, by which those problems can be successfully met.

Proposals: 1. We recommend Federal fiscal aid to State governments in their handling of the problem of subsidizing low-cost housing for low-income groups. While the 1949 Housing Act provides, in general, an adequate working basis for a comprehensive program in this field, the research provisions of this legislation should be more adequately utilized than has been true to date. And in no event should the Federal Government go into the housing business. It should encourage private action primarily, not provide a substitute therefor.

2. We favor a continuation of Federal insurance for home mortgages.

3. We submit that a substantial reduction of building costs could be effected by:

(a) modifying antiquated local building codes to conform to present technological development;

(b) breaking up monopolies in the building-material industry;

(c) eliminating restrictive practices in building-trade unions;

(d) eliminating many of the hidden taxes on construction materials which at present are passed on to the consumer.

For a New Approach to the Labor Issue

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. POULSON. Mr. Speaker, without question, one of the serious problems before the American people is to find a solution as to how to obtain better relationship between management and labor. I do not wish to state that one group is more responsible than the other. I think that Mr. Eric Johnston, president of the Motion Picture Association of America, has ably introduced a new approach to this problem. I am inserting his statement in the RECORD:

FOR A NEW APPROACH TO THE LABOR ISSUE

ERIC JOHNSTON PROPOSES THAT MANAGEMENT AND LABOR, NOT POLITICIANS, REVISE THE LAW

(By Eric Johnston)

I would like to see management and labor jointly draft new labor legislation to present to Congress. This suggestion would have been ridiculous a few years back. Today there are powerful stabilizing forces in industry which make it possible and desirable. Labor and management are closer together in their basic thinking than they ever were.

The ridiculous thing today is to leave labor-legislation drafting to the politicians. They gave us the Wagner Act, which business didn't like, and the Taft-Hartley Act, which labor doesn't like. Neither act gave us what everybody in this country wants, and that's peace in industry. Rightly or wrongly, both were dubbed punitive measures, and peace never results when one party believes it has been unjustly treated.

When it's left to Congress, the kind of labor law we get depends on which side can influence Congress with the promise of the most votes—the friends of labor or the friends of management. If labor legislation continues to be the outgrowth of a political

UNIVERSITY OF MICHIGAN LIBRARIES

power struggle, we can despair of ever achieving industrial peace.

In this article I want to make three points:

1. I want to amplify the reasons why I think there's no chance of industrial peace if it is left to the maneuvering of political parties.

2. I want to discuss the surprising new stabilizing forces which have been evolving in the last 5 years.

3. I want to outline my ideas of how labor and management can draft their own rules as a basis for a labor law acceptable to both that would provide a reasonable assurance of more peace in industry.

It is the practice of politicians to exploit controversial issues. Among the most hotly disputed is the kind of labor law we're going to have. The Taft-Hartley Act will be made an issue by both sides in the 1950 elections. Left to politics, there is no knowing what kind of act we will have in 1952. If the past is any guide to the future, it will not be one to inspire industrial peace.

Left to politics, we will continue to get labor legislation inclined toward labor one year and management the next; first a Wagner Act, then a Taft-Hartley Act. Every time this happens, either labor or management is affronted and basic issues are not resolved.

True enough, labor has exaggerated the effect of the Taft-Hartley Act. Labor said the law would smash unions. It has not. But management exaggerated the virtues of the law. Management said it would stop strikes, bring industrial peace. It has not. Labor exaggerated the virtues of the Wagner Act. Labor thought it was a Magna Carta for the working man. It was not. Management exaggerated its flaws. Management said it would wreck business. It did not.

Extremist legislation either way meets no real need in our sensitive economy. It perpetuates ill will between management and labor when greater cooperation is necessary. Extremist legislation is a contradiction of the democratic principle of compromise and accommodation.

All of us—not just labor and management alone—are acutely affected by labor legislation today. The livelihood of everyone depends increasingly on uninterrupted production in industry. So do our commitments to the democratic world. Our industrial disputes look bad in the eyes of the world we are supposed to be leading; they look good in the eyes of those who think that our type of capitalism is doomed to collapse.

Our people are aware of how acutely they are hit by industrial feuding. Major work stoppages in industry affect all levels of our system. Public opinion polls place strikes as the Nation's most alarming problem for 1950—ahead of the cost of living; ahead of how to handle Russia; ahead of war.

What the people want is a law that is neither prolabor nor probusiness. They know you cannot operate efficiently under rules slanted in favor of one side or the other.

The kind of impartial labor legislation we are all hoping for can be drawn only on the basis of rules agreed to by management and labor in advance of congressional action. The only men who can write impartial rules for labor and management are the rational leaders of both groups, acting in concert and determined above all else that henceforth politics shall not make a football out of industry disputes.

This has been tried before, but it failed because the timing was wrong. I am utterly convinced it is time to try again.

That brings me to my second point: that fresh stabilizing factors now exist in industry. They have evolved. They were unplanned. They were unintentional. But they are brand-new indicators of the American capitalistic system's ability to work toward the answers to its own problems. Three of these stabilizing forces stand out:

Stabilizer 1 is that high wage levels and a high standard of living for the American worker are proving deterrents to the use of the strike as a weapon for labor advantage. If living standards continue to rise, the strike may yield to more civilized methods as trial by combat in the feudal days yielded to the courts of law and the judgment of juries.

It would be naive to suggest that the high-wage theory so commonly accepted by industry today as good business will work around to an assurance of peace in industry. As a stabilizing force, it should not be exaggerated. In all candor, the strike has been the weapon that enabled the worker to achieve much of his present fortune. We can never delude ourselves that labor will grow soft on the subject of strikes until a more civilized way of settling industrial disputes has been developed.

Just why are workers becoming more reluctant to strike? The answer lies in terms of people and not in terms of statistics or theories. Suppose we visit, in fancy, the home of a typical industrial worker in the year 1900—a half century ago. What kind of living standard did he have?

His home was probably more of a shack than a house. Undoubtedly it was rented. Kerosene lamps did the lighting, and the heating was in charge of a rickety stove or two. The plumbing was rudimentary. If the man of the house had a "Sunday suit," he was among the lucky ones. A clean apron was sufficient dress-up costume for his wife—and probably all she had.

Refrigerators, electric irons, vacuum cleaners, and other household work-savers were unknown. People other than industrial workers did not have them either, but they probably had their 1900 equivalents—an ice box, a carpet sweeper. The industrial worker lacked these conveniences.

His children left school as soon as the law allowed. If they could earn a few pennies, the earlier the better. By and large, the industrial worker lived on a shoestring. To paraphrase the sometimes useful Karl Marx, he had nothing to lose by striking except that shoestring. In many cases, it was only a question of keeping fed while a strike was in progress, and soup kitchens, like as not, supplied that need.

Now suppose we visit an industrial worker's home today. It may not be utterly typical; it may not be absolutely average, but we would not need to hunt long to find one like it. This union man, let us assume, is a steel worker. In the last steel strike, he found it immensely difficult to keep going after the strike had lasted only a few weeks.

Why? Because he could not keep up his overhead. He had had a long stretch of prosperity—good wages and steady work—and his living standard had hit a new top. Ten years of good times—a long pull in our economic history—had changed his habits and his circumstances. Very much like a businessman, his credit had expanded and he had been using it. He was buying his home, and there were payments to be met. He was buying—on time—an electric refrigerator and other labor-saving devices. There was a telephone bill, an electric bill, and a gas bill.

One of his sons was in college. The wages of a skilled worker in steel could afford that now. There were some medical bills—for illnesses for which the worker of 1900 would never have dreamed of calling in a doctor.

This is the story of so many industrial workers that it accounts for their growing dislike of the strike. Their long stretch of good times has found them giving hostages to fortune. The bosses' luxuries of yesterday have become the workers' necessities of today.

Stabilizer 2 is management's growing social consciousness.

Let's visit, in fancy, the front office of a corporation in 1900. We won't need to stay long to learn that its workers are so many ciphers on the pay roll; that labor, in management's eyes, is a commodity. Get it as cheaply as possible, spend as little as possible on the working environment; if the man gets sick, that's his bad luck; when he's too old to work, pitch the old guy out on the ash heap of the community. That's the mood of the scene. It allowed for obsolescence of machines—but not of men. A strike brewing? Have the Governor call out the National Guard.

By contrast, suppose we visit the front office of a big corporation in the year 1950. It could be the Ford Motor Co. Here is an atmosphere utterly at variance with that of 1900. The high-wage principle is actively at work. Collective bargaining is an established institution. Pensions go to the retired worker. He has health insurance. Above everything else, he is a respected person, virtually a colleague, never a commodity.

It could be General Motors, where the pay scale is geared not only to the cost of living, but to benefits from increased production. It could be any one of scores of concerns where justice has been enthroned in the factory as it has in the courthouse. It could be any concern where the worker has been given a direct sense of participation in the operation—and in our whole system—by sharing in the benefits of new techniques, in the new wealth made possible by better machines, and in the fruits of increased production.

The high-wage level has forced management to more efficiency; but the worker must accept, along with his new high wages, the higher productivity theory. More and more he does. Sound labor leadership knows that high wages which necessitate high prices are self-defeating, and so said Labor's Monthly Survey, that excellent publication of the AFL, not long ago.

Stabilizer 3 is the growing acceptance by management that social progress must keep in step with technical progress. The welfare fund is the natural corollary.

What high wages will do for industrial stability will be repeated by the welfare fund. The United Mine Workers are finding that out. When no coal is mined, funds stop flowing. No coal, no welfare fund. I think it is safe to predict that union leaders will not tend to jeopardize welfare funds as they become more and more a part of the workers' standard of living.

That, at least, has been the experience in the ladies' garment industry. Unions get a vested interest in the continuity of production. In the form of pensions, workers earn a franchise in the plants which employ them. The security of the individual is tied to the security of the institution, and it becomes viewed in that light.

The welfare fund cannot be advocated without some caution. These funds can't operate as stabilizers long unless they are actuarilly sound; they must be free from domination by either management or labor; they must be wisely administered, with impartiality assured by a third party on the board, jointly chosen by labor and management.

These stabilizing forces—a high living standard, social justice, and the welfare fund—are combining to change the character of our industrial society from one of constant warfare to a higher pitch of civilized living together. Their emergence means that many things which fomented dispute in industry are behind us: the recognition of unions, the acceptance of the principle of collective bargaining, and the acceptance of the principle

that wages must keep pace with profits out of increased productivity.

We have come further than we sometimes are aware. We are sometimes unaware of how strong is our present base from which to move even further. What we need to do now is to translate the changed conditions into a smoother working arrangement, exploiting our new advantages into positive factors for industrial progress and peace.

That brings me to point 3: How labor and management can write their own rules as a basis for new labor legislation. Knowing what we do—that the American people are insistent on industrial peace, that a Nation-wide strike might paralyze our country, and that industrial peace through politics is hopeless—labor and management have no reasonable excuse today not to convene once again to write their own rules. When I say rules, I mean a set of general principles of agreement between labor and management which would then be written into the draft of a law for the House and Senate Labor Committees.

Past failures in reaching a lasting accord between management and labor need not deter us. I am naturally thinking back to the time when the last attempt was made. It was just about 5 years ago that the President of the Chamber of Commerce of the United States, with the presidents of the CIO and the AFL, worked out a simple declaration of accord and signed their names to it. It was labeled a management-labor charter for industrial peace. The president of the CIO, then as now, was Philip Murray; the president of the AFL, then as now, was William Green. I was president of the National Chamber at the time.

The effort was a failure. The accord was short-lived. We failed because labor and management were simply not ready for a step as big as this. The war was still on. Both sides were timorous about the post-war years. The bugaboo of a depression after the victory hovered over the deliberations. Each side was maneuvering for advantage in the uncertain years ahead. More importantly, there were no stabilizing forces in evidence then as they so clearly show themselves today. In five brief years the whole atmosphere has changed in tone.

Men from management and men from labor can meet at a conference table this time with new faith in our system and with new faith in each other. And when they meet, what rules should they draft for industrial peace?

I believe the rules should encompass these points:

1. That increased prosperity for all involves the highest degree of production at wages assuring a steady advancement in the standard of living.

2. That the rights of private property and free choice of action are the foundations of our Nation's expanding economy.

3. That management has an inherent right to direct the operations of an enterprise.

4. That labor has fundamental rights to organize and engage in collective bargaining.

5. That we must cooperate in building an economic system which will protect the individual against the hazards of unemployment, old age, and physical impairments beyond his control.

Agreed to and spelled out in law, there is room within those broad principles of accord for labor and management to work together better than they ever have in the past.

These principles are not new. They were encompassed in the labor-management charter of 5 years ago, but in the perspective of today the thought and the language itself were in advance of the times. They could well be the core of the labor legislation we need now, for they are the antithesis of the principle of punitive legislation.

As an ally to the law, I suggest that at the same meeting at which the rules are written, a permanent council of management and labor be formed. This council would not be a substitute for collective bargaining. It would concern itself only with the broader aspects of management-labor relations. It would make public its reports, and most importantly, it would meet often. It would be reassuring to the public. It would be another great stabilizing force.

Who would take the leadership in a call to draft such rules? It is obvious that it will not be done at all if it is left to everybody. The simplest procedure, it seems to me, would be a joint invitation to the representatives of labor by the two leading business organizations, the National Association of Manufacturers and the National Chamber of Commerce. It should be done promptly.

Now, while the hour is propitious, in advance of the political campaigns if possible, but during them, if need be, is our great chance to take labor legislation out of the area of politics and lift it into the realm of business and labor statesmanship. Now is the time to exercise a new kind of patriotism, demonstrating to the world the versatility of the American system.

Msgr. Maurice W. Chawke: "His Boys" Mourn His Loss

EXTENSION OF REMARKS
OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks I include an article from the Detroit News of Monday, January 30. This article is a tribute to a saintly priest whose death on January 29 was a great tragedy to the people of Michigan who knew him so well, to the generations of boys who were the objects of his inspiration and guidance, and a deep personal loss to those who, like myself, valued his friendship so highly.

The lives of few men have been so filled with that thought and action which springs from a self-less devotion to youth. His was a devotion that did not know the boundaries of race, religion, or color.

Father Chawke as he was known to so many, even after the church saw fit to bestow an ecclesiastical rank upon him, burned with an ardor and spirit of self-sacrifice which was the inspiration for the youth organizations which now reach into every part of our country. Although his interest lay chiefly in providing athletic recreation for his boys, the guidance he gave them did not stop there. Many of his protégés have joined him in the priestly ranks, and success in other fields and walks of life has visited nearly all of them.

Following the example of him to whose service his whole life was dedicated, and taking to his big and sympathetic heart the words of his Master, "Suffer the little children to come unto Me," Father Chawke gave himself to the boys of Detroit and the youth of the Nation. Knowing him as I did, I can say that few men have ever given so much.

It was a singular blessing to have known him and I am sure that his greeting will be "Well done, thou good and faithful servant."

The article follows:

AN ORIGINAL WORKER IN YOUTH MOVEMENT PASSES WITH A PRIEST'S DEATH

(By Harry Leduc)

"Father Chawke is dead."

Dozens of Detroiters passed that word Sunday and are repeating it today as they pause in prayer and reverence for the memory of the Catholic priest who was the first spirit of the boys' movement in Detroit and Michigan, as well as an inspiration undoubtedly to the founding of Boys Town in Nebraska and other movements in the world of youth.

Details of the 79 years of his life and death are recorded in another part of the News, but the sport section obtains the privilege of reporting his contributions to the phase of life of which sport pages treat.

"Firsts" marked his career from the time he entered old Detroit College, precursor of the present University of Detroit.

He played on the first football team Detroit College ever had.

He organized and played on the first great sandlot baseball team in the city's history, the Avon Tigers.

He built the first parish athletic club in the city's history, the St. Louis YMC. Membership was a quarter and dues a nickel a month and no boys were barred.

From his work and inspiration developed the present Catholic Youth Organization, with its boys' clubs on the West and East Sides, its full city-wide program of athletic activity, and with one of his own St. Vincent boys (Father Harold J. Markey) wearing his mantle as head of the CYO.

In a broader sense, Father Chawke 50 years ago understood the boy and worked and fought for him until today city government is spending millions to provide facilities for baseball, football, boxing, tennis, handball, skating, and all the other myriad activities once nonexistent for youth.

His protégés would fill a column. He organized the Avon Tigers at the turn of the century, after his 1897 Detroit College graduation, in the summers between his studies for the priesthood at Baltimore and Cincinnati. "Wish" Egan, chief scout of the Detroit ball club today, was one of his Avon pitchers. Others of that team were Claude (Blink) Stark (brother of the News' George W. Stark), "Nig" Clarke, Jerry Utley, Ed Killian, all of whom went into organized baseball successfully. Bill Hayes, Randolph Duchene, and Joe Schiappacasse were others.

The Avons played the best ball clubs in Michigan and met the famous DAC teams annually. They were just kids but they always gave the star-studded DAC club a battle.

After his ordination, Father Chawke was assigned to St. Vincent's and he quickly erected a building that still stands. It had a court where basketball and handball both were played, wrestling mats, billiard tables, and a room for checkers and other games.

In the light of present recreation centers, it does not pale—and to what he called the St. Louis Young Men's Club Father Chawke welcomed all boys regardless of creed.

As were the Avons, the St. Louis YMCA ball club was one of the city's best. Mike Maurer, a lefthander, was its great pitcher, Wobbles McLaughlin the catcher, and in the line-up were such as Burt (Birdie) Herzog, Al O'Driscoll, Jack Cronin, Joe Marshke, Pete LeFebvre, Bull Drean, Joe Scribner, and Tony

UNIVERSITY OF MICHIGAN LIBRARIES

Dugray. His basketball teams were equally well-known and hard to beat. Maurer starred in basketball, too, along with Frank and Walter Hardy, Charley Faber, Ray Elster, and Bob Bowerman.

Marshke, LeFebvre, and the Hardy brothers all entered the priesthood. Cronin today is head of Fisher Body, Fabor is the DSR's chief accountant, Herzog is a prosperous businessman, and success in one form or another came to all the others.

Later, out of the St. Louis YMCA, came the boy Markey who today is the priest who organized and heads the CYO.

Father Chawke was a big man but his heart was bigger than his tall and athletic figure. He could put his hand on the head of a tike and the youngster felt not only the kindliness of the pat but the sense of being next to greatness.

Yes, he had a church title at his death (monsignor), but he'll always be "Father Chawke" to all of "Father Chawke's boys."

Admiral Blandy

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. HARDY. Mr. Speaker, Admiral Blandy's retirement on February 1, 1950, is a great loss to the Navy which he has served so magnificently for over a third of a century. He is one of the finest officers, one of the ablest, one of the best grounded in the art of naval warfare in the great history of the Navy. Throughout the naval service he was recognized as not only an outstanding leader but one whose remarkable grasp of the strategy, techniques, and tactics of naval warfare made him a truly Navy great, a fitting compatriot of the greatest Navy leaders of the past.

I regret keenly that Admiral Blandy has terminated his active naval service. His departure from the active list will be felt throughout the fleet, and will have an impact on all of the Nation's defense planning. From my personal associations with him, from the associations of my friends in the Navy who have served many years in the Navy with him, I can say with the deepest conviction that the retirement of Admiral Blandy takes from the active list of the fleet one of the finest combat officers I ever expect to know.

I know all my colleagues in the House join me in a rousing "well done" to Admiral Blandy, and will enjoy reading the remarks he made when he turned over command of the Atlantic Fleet to Admiral Fechteler. His statement follows:

REMARKS OF ADMIRAL BLANDY UPON BEING RELIEVED

I wish to take advantage of this final opportunity to thank and congratulate the Atlantic Fleet upon the progress made in the past 3 years.

In spite of two large turn-overs of enlisted personnel since the war, during one of which one-third of the fleet was immobilized by lack of men, you were able to meet all your essential commitments. Those commitments took you from the pleasant waters of the Caribbean to the cold mists and stormy seas of the Davis Strait, and from the Atlantic seaboard to the eastern Mediterranean. I am sure many statesmen will agree with me when I say that the presence of our ships and planes and men in Mediterranean waters and ports has played a major part in strengthening the resolution of countries along Europe's southern coast to reject the slavery of communism.

The Atlantic Fleet today is manned by the finest men it has ever had. Your combat efficiency, already high, is rapidly progressing toward the higher level which your country expects of you. I am pleased with your progress in all forms of training, and I am particularly gratified by the advances made in the past year in all phases of antisubmarine warfare.

I naturally have some regrets at giving up command of the greatest fleet in the world today, which my superiors have entrusted me to hold for 3 years. But that is long enough for any man to hold it; and my regret is tempered by the satisfying knowledge that I am delivering it into the capable hands of my distinguished successor, Admiral William Fechteler.

You can be sure I will always follow the progress of the Navy, and especially the Atlantic Fleet, with the keenest interest. What the future will bring in sea warfare and the air warfare which will always accompany it, cannot now be accurately forecast. Perhaps before I die, warfare on, under, and over the sea will again change as radically as it has during my active service. In any event, I can say with confidence that the Navy's mission of controlling the sea, in order that we may use it as a highway, and keep the enemy's traffic off it, will remain for a great many years a major role in war, involving a wide variety of tasks, and requiring a multiplicity of talents. I fervently hope that our highest leaders responsible for the national defense will always have the wisdom to give the Navy the tools needed to do its complex job.

Certainly at the present time our best hope of peace lies in a strong national defense team, adequately equipped and adequately trained.

In conclusion, I wish to think the American people for the honor and privilege they have accorded me, in permitting me to serve them for the past 40 years. And I thank all of you here, and all others in the Navy and the other armed forces, who have made my 40 years of service such a thoroughly enjoyable and soul-satisfying experience.

Address of Lawrence M. Kocinski

EXTENSION OF REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following speech delivered by Lawrence M. Kocinski, national commander of the Polish Legion of American Veterans of the United States, at the grave of Gen. W. Krzyzanowski, at Arlington Cemetery, Virginia:

Comrades, we are gathered here today to honor the memory of Gen. Wlodzimierz Krzyzanowski, who died 63 years ago.

But the glory of his deeds lived on beyond him.

Like his compatriots, the immortal Thadeusz Kosciuszko and Kazimierz Pulaski, he was in the forefront of the struggle for our fundamental and basic liberties, for the right of every man to live in freedom, and to live in peace.

Like them, he hated tyranny.

Like them, he was always on the side of justice, democracy, and equal opportunity for all.

These great patriots were the sons of Poland.

And following in their footsteps, and inspired by their noble sacrifice, countless other sons of Poland, countless Americans of Polish parentage, have rallied to the defense of our American ideals whenever these were threatened by a foreign or domestic foe, and have gone forward into battle, to fight for freedom.

They fought in one world war against the oppression of the Kaiser, and they fought in the Second World War to wipe off the face of the world the blot of Hitler butchery, brutality, and crime.

In that titanic struggle for our very civilization, Poland lost 6,028,000 men, women, and children of her population (half of the entire population of the Dominion of Canada).

Of every 1,000 inhabitants, Poland lost 170 at Hitler's hand.

And, in addition, the destruction and ravages of war cost Poland $58,000,000,000.

These losses were greater than those suffered by any nation of the world during the last war.

And because the democratic nations of the world took cognizance of these tremendous losses, and to help Poland rehabilitate herself, they returned to Poland lands which had been a part of Poland in 963.

Today the government of western Germany asks that this land be once more taken away from Poland, and there are some among the statesmen of the democracies who have failed to cry out against this new iniquity, and who are not averse to having these new losses inflicted upon Poland.

We, of the Polish Legion of American Veterans, maintain that because it was Poland that suffered the most tremendous losses of all nations in the last war, because iniquity and injustice must not be rewarded through further injury to their victims it would be a denial of justice—it would be a grievous wrong—to grant our enemies of not very long ago that which they seek.

On these hallowed grounds we affirm our determination: To do everything within our power, as citizens of this greatest democracy in the world, to resist the campaign of vicious propaganda aimed at depriving the Polish people of this land. During the past 5 years Poland has expanded a tremendous effort in that area, and has struggled valiantly to reestablish its economy.

Five million people, brought from other parts of Poland, were resettled on the land.

Today, as we place this tribute upon the grave of Gen. Wlodzimierz Krzyzanowski, as we recall all that he had done to help establish freedom and justice in our own beloved Republic, let us remember, too, the great nation of which he came, a nation that today also pleads for justice.

As veterans of America's own battles, as Americans of Polish descent, it is our sacred duty to continue fighting for the preservation of those principles of equity and justice for which we had battled in two world wars, to preserve that heritage of freedom which our patriots entrusted to us.

We shall ever be on the alert to preserve Poland's western frontier—the frontier of peace itself.

Georgia Legislature Rescinds Humber Resolution for World Government

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. DAVIS of Georgia. Mr. Speaker, on January 24, Mrs. Lola Lee Bruington, executive secretary of the defense committee of the National Society of the Daughters of the American Revolution, issued a news release in Washington regarding the action of the Georgia State Legislature in rescinding its 1946 action in passing the Humber resolution for world government.

Under leave previously granted, I insert this news release herewith, and also a copy of the resolution passed by the Georgia Legislature repudiating the resolution adopted in 1946:

WASHINGTON, D. C., January 24.—Action of the Georgia State Legislature rescinding its 1946 action in passing the Humber resolution for world government, was hailed today by the Daughters of the American Revolution as the first victory against world federalist advocates since their drive for a constitutional convention on the subject.

Mrs. Lola Lee Bruington, executive secretary, national defense committee, praised the action of the Georgia House of Representatives for its unanimous vote to rescind the measure, while the Senate voted 34–8.

The new bill called upon the legislators to rescind the action taken by the 1946 legislature in adopting the Humber resolution which called for declaration of a federation of the world.

Mrs. T. Earle Stribling, DAR State chairman for national defense, Atlanta, Ga., led the fight for adoption of the new bill. She was aided by veterans and other patriotic groups.

Mrs. Iris Blitch, only woman member of the Georgia Legislature, declared her stand against world government, and she was supported by Lt. Gov. Marvin Griffin and Speaker of the House Fred Hand. Senator Frank Gross, who introduced the Humber resolution in 1946 and succeeded in having it passed, worked strenuously for its repeal, stating that from additional information gathered, he did not believe that the State of Georgia was ready to back an attempt at federation.

Mrs. Bruington, in issuing this information from DAR national headquarters here, said that her Georgia committee has the full assurance that Gov. Herman Talmadge will sign the new measure.

Whereas the General Assembly of Georgia passed a resolution at the 1946 session of the general assembly approving the principles of world federation; and

Whereas due to changing conditions it is best that Georgia be not considered as one of the 22 States seeking world government; and

Whereas the principles announced in the declaration of the federation of the world as set out in said 1946 resolution are not approved by the general assembly; and

Whereas a copy of said 1946 resolution was sent to each of the Senators and Members of the House of Representatives in Congress from the State of Georgia: Now therefore, be it

Resolved by the house of representatives (the senate concurring), That said resolution of 1946 be now repudiated and that the General Assembly of Georgia go on record as opposing the principles of world federation; be it further

Resolved, That a copy of this resolution be sent to each of the Senators and Members of the House of Representatives from the State of Georgia.

Passed in Atlanta, Ga., January 1950. Georgia House of Representatives, unanimously; Georgia Senate, 34 to 8.

Effect of Taxation on Our National Economic Situation

EXTENSION OF REMARKS
OF
HON. CHARLES A. EATON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. EATON. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD, I include a very important and instructive statement by Mr. George K. Batt on our national economic situation with special emphasis upon the effect of taxation:

STATEMENT BY GEORGE K. BATT, VICE PRESIDENT, DUGAN BROS. OF NEW JERSEY, INC., AND VICE PRESIDENT, NEW JERSEY STATE CHAMBER OF COMMERCE, THIRTEENTH ANNUAL CONGRESSIONAL DINNER, THURSDAY, FEBRUARY 2, 1950, MAYFLOWER HOTEL, WASHINGTON, D. C.

We know that you of the New Jersey delegation in Congress are dealing with many issues which gravely affect the fortunes of our country and its people. I doubt whether any previous Congress ever had so large a work load as that which confronts you. And as more laws are enacted which take the Government into new fields, your work load grows rather than diminishes. I would imagine that it has already become physically impossible for any Member of Congress to acquire a comprehensive knowledge of all the important measures that come up for debate and decision.

Doubtless it would help you greatly if more of the folks back home would write you, giving you the facts as they see them about the effect which specific proposals would have upon their daily living and upon the life and development of their communities. It has been my experience that all of you have welcomed such letters; you have often found them helpful. Some of you have, in a friendly way, criticized our New Jersey business men at times for not availing themselves of this opportunity to inform and advise you regarding legislation which will affect them. I hope tonight's meeting will be a step toward correcting this situation.

We are informed that Capitol Hill swarms these days with a bewildering convergence of pressure groups and counter-pressure groups, many of them presuming to speak for people and interests back home. The spenders—those having vested interest in the spending of public funds—are said to be especially active these days. If it is at all reassuring to you, may I say that we of the New Jersey State Chamber come here seeking nothing that will help New Jersey at the expense of Uncle Sam. We have for some years refrained from being a party to any demands for Federal funds for any local purpose. We have urged chambers of commerce and other business groups in New Jersey to do likewise. You will not find us in the pork-barrel parade. On the contrary, we have considered it much more important to all the people of New Jersey that the Federal Government reduce its spending burdens so that we in New Jersey may have more funds to perform those public services which can be best administered at the State and local levels. We are convinced that, all in all, we get more service value for our tax dollars spent at Trenton or in our city halls than we get from those spent in Washington, D. C.

We also believe it vitally important that our Federal budget be balanced without further delay, so as to protect the value of the dollars we spend in our local governments, in our households, and in our business.

The $42,500,000,000 Federal budget proposed for the next fiscal year will cost the people of New Jersey $1,400,000,000 in Federal taxes, plus interest on whatever deficit is incurred.

This $1,400,000,000 Federal-tax burden is nearly three times the total amount of taxes which will be collected in New Jersey this year to finance our State government, all our county and municipal governments, and all our public-school systems combined.

The total amount of all Federal, State, and local taxes collected in New Jersey last year very nearly equaled the total amount of wages and salaries paid by all New Jersey industries.

The Federal Government expects to wind up this year with a $5,500,000,000 deficit, and next year with another about as large. This means an eleven-billion-dollar increase in the Federal debt. The interest on this deficit alone will add some $270,000,000 to the Government's yearly spending burdens. Do you know that New Jersey's share of this increased interest charge will be about $8,500,000? Do you know that $8,500,000 is three times the amount now needed to meet the interest charges on our entire State government debt?

While New Jersey collected $14,767,000 in alcoholic beverage taxes last year, the Federal Government collected $92,574,000 from New Jersey in the same kind of taxes. And our State and local governments do most of the policing of the alcohol industry.

The State government of New Jersey last year collected $9,106,000 in inheritance taxes, while the Federal Government extracted $39,737,000 from New Jersey out of the same tax sources.

Don't you think it's about time we began to take stock of this situation?

We would offer three constructive proposals for consideration by you and your colleagues on Capitol Hill:

First, the answer obviously is not to be found in imposing new Federal taxes. If wartime excises are to be reduced, the reduction should be made on the merits of the case. It should not be conditioned upon increasing other Federal taxes. What is needed is a gradual leveling off of Federal spending, so that the over-all Federal tax burden may be reduced. The President's budget for 1951 includes nearly a billion dollars to initiate 34 new spending programs. We estimate that when these new programs are fully under way, they will add about four billion dollars to the Federal spending budget. This is simply traveling in the wrong direction.

Second, get behind the Federal-State fiscal program of the Conference of Governors, which calls for two things: (1) A step-by-step withdrawal by the Federal Government from tax fields properly belonging to the States; and (2) a gradual curbing of the Federal grants-in-aid evil. This would be done by rejecting proposed new aid measures and by an intelligent cutting of present grants of doubtful necessity. Governor

UNIVERSITY OF MICHIGAN LIBRARIES

Driscoll, as you know, has been spearheading the fight for this program, which has won the support not only of most of the governors and legislatures, but of the Hoover Commission and of many thoughtful leaders, including General Eisenhower.

Our third proposal is this: Insist upon and work for congressional approval of the economy proposals of the Hoover Commission. Many of these proposals are being resisted by bureaucratic and other spending lobbies, which, for their own selfish reasons, prefer to see our Government continue to blunder along in the thick morass of inefficiency, duplication, and wasteful spending. We particularly call to your attention those Hoover Commission recommendations which point toward the adoption of the Governor's Conference tax program to which I just referred, and those which would draw the line upon further Government intrusion into public power, banking, medicine, and other fields in direct competition with taxpaying private enterprise.

The time has come for congressional leaders in Washington to recognize the fact that the States and their local governments are still principal component parts of our American system of government. We have confidence in the ability of people at the local level to conduct their public affairs adequately and competently. We have local problems, to be sure. We presently have a State revenue problem. But I repeat this assurance in your presence, that our State chamber is intent upon working with the governor, the legislature, and others interested to bring about a constructive solution to New Jersey's tax problems, to the end that full responsibility for education, police protection, highway development, and the other essential services within the State and local domain may be fully met.

In short, we of New Jersey enterprise cannot help but find ourselves becoming increasingly alarmed at the whole picture of a Central Government growing larger every year—draining an ever-increasing tax income away from our citizens, and competing in more and more ways not only with private enterprise but also with State and local governments.

The concept of a huge Federal Government inevitably clashes with the generally accepted characteristics of our American opportunity system. Business spokesmen groups, such as the New Jersey State Chamber of Commerce, are of one mind in feeling that governmental units should be only as large as they need to be, and not as large as they can contrive to be. And they are of one mind also in feeling that there must be sufficient legitimate freedom for every enterprise and every individual to work and contribute to the fullest for the common good.

To put our economic house in order, and, more fundamentally, to demonstrate that genuinely American principles are to prevail over the monopolistic principle of a large Central Government, three major objectives must be given topmost importance in the efforts of both private citizens and public officials. These three major objectives are:

First, we must bring the cost of government—and this means predominantly the cost of Federal Government—down to a level commensurate with the real cost of performing essential governmental services, and proportionate as well to the ability of both individuals and enterprise to pay the bill without imperiling the flow of money so vital to the continued growth of our system.

Second, we should refrain from enacting and imposing laws and regulations which by every reasonable measure would do nothing but hamper productive enterprise.

And finally, basic to all of our actions, both as citizens or as lawmakers, we should alert ourselves to the lengthening shadow of a socialistic trend in government. This threat places upon each of us a personal responsibility to resist those seemingly worthy legislative proposals and actions of government which cannot help but lead us further down the road to socialism.

Cold Won't Stop Budworm

EXTENSION OF REMARKS
OF
HON. LOWELL STOCKMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. STOCKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the East Oregonian of January 21, 1950:

COLD WON'T STOP BUDWORM

(Western Pine Association Service)

Any hopes that cold weather might freeze out the 2,000,000-acre tree-killing budworm epidemic in Pacific Northwest timberlands were dashed today by the scientific record.

Ernest L. Kolbe, chief forester of the Western Pine Association, said the vast insect horde that menaces billions of feet of fir timber in Oregon and Washington, is "just about frostproof."

"When it comes to cold, the budworms can sure take it," said Kolbe. "In Quebec and Maine they have weathered 40 below zero many times. In eastern Oregon last winter temperatures dropped to 30 below without decimating the budworms. Chances are they could get along fine at the North Pole if they only had some of our nice, juicy needles to eat.

"Reason they are more or less immune to cold is that during hibernation they are well insulated by a silken nest, or cocoon that they spin around themselves. Also, they are protected by bark behind which they hole up for the winter."

"But there's one thing they can't take, and that's DDT," said Forester Kolbe, who heads a private-State-Federal joint action committee formed here a year ago to fight the record-breaking insect outbreak. The group has mapped an aerial-spraying project for this coming spring to cover about 1,000,000 acres of the worst infested areas in the two States. It will be the largest single aerial-spraying job ever undertaken," Kolbe said.

Listed for treatment are various areas in the Blue Mountains, near Walla Walla, Pendleton, Kinzua, La Grande, Enterprise, Wallowa, Heppner, John Day, and elsewhere; also south of Mount Hood, out of The Dalles; the Sisters region, and numerous danger spots west of the Cascades, including several near Roseburg. Last year 270,000 acres, chiefly near Eugene and Oakridge and east of Mount Hood, were sprayed with near-perfect results.

"The budworm," said Forester Kolbe, "is vulnerable only during a period of about 2 weeks in the spring. That's when you have to hit the caterpillars, or not at all. It is a tremendous job to get such a huge spray project ready. We must stock pile a trainload of DDT and line up a veritable armada of specially equipped spray planes, build some roads and airstrips, spot stray storage tanks at strategic points, and have everything ready to go by nature's deadline in May or June."

He said preparatory work is marking time now pending action by Congress on a requested $880,000 emergency appropriation to cover the Federal share of costs. Already the two State governments and private owners of lands to be sprayed have underwritten their shares, totaling $314,000. More than two-thirds of the infested areas to be sprayed are Federal lands.

"We can't even hope to proceed on this huge project without Federal participation," said Kolbe, "and if we don't spray, heavy losses in timber are inevitable. It has to be a three-way cooperative job—private, State, and Federal, as these properties are intermingled. If the United States Government keeps us on tenterhooks on the financing matter beyond mid-February, it will be too late to get ready."

Box Suppers Offer Less Political Nourishment Than Bender's Advice

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. BOLLING. Mr. Speaker, under leave to extend my remarks, I include an excellent column by Lowell Mellett. I invite particular attention to the wisdom of the advice offered by a former Republican Member of the House, George H. Bender, of Ohio, to those to whom his counsel applies:

ON THE OTHER HAND—BOX SUPPERS OFFER LESS POLITICAL NOURISHMENT THAN BENDER'S ADVICE

(By Lowell Mellett)

This you wouldn't believe if you didn't see it but there it is right in the paper, a two-column paid ad for that Lincoln Day celebration the Republicans have planned as an offset to the annual Jefferson-Jackson Day shindig of the Democrats.

You remember the original announcement concerning this affair. It was to be a dramatic demonstration that the GOP is still the party of Lincoln, the poor man's party. The Democrats might throw $100-a-plate dinners in the name of their twin patron saints, but a more fitting tribute to the founder of republicanism would be a simple dollar dinner. That's what it was to be, a spontaneous, inexpensive expression of the party's loyalty to its original principles. The country would see who are the political plutocrats and who are the plain people.

IDEA DIDN'T TAKE HOLD

But apparently the idea didn't take hold in the manner hoped for and it has become necessary to advertise for customers. So, look what you'll get for your dollar: Fred Waring and his Pennsylvanians. Square dancing and round dancing. Entertainment, with George Murphy and Robert Montgomery, all the way from Hollywood, acting as masters of ceremonies. The dinner? Well, you don't even have to eat that; you can have dinner at home, but there will be complete chicken dinner for an extra dollar if you want it.

Nothing is said in the ad about speeches, but if there are not to be any it surely would say so, since that would help draw a crowd. However, even if they have speeches, it's a good guess that the big hall will be filled and that everybody will have a good time. Presumably they will all go home filled with a new appreciation of the greatness of Lincoln and the fidelity of his party to his principles.

The Jackson-Jefferson Day meal won't draw any more customers—the estimate for each

affair is about 5,000—but there the similarity ends. The Democrats attending will have paid $100 per plate in advance and they will have to listen to speeches. No big name band. No square and round dancing. No Hollywood entertainers. Just a good, wholesome dinner on a red, white, and blue tablecloth. For this and for the love of Harry Truman, Thomas Jefferson, and Andrew Jackson they will pungle up $100 each. At least that's part of the idea, the other part being the profit on the proceedings, which goes into the party's campaign fund.

And presumably the elegant eaters will all go home resolved to be more like Jefferson and Jackson and Truman.

GOP LEADERS, IN FIX

Which is enough of nonsense. Seriously the Republican Party leaders should be doing something about the ridiculous fix they are in, as exemplified by these two contrasting celebrations. The answer won't be found in silly box suppers. It will be found in an improved course of action.

"As matters stand now, the Republican Party is in the most difficult position in its history," said George H. Bender, former Ohio Congressman-at-large, writing last May in the National Republican, which he publishes. "It may receive little or no credit for any assistance it may render in the passage of legislation. It will be blamed justifiably for any stand it may take in conjunction with reactionary elements of the Democratic Party. But this dilemma must be faced resolutely.

"It will profit the Republican Party nothing if it chooses the path of obstructionism in the Eighty-first Congress. The political consequences of any conduct which can be interpreted as an unholy alliance with nonprogressive elements must prove catastrophic."

The first half of the Eighty-first Congress has passed into history with little to indicate that many of the party leaders believe Mr. Bender. The second half is under way and the indications haven't greatly changed. But there is still time—unless the Republican leaders really prefer box suppers.

The Church Federation of Greater Chicago Commits Itself Wholeheartedly to the Christian Principles of FEPC

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. O'HARA of Illinois. Mr. Speaker, that my distinguished colleagues in the House may understand the depth and the universality of the public sentiment of the great metropolis of the inland, Chicago, supportive of H. R. 4453, I am extending my remarks, by unanimous leave graciously granted, to include the following letter from the Church Federation of Greater Chicago, which includes Protestant churches of all denominations:

JANUARY 30, 1950.

The Honorable BARRATT O'HARA,
House Office Building,
Washington, D. C.

DEAR SIR: The board of trustees of the Church Federation of Greater Chicago has declared that discrimination in employment because of race, creed, color, national origin, or ancestry is unjust; and a denial of Christianity and brotherhood; and that it is favorable to the principle of legislation which would prohibit such discrimination, such as the present House bill H. R. 4453.

We urge you to do everything in your power to bring this legislation to the floor of the House as soon as possible, and to keep it on the floor until a final vote has been taken.

Your party pledged support of a Fair Employment Practices Commission in its 1948 platform. We trust that you will not fail now in securing the passage of adequate FEP legislation.

Sincerely yours,

LESTER R. MINION,
JOSEPH L. ROBERTS,
Cochairmen, Commission on Race Relations.

P. S.—Please sign discharge petition No. 20.

Following is my reply to the above letter:

FEBRUARY 6, 1950.

Mr. LESTER R. MINION and Mr. JOSEPH L. ROBERTS,
Cochairmen, Commission on Race Relations, The Church Federation of Greater Chicago, Chicago, Ill.

DEAR SIRS: This is to acknowledge receipt of your form letter concerning H. R. 4453. I am happy to note the position taken by the board of trustees of the Church Federation of Greater Chicago in support of legislation aimed at removing discrimination in the opportunity to obtain and hold employment.

Such legislation, reflecting as it does the Christian concept of the brotherhood of man under the fatherhood of God, could not fail to inspire deep sympathetic interest among the men and women whose spiritual strength is maintained and augmented by attendance and worship at the many Protestant churches of all denominations comprising the membership of the Church Federation of Greater Chicago.

It is heartening that your board of trustees has responded to this universal sentiment among Christian people in our community by officially declaring the support of H. R. 4453 by your federation, truly representative of and the spokesman for the United Protestant Churches of Greater Chicago.

You request me to sign discharge petition 20. I am happy to inform you that I was one of the first to sign this petition and that I also signed discharge petition 21, which is of a similar nature. Discharge petition 20 was filed by Representative FRANKLIN D. ROOSEVELT and discharge petition 21 by Representative ADAM CLAYTON POWELL. It is significant to note as indicating no division among those supporting FEPC that ROOSEVELT signed POWELL'S petition, as well as his own, and POWELL signed both his own and ROOSEVELT'S petition.

As the 1948 national platforms of both major parties pledged support of a Federal Fair Employment Practices Act I see no good reason why any individual Member of the House should not feel free to sign any or all discharge petitions, the objective of which is to bring an early vote on proposed legislation redeeming the pledge of both parties. Certainly if each individual Member applied to his own actions the test of his fidelity to campaign pledges of his own party it is inconceivable that a discharge petition for H. R. 4453 would fail of the required 218 signatures.

Regardless of the fate of the discharge petitions now on the Clerk's desk, I can assure you with the utmost confidence that H. R. 4453 will reach the floor of the House early in this session and be passed by a substantial majority. The sincerity and determination of the President and of the House leadership is beyond question, and I am sure there is equal sincerity and determination that the FEPC bill shall be passed among sufficient numbers of the opposition party.

The action of the board of trustees of the Church Federation of Greater Chicago has been a stimulating contribution, of real value, to a good fight for the good cause of a functioning democracy geared to the conception of the brotherhood of man under the fatherhood of God.

Cordially and sincerely,

BARRATT O'HARA,
Member of Congress.

Relocation of Defense Industries

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mrs. DOUGLAS. Mr. Speaker, California has had the greatest population increase since the war of any State in the Union. The question of employment, therefore, is of first importance. The possibility that a factory may close or a shipyard shut down in a given area is of grave concern not only to the people who live there but to the people of all California.

A number of proposals have been made and continue to be made as to the dispersal of vital industries from both the east and west coasts because of the possibility of eventual air attack upon the continental United States.

Mr. A. J. Hayes, international president, International Association of Machinists, Washington, D. C., tried to ascertain from Mr. Hubert E. Howard, Chairman of the Munitions Board, what the policy of the Munitions Board was to be with respect to vital industries on the west coast.

A press release issued by the Chairman of the Munitions Board making public Mr. Howard's letter to Mr. Hayes clearly states the position of the Munitions Board in this matter.

Mr. Speaker, under leave to extend my remarks, I wish to include the abovementioned press release; together with Mr. Hayes' letter in acknowledgment of the letter from the Munitions Board:

Hubert E. Howard, Chairman of the Munitions Board, today made public a letter to A. J. Hayes, international president, International Association of Machinists, Washington, D. C., which states that the Department of Defense is not advocating the relocation of defense industries from one area to another.

The Department of Defense program for dispersion of industries, Mr. Howard pointed out, is to encourage separation of vital facilities by at least a few miles.

This reiterates a statement made by Secretary of Defense Louis Johnson before the New England Council, at a meeting in Boston, November 18, 1949, when he said:

"I have been told by three or four of those sitting on this platform as we were in in the ante-room, that you governors and you members of the council have been distressed by publicity and rumor that we of the Department of Defense favor the moving of factories from New England. There isn't and there never has been a word of truth in those rumors. Our job in the Department of Defense is the defense of all America. I do beg of you in accepting that statement of mine, when you build the new plants, don't put them too close together. Put them a few miles apart."

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. Howard's letter to Mr. Hayes is made public as a statement of the Department of Defense policy:

"DEAR MR. HAYES: The resolution of December 7, 1949, expressing the position of the International Association of Machinists in regard to the dispersal of defense industries, which was forwarded to the President and the Secretary of Defense, has been received This matter was referred to me as Chairman of the Munitions Board for reply because of our interest and responsibility in the security of vital defense industries.

"The Department of Defense program for dispersion of United States industries is to encourage vital facilities to separate major industrial plants by at least a few miles. For your information a copy of a booklet entitled, 'National Security Factors in Industrial Location,' published by the National Security Resources Board in September 1948, is attached. The general guidance on dispersion to be found in this booklet is being followed by the Department of Defense. Particular attention is invited to the fact that industry is spending 12 to 14 billion dollars annually for new plants and equipment. A substantial portion of these plants are being located in highly industrial areas, thereby increasing such areas' susceptibility to attack. As pointed out in the booklet, the separation of major industrial plants by only a few miles is sufficient to give any single installation considerable protection. When private industry expands existing plants or locates new plants, the benefits to be gained by this comparatively small space can be had without any marked effect on the local economy, dislocation of experienced craftsmen or additional cost to the taxpayers.

"Although modern strategy is based on the fact that any area of the United States can be attacked, the staggering cost in material and energy of such an extensive attack would require that it be planned so as to accomplish the maximum damage to our production facilities. The area of major destruction from an atomic blast generally can be enclosed within a circle of 3 miles radius. The fewer vital plants located within any given 3-mile radius, the less desirable it is as an atomic target.

"The Department of Defense program is to disperse within areas and not to disperse from one area to another. We do not advocate dispersion by the relocation of industries from one area of the United States to another because of the serious social and economic factors involved, such as those pointed out in the resolution. In addition, under our form of government, no executive authority exists to direct private industry to move its plants or its production from one location to another. The transfer of the aircraft plant from Connecticut to Texas, referred to in the resolution, was based on reasons quite apart from security considerations and was financed in its entirety by the company concerned.

"I would like to assure you that the Department of Defense is planning the protection and defense of the entire United States and is not planning the defense of any one area to the detriment of another. Our program for dispersion is designed to make all areas less desirable for an atomic target by advocating that the location of new plants or the expansion of existing plants be made in areas outside of a 3-mile radius from other vital facilities.

"Sincerely,

"HUBERT E. HOWARD, *Chairman.*"

INTERNATIONAL ASSOCIATION
OF MACHINISTS,
Washington, D. C., January 17, 1950.

Mr. HUBERT E. HOWARD,
Chairman, Munitions Board,
Washington, D. C.

DEAR MR. HOWARD: This will acknowledge your letter of January 13 which was sent as a result of and in reply to a resolution regarding the dispersal of defense industries, recently adopted by the executive counsel of the International Association of Machinists.

We are greatly pleased to learn that the Department of Dispersal is not presently contemplating the relocation of industries from one area of the United States to another. The International Association of Machinists is highly in favor of defense plans or a defense program which will adequately protect our people, our industries, and our form of government. It is our considered judgment that this type of protection can be afforded only by the building of adequate defenses to protect all of the vital section of the United States and its Territories.

We are principally concerned with defense because we want to protect our way of life. This, of course, includes our free-enterprise system. We are not in favor of cutting the main arteries of our economic system on the basis of the unilateral judgment of experts in one field. If, in the final analysis this is necessary we favor it, but if possible we prefer adequate defense of all of our country, including our industrial and economic systems.

Respectfully yours,

A. J. HAYES,
International President.

Situation of the Jews in Russia

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. MULTER. Mr. Speaker, I am placing in the RECORD today a very interesting study on the Jews in Russia. It was prepared by an able and outstanding scholar, Dr. Sergius Yakobson, who is Chief of the Foreign Affairs Section of the Legislative Reference Service, in the Library of Congress.

This excellent study should help in clearing up a good deal of the misinformation and the many untruths about the Jews in Russia, which have been spread these past few years by individuals and groups who are interested merely in keeping alive the flames of hatred and prejudice. Dr. Yakobson discusses in his study such factors as the number of Jews in Russia, their social composition, their legal position, and the factual situation of Jewish life under the Communist regime. He delves into the causes of the failure of the colonization project at Biro-Bidjan, in the Soviet Far East, which are not generally known.

Most important, however, is the last part of his study which he devotes to an analysis of anti-Semitism in present-day Russia and the Soviet attitude to the State of Israel. He reaches the conclusion, on the one hand, that "the current attitude of the Soviet Union toward the Jews has many of the characteristics of traditional anti-Semitism," and on the other hand, he concludes that "although it has recognized and entered into diplomatic relations with Israel, the Kremlin is determined not only to prevent the Jews in the Soviet Union from emigrating to the new state but even from supporting or manifesting their sympathy with their friends in Tel Aviv."

Mr. Speaker, I commend this brief study to the attention of the Members of this House:

THE JEWS IN THE U. S. S. R.

(By Sergius Yakobson, Chief, Foreign Affairs Section, Legislative Reference Service, Library of Congress)

1. NUMBER OF JEWS

The last Soviet census of January 17, 1939, registered 3,020,141 Jews in the U. S. S. R., establishing them as the seventh most numerous national group after the Russians, the Ukrainians, Belorussians, Uzbeks, Tatars, and Kazakhs. The question of nationality in the 1939 census was given a purely psychological-cultural definition indicating the group with which each individual felt that he and his children were most closely identified.

With the incorporation of the Baltic republic, eastern Poland, and Bessarabia, into the Soviet Union in 1941, about 2,200,000 persons were added to the Soviet Jewish population. Allowing for a slight natural increase, the grand total of Soviet Jews prior to Hitler's attack on Russia in June 1941 amounted to about 5,300,000.

At present, after Hitler's mass extermination of Jews, the numerical strength of the Jewry in Russia is estimated at from two to two and one-half million people.

2. SOCIAL COMPOSITION

The social composition of the Russian Jewry has undergone remarkable changes. It consisted at the turn of the century when the last prerevolutionary census was taken in 1897, of—

	Percent
Merchants, entrepreneurs, and indefinite professions	54.4
Handicraft workers and artisans	29.4
Employees	10
Industrial workers	4
Agricultural workers	2.2

In 1939, prior to the outbreak of the war, the main groups of the Jewish population were:

	Percent
Employees and professionals	48.2
Industrial workers	23
Handicraft workers and artisans	20.8
Collective farmers and individual peasants	5.8
Others	2.2

3. LEGAL POSITION

After the downfall of the monarchy in Russia, the Provisional Democratic Government at St. Petersburg promulgated on April 2, 1917, a decree finally repealing all restrictions and discriminations against Russian citizens of Jewish faith, as well as other minorities. Thus, the end of anti-Jewish legislation in Russia has to be credited to the victory of democratic and liberal forces in the March revolution of 1917. The political freedom which the Provisional Government gave the Jews delighted them to such an extent that they were not interested in deriving any further benefit from the revolution.

The Communist Government of Russia in power since November 1917, proclaimed in one of its first decrees issued on November 15 of the same year, equality and sovereignty of the peoples of Russia and abolition of each and every privilege or restriction based on nationality or religion. Later on, in August 1918, a special statute called upon the Soviet people to fight anti-Semitism by all possible means. The Council of People's Commissars instructed "all Soviet deputies to take uncompromising measures to tear out the anti-Semitic movement by the roots. Pogromists and pogrom agitators were to be placed outside the law." Any kind of hatred against any nation was declared "inadmissible and shameful."

In 1926, the Russian Criminal Code made anti-Semitism a criminal offense. This law stated that incitement to discrimination of any kind was punishable by a jail sentence of up to 2 years; during times of stress, incitement to discrimination was punishable by even longer terms of imprisonment and also by death.

Finally anti-Semitism was outlawed by the Soviet 1936 Constitution. According to article 123 of the Constitution "equality of rights of citizens of the U. S. S. R. irrespective of their nationality or race, in all spheres of economic, state, cultural, social, and political life is an indefeasible law. Any direct or indirect restriction of the right of, or conversely, any establishment of direct or indirect privileges for citizens on account of their race or nationality, as well as any advocacy of racial or national exclusiveness or hatred and contempt, is punishable by law."

Thus, by law, the Soviet Jewry is put on an equal footing with all the other ethnic groups inhabiting Soviet territory. However, neither Judaism nor the Hebrew language is encouraged by the Soviet government. In the words of Dr. Morgenstern, former president of the Hebrew Union College at Cincinnati, "The great Jewish community of Russia is lost to Judaism and perhaps to the Jewish people. Judaism cannot survive in Russia, any more than can any other religion."

Article 124 of the present Soviet Constitution guarantees to all Soviet citizens freedom of religious worship and freedom of antireligious propaganda, but significantly, not the freedom of religious propaganda. As before, organized religious teaching is not permitted in the Soviet Union. Religious instruction, including Hebrew, may be taught children under 18 only privately within the confines of the home.

Like all other Soviet citizens, the Soviet Jews are not permitted, with very rare exceptions, to leave the Soviet Union and migrate to foreign countries. The Soviet Government has also for a long time been violently opposed to Zionism as a "bourgeois movement bound up with foreign imperialism." Lenin himself was the first to suppress the Zionist movement in Soviet Russia.

The attitude of the present Soviet leaders to zionism was best summarized in a talk which Bartley Crum, a member of the Anglo-American Committee on Palestine, had with the powerful Ukrainian Foreign Minister Dmitri Manuiliski in London early in 1946. "He, Manuiliski, in his own city of Kiev, had seen the sufferings of the Jews, he told me," writes Crum. "He knew what they had gone through. He was proud that anti-Semitism was not tolerated in Russia. But he would be less than honest, he added, if he didn't tell me also that there is a large Mohammedan population in the Soviet Union. 'Does Moscow still believe that Zionists are the tools of British imperialism?' I asked. He smiled again. 'They are not active tools of British imperialism, Mr. Crum, but Dr. Weizman and his group have such confidence in the integrity of the British that Russia feels sometimes they are the unconscious tools of British imperialism.'"

4. FACTUAL SITUATION

(a) Jewish life in Russia after the revolution:

The revolution of 1917 put an end to the Jewish ghetto in Russia. But Russian Jewry had to pay dearly for the Communist revolution. The downfall of the Romanov dynasty gave the Russian Jew political equality, but the establishment of the Soviet regime destroyed the foundations of the social and economic life of the Jewish masses in Russia. The so-called Jewish question, which, in 1917, had been solved in the political sphere, now reappeared on the economic plane.

One of the first aims of the Moscow Communist government was the destruction of bourgeois society in Russia. Its economic policy was directed primarily against all forms of private ownership in industry and trade. Russian Jewry became one of the main victims of the Bolshevist experiment. It was estimated that before the revolution 50 percent of the Jews were tradesmen, 40 percent small artisans, 6 to 7 percent belonged to liberal professions, and only 3 to 4 percent were working in the factories or on the land. The Soviet policy led to the pauperization of the Jewish masses. It deprived them of their savings, their means of production, and of hope of employment in the near future. The Russian Jew became a "declassé." Neither Soviet industry, which itself underwent a severe crisis; nor the bureaucracy, which could take only the best-equipped; nor the party, whose numbers were artificially kept very low; nor the black market, condemned in Soviet Russia as "economic prostitution," could absorb the very large number of the unemployed Jewish population. The unemployed Jewish worker tried to become an artisan or to open a little shop. But the ranks of Jewish artisans were soon depleted due to shrunken markets, the lack of tools, and heavy taxation. The Jewish tradesmen, even under the New Economic Policy, were badly handicapped by the lack of goods, prohibitive taxes, and hopeless competition with state and state-protected cooperative trade. Besides, the position of the Jew as a middleman between the town and countryside made him a special suspect in the eyes of the Soviet government. It also endangered his position and nourished anti-Semitism. Particularly hopeless seemed to be the situation of the Jewish youths, who, unless they were members of the Young Communist League, could hardly find a place in the new Soviet society.

How was a solution to be found of this problem of the Jewish masses, which threatened to affect the whole social organism of Communist Russia? As all doors to other occupations seemed to be shut, the settlement on the land and agricultural activities seemed to offer the only logical chance for the regeneration of the Jewish ethnic groups in Russia. This exodus to the land began quite spontaneously, first entirely unorganized and on a purely voluntary basis. The Jews turned first to places close to the towns in which they lived and obtained land as individuals. But soon the land around the towns was no longer free for settling. Many Jews therefore now had to emigrate to new districts farther away from home in order to seek work on the land. They were particularly attracted by the free steppes in the Ukraine, and in 1922 Jews began to migrate thither.

Only as the economic situation became more acute and the number of Jews ready to migrate increased steadily the Soviet government decided to assume control of this colonization. The Committee for Land Colonization of Jewish Toiling Masses (Komzet in Russian, Komerd in Yiddish) was organized in August 1924 with the idea of establishing through migration 100,000 Jewish families in the course of 10 years. But only 10,000 families were settled on the land during 1925 to 1927. During these 3 years only a small part of the expenses was borne by the Government, the greater portion being provided by the foreign Jewish organizations. An official report of the Komzet states that the Jewish organizations from abroad brought in 9,500,000 rubles of the total sum of 14,500,000 rubles.

As a result of this Jewish agricultural colonization in the U. S. S. R. during 1922–27 large Jewish settlements could be formed as nuclei of a series of national Jewish regions. In fact, the Jewish Communist press spoke already of a Jewish republic in the Crimea. However, in 1928, all these plans had been abandoned. The reasons for this change of policy were never explained in the Soviet press. At that time the region of Birobidzhan, in the Soviet Asia was suggested as a substitute. Through an investigating committee sent to the Far East the Komzet discovered that in respect to climate, territorial size, and natural resources Birobidzhan was suitable for Jewish mass immigration and was capable of absorbing economically in compact groups tens of thousands of families. In 1928, the Komzet requested the All-Union Executive Committee of the U. S. S. R. that Birobidzhan be set aside for Jewish colonization as a means of alleviating the plight of the economically and socially uprooted Jewish populace.

Many factors appeared to favor the success of Birobidzhan project. The settlement of Jews was to be carried out in a territory connected by land with the motherland. True enough, it was situated thousands of miles from the original homes of the Jews but these need not face the difficulties of an overseas migration. Further, the two contracting parties usually responsible for the operating of different settlement projects—vis, the government of the territory selected for settlement and the agency responsible for the project—were here identical, to wit, the Soviet Government. This eliminated a good deal of friction, facilitated the planning of the project, and its execution. Besides, the Soviet State was prepared to take upon itself the bulk of the expenses for melioration work, extensive drainage, clearing of forests, etc., without exacting the repayment of the allotted funds.[1] Birobidzahn—unlike the ordinary settlement projects—was an economically diversified entity. Agricultural and industrial colonization went hand in hand. The natural features of the region favored such a development. Birobidzhan had both plenty of fertile land and an abundance of timber and mineral resources. Finally, the settlement of Jews in Birobidzhan took place in an almost uninhabited country upon which no local populations had claims.

There is no doubt that some degree of economic progress was achieved in Birobidzhan. However, in spite of economic achievements, Jewish mass settlement in Birobadzhan resulted in a threefold failure.

1. Birobidzhan did not become a sanctuary or a spiritual center for the entire toiling Jewish population. In fact, only a small number of non-Soviet Jews, altogether 784 persons (101 from Lithuania, 83 from Latvia, 116 from Argentina, and the rest from Poland and Palestine) were reported to have come to Birobidzhan. The agreement signed in 1936 by the American Committee for the Settlement of Foreign Jews in Birobidzhan (Ambidzhan) with the Soviet Government for the admission of an initial quota of 1,000 Jewish families from Poland has never been put in force, and nothing came of the promise made by the Soviet Government in the spring of 1938 that in the course of the year 4,500 foreign Jews would be settled in Birobidzhan.

2. Birobidzhan did not become the national home for Soviet Jewry; it also did not become a Soviet Jewish state. At least until 1939—and this is still the case today—the Jews remained a minority in the Jewish autonomous region. Thus, the results, in spite of the steadily increasing total number of Jews in Birobidzhan, in no way measure up to the high expectations for mass migration to this country. The goal was the settling in the first 10 years of approximately 150,000 to 200,000 Jews. But in 1939, 11 years after the beginning of the Birobidzhan project, only 40,000 Jews, according to pro-Soviet figures

[1] Between 1928 and 1932, government appropriations for Birobidzhan amounted to 9,250,000 rubles. The Ozet (a society to assist Jewish colonization) furnished 2,400,000 rubles. Later both the government appropriations for Birobidzhan as well as contributions of voluntary organizations (labor unions, factories, etc.) showed substantial increases.

UNIVERSITY OF MICHIGAN LIBRARIES

(23,000 according to conservative estimates), were present in the Jewish autonomous region.

Due to the lack of accurate and complete Soviet official statistics the figures given by private investigators on the population movement in Birobidzhan differ in detail but all of them agree as to the tremendous turnover in Jewish settlers. An extremely high number of Jews who migrated to Birobidzhan came as immigrants but turned out to be only visitors. About a half, or at the best 75 percent of the Jews who migrated to Birobidzhan in the years 1928–36, became permanent settlers in the region, while the others either returned home or left Birobidzhan for the neighboring provinces.

3. The problem of reconciling simultaneous agricultural and industrial colonization with an establishment of an organic and sound relationship between the city and the countryside was not solved in Birobidzhan. We are here faced with the same phenomenon of flight from the land familiar to us from other settlement enterprises and the economies of nonsocialist countries. Only a part of the Jewish settlers in Birobidzhan remained on the land; the greatest majority settled in, or moved at the first opportunity to, the towns of Birobidzhan, preferably to the largest city, that is Birobidzhan—where, in 1939, about one-half of the population of 40,000 was Jewish. The Jewish agriculturists in Birobidzhan were also attracted by the glamor of the neighboring towns of Khabarovsk and Vladivostok, the rapid growth of which can at least partly be traced back to the infiltration of the Jewish element.

"What do we desire?" complained the chairman of the Presidium of the Central Executive Committee of the Soviet Union, Kalinin, at a meeting on August 8, 1936. "Do we desire to create a new western region, a Jewish population in the cities and a non-Jewish one in the villages? What kind of a national Jewish state will this become?"

Furthermore, physical hardships and psychological hurdles handicapped the colonizing effort. The conquest of this virgin land proved to be more than a match for quite a number of Jewish settlers with very little or no previous farming experiences. The Jews who came to Birobidzhan—but for a few exceptions—were no pioneers, but average, everyday Soviet citizens. No pioneering urge or spirit of adventure but sheer necessity, unemployment, social dislocation put the poverty-stricken Russian Jew on the way to Birobidzhan. Therefore, it is hardly surprising that, as soon as changes for the better occurred at home, the chief incentive for moving to Birobidzhan instantly disappeared. The chances of making a living in the old country or, preferably, in Moscow and other large Russian industrial centers, mainly accounted for the Jewish reemigration from Birobidzhan, as well as for the set-back to Jewish eastward migration.

In order to overcome the crisis in the Jewish migration to Birobidzhan it was proposed that the Commissariat for Internal Affairs and the secret police aid in recruiting, selecting, and transporting settlers. This introduced an element of forced migration but was officially justified by the need for special precautions in settling border districts.

The Jewish mass migration to Birobidzhan was a failure. It is still an undeveloped, underpopulated "backward" country. There is still a huge reservoir of almost untapped natural resources, of fertile land, water power, timber, and minerals. There still remains the unique geopolitical and geoeconomic position of this region on the confines of the Soviet Far East and Manchuria. The proximity of iron and coal reserves can make Birobidzhan into a powerful metallurgical base of the Soviet Union, even overshadowing the Donets Basin and the Kuzbass, and the configuration of the three rivers—Amur, Ussuri, and Sungari—makes Birobidzhan a land of great promise. But it is hardly to be expected that future settlers of Birobidzhan will be Jewish. Much speaks against it.

(b) Anti-Semitism in present-day Russia.

The legal and social segregation of the Jews in Russia disappeared after 1917 and a high percentage of Soviet Jews were absorbed into the ranks of ordinary Soviet citizens through frequent intermarriage with the Russians and through voluntary assimilation. Anti-Semitism and the primitive rather emotional anti-Semitic prejudices among the different nationalities of the U. S. S. R. are, however, still in existence in the Soviet Union of today.

They continued in the first years after the revolution in spite of the official policy of the Communist government. Remnants of the anti-Jewish feeling persisted and while it was not widespread, sporadic outbursts of anti-Semitism occurred.

The survival of anti-Jewish prejudices even became a part of the general picture. As early as 1921, on his visit to Georgia, Stalin, for instance, was astonished at the lack of the former solidarity among the workers of the various trans-Caucasian nationalities. "Among the workers and peasants," he complained, "nationalism has developed; suspicion against their own comrades of other races has strengthened; there are far too many — anti-Armenian, anti-Tatar, anti-Georgian, anti-Russian and other such nationalistic expressions to be heard."

The new wave of anti-Semitism was even reflected in the proletarian literature of the period: a number of articles by Maxim Gorky and other noted writers deploring the anti-Semitic tendencies of some of their colleagues were published.

Anti-Semitic excesses continued to occur, however, and the Government was compelled to enforce the law vigorously. Conductors were required to stop trolley cars and have militia men arrest passengers, sober or drunk, who uttered anti-Semitic invectives or cast aspersions upon the Jews or other minorities of the multinational Soviet state. In 1928 the press denounced anti-Semitic manifestations. All cases were thoroughly investigated and offenders severely punished. Schools, factories, farms, offices, and trade unions were instructed to expel members guilty of such action. In March 1932, two anti-Semitic judges at Krasnoyarsk were dismissed; 1 month later a Kharkov court passed a death sentence on five Ukrainian peasants found guilty of raiding a Jewish colony and killing several Jews. Anti-Semitism was particularly rampant among the Crimean Tatars.

Later in the thirties, when Hitler's accession to power in Germany and the expansion of the Japanese to the Asiatic mainland promoted the rise of nationalism in the Soviet Union, anti-Semitic feeling in Russia received an additional impetus. A Jew became now identified as a Trotskyist. By repeated actions and purges of Trotskyists, the left international wing of the Communist Party was completely decimated in Soviet Russia and simultaneously the radical Jewish element with a few exceptions disappeared from the Moscow government. By the end of 1938, all the outstanding leaders, up to 100, of the Jewish Communist group in Soviet Russia were liquidated. The Jewish press was suppressed. Russification of Jewish cultural life progressed rapidly. At the same time all contact with Jewish foreign organizations interestd in Birobidzhan was interrupted, and even some of their representatives were imprisoned. "You Jews," said Stalin to the German writer, Feuchtwanger, in 1937, speaking of Radek, "have created one eternally true legend—that of Judas." Jews who formerly played a conspicuous role in the Soviet bureaucracy were dropped now en masse from the neo-Nationalistic Soviet Government, the Soviet Diplomatic Corps, and the high offices in the various agencies of the Soviet administration. Even during the recent war, the United Press correspondent in Moscow, Harrison Salisbury, never saw at the Soviet Foreign Office a young Jewish attaché around the place, and he had a feeling that blond Nordic types were preferred. And in the late thirties it was a popular Soviet joke to compare Stalin with Moses for having achieved the exodus of Jews from the central executive committee of the Soviets.

The recent war years, the time of terrible hardships in Russia, strengthened furthermore the anti-Semitic sentiment in various Soviet quarters. They even revived the old accusation of Jews dodging active military service in spite of the fact that the Soviet Jewry ranked fourth among the national groups receiving Soviet military decorations. A total of 123,822 Jewish Red Army fighters and war workers received the Order of Lenin, the Order of the Red Banner, the Medal of the Patriotic War, and other Soviet medals and orders.

The growth of anti-Jewish feeling in wartime Russia forced even Ilia Ehrenburg to speak openly against this dangerous development at a meeting of the Jewish anti-Fascist Committee in Moscow in March 1943. And it is remarkable that in view of the strength of anti-Semitism in Russia, in none of the Soviet war slogans or posters has there been particular reference made to the plight of the Jewish people under the Nazi regime. The Soviet leaders avoided scrupulously any chance of being accused of waging a Jewish war. After the end of hostilities, the anti-Semitic sentiment in Russia seemed to have subsided to some extent. However, new anti-Jewish excesses were caused by the return of the Jewish evacuees from their evacuation places in Russia to their old homes in the war-devastated regions of the Soviet Union with their terrible housing conditions. And a new and significant turn in Stalin's national policy is finally indicated in his address of May 24, 1945. Here Stalin spoke openly for the first time of the Russian people as the most outstanding nation of all the other nations forming the Soviet Union and as the leading force of the Soviet Union. Thus, the Soviet dictator is inclined now to put the Russian people in the same privileged position with regard to other Soviet peoples as the one which the Communist Party enjoys as the "vanguard and the leading core of all organizations of the working people" with regard to the proletariat of the Soviet Union.

As early as 1903 Lenin attacked the Jewish Bund, which was a Jewish socialist organization founded in 1897, on the ground that the Jews were not a nation and that their destiny lay in being assimilated by the people of the area where they resided. Lenin condemned the bund for trying to combine Zionist views with those of socialism, insisting that "the idea of a Jewish nationality is contrary to the interests of the Jewish workers and engenders in them a feeling of hostility toward assimilation."

Stalin has also attacked the Bund in an article republished in 1946, but actually written much earlier. Stalin contended that the Jews were not a nation because they "did not have a broad stable section tied to the land which naturally consolidates a nation." Only 3 or 4 percent of the several million Russian Jews were engaged in agriculture, Stalin pointed out, and he implied that for this reason they would be assimilated. He considered the Bund to be contrary to the purposes of the proletarian revolution and was, therefore, to be opposed.

With the advent and establishment of a Jewish state in the Near East, Soviet warnings against Zionism became strong and explicit. During 1948 articles began to appear in the Soviet press warning Soviet Jews that

their future lay in the Soviet Union and not in Israel. The famous journalist Ilya Ehrenburg, himself a Jew, repeated in the Communist Pravda of September 21, 1948, the old Communist concept that the fate of the Jews lay in their being assimilated in the countries in which they were living and that the idea of an international Jewish culture was mystical. And a month later the Jewish newspaper Einikeit reminded the Jews that while their sympathy should be with the Israeli proletarians struggling against capitalism, they should not "consider Israel their homeland." In short, although it has recognized and entered into diplomatic relations with Israel, the Kremlin is determined not only to prevent the Jews in the Soviet Union from emigrating to the new state but even from supporting or manifesting their sympathy with their friends in Tel Aviv.

Coincident with this opposition to Zionism within the Soviet Union has appeared a chauvinistic prejudice against "international bourgeois culture" or "cosmopolitanism" which is, to a large degree, identified with Jewry.

During 1949 the campaign of the Soviet Government against "antipatriotism" and against other deviations and "errors" in the realms of art, literature, the theater, and other cultural activities assumed to a great extent an anti-Semitic coloring. In a very prominent position among those thus attacked were persons with Jewish names. In numerous instances Russian names were followed by the original Jewish names in parentheses. "Cosmopolitanism," which was largely identified with Jewish international culture, was harshly castigated. In particular Jewish literary critics in the Soviet Union were pictured as living corpses, renegades, men wearing traitor's masks, and they were accused of playing up the "cosmopolitan idea of the existence a world-wide Jewish literature and of putting Soviet writers on a par with burned-out businessmen of America and Palestine."

These officially inspired press attacks did also assault the Jewish religion. The novel, Years of Life, by Alexander Isbakh, was, for instance, taken to task for propagandizing in favor of and describing in detail the services in a synagog.

Thus it may be said that the current attitude of the Soviet Union toward the Jews has many of the characteristics of traditional anti-Semitism which hardly can encourage or terrify the Russian Jews into "resigning themselves to spend the rest of their days in the Soviet Union under a dictatorship," as pointed out by Joseph Newman in his recent series of articles on Soviet Russia which were published in the New York Herald Tribune.

UNIVERSITY OF MICHIGAN LIBRARIES

VA "Fight's On" Over Hoover Commission Recommendations

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, under permission to extend my remarks, there is printed herewith a radio talk made by me during the past week:

Friends and fellow Americans, an evening broadcast is opened with the statement, "Soup's on." Let me open this report with the statement, "Fight's on."

Over WHFB, local chambers of commerce have been urging the folks to write their Congressman to support the recommendations of the Hoover Commission. They did.

The writers wanted economy and efficiency in the Federal Government. So do I, and, unless we get it—and that right soon—everyone is going to pay—as the old expression has it—through the nose—whatever that may mean.

Through the generosity of WHFB, I was given opportunity to reply to those requests, and then stated what I thought everyone knew—that I, too, was for more economy, greater efficiency, in the Federal Government.

The home folks were advised that, as the various bills designed to put the Hoover Commission's recommendations into operation came before the Congress, those who thought they would be adversely affected would vigorously oppose them.

The expected has happened. Today the battle is on. The Hoover Commission recommended changes in the Veterans' Administration. From veterans, from veterans' organizations, the letters are now pouring in, opposing the recommended changes.

Typical of the American Legion's position is a letter dated January 12, 1950, from R. Gerald Barr, commander of the American Legion, department of Michigan.

I quote Mr. Barr:

"The American Legion, as you will recall, carried on a great fight for many, many years to see that veterans' rights were placed under a single, central agency so that there might be greater efficiency in the management and coordination of veterans' benefits. This fight, which was carried on for many years, finally resulted in 1929 in the creation of the Veterans' Administration under which all veterans' benefits and their coordination and management were placed. The Veterans' Administration has continuously operated for some 20 years since that date.

"Although there is constantly room for increased efficiency in the Veterans' Administration, we believe that its record since 1929 has been a creditable one; certainly greater efficiency has been promoted by having all phases of the veterans' program under the same roof where immediate reference can be made to master indexes and master files for many phases of the veterans' program. We in the American Legion are wholeheartedly in favor of seeing the veterans' program administered under a central agency where greater efficiency can at all times be realized.

"However, we do not oppose the recommendations of the so-called Hoover Commission as a whole or in their entirety. We are very much opposed to those recommendations as they pertain to veterans."

On the other hand, the Washington branch of the Citizens Committee for the Adoption of the Hoover Report, on the 25th, last, announced that it was only trying to improve service to the veterans by reorganizing the veterans' agency, which has been attacked even by professional veterans organizations' leaders for slowness and inefficiency in handling claims.

It issued the following statement—and I quote:

"Those leaders of veterans' organizations who are maintaining that the Veterans' Administration does not need a major reshuffling must be creating considerable surprise among their members who have had to wait 6 weeks for a letter to be answered, or who know a veteran's widow who has had to wait four times as long to collect on her husband's National Service life insurance policy as is required to collect from an insurance company.

"We are sure that most members of veterans' organizations will greet some claims of their leaders with healthy skepticism. The Hoover report would definitely speed up and improve the service to veterans—and the veterans know there is plenty of room for improvement."

The Hoover Commission Task Force which investigated the VA was headed by a former Legion national commander, Col. Franklin Dolier, of Newark, N. J.

The Task Force found, for example, that, in the handling of veterans' insurance, the Government agency employed four times as many clerks per policyholder as do commercial companies.

That Task Force also recommended merging veterans' hospitals in a general Medical Administration; recommended transferring the GI home loan programs to the regular Federal Housing Agency; giving the Interior Department the responsibility for construction of veterans' hospitals.

On January 25, George M. Craig, national Legion commander, held a conference with President Truman. Then, on the 26th, he talked the situation over with former President Herbert Hoover. It is understood that he told both gentlemen that the Legion would fight the proposed changes at the polls.

So here in Washington, Congressmen are on the spot.

Junior chambers of commerce no doubt many of their members Legionnaires—millions of citizens throughout the country, insist they want economy and that we'll get it if we adopt the Hoover Commission's recommendations.

Present officials of the Legion and no doubt all other veterans' organizations and individual veterans say, "Yes, we, too, are for economy, but"—as Department Commander Barr wrote me—and again I quote—"we are very much opposed to those recommendations as they pertain to veterans."

If the former national commander of the Legion who recommended the changes is all for them, and if the present commander of the Legion is all against them, what is a dumb Congressman to do?

One thing this dumb Congressman does know—and no one is going to argue him out of it—and that is that a lot of veterans, veterans' widows, veterans' dependents, are writing him for help in adjusting their differences with the Veterans' Administration, and he'll sure be glad of a procedure which will give the veteran better service, people generally less expense in connection with the administration of veterans' affairs.

Prayer To Make Democracy Worth Defending

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mrs. DOUGLAS. Mr. Speaker, a real old-timer of the desert is Alice Salisbury, of Barstow, Calif., a fine and growing city of the Mojave Desert region. No longer young, Alice Salisbury still has the vigor and forthrightness, the optimism and belief in the future of the pioneer woman. She has composed a prayer which in this day of struggle echoes the aspirations of millions of Americans. I place this prayer in the RECORD where it may be read by many:

PRAYER TO MAKE DEMOCRACY WORTH DEFENDING

God of our Fathers, we thank Thee for America, her fertile plains, her majestic

mountains, her age-old forests, and the treasures that lie in her bosom.

We thank Thee for the heritage of faith and courage and fortitude that our Nation-building forefathers entrusted to our keeping.

We thank Thee for the pattern that they wrought for our guidance—crusade against tyranny, defense of the rights of the individual, preservation of the institutions of democracy.

Now, O Lord, when the forces of greed and untruth are again threatening the citadels of civilization, we, the wives and mothers of America, pray that we may come to know the true meaning of democracy, the democracy born of the agony of Valley Forge and nurtured in the heart of martyred Lincoln.

O God, make us large enough in word and thought and deed to face valiantly the problems besetting our Nation, and at the same time help us to bring unprejudiced minds to an understanding of the problems of other people struggling today to emerge from war ruin into strong and sustaining national life. To that end, O God, guard us against racial intolerance and denial of world brotherhood.

Above all else, help us to make our homes strongholds of true democracy; help us to fortify those homes against false and misleading doctrines; help us to teach the children those homes shelter, to face clear-eyed the hideous aspects of war, without weakening their belief that liberty is worth dying for.

Help us to convince these children of ours that the very existence of civilization is at stake today, and that we are calling upon them to become guardians of that civilization. Help us to teach them by precept and example that the patriotism of today calls for a courage, fortitude, and honesty, a capacity for labor, self-sacrifice, and self-discipline such as America and the world may never need more urgently.

Help us, O Lord, to make democracy here in our United States worth defending against the onslaughts of tyranny, greed, intolerance, and unbelief.

ALICE SALISBURY.

Some of the Meanderings of Nebraska's Reactionary Republicans

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. O'SULLIVAN. Mr. Speaker, comes now David Martin, of Kearney, Nebr., attorney and counselor at law, and proctor in admiralty, and also Republican State chairman from Nebraska, a man whose forebears were shrewd enough to elude, some people say, the mountain feudings of the Coys, and with high hope and stout voice starteth to maketh by caravan, of either one or two automobiles, an extensive trip through now prosperous rural Nebraska, with the avowed, fell purpose and intent of recapturing the farm vote lost by the Republican Party in Nebraska at the last election.

This election blow delivered by the Nebraska farmers to the very pit of the elephant's stomach seems by coincidence to have been as identically severe as an 80-day cool-off period of the Taft-Hartley law to labor after the issuance of a "yellow-dog injunction" because the caravan comes creeping about 80 days after the blow.

The old fear plays of what will happen to you if you do not vote Republican and the old squeeze plays of the banks and holders of the mortgages and the dispensers of the credits, are all things of the past. The farmers of Nebraska have not only grown to be ultra courageous but also exceedingly smart since the awful, suffering days of President Hoover.

The Nebraska farmers have paid up their mortgages and notes, now pay cash as they go, and have money in the bank, and sometimes own the blamed old bank since the Democrats took over the reins of National Government, and the Democratic Party put its kindly, sheltering arms about the shoulders of the troubled Nebraska farmers.

I am sure that Mr. Martin by this time realizes that all of the farmers of today "can see above the grass in the summertime and the snow banks in the wintertime." Although the soil of Nebraska is most fertile, even the river-bottom slough grass does not grow that tall anymore, and when the blizzards come the Democrats, if need be, under the able direction of that great Democratic engineer from Alabama, Maj. Gen. Lewis A. Pick, can dig them out if need there be.

I am sure that Mr. Martin will have his ingenuity taxed to the utmost in trying to figure out some plausible recapture conversational methods, for that is the only method left for reactionary, greedy, and selfish Republicanism to pursue in Nebraska or elsewhere.

I wonder if Mr. Martin will tell the farmers and other Nebraskans that the Republican Party in the Eightieth Congress made the wartime excise taxes permanent so as to give the big boys a big income tax cut, that that same Congress cut off all money for grain storage bins in an effort to force grain storage into the private grain elevators and if need be force the grain which they could not store on their farms, on the market at less than could be secured from a Government loan; that that same Congress was against a 90-percent parity for basic farm crops, and passed a sliding scale parity law providing for a base 75 percent and a high of 90 percent of parity so as to tumble the prices of basic farm crops and make the farmer again the legitimate financial prey of the now financially lean middlemen who were wont to farm the farmers; and many other unfriendly legislative gestures which time will not permit me now to call my readers attention to.

I do not suppose that Mr. Martin will call the farmers' attention to any of these wrongdoings, but I feel sure that the farmers will remind him of them and hereafter steer their future political courses far, far away from the Republican help which blighteth and destroyeth farmers and those who are dependent upon farmer's incomes for their own livelihood.

In conclusion I want to direct your attention to the following news story which appeared in the Lincoln (Nebr.) Star, a liberal Democratic newspaper, on January 31, last, and written by Ray Hansen, one of its staff members:

DENNEY HITS ACTIONS OF GOP LEADERS—"PARTY OF OLD PEOPLE" POLICY IS UNDER ATTACK

(By Ray Hansen)

FAIRBURY, NEBR.—The dilemma facing the Republican Party was exemplified in Fairbury Tuesday.

The party wants—and needs—votes, but it doesn't want to sacrifice the cherished principles that made America great to get them.

That is well pointed out in two observations of a young Fairbury attorney when the GOP caravan held its second meeting of the second week of its cross-State tour here Tuesday. He exorcised the leaders for making the GOP a party of old people, and reprimanded State leaders for getting radio commentator Fulton Lewis as a speaker for Founders Day.

The attorney was Max Denney, unsuccessful candidate for the State chairmanship last November.

Denney, who is chairman for the legislative district in Jefferson County, set forth his views in a brief talk to party leaders who are conducting the tour. He said Republicans should answer affirmatively every issue they face. "Unless there are constructive answers to all questions," he declared, "the party will continue to lose votes."

In particular need of all the answers are county precinct workers, Denney said. "And it is the job of State headquarters to provide the answers," he added.

URGES RENEWED VIGOR

Sixteen farmers, workers, businessmen, and housewives turned out to hear State Chairman David Martin, of Kearney, plead for renewed vigor of party workers. Accompanying Martin were National Committeewoman Edna Batson Donald, of Grand Island, and John Binning, Lincoln attorney representing Young Republicans.

Vice Chairman Eve Bowring, of Merriam, and Finance Chairman Joseph Wishart, of Lincoln, who were with the caravan on the first week of its tour, returned to their homes over the week end when hit by flu.

The ostensible purpose of the meeting is to get the feeling of what the common people want from the Republican Party.

But that does not seem to be followed. For instance, Chairman Martin tells the handful who gather for each meeting that the party leaders are here to get your ideas on what the party should do.

But he then proceeds to tell the workers what should be done, by stressing the evils of the Democratic administration, the dangers of socialism, and why the party should make deficit spending the main issue of their attack. Declared Martin, "It seems to me you're more concerned with the money being spent than anything else."

The minor leaders who follow Martin then echo his assertions.

Binning emphasizes the importance of interesting young people in party work. He urges county leaders to give young men and women offices of responsibility.

Following the meetings, Martin meets with the county chairmen and they revise the list of precinct workers—in some cases cutting away deadwood and injecting new blood.

The one-car caravan left Fairbury at noon and went to Beatrice, where they will meet with Gage County leaders late Tuesday. On Wednesday they go to Pawnee City, Thursday to Auburn, and late Friday to Lincoln.

Alaska and Hawaii Statehood Vital to National Defense

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I include the following statement made recently by Hon. FRED L. CRAWFORD, of Michigan, on Alaska and Hawaii statehood which appeared in the Hearst papers throughout the Nation:

ALASKA, HAWAII STATEHOOD VITAL TO DEFENSE OF UNITED STATES—ADMISSION WOULD BE LETHAL BLOW TO RED COLD WAR

(By FRED L. CRAWFORD, Representative in Congress from Michigan)

WASHINGTON, January 21.—Congress must grant Hawaii and Alaska statehood—now.

The reasons are imperative.

They are key areas of our strategic defense against Russia.

They are key areas in our cold war against the world spread of communism.

As Territories they are weak.

As States they would be strong.

Japan struck at both Territories in World War II.

Hawaii and Alaska today are the prime targets under the American flag of the most powerful enemy that has ever threatened the United States.

Statehood would strengthen them internally.

And statehood would vastly strengthen America's position in the ideological and economic conflict now being waged by Russia throughout the Pacific.

Proof that was given me on my recent tour of all our island possessions in the Pacific, Japan, the Philippines, Okinawa, Hong Kong, and other parts of the Orient.

It substantiated completely earlier impressions I had gained on visits to Alaska and other territorial possessions.

The actions of our Government toward its territories speak louder to the peoples of the Orient and the Pacific than all the flossy double talk emanating from our State Department.

We will be on the losing end of the cold war in the Pacific as long as we limit the peoples of Hawaii and Alaska to a mere territorial status.

Today Communists everywhere can and do make capital of these admittedly unfortunate facts:

1. Hawaii, an area with a population greater than that of 11 of our sovereign States, has no vote in Congress and no voice in the Senate of the United States.

2. Alaska, with an area one-third as large as our entire continental United States, likewise has no vote in Congress or voice in the Senate.

3. They are excluded from even discussions of foreign relations within the appropriate committees of the House and Senate.

4. Their citizens contribute richly in taxes to the Federal Treasury—without representation.

5. Their people, their business enterprises and their investments in recent years have been denied even Federal protection.

As territories, both Hawaii and Alaska have been powerless to deal with paralyzing strikes which Harry Bridges' Pacific longshoremen's union either engineered or in which his union has been actively involved.

Bridges is now on trial in the United States District Court in San Francisco on perjury charges that he swore falsely at a naturalization hearing in 1945 that he never was a Communist.

There is voluminous testimony before that trial that he is or was a Communist and a leader among Communists.

As Territories, Hawaii and Alaska are helpless to deal with such types.

CRUCIAL ROLE

As States they could protect the interests of their citizens and their economy at least to a greater degree than they can now or have been able to during recent strangling strikes.

Statehood is more important to Hawaii and Alaska.

It is even more important to the United States that Hawaii and Alaska become States.

Theirs is a crucial role in our national destiny.

They are our western bastions of defense.

They represent to the peoples of Asia, the Orient, and the Pacific the one example of unity and equality among the three great Pacific racial groups.

In their Territorial activities Hawaiians and Alaskans have long demonstrated the highest qualities of citizenship and abilities for self-government under the free American system.

Hawaii and Alaska are entitled to statehood and statehood will enable them to more effectively fill their vital roles.

Consider these roles separately.

Alaska as a vast Territory of very great, yet unmeasured, resources.

We are spending money up there as if we intended to use Alaska as a buffer between the United States and Russia, which lies only across a narrow strip of water where the two countries almost touch.

CANNOT CONTINUE

The United States has set itself up as a buffer between Russia and the rest of the world.

Unless Alaska does serve as a strong buffer between Russia and ourselves, the United States cannot continue indefinitely as a buffer between Russia and the rest of the world.

It is as simple as that.

The United States needs Alaska as a State.

It needs Alaska much more than Alaska needs the United States.

It needs Alaska's space, her strategic geographic position, her industry, her resources, and her potential products.

We need everything Alaska has—fish, timber, minerals, oil—and everything that Alaska can develop and produce.

We need them in relation to our industrial and economic position, and in relation to the international obligations we have assumed throughout the world.

NEEDS PEOPLE

Alaska needs people, lots of people, in addition to its present population which today is larger than that of a third of our States when they were admitted to the Union.

She needs people to develop her vast resources.

Alaska needs transportation so that tonnage to build industries and defenses can move to Alaska, and the products and raw materials of Alaska can move to us.

To Alaskans this means a railroad, and it should mean the same thing to us.

A railroad is the only safe and economic method of transportation that can be provided.

Ocean transportation to Alaska has been shut off repeatedly by maritime union strikes.

POWERFUL INFLUENCE

Every strike has impaired our defense program in Alaska.

Russian submarines would menace our sea lanes in event of war.

The Alcan Highway is a dusty road that starts far north of Edmonton and is connected with closer highways only by an unimproved dirt road constantly in bad condition.

This is because Canada's railroads exert powerful influence in Canada and they want it that way.

What is needed is a railroad east of the coastal range where it could be defended and where it would supply both Alaska and Canada with transportation for their goods and people, and transportation of goods and people from Alaska and Canada to the United States.

In the face of Russia's huge submarine program and her vast construction program across the Bering Straits from Alaska, a railway to Alaska is a must.

What does this have to do with statehood? This:

Alaska needs—and we need—two Alaskans in the United States Senate who can inform us about Alaska and her needs, both economic and for defense. We need their voice, their action, and their vote.

Alaska needs—and we need—a Representative in the House who has a vote.

BENEFIT TO ALASKA

Alaska would benefit—the United States would benefit—and, I believe, our international relations in view of the obligations we have assumed to help most of the world, would benefit as well.

Hawaii is in a somewhat different position, but is just as much entitled to statehood as Alaska, although for somewhat different reasons.

Militarily, Hawaii stands at one corner of our inner Pacific defense triangle that extends from Alaska's mainland down to Hawaii and across to our Pacific Coast.

Hawaii also is a pivot for our outer Pacific defense triangle that extends southward to encompass the Pacific islands now under our trusteeship, Samoa and Guam; extends westward to Okinawa, and extends north to the tip of the Aleutians.

Hawaii has almost reached the zenith of her agricultural development and resources.

LOYAL POPULATION

Her population is large and relatively stable. Her people are industrious and loyal. Hawaii is American. In every way Hawaii is the equivalent of States with similar populations—except that she is not a State.

Hawaii has met all qualifications of statehood ordinarily required by Congress and definitely should be a State.

Statehood for Hawaii would have priceless value to the United States in the Pacific and in our international relations with the world.

Only in Hawaii have the cultures of the Orient, of Micronesia and Polynesia, become completely absorbed within the American concept of human dignity and government under law.

The mere knowledge that Hawaii has been granted statehood would have dynamic effect throughout Oceania and the Orient.

It would be the greatest blow to Stalin and communism in the Orient that America could deliver, for it would prove this:

Where Russia can only offer slavery, starvation and loss of face, the United States has offered to a population that includes their racial strains full partnership as a State.

Let us achieve this victory in the cold war in the Pacific now.

Make Hawaii a State.

UNIVERSITY OF HAWAII LIBRARIES

United States Neglects Own Defense While Bolstering Allies

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Sunday Star of February 5, 1950:

UNITED STATES NEGLECTS OWN DEFENSE WHILE BOLSTERING ALLIES—ANALYST SAYS OUR 48-GROUP AIR FORCE IS LARGELY ON PAPER AND THE GATES ARE OPEN FOR POSSIBLE ATTACK

(By Constantine Brown)

No nation which is not fully prepared—arms in hand—to fight for its freedom can survive. This has been amply demonstrated throughout history, from the decline of the Roman Empire to the fall of France of 1940 and of China of 1949.

Whatever wishful thinkers may say, the United States is in a more critical situation than ever in its history. We are the direct target of a ruthless, oriental despotism which has at its disposal an enormous mass of manpower and almost limitless raw materials.

The U. S. S. R., which we pampered during World War II and the years immediately following, has succeeded through exploitation of our mistakes in becoming the world's foremost military power. When after VJ-day we pulverized the most formidable military force the world has ever seen under the impact of almost hysterical propaganda, the Russians proceeded to a thorough reorganization of their armed forces.

While we were reducing our air, ground, and naval power to a mere token, the Soviet military establishments were modernized and improved. During the war Russia had masses of manpower, which it used with utter recklessness. But it lacked completely the know-how to develop technical weapons, which mean as much as manpower these days.

We hid nothing from them. What was not given Moscow officially was handed over surreptitiously by the legion of ideological agents who filled our Government departments.

REDS KEEP BUILDING

The possession of important military secrets was not of much help, however, since Russia was known to lack the technicians who could turn blueprints into actual weapons for destruction. But Russia obtained the needed technicians from Germany. Highly skilled men who had worked a lifetime in laboratories where V-missiles, snorkel submarines, and the A-bomb were studied either were impressed or cajoled into Russia's service.

Today, according to reports which are considered correct by the most authoritative services in America and England, there are upward of 10,000 scientists and skilled technicians working in Russian arsenals and navy yards.

Never in modern history before World War II was Russia able to develop a single prototype for a naval vessel, and in 1939 Soviet authorities pleaded to be permitted to buy a couple of modern American battleships. But today Soviet arsenals have produced improved snorkel submarines, with greater speed and longer underwater endurance than the originals she received from Germany. Russia has many more such undersea vessels than all the other powers combined.

The same thing applies to Russia's air force, which not too long ago was lamentably weak. During World War II the Russians had to rely exclusively on American lend-lease planes, but they did not use them extensively. Russian aviation was limited principally to ground support and its pilots flew at tree-top elevation.

Russian authorities confiscated American long-range bombers which made forced landings in Siberia and obtained secrets which were not communicated officially to Moscow. Today the Soviet has 14,000 first-line planes, including the latest jet fighters and long-range bombers, which probably are not inferior to our B-36's, the pride of the United States Air Force.

PROBABLY HAVE H-BOMB

For a while we appeared to have a monopoly on the atomic bomb. While the Russians were not expected to produce such a bomb for several years yet, there was a howl from Russian sympathizers that we either do away with that destructive weapon or that we share our secret with the U. S. S. R.

No such howl is being heard any longer. The Russians, according to President Truman's unequivocal statement of last September, have produced and tested the atom bomb, which now is in production in the many plants in Central Russia, Siberia, and Outer Mongolia.

The German technicians, who have been working on atomic energy longer than our own scientists, are likely to have produced both the atomic and hydrogen bombs. The fact that we have not yet received an ultimatum from Moscow to cease our effort to frustrate Russian expansion is an indication, in the minds of our military leaders, that the Soviet has not yet produced the number of bombs needed to create a real threat to this country. It is only a matter of time, however, until enough have been produced.

This is not a race, however. When we have the hydrogen bomb in production we shall stow it away for use only in retaliation. When the Russians have a sufficient number they probably will use them in a blitz, hoping to catch us by surprise in the same way as the Japanese caught us at Pearl Harbor.

The Russians are concentrating their power on targets which they have selected as vital for the day. We are dispersing our weak forces to the four corners of the earth. After possessing a formidable ground force at the end of the war, we now have some 11 divisions, less than 7 percent of the Russian ground strength. These are divided between Japan, Germany, Austria, and Trieste. Only two divisions are available within the United States for the defense of our territory.

Strategic Alaska is completely lacking in any ground force. The maintenance crews of the three air groups stationed there are being trained in their spare time to handle machine guns and rifles for defense against a potential enemy airborne force of three divisions which is known to be located in eastern Siberia.

FEARS OF STRATEGISTS

Congress last year approved 70 air groups as a minimum for the security of the United States. Today we have only 48 air groups, and those are largely on paper. The necessity for stringent economy to reduce the deficit of $5,500,000,000 prompted the administration to cut military expenditures drastically. But the administration is still spending cheerfully this year an amount equal to the budget deficit to help western European countries.

We are now in the process of sending $1,000,000,000 worth of military equipment to the Atlantic Pact nations. The administration will require at least twice that amount for the military-aid program next year and will put up a real fight to maintain the European recovery program appropriation at $3,000,000,000. But there is not enough money in the Treasury, we are told, to permit the expenditure of about $200,000,000 to house at least one ground division in Alaska where most military men expect the blow to fall.

The spending on western European rearmament is predicated, strategically, on the conception that if Russia decides to change the cold war into a shooting war, its troops will march either toward the Rhine or into the Balkans, the Middle East, and the Near East.

NOT TOO LATE

But nobody seems to have told the American people the nightmarish fears of some top American strategists. What, it is asked, if Russia decides to bypass Europe and the still unconquered countries of the east and moves quickly on the strategic bases from which it can ruthlessly bomb American industrial centers? What if Russia, instead of following the classic pattern ascribed to its strategists, decides to rush its paratroopers—of which the Soviet is reported to have about 13 divisions—into Alaska, Greenland, and Iceland, all totally undefended territories?

Are we really ready, as Defense Secretary Johnson so frequently states, to meet a Soviet attack on those territories? The composition of American forces is no military secret any longer. And there is no indication that those particularly strategic bases are in any way ready to repel an attack by Soviet airborne forces which will try to establish and hold air bases for the Russian long-range bombers and fighters. The area between Los Angeles and Buffalo is only 5 or 6 hours from Alaska, Greenland, or Iceland.

Yet, while many billions have been found available every year since 1941 for all kinds of schemes in Europe, there is not sufficient money in the Treasury to close the gates of the United States to any enemy force.

Moscow has left nothing to the imagination as to how it feels toward the United States. All our diplomatic efforts to cajol, appease, and, more recently, to adopt a semi-firm attitude toward the Kremlin have brought no improvement. The men in the Kremlin continue to regard us as the only obstacle to their ambitions to dominate the world.

The tragic part of our spending money on foreign nations without substantially strengthening our own military forces is that if Russia decides to move against the United States directly from the polar bases none of the countries which we are now supporting can or will come to our aid. The one exception is Canada, which from the strategic point of view is integrated with American territory.

Those countries cannot create a diversion by threatening western Russia because even if the full military-aid program is fulfilled they will still be far weaker than the Russian forces which are guarding the approaches of the iron curtain countries. But what is even more likely is that as soon as the reports of a successful Soviet air attack on the United States have reached Europe the present governments will disappear and the Communists will take over. The new regimes immediately will place their respective countries under the protecting wing of the U. S. S. R.

REARMAMENT URGED

There is still time to offset these great dangers to our own security. But nothing can be done diplomatically at this time. If Russia were to learn that we have decided to build a very powerful American air force and at the same time that we are proceeding with the organization of strong defensive positions backed by full-strength divisions in the "polar areas," she might think twice before acting rashly.

The answer to the present concrete threat to our own territory is to be found in our immediate rearmament, regardless of what other international or domestic commitments we may have to ignore, or how much larger the deficit may be this year or next. If the administration were to take the American people really into its confidence and tell them bluntly what could happen if we continue in the present state of unpreparedness, there would be few, regardless of political party and beliefs, who would not be willing to buckle their belts and even forego some necessities in order to hand out some more cash to pay for insurance for the Nation's freedom—an adequate military force at home.

The whole program for welfare of the people as understood and contained in the platform of the Democratic Party may be important. But it will only be money wasted if the country is not in a position to defend itself if attacked. And today we are not capable of warding off the first deadly blows of a potential enemy, regardless of what the politicians say.

We are alone. We can help those across the Atlantic after we mobilize our forces, even if large sections of Europe are invaded by the Russians. The reverse is not true. The war-weary Europeans have neither the ability nor the will to come to the rescue if we ever need their help. We are alone, 160,000,000 Americans (including the Canadians) against an oriental mass four times as great, which has learned to produce and use the most modern scientific inventions for destruction.

Well-prepared in advance we can weather any storm. But today we are neither psychologically nor physically prepared to meet what many describe as an inevitable danger.

Colorado River Controversy

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

COLORADO RIVER BOARD
OF CALIFORNIA,
Los Angeles, January 24, 1950.

Hon. HARRY R. SHEPPARD,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: During the past year, as the Colorado River controversy between California and Arizona intensified, a great deal of misleading propaganda has been disseminated by proponents of the central Arizona project.

Arizona supporters, both in and out of Congress and others, publicize two major subjects which have the effect of confusing and deluding the public and the Congress into believing that California does not need its legal share of Colorado River water. These subjects are: (1) Conversion of salt water into fresh water; (2) importation of water into southern California from the Columbia River.

Through published stories, speeches, and testimony the opponents of California have succeeded in deceiving the unwary and the uninformed into believing that these panaceas are available just around the corner. I hardly need tell you that the opposite is the truth.

I wish to be most emphatic in stating that California is not opposed to any scientific experiment which might result in relieving the water problems of the Nation, and desires to support bona fide research for the purpose.

Meanwhile, the Colorado River controversy is real, and it must be settled in the interest of an economic security that cannot be obtained with mere faith in experiments. The people of California have invested more than half a billion dollars in projects to bring Colorado River water and power to their farms, homes, and factories. This great investment, which must be paid for regardless of future events, was made years ago to assure us adequate water and power in days ahead. Those days have now arrived. Every increase in water needs from now on must be met with water from the Colorado River.

The highest scientific authorities are agreed that it may be years, if ever, before conversion of sea water can be accomplished cheaply enough to be used in industry and agriculture.

Southern California does not need water from the Columbia or any other distant river, if the Colorado River water awarded to California years ago in Federal Government contracts can be retained.

I appeal to you to help in defeating the propaganda of the Arizona proponents which may deceive those unfamiliar with the facts into believing that California might soon be supplied with water from the sea or some other unproven source.

The fight we now face is a fight to determine whether 5,000,000 people will be assured of an adequate water supply, or whether a few large landholders in Arizona will get water to grow more crops that are already surplus and subsidized.

California must win this fight. This is a fight for southern California's economic life. A proven and dependable water supply cannot be abandoned.

With kindest personal regards.

FRANKLIN THOMAS,
Chairman.

The Mindszenty Trial: A Chapter in Infamy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. MULTER. Mr. Speaker, I am pleased to submit the following article entitled "The Mindszenty Trial: A Chapter in Infamy," which appeared in the New York World-Telegram and the Sun on February 4, 1950, and which was written by Gabriel Pressman.

Mr. Pressman covered the Mindszenty trial while in Europe on a Pulitzer traveling scholarship. His application for a visa to Hungary first was denied but finally was issued—apparently by mistake—to "Grabriel Stanley, American pressman." Stanley is his middle name. He gives here an eye-witness account and his impressions on the first anniversary of the infamous trial, as follows:

THE MINDSZENTY TRIAL: A CHAPTER IN INFAMY—PROSECUTION OF CARDINAL CONVICTED RED JUDGES IN EYES OF FREE WORLD

(By Gabriel Pressman)

A year ago today, I saw brought to trial a brave man who acted like a coward. I saw a people's court from which the people were barred. I saw an ex-Nazi sitting as a Communist chief judge. I saw a defense attorney out-prosecute a prosecutor.

On February 4, 1949, second day of the trial, I was admitted to a dimly lit courtroom in Budapest, where Joseph Cardinal Mindszenty and six co-defendants sat before the bar of Communist justice. Edward Korry, of the United Press, and I were the only American correspondents representing American publications admitted to the trial.

There was one catch: I could not choose an interpreter, I was told by Ivan Boldizar, pudgy, nervous-eyed government press chief.

The government would supply me a bright young Communist to translate for me.

GUNS GUARD COURT

The courtroom was two flights up—with six checkpoints of submachine gunners from the door of the dirty, red-brick courthouse on Marko Street, to the door of the trial room itself.

It was a small, dark room. Not much light pierced the huge windows. On the dais sat the people's court president and four associate judges. On the first bench beneath were the seven defendants, charged with a royalist conspiracy to overthrow the government.

Their faces were drawn. Their attitudes ranged from indifference to resignation. Alongside each sat a militiaman. Throughout the courtroom, militiamen stood or sat among the carefully screened spectators. Only seven relatives of defendants were present.

FROM NAZI TO RED JUDGE

Through an American's eyes, it was a trial of paradoxes. There was Vilmos Olti, before and during the war one of Hungary's foremost Nazis, now playing Communist chief judge.

Olti fired an endless stream of questions at the defendants, methodically building up the case against them with "Yes" and "No" answers. He allowed seven prosecution witnesses, no defense witnesses. As he carried the case through in a lightning 3 days, the hard-faced prosecutor-juror seldom looked up from the papers he read.

The trial seemed a little academic. The defendants had confessed everything days before at the headquarters of the dread secret police, 60 Andrassy Street. And the government had the confessions bound neatly into a yellow book for the convenience of Red propagandists.

EAGER TO CONFESS

The defendants vied constantly to confess. Once it was even too much for the court. The cardinal tried to read a repudiation of his prearrest warning against any future confession, but Olti silenced him: "You don't want to read that now." So the cardinal sat down and read it when directed.

Young Andreas Zakar, the cardinal's secretary, was once his stubborn, good right arm. Now pathetically trying to follow wherever Olti led. And the judge coached him benignly, like a teacher with a backward child.

Zakar used the word "democratic" in the Western sense. "Liberal, bourgeois democratic, or people's democratic?" Olti demanded.

Zakar (searchingly): "Er * * * liberal."

Olti (with fatherly severity): "That means against progress."

Zakar: "Yes, sir."

ROLE FOR CARDINAL

The Cardinal, an excellent orator before his arrest, spoke monotonously, reading from prepared papers. Under prodding from the rasp-voiced director, the Cardinal said: "I'm very sorry" about everything—the book he had written, letters, money manipulations.

The script called for a Mindszenty of repudiation, confession, and apology. And this, the Communists wanted the world to believe, was the same man who in a last interview said stanchly: "I will never take

UNIVERSITY OF MICHIGAN LIBRARIES

back anything I have said against the Communist government. * * * Hungary has degenerated into a gigantic chamber of horrors, a den of robbers and thieves."

Crudest of the crudities was the attitude of the so-called defense attorneys. They spent most of the trial twiddling their mustaches or gazing into space. I didn't see them take a single note, nor consult each other once.

Kalman Kiczko, a Communist of 30 years' standing, defended the cardinal. Joseph Groh, prominent Catholic lawyer, had been jailed for offering to serve.

Kiczko pleaded well * * * for Kiczko. Most of his final speech told how much he, Kiczko, loved the people's democracy.

Then, removing his spectacles, he denounced Western newspapers: "The foreign press has written numerous calumnies against Hungary." He disputed that the trial was unfair: "Nobody either at home or abroad can accuse us of restricting freedom." He cringingly thanked the prosecution for bringing up the charges against his client. And, when he sat down, even Olti smiled.

A year has passed and the world still wonders what made the defendants act as they did. Was the cardinal tortured, drugged, or hypnotized?

Pro-Communist correspondents reported the cardinal seemed perfectly normal in every respect. It was hard to agree when you saw a man weak and cowardly, whose actions for 4 years had spoken strength and courage.

CHANGED MAN AT TRIAL

Was he in his right mind when he offered to resign if the charges against him were dropped? Only the Pope could accept such a resignation. Before his arrest, he could deliver a perfect sermon from a few notes. At the trial he forgot frequently and—the interpreters did not hide it—had to be prodded by the court.

The key to what happened is, of course, the 38 days the cardinal spent with the secret police before the trial. I did not speak to the cardinal—the government forbade it—but I have spoken to others educated to confess at 60 Andrassy Street. The Communists have a standard curriculum: questioning for days on end under bright lights, standing with arms overhead until faint, repeated blows with blunt instruments on the kidney, electric shock treatments.

It is possible that all the standard methods and perhaps more were used on the defendants. Perhaps Zakar was tortured to arouse the cardinal's pity. Zakar's white face and trembling impatience to please marked him a likely graduate of the torture chamber.

Not all the clues were outside the court. In the cardinal's final speech, he spoke with some feeling for the first time:

"I stand here with half a century of basic principles * * * principles that guide us as railway tracks guide trains. * * * I was not and am not an enemy of the Hungarian people * * * worker or peasant."

Perhaps the cardinal here revealed his true thoughts—that he believed as he always did, that he still loved the people but not the Communist government.

REFUSE TO BOW TO REDS

Significantly, the Hungarian press and radio did not carry the statement. For weeks before the trial, these government-controlled media trumpeted the cardinal's guilt. "A pitiable worm, a scared scoundrel, a bloodthirsty beast of prey," they called him.

Meanwhile, the government had nightly press briefings to tell correspondents what to write. Boldizar, the press czar said: "Tell your readers that the cardinal is not a brave hero of freedom but a weakling and a coward." The second night Mr. Korry and I refused to sign a Communist-sponsored resolution, signed by the others, affirming there was no censorship and translations were accurate.

A Hungarian journalist secretly applauded our stand: "There are two kinds of censorship: one where the censor's pencil scratches out the words, the other where the fear in your heart scratches them out." He told me how every Hungarian-speaking person in that courtroom had been intimidated.

After my refusal to sign, the government pretended I did not exist, withdrew even its slanted help. I had to scrape together at least the official version of what was happening—and that was damning enough.

FINAL COURT SCENE

Time will never dim that last, sad scene of February 8. The defendants stood for more than an hour while Olti issued an anti-Western political tirade and their sentences.

The cardinal's head was slightly bowed, his hands clasped before him. As he was sentenced to life imprisonment, his cheek twitched. Princess Esterhazy knelt in prayer. A government camera's flashbulb exploded.

There was a weird moment when Laszlo Toth, almost deaf Catholic editor, stepped forward to hear Olti shout his fate—10 years.

Then it was over. The heavily guarded defendants filed out. In the corridor I stopped gray-haired Hildegarde Zaker, the defendant's sister. Glancing nervously at detectives, her eyes moist, she said in French:

"My brother is a good boy. He has always served God. If God wills it, then this must be."

The reaction of the people in the streets and coffee houses was bitter. Through a Hungarian-speaking American, they told me: "They were afraid to give him the death sentence because they know his hold on the people is too great."

HAS PLACE IN HISTORY

The cardinal, says the Hungarian underground, languishes today in Gyujtofoghaz jail, 10 miles north of Budapest.

Whatever happens, Cardinal Mindszenty's place in history is assured. A Hungarian student friend expressed it well that last night in Budapest as we strolled along the banks of the Danube. I had just come from a final press conference at which Boldizar said: "The trial is over, but the trial of you correspondents has just begun. You must tell the world the truth about this traitor."

My friends looked up at the sky. "You know, for once Boldizar is right," he said. "This was more than the trial of Cardinal Mindszenty. In the court of world public opinion, a cardinal has convicted his judges and communism stands condemned."

Implementation of Hoover Commission Reports and Recommendations

EXTENSION OF REMARKS
OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 7 (legislative day of Wednesday, January 4), 1950

Mr. McCLELLAN. Mr. President, the staff of the Committee on Expenditures in the Executive Departments has prepared a staff memorandum, which is a brief summary or analysis of the progress which Congress has made thus far toward the implementation of the Hoover Commission reports and recommendations. I believe this will be of interest to Members and others. Therefore, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

SENATE COMMITTEE ON EXPENDITURES IN THE EXECUTIVE DEPARTMENTS,
February 3, 1950.

STAFF MEMORANDUM NO. 81-2-12

Subject: Why hasn't the Congress taken action upon the Hoover Commission Report?[1]

The public appears confused over three important phases of the Hoover reports: (1) Action taken to date by the Congress to implement the reports; (2) possible economies in Federal expenditures expected to result; and, (3) the distinctly different methods of effectuation required.

The facts are:

1. ACTION BY THE CONGRESS

Half (9 of 18) of the Hoover reports have been acted upon favorably—in whole or in part. They are:

No. 1, General Management of Executive Branch.
No. 2, Personnel Management.
No. 3, General Services (Supply Activities).
No. 4, The Post Office.
No. 5, Foreign Affairs (Department of State).
No. 8, National Security (Department of Defense).
No. 10, Department of Commerce.
No. 12, Regulatory Commissions.
No. 13, Department of Labor.

(For details see S. Rept. 1158, October 12, 1949, and Senate Committee Rept. No. 7, February 1, 1950.)

Legislation is pending to effectuate in varying degrees every report not already approved.[2]

A recapitulation of congressional action on the Hoover reports reveals that 12 major statutes were enacted, 6 (of 7) reorganization plans submitted by the President were approved, and some 20 other measures were processed toward enactment (passed Senate or House, reported favorably by committees, or hearings held) during the first session, Eighty-first Congress. As a result, significant reorganization has been effectuated or authorized in these broad executive areas: (1) Personnel, (2) Federal Supply, Buildings Management and Records, (3) the Department of Defense (including revision of budgeting and accounting methods) (4) the Department of State, and, (5) the Department of Labor.

(In October, the Citizens Committee for the Hoover Report, a research organization founded with Mr. Hoover's approval to further the adoption of the Commission's report, estimated that approximately 20 percent of the entire report had been effectuated. "More reorganization has been accomplished than at any previous time in the Nation's history," the committee stated.)

2. HOOVER REPORT "DOLLAR SAVINGS"

No hard and fast figure upon Hoover report dollar savings exists, or likely will. At best, the estimates which have been made are of necessity a "guess." Their chronology follows:

In December 1948, Mr. Hoover stated in a press release that if the whole of the Commission's recommendations were adopted "there should be a saving of about $3,000,000,000 a year."

In January 1949, the Hoover Commission conducted a "staff study" of its task forces'

[1] A question repeatedly asked Members of Congress. This is a summary of action taken by the Congress. It supplements S. Rept. 1158, October 12, 1949; and Senate Committee Rept. 7, February 1, 1950, which present more detailed analyses of action taken, legislation pending, and areas awaiting action.

[2] Where legislative action is required. See Methods of Effectuation.

estimates of savings in their respective areas. Fourteen of the 24 task forces made no estimates. The estimates of 10 totaled $3,234,850,000.

In June 1949, the Citizens Committee estimated savings at $3,000,000,000 a year; in October 1949, "of approximately $4,000,000,000 a year," and in December 1949, "three to four billions, possibly more." Various speakers, the source of whose information is unknown, since have raised the estimate to as high as $5,000,000,000 a year. The variance of such estimates indicates the difficulty of accurately forecasting economies.

The citizens committee estimates savings in fiscal 1951, as a result of reorganization effectuated to date, will total $1,250,000,000—$1,000,000,000 from reorganization of the National Military Establishment; $250,000,000 from consolidation in General Services Administration of supply, buildings management, etc. These estimates stem from the Hoover Commission staff study which a year ago predicted military savings at "from one to two billion per year" within "a reasonable period" of time, and savings through consolidation of supply activities at $245,200,000 per year.

Many students of reorganization believe Hoover Report economies have been oversold. They point out that the primary objective of the Hoover Commission was not to achieve immediate economies, but greater efficiency through better rearrangement of the executive branch, which could be expected to effect improved administration and produce long-range economies. Emphasis, therefore, should be placed on increased efficiency of government and improvements in the Federal service, to insure a greater return for the tax dollar expended. It is extremely difficult to pin point future economies in reorganizations without a broad margin for error, and often, even more difficult to prove them once reorganization is accomplished. Two-thirds of the Hoover task forces declined to estimate economies, probably for these and other reasons. It remains reasonable to expect economy from some of the Hoover Commission reorganizations, particularly consolidations and eliminations of functions. Just what the amount will be cannot be reckoned accurately until operations have been conducted under such readjustments over a definite period of time.

It is doubtful that any accurate evaluation of Hoover report "dollar economies" could be made until that has been done.

3. METHODS OF EFFECTUATION

Many Senators report this inquiry from constituents: "Why can't all the Hoover Commission recommendations be sent through Congress in a 'single package'—one bill?" On the other hand, some organizations have expressed the fear that all the commission's recommendations will be considered in an omnibus bill—thus precluding "individual treatment" of their special interests.

Aside from the obvious legislative infeasibility of attempting to embrace the some 288 Hoover recommendations in one bill, the more important factor is that the Congress actually is responsible for initiation of only slightly more than one-third of the recommendations made.

Few appear to realize that the Hoover recommendations require three distinct types of effectuation: (1) Administrative action by the agencies concerned; (2) Reorganization plans submitted by the President; and (3) Substantive or appropriation legislation by the Congress. The Bureau of the Budget has classified the 331 individual actions necessary to effectuate the 288 recommendations as follows:

Actions and methods of effectuation:

One hundred and twenty-two (or 36.9 percent): Administrative action by executive branch.

One hundred and five (or 31.7 percent): Substantive legislation by the Congress.

Eighty-two (or 24.8 percent): Reorganization plans (initiated by the President).

Twenty-two (or 6.6 percent): Appropriation legislation by the Congress.

Total, 331 (100 percent).

Thus, according to the Bureau of the Budget, of the 331 actions necessary to implement the Hoover Commission's recommendations, 61.7 percent require initiation by the Executive Branch (through administrative action or reorganization plan) and 38.3 percent require initiation by the Congress, through legislation.

Beyond that fact, such matters as committee jurisdiction, coordination with other interrelated legislation and the necessity of conducting extensive public hearings upon many of the reorganization proposals, would preclude, from a time factor if none other, single-package processing.

PUBLIC LAWS ENACTED

A tabulation of public statutes enacted and reorganization plans approved by the Eighty-first Congress, first session, to effectuate the Hoover Commission Reports, with a terse description of each, and reference to related Hoover reports, follows.

(Status of other pending legislation is available in detail in Senate Report No. 1158, Progress on Hoover Commission Recommendations, October 12, 1949; and in condensed form, in committee print No. 7, Legislative Action on Hoover Commission reports, February 1, 1950, prepared by the Senate Committee on Expenditures in the Executive Departments.)

PUBLIC LAWS

Public Law 109 (Reorganization Act of 1949), June 20, 1949 (Hoover Rept. No. 1): Empowers President to submit reorganization plans to the Congress. (Expires April 1, 1953.) The President transmitted seven plans in 1949, six of which were approved.

Public Law 92 (Travel Expense Act of 1949), June 9, 1949 (Hoover Rept. No. 1): This act increased the Federal travel per diem from $6 to a maximum of $9 per day, in accordance with recommendations of the Commission's task force on Federal field services, filed with Report No. 1.

Public Law 429 (the Classification Revision Act of 1949), October 28, 1949 (Hoover Rept. No. 2): This act revised the civil-service classification system to promote simplicity, efficiency, and economy. It would correct distortions among present pay schedules; provide additional classifications for top management, professional, and scientific positions; provide incentives for employee contributions toward more economical administration; require each agency to establish a performance rating plan; and require the Civil Service Commission to submit its recommendations for improvement of the efficiency rating system to the Congress by February 1, 1950. (Report referred to Senate Committee on Post Office and Civil Service, February 2, 1950.)

Public Law 359 (the Executive Pay Raise Act), October 15, 1949 (Hoover Rept. No. 2): This act increased compensation of Cabinet officers, heads of departments, and other administrative officers, establishing pay schedules for Cabinet officers at $22,500; and for Under Secretaries, Assistant Secretaries, and heads of agencies, commissions, bureaus, and boards, at rates ranging from $14,000 to $20,000 based upon relative importance of the respective positions.

Public Law 180 (Civil Service Retirement Act), July 24, 1949 (Hoover Rept. No. 2): This act consolidated various Government retirement programs; repealed the Alaska Railroad Retirement Act and the Canal Zone Retirement Act, to bring subject employees under the Civil Service Retirement Act.

Public Law 167 (10 professional and scientific positions in NACA), July 13, 1949 (Hoover Rept. Nos. 2 and 8): This act authorized the establishment of 10 positions at salaries from $10,000 to $15,000 per year to provide for scientific research relating to national defense by the National Advisory Committee for Aeronautics.

Public Law 152 (Federal Property and Administrative Services Act of 1949), June 30, 1949 (Hoover Rept. No. 3): This act established the General Services Administration. Transferred Federal Bureau of Supply, Federal Works Agency (including Public Buildings Administration, and Bureau of Community Facilities) and National Archives to GSA, thus consolidating in one general service agency all housekeeping functions, including Government procurement, buildings management, records management, transportation supervision, and surplus-property disposal.

Public Law 231 (to improve operations of Post Office Department), October 16, 1949 (Hoover Rept. No. 4): This act provided for a long-range development program for improvement in methods, procedures, equipment, and supplies used in the postal service.

Public Law 73 (reorganization of Department of State), May 26, 1949 (Hoover Report No. 5): This act vested authority, previously administered by subordinates, in the Secretary of State for the conduct of foreign affairs; authority to promulgate regulations necessary to the execution of such functions, authority to delegate certain responsibilities to subordinates under his immediate direction; and, in general, provided for a thorough reorganization of the Department.

Public Law 216 (Reorganization of the National Military Establishment), August 10, 1949 (Hoover Report No. 8): This act converted the National Military Establishment into a Department of Defense, centralized management, improved fiscal reorganization upon basis of performance budget, created a Chairman for the Joint Chiefs of Staff, and, in general, provided for further unification of the armed services.

Public Law 110 (Central Intelligence Agency), June 20, 1949 (Hoover Report No. 8): This act granted the CIA the necessary authority to improve its internal operations. It clarifies functions relating to procurement, expenditures of appropriated funds, protection of confidential operations, and other administrative activities.

Public Law 36 (to amend the National Security Act of 1947), April 2, 1949 (Hoover Report No. 8): This act created an Under Secretary of Defense to exercise the power of Secretary of Defense during the Secretary's official absence.

REORGANIZATION PLANS

Reorganization Plan No. 2 of 1949, August 20, 1949 (Hoover Report No. 13): Transferred the Bureau of Employment Security from the Federal Security Agency to the Department of Labor.

Reorganization Plan No. 3 of 1949, August 20, 1949 (Hoover Report No. 4): Increased authority of the Postmaster General by transferring to him functions of each Assistant Postmaster General, the Purchasing Agent, the Comptroller, and the Bureau of Accounts. Authorized Postmaster General to delegate functions.

Reorganization Plan No. 4 of 1949, August 20, 1949 (Hoover Report No. 1): Transferred National Security Council and National Security Resources Board to the Executive Office of the President.

Reorganization Plan No. 5 of 1949, August 20, 1949 (Hoover Report No. 2): Provided for executive direction by the Chairman of administration of the United States Civil Service Commission, but maintained advantages of bipartisan membership.

Reorganization Plan No. 6 of 1949, August 20, 1949 (Hoover Report No. 12): Strengthened administration of the United States Maritime Commission by vesting in the Chairman responsibility for (a) administration, (b) appointment of personnel, and (c) supervision of personnel.

UNIVERSITY OF MICHIGAN LIBRARIES

Reorganization Plan No. 7 of 1949, August 20, 1949 (Hoover Report No. 10): Transferred the Public Roads Administration from the General Services Agency to the Department of Commerce.

The Story of Boston

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 7 (legislative day of Wednesday, January 4), 1950

Mr. LODGE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an interesting and thought-provoking editorial entitled "Only the Big Ones," from the Boston Post of February 1, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONLY THE BIG ONES

The lifetime comments on men and modes which G. K. Chesterton, brilliant British writer, penned in his day, outlive him. One was the immortal essay on why people laugh when somebody slips and falls down. He attributed it to a subconscious memory of man's fall from grace in the Garden of Eden.

It would take a bearded philosopher many years and many volumes perhaps to prove it. But Bostonians know why their city becomes the immediate target for guffaws, at home and abroad, when it stubs its toe. No one bothers to chortle when a pee wee topples. It's when the big fellow goes down that the big laugh comes.

Boston was where America began on King Street, now State Street, when five citizens fell under the withering fire of the Redcoats for freedom's sake. It was Boston money and Boston pioneers who developed much of America, building far-flung cities and sowing the western plain. It was Boston men who sent clipper ships roving the earth to bring back the spices which Columbus sought.

But Boston did not rest on those laurels. Today it is the cultural center, the history center, the educational center, the medical center, and the religious center—big, busy, and seeking to be better. As such there is bound to be envy, satire born of little minds, and laughter which indirectly adds up to flattery. If Boston did not count—did not amount to anything—it would be ignored.

If Boston was morally unctuous, instead of right, it would accept rowdy lines in plays that would not be used in the living room; it would overlook the purple passages in books that are put in purposely to sell them and gloss over motion pictures it feels, in some parts, are not fit for children.

Such an attitude makes Boston free game for pseudo-liberals and phony intellectuals who at heart are nihilists in public conduct. When there is an incident like that involving the visiting Japs, which is contrary to everything Boston and which all thinking Bostonians deplore, we are scandalized. When Brink's is robbed, the comedians in a city not so far away, where jewel thieves steal half as much in a night, have a holiday.

However, Boston is not dismayed. There will be a great jubilee here in May. A new city hall will rise on the traditional School Street site. Futuristic ramps and circles to relieve traffic problems will soon be started. Mayor Hynes lops $50,000 from the refuse contracts in his economy drive. There are other happy, progressive steps being taken which spell the important thing—prosperity—the kilowatt that spins the flywheel.

Out of error will come good. Public and private safeguards on money and life will be increased here and Nation-wide because of Brink's. The Jap incident, which the State legislature in Boston rectified yesterday, will only hasten the demise of the 22-man council. But Boston should create, and at once, a citizens group to combat the censure, libel, and half truths. We cannot afford to be complacent or indifferent. Some mud might stick. By telling the Boston story, the real story, we can fight back.

Open Primary System

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 7, 1950.

Hon. WILLIAM H. HILL,
Chairman, Broome County Republican Committee, Binghamton, N. Y.

DEAR BILLY: According to the Binghamton Press, you are still determined, despite terrific pressure, to maintain the open primary system which your worthy leadership has always advocated as the fairest possible method of selecting Republican nominees.

You are deserving of the greatest praise for your courage in the face of the most vicious plot to wreck the Republican Party in Broome County in the twentieth century.

This gang would never dare challenge your will in this matter were you not confined to a hospital bed.

This underground wrecking crew has just about ruined representative government hereabouts and is dedicated to a rule-or-ruin policy, come what may.

They advocate the closed primary for two reasons, and I will describe them in detail, as follows:

1. They are afraid of facing the voters in a free primary, because they know only by strong-arming a so-called party endorsement can they survive the natural dislike which Republican committee people and party members alike have for their overbearing arbitrary methods.

2. They have for years been pointing to ganging up on me in the party primary, because they realize that is the only place they can even begin to accomplish their sordid scheme.

Whatever few differences you and I may have had since I have served this district in Congress, I have always recognized in you a champion of the Republican Party of Abraham Lincoln. It is shameful and tragic to think that this great organization should now be honeycombed by a myriad of termites boring from within, having but one objective, complete sabotage of the lofty principles of the Great Emancipator.

A public official should be unafraid of primary competition. Your policy has made a fair fight out of what could have been a below-the-belt, one-sided battle.

On the basis of the open primary, I have always welcomed other candidates. The more the merrier, I say. Those who are appearing most desirous of the opposite view seem to be afraid of equal competition.

While I have never been a power in the little circle of trouble-makers who for the most part are self-appointed apostles of this un-American brand of lousy politics, you have, nevertheless, my pledge of unqualified support in your brave and gallant struggle to keep our Republican Party free in Broome County.

I join with you in trying to preserve the American electoral system against these modern Huey Longs, these Bosses Pendergast, these Henrich Himlers, who want to turn our party's primary into a Nazi plebiscite.

Most sincerely, I remain,
Your Congressman,
EDWIN ARTHUR HALL.

The President and the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. JACKSON of California. Mr. Speaker, under leave to extend my own remarks in the Appendix, I include the following remarks delivered on Monday, February 6, over the Mutual network by our colleague the gentleman from California [Mr. WERDEL] a member of the Committee on Education and Labor:

At long last President Truman has decided to invoke the Taft-Hartley law in the coal dispute.

For weeks we have pleaded with Mr. Truman to do what he finally did today.

Had he taken this action 6 weeks ago, the Nation's coal supply would not now be at its present dangerous low.

But that is what might have been.

Now the President has decided to use the very law that he has condemned so often * * * the same law his party expects to use as a political issue during the coming congressional elections.

Well, the people will remember that it was the only instrument available to the President of the United States to protect the Nation's health and safety.

Even Democratic politicians should now be thankful for the Taft-Hartley law.

Even they must now admit that when the President took his oath to enforce the laws of the United States, he had his tongue in his cheek with regard to Taft-Hartley.

That his actions and statements since then have bred disrespect for the law, that may have a vital bearing on its enforcement.

Federal-State Relations to Education

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following statement by Dr. Edgar Fuller, executive secretary, National Council of Chief State School Officers, Washington, D. C.:

FEDERAL-STATE RELATIONS TO EDUCATION

(By Dr. Edgar Fuller, executive secretary, National Council of Chief State School Officers)

INTRODUCTORY STATEMENT

Assuming that only the present educational activities of the Federal Government are being considered, most educators favor a Federal board of education to replace the appointed politicians now in charge of the United States Office of Education. This board would determine internal policies of the Office relating to educational appropriations by Congress, publications, staff assignments, library, research, and advisory services.

As the task-force writer in education for the Hoover Commission has said, the Commission's recommendations for education were "innocuous and reactionary." Educators desire to remove education, somewhat as the judiciary has been removed, from control by partisan politicians and to reduce the possibility that any politician will ever be in a position to control education in the United States as Hitler and Stalin have controlled the educational systems of Germany and Russia. Control of education by partisan political officials is fundamentally out of harmony with American experience. Our colleges, universities, and public-school systems are universally governed by boards of education and operate most effectively where they have best protection against partisan politicians. The Federal agency for education requires the same protection if it is to operate efficiently and economically.

It is absurd for the Hoover Commission to say there must be a huge educational bureaucracy in Washington before the Office of Education can attain status worthy of education.

The major functions of the Office involve services to education in the States without Federal control of State programs of education, not services to other Federal agencies.

Question. Why doesn't the Hoover Report agree with the task-force report?

Answer. Since education is primarily a State and not a Federal function, the Hoover Commission erred fundamentally in treating the Federal agency for education exactly as it treated Federal agencies exercising functions primarily Federal. The services of the Office of Education cannot be effective under the personal control of a hierarchy of noneducational politicians.

The Commission recommended retention of some independent Federal agencies and a new independent agency for health services. The reasons for an independent agency for education are far more compelling than the reasons for a new independent agency for health. Neither can the independent agencies recommended for retention, with few exceptions, present a case for autonomy comparable to that of education.

Question. What are the dangers in a large agency administering a complex of many different services?

Answer. Any of the services in the agency favored by its political head could use the Office of Education for political ends, thus ending its usefulness to educators throughout the country. Under the Hoover Commission recommendations, education would be dominated by a huge welfare organization devoted to crusades for such programs as compulsory health insurance. Education must be nonpartisan, and must not be placed where it can be used to promote partisan political programs of this kind. To place a small professional Office of Education far down in a neat organizational chart of political hierarchy is to invite Federal control of education in its worst form.

The statement of the Hoover Commission that "It is the well-being of the individual, not control by the doctors, educators, or social worker, with which the Government's health, educational, and social-security functions are primarily concerned" is irrelevant and a gratuitous insult to our profession. We ask for control of the Office of Education by a nonpartisan board of laymen and the Congress of the United States, not by either professional educators or appointed politicians only remotely responsible to the people.

Question. What is the argument favoring inclusion of the United States Office of Education in a Department of Welfare (S. 2060), if it would give the Secretary of Welfare the right to determine completely by executive order educational functions in the Federal agency for education?

Answer. The arguments are (a) that the Secretary of Welfare should have power to assign educational responsibilities as he desires anywhere within his agency to assure coordination and integration, (b) that the Secretary of Welfare will speak more effectively for education in the Federal Government than will a Federal Board of Education.

The present small amount of autonomy in the Office of Education, which the Commission would have abolished, has prevented its complete emasculation and subordination to welfare. The process of coordination and integration has been going on for several years, and has reduced both the prestige of the Office of Education and the value of its services to education.

The Office of Education would not be adequately represented in the Federal Government by a Secretary of Welfare. His would be a partisan, welfare-dominated voice and it would interfere with the hearing of the real voice of education. A nonpartisan board of laymen could speak for education within a statutory framework established by the Congress in a manner which would command the respect of all the people.

Question. Should the Government appropriate large sums of money for general education?

Answer. Congress must decide. Political scientists who worship streamlined charts need to study the precedents for State financing of local schools without control of their programs of education and the history of Federal aid to education.

Should general Federal aid for elementary and secondary education be appropriated by the Congress, all our experience in education indicates that a nonpartisan board of laymen would provide more protection against Federal control of the State education programs aided than could possibly be provided under the administration by political officers recommended by the Hoover Commission.

Question. What about an independent Department of Education with Cabinet rank?

Answer. We do not favor it. We don't want Federal control of educational programs. A Cabinet official is always a politician and we can't afford to make education political. It might easily lead to a Federal educational agency too large for safety, especially if the recommendation of the Hoover Commission that all Federal agencies be given status according to the size of their pay rolls should be accepted. The temptation to build up his department is next to irresistible for a political officer sitting in the Cabinet.

Question. What about S. 656: A Federal Board of Education as proposed by the National Council of Chief State School Officers and supported by the NEA? (Other organizations which passed resolutions in support S. 656 are the County and Rural Area Superintendents, the Southern Work Conference, the American Association of Colleges for Teacher Education, the American Association of School Administrators, the New York State School Boards Association, etc.)

Answer. Within its appropriation and statutory authority, the Federal Board would determine the policies of operation of the United States Office of Education and administer the Office through its professional executive, the Commissioner of Education.

This organization for education has been most successful in colleges, universities, and all levels of public education. Educators merely desire to substitute a board of citizens for a single politician wtih personal political power over educational policies. Dealings by teachers, administrators, and State officials with Federal agencies on educational matters is most effective when such dealings are on a nonpartisan basis.

Question. In an agency with Cabinet rank, the political head obviously would be in authority over the whole hierarchy and determine the functions of even the Education Bureau. Would there not be the same danger in a Federal Board of Education?

Answer. No. The effect of a nonpartisan Federal Board of Education would be just the opposite. Educators and citizens generally are willing to trust a nonpartisan board of laymen to represent the public, but not a partisan politician. In any event, the argument that education must be turned over to the politicians in order to keep it close to the people is fallacious. The entire history of our public schools and our colleges and universities demonstrates otherwise.

The notion that education must be protected in behalf of the general public against both professional educators and politicians accords with the views of educators but not with those of the Hoover Commission. Educators do not seek such control, but favor the exercise of such control by a board of laymen broadly representative of the general public. They would protect education against both educators and politicians. The Hoover Commission on the contrary, would apparently turn the entire educational enterprise over to politicians.

Question. What are the possible weaknesses in a Federal board set up at the national level?

Answer. It has been contended that persons who do not give full time to paid jobs do not serve efficiently, although volunteer services of citizens to the Federal Government in the past have failed to prove this. Some college, university, and public-school boards have been wiser than others, but it should be possible to rely on the President to appoint a board of high quality, of whom no more than 6 of the 11 members may be of one political party, under the provisions of S. 656.

Question. Is a National Board of Education analogous to a State board?

Answer. Education at the Federal level is not a duplicate of education at the State level, but there is much resemblance so far as the relationships of the Board of Education and its professional staff to educational policies are concerned. The special requirements of Federal relations to education due to the fact that education is a State function and not a Federal function have often been grossly violated by politically administered Federal agencies of the type proposed for the Office of Education by the Hoover Commission. Such special requirements for the Office of Education, due to the differences in functions, would be more likely to be observed by a nonpartisan board of citizens than by a politician. The Federal Board would confine its functions to the legal scope of the Office of Education, just as State or local school boards or university boards of education would act within their respective areas of statutory authority.

UNIVERSITY OF MICHIGAN LIBRARIES

Flood Wall at Vincennes, Ind.

EXTENSION OF REMARKS
OF
HON. JAMES E. NOLAND
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. NOLAND. Mr. Speaker, several days ago Mr. Curtis Kimmell, the city attorney of Vincennes; Mr. R. S. Robertson, secretary of the Indiana State Flood Control Commission; Mr. Joseph Perrey, engineer of the Indiana State Flood Commission and I appeared before a House Appropriations Subcommittee requesting an initial appropriation of $500,000 to start construction of a floodwall at Vincennes, Ind.

This project constitutes the greatest emergency in the State of Indiana today. The following newspaper article from the Indianapolis News demonstrates beyond all doubt how seriously this new floodwall is neded:

VINCENNES WAS NEARER DISASTER THAN IT KNEW—MINOR SLIP WHICH MIGHT HAVE FLOODED MOST OF CITY REVEALED

VINCENNES, IND., January 25.—James White, flood coordinator, today revealed how a minor slip a week ago Sunday night came near causing inundation of four-fifths of Vincennes.

White said following the heavy rain, a leak was detected in Niblack Boulevard along Kelso Creek, and men were pulled from other sections of the city's levee to avert a flooding of North Vincennes.

After the danger had been averted, a patrol passing along the section of secondary sandbag levee near the Ebner Ice and Storage Co. discovered water running over the top tier of sandbags, threatening to wash out this bulwark.

Soldiers and volunteers were rushed to the spot and worked frantically to avert the mishap that would have brought flooding of 80 percent of Vincennes, and most of southern Knox County.

This incident was not revealed publicly until after the flood crisis had passed.

"Some of these floods," White said, "are going to sweep over Vincennes, just because of a minor slip, if the Government doesn't awaken to the peril here and appropriate money with which to construct an adequate floodwall."

Representative JAMES E. NOLAND, Democrat, of Indiana, is taking a plea for the proposed $3,000,000 floodwall directly to President Truman tomorrow. He will ask Truman to support spending of $500,000 next year to start work on the wall, already planned by Army engineers.

Franklin Roosevelt, Jr., Being Groomed for Albany

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent:

FRANKLIN ROOSEVELT, JR., BEING GROOMED FOR ALBANY—COLUMNIST DISCUSSES PREPARATIONS FOR GAINING NOMINATION FOR GOVERNOR

(By Frank R. Kent)

The efforts to build young Franklin Roosevelt up to a size where he must be nominated by the Democrats for Governor of New York next November is not going so well. For this there are several reasons.

The chief of these seems to be the source and character of his publicity. Most of this comes from interested persons so close to him personally as to make the fulsomeness of their praise slightly sickening. A second trouble is their technique. Their notion of an argument is to assert that the mere suggestion of either James or Franklin Roosevelt achieving success in politics is enough to cause all the rich old reactionaries in the country to tear their hair in a rage or swoon with fright. This is considered not only effective politically but screamingly funny. It is, of course, pretty silly stuff but it does give an idea of the caliber of the new gubernatorial aspirant and his journalistic masseurs.

It is interesting to note that in none of the printed grease in which young Franklin is now being drenched is there any reference to his qualifications for the governorship. Great emphasis is placed on his personal charm, his extraordinary victory in the district last year and the vote-getting asset of his name. Not a word is said about either his character or his ability. No mention is made of his public record. Of course, as yet, he has no public record. Nor has he ever been in position where his ability could be judged. As to his views, his speeches have merely mouthed the word of the welfare state administrationists and he has carefully echoed the Americans for Democratic action propaganda. If since he came to Congress—or before—he has done any thinking for himself about issues or measures or men, there has been no sign of it.

Notwithstanding the spoiled child characteristics which protrude, when he first came to Congress the disposition of his colleagues was rather to like him personally. He has done a good deal to change this recently. Among the incidents which do not reflect credit on him may be mentioned his slightly degrading controversy with Clayton Powell, Negro Congressman from New York, who accused him of discourteously usurping Mr. POWELL'S prerogative to present the petition to bring the FEPC bill out of committee in order to glorify himself and promote his gubernatorial ambitions. Another was his attack upon Congressman Clarence Brown, of Ohio, who, in replying, gave the rather startling figures of the number of important roll calls Junior had missed since he took his seat and suggested that he could not learn House procedure in New York night clubs nor by nocturnal meditations on Fifty-second Street. A third was his inexcusable use of the word "chicanery" in referring to the greatly beloved and respected Congressman JAMES W. WADSWORTH. He also indicated his belief that Senator TAFT and ex-President Hoover were somewhat hypocritical. And, finally, there was the typically bumptious reply to the question of why he refused to debate with Wendell Wilkie's son Philip over the radio. "Why," he asked, "should I make that fellow a big shot?"

All this has combined to create the impression of an unpleasantly immature and self-assertive playboy, chiefly interested in promoting himself politically as fast as possible, but not to be regarded as raising either the mental or moral level of the House. Of course, he may correct this idea in the present session and make a record that will commend him generally. But no one will claim that he has yet made a start in that direction. His publicity promoters have practically drawn a blueprint of how, with the aid of his friend, Ed Flynn, of Belgian-paving-block fame, he can get the gubernatorial prize through the old labor union-Negro combination. It is to be worked for him by his political aides and agents. He is to stay in Washington (mostly) and "stick to his knitting," pretending not to be interested in anything except his seat in the House, while his friends "sew the nomination up for him."

Perhaps, it will work out the way they have it planned. However, there are a good many hurdles to take and quite a few persons to push out of the way. Also, there is the question of being elected after being nominated. Junior's boosters insist the name alone will carry him. "Junior," they say, "is just the boy to do the trick." But that is not necessarily so. For 10 years now, the Democrats have not had a real majority in New York State. In that time they have carried the State for President and for Senator by the grace of the so-called Liberal Party bossed by David Dubinsky, the labor leader, and the American Labor Party, admittedly dominated by the Communists.

Combined, the two parties poll upward of 700,000 votes. Without their support, President Roosevelt would not have carried the State in either 1940 or 1944. With their support, President Truman failed to carry it in 1948 and Senator LEHMAN would have been overwhelmingly beaten last year but for them. The indisputable truth is that for its success in the greatest State in the Union, the Democratic Party is completely dependent upon these two splinter parties. It isn't a savory situation. If the people of New York ever really grasp the character of the men who control their State and what a shabby, subservient instrument the Democratic Party has become there, it will take a good deal more than Junior has to do the trick.

The American Legion and the Hoover Report

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. ANGELL. Mr. Speaker, the following interesting and factual radio address was recently delivered in my district by Mr. Don Eva, legislative chairman of the American Legion for the State of Oregon, relative to the American Legion and the Hoover report. It is worthy of consideration by all persons interested in the Hoover report and the welfare of the veterans. All of my colleagues will find time to read it:

My fellow Americans, the American Legion, as you know, is dedicated to God and country.

Probably never before in our long and proud history have we of the Legion been put to a more severe test in living up to that sacred dedication than we are today.

Do not believe those who would tell you that the American Legion is a pressure group, interested only in putting all veterans on a gravy train. That is either a

vicious lie or an accusation based upon ignorance of the true ideals of the American Legion.

True, the American Legion's obligation is to fight for the rights and proper privileges of our disabled and needy veterans. It always has been and it always will be.

But the American Legion today stands in the forefront among all patriotic organizations in the United States in the cause of Americanism. It is in the interest of Americanism—Americanism and true national economy that I have the pleasure of appearing before you today.

First of all, permit me to state that the American Legion is not opposed to the Hoover Commission Report in its entirety.

The American Legion from its national commander down to its more than 3,000,000 post members is wholeheartedly in favor of economy in Government, good, sound, common sense economy. After all, American Legionnaires are citizens and just as much taxpayers as any other good American citizens.

The conception that the American Legion is opposed to the complete Hoover Commission Report is wholly erroneous. Much of it may prove of real assistance in bringing about economy. Some of it already has.

The American Legion does however oppose most strenuously that section of the Hoover report which would dismember the Veterans Administration, which has proven itself for more than 20 years to be the most efficient of all large Government agencies into five or more separate bureaus, some of them purely experimental and certainly more costly to the taxpayers of the United States.

Many people seem either not to know or to have forgotten that the Veterans Administration was created by recommendation of Herbert Hoover himself when he was President of the United States.

Mr. Hoover, then President, said to the Nation in 1929 that in the interest of efficiency, economy, more uniform administration and better definition of national policies, the Veterans Bureau, the Pension Bureau and the National Home for Volunteer Soldiers should be brought together into a single agency.

So the Veterans' Administration was created by act of Congress on July 3, 1930, as the last word in streamlined service to veterans.

The Veterans' Administration today is exactly what its name implies. It administers all laws relative to benefits or services to former members of the armed forces and their dependents. These include disability and death compensation, disability and death pensions, medical and hospital services, domiciliary care, United States Government and national service life insurance, vocational rehabilitation and education, guaranty of loans for purchase of homes, farms, business properties, everything applying to veterans.

The wisdom and the economy of creating the Veterans' Administration as the one agency to administer all veterans benefits has been proven to the complete satisfaction of the Government and the people of the United States.

During 30 years of careful scrutiny by and cooperation of the American Legion, the Veterans' Administration has been developed and so operated that in spite of some existing imperfections it stands alone today among all large Government agencies as the one not subject to political pressure and free from pork-barrel raids.

That economies even now may be effected in the Veterans' Administration we do not for one moment deny. But from years and years of experience and close cooperation with this great one-stop agency, the American Legion, which itself fought alongside then President Hoover for consolidation of a number of bureaus into one agency, both in the name of economy and efficiency. The American Legion maintains that further economies can best be brought about within the present set-up of the Veterans' Administration.

But what has the Hoover Commission suggested? It proposes that the major functions of the Veterans' Administration be split up into five or more agencies.

It recommends that hospital and medical attention be turned over to a new experimental bureau—a United Medical Administration—that hospital construction be transferred to the Department of the Interior, that all insurance matters be handled by another new and experimental agency, a Veterans Insurance Corporation, that home loans be taken care of by a Housing and Home Finance Agency, and that only the lesser veteran benefits remain under the charge of the Veterans' Administration.

Ladies and gentlemen, such dismemberment of our Veterans' Administration is unthinkable.

Emasculation of this most efficient of all large Government agencies into five separate Federal bureaus, as proposed, would not only be a stunning blow to our veterans, particularly the disabled, it also would entail an additional drain on America's already overburdened taxpayers.

I ask you, ladies and gentlemen, where could economy be effected in such a set-up?

As I have stated, the American Legion has proven itself for more than 30 years the most experienced group in the world on veteran affairs. The American Legion's rehabilitation experts, its National, State, and post officers and members have labored through these three decades in building up a most efficient Veterans' Administration.

But the suggestion that the Veterans' Administration be vivisected was made without any consultation with either the American Legion or any other recognized veterans' organization.

Four times the American Legion asked the Hoover Commission for permission to present the Legion's side of the case. But no such permission ever was granted.

The very fact that all members of the Hoover Commission itself were not in accord, and that neither the group of insurance executives nor a big engineering firm called in by the Hoover task force would recommend such changes as have been proposed, is evidence in itself of the folly of the portion of the reorganization plan that would dismember the Veterans' Administration.

Permit me to read the following from the report of the Trundle Engineering Co., of Cleveland, Ohio, to the Hoover Commission:

"From the very beginning the Veterans' Administration has been the beneficiary of the advice and constructive criticism of organized veterans' groups—of which the American Legion is by far the largest, with a membership of more than 3,000,000—who have acted as spokesmen and representatives of ex-servicemen and their dependents. Formal recognition was extended to these groups by congressional enactment in 1936, naming several national organizations, and authorizing the Administrator to add others at his discretion.

"The full-time representatives of these accredited organizations do valuable work in connection with cases that otherwise would have to be done by Veterans' Administration personnel. As intermediary counsel and later as advocate, they save time for the contact officers, the rating boards, and adjudicators.

"Examination of this program indicates that it is sound both in intent and operation. * * * The Veterans' Administration, representing the Government, acts as a judge in determining a veteran's entitlement to benefit. As a claimant he is entitled to the assistance of an advocate fully familiar with the laws governing his rights. This need is met by these accredited representatives of recognized service organizations, who render this aid free of charge and with a minimum of self-interest.

"This policy of recognition offers a corollary benefit to the Veterans' Administration as well as to the veterans themselves. The close working of its personnel with well-informed but independent groups serves to provide a source of constructive criticism of procedures, rulings, and possibly activities that is most wholesome. Service organizations through their executive offices in Washington and elsewhere maintain a vigilant watch over its activities and are not hesitant to express pertinent comment when it seems desirable. A number of the service organizations contribute materially to the operation of veterans affairs by appearing by invitation before congressional committees. They either advocate or oppose proposed measures and thus permit examination by the public as to the merit of such proposals."

Thus the Trundle firm, in its report, lauded the American Legion and other veterans' organizations for the priceless service rendered by their rehabilitation experts to the Veterans' Administration.

Would the United Medical Association, the Department of the Interior, the Veterans Insurance Corporation, the Housing and Home Finance Agency, and the Veterans' Administration all continue to utilize most beneficially this invaluable service?

Or would the taxpayer be saddled with the cost of such service?

We have mentioned the five bureaus into which it is suggested we experiment with veteran affairs, now handled efficiently by one established agency. Then what would we have?

The Hoover Commission proposes that the hospital care and medical treatment presently available to veterans, under the direction of the Veterans' Administration, be taken over by a new colossal Federal agency. It is to be known as the United Medical Administration and contains a cruel joker.

This experimental bureau would not render service exclusively to veterans.

Instead of the wise and efficient course demonstrated by the Veterans' Administration through the years, the new agency would administer hospital care also for the merchant mariner, civil-service employee, Army, Navy, Air Force, and Marine Corps personnel and their dependents. This is definitely the beginning of an attempt to divorce the veteran from his identity as a veteran.

That's how this one change would affect the veteran. Now how will it affect you and me as taxpayers.

The creation of any new governmental agency, such as the proposed United Medical Association, inevitably would mean the creation of thousands of new jobs.

It would mean the training of many inexperienced new officials. This would require both time and money.

It would involve many duplicating functions, such as existed in the dark 1920's, with faint hope that any good would result.

In such a program there can be no economy.

Veterans, active servicemen, merchant mariners, civil-service and other Government employees are hospitalized under completely dissimilar authorizations. A veteran no longer must be accounted for on a morning report, a sick book, a clothing report and a pay record, but for the active serviceman in the United Medical Administration hospital all these records must be accurately kept.

The handling of some five or six classes of patients would make the paper work in United Medical Administration hospitals chaotic.

Such ramifications would not work for economy.

They would be stupendous and costly to the taxpayer.

Of all Government agencies, only one is familiar with the needs of veteran hospital construction and experienced in this highly technical work—the Veterans' Administration. If recommendations of the Hoover Commission were followed, this all-important and specialized work would be transferred to the Department of the Interior.

Veterans' Administration hospitals have been and are being built for less money per cubic foot than those constructed by the Army and Navy and compare favorably with private hospital construction. Certainly the taxpayer could not benefit by the transfer of this work to the Department of the Interior.

The Hoover Commission states that the Insurance Division of the Veterans' Administration is inefficient. Yet, it proposes to correct this alleged inefficiency by creating an additional experimental corporation to handle this tremendous job—a new Veterans' Insurance Corporation.

The Hoover Commission wants to take from the Veterans' Administration the handling of all home loans made possible under the GI bill of rights, which the American Legion fought so tirelessly to enact into law. The Commission would give this part of the Veterans' Administration's responsibility to yet another Federal outfit—the Housing and Home Finance Agency. The Commission's failure to make mention of administration of farm and business loans remain unexplained. The natural inference is that additional complications may result from a further division of veteran loans into still other agencies.

Should the recommendations of the Hoover Commission be adopted, there would remain in the hollow shell of the Veterans' Administration only a relatively small part of its present services, including:

A Veterans' Benefit Service, charged with administration of pensions, retirement benefits, disability compensation, and guardianships.

A Readjustment Service, to administer the vocational rehabilitation, education, and readjustment allowance programs, as well as the certification of veterans for loan guaranties.

The Office of Legislation would be consolidated with that of the General Counsel.

If such an emasculation should conceivably be adopted by the Congress, the pushing around plight of our veterans in 1920 would be only a circumstance to the bewildering chaos into which our veterans of today and tomorrow would again be plunged.

The American Legion will fight to the last ditch to prevent a recurrence of the infamous Economy Act of 1933. That part of the Hoover report dealing with veterans proposes to repeat the Economy Act on an even greater scale. It would divorce all veterans from their identity as veterans, dismember the Veterans' Administration, take their hospitals from bed-ridden veterans, deprive all veterans of preference in Government employment, leave the 19,000,000 veterans of the Nation without a unified service agency, and all centralized Government responsibility for the welfare and rights of veterans, and leave the dependents of those who fell in battle at the mercy of bureaucratic red tape.

The American Legion contends that the cost of rehabilitating the human wreckage of war is as much a part of the cost of waging war as is the building of battleships, tanks, planes, and guns. Those weapons are paid for in cash on the barrel head. The Government leans over backward to see that every wartime contractor gets a square deal. But the human costs of war are put on the cuff. They constitute a sacred obligation of the Nation. This debt cannot be honorably discounted or evaded by simply writing it off as a so-called economy measure.

A so-called economy measure that cannot conceivably mean economy.

How many of you recall the plight of our veterans immediately following World War I?

Back in 1920 the American Legion discovered that the veteran was far from receiving the services a grateful American people had voted for him. Then a labyrinth of agencies was going through the motions of trying to serve the veteran. The result was overlapping, inefficiencies, and tremendous expense. For his various rights the veteran was pushed around from the Pension Bureau to the Public Health Service, to the War Risk Insurance Corporation, to the Federal Board for Vocational Education, and back again.

Because of this chaos, President Harding appointed a committee of 10 prominent Americans to study this deplorable situation and recommend action. This committee, headed by Brig. Gen. Charles G. Dawes, himself later Vice President of the United States, recommended that all services to veterans be placed in one agency. From this report came the Veterans' Bureau, established by law in 1921. The Dawes committee said in part:

"It cannot be too strongly emphasized that the present deplorable failure on the part of the Government to properly care for the disabled veterans is due in large part to an imperfect organization of governmental effort. There is no one in control of the whole situation. Independent agencies by mutual agreement now endeavor to coordinate their action, but in such efforts the joint action is too often modified by minor considerations, and there is always lacking that complete cooperation which is incident to a powerful superimposed authority. No emergency of war itself was greater than is the emergency which confronts the Nation in its duty to care for those disabled in its service and now neglected."

Then, upon the recommendation of President Hoover, came the further consolidation resulting in the creation of the Veterans' Administration in 1930.

Now comes the recommendation by Mr. Hoover's Commission that this great institution, the Veterans' Administration, the magnificent monument to the American Legion and other veterans, be torn limb from limb.

Mr. Hoover's task force must have failed to study, and it certainly failed to heed, the bitter experience of the past. The Hoover recommendation of dismemberment, which would return veteran affairs to the chaotic conditions of 1920, is not consistent with the usual sound thinking of this great American.

Just suppose General Motors was told: "You may retain your administrative functions, but you will have to divorce yourself from the other operations of your corporation. Ford will take over your production. Engineering will go to Studebaker. Your distribution will be conducted by Chrysler. And your sales can be handled by Kaiser-Fraser."

That is substantially what the Hoover Commission recommends so far as the Veterans' Administration is concerned.

In such a situation, could you possibly expect more efficiency, more economy?

As we have tried to make clear, the American Legion does not oppose the Hoover report verbatim.

The America Legion, as much as any other patriotic group, insists upon economy.

But we do maintain and most sincerely trust you will agree that that part of the Hoover report dealing with veteran affairs does not mean economy. It will not reduce taxes.

It means a house divided—five experiments to replace one success.

It means more agencies and more taxes.

And that is what nobody wants.

Budget Pruning

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 7 (legislative day of Wednesday, January 4), 1950

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Budget Pruning," published in the Washington Post of February 7, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUDGET PRUNING

Section 138 of the Reorganization Act providing for a legislative budget is a dead letter, and should be replaced by a workable substitute providing congressional appropriations committees with the information required to do an intelligent job of budget pruning. The joint congressional committee set up under this act includes all the members of the four appropriating and taxing committees of both Houses. It is handicapped by sheer size. Furthermore, the committee is required to report its estimates of over-all receipts and expenditures, with accompanying recommendations, much too early in the session. Senator MCCLELLAN proposes to correct these defects by replacing this unwieldy committee by a small body consisting of five members of the House Committee on Appropriations and an equal number of members of the Senate Committee on Appropriations. The budget committee's work would be continuous; it would be assisted by an adequate technical staff; and it could call on Government agencies to transmit duplicates of all requests for funds submitted to the Budget Bureau.

This procedure would enable the budget committee to assemble detailed information on all the items contained in the executive budget, and the utilization of such data by the committees on appropriations would speed up legislative processes, now delayed by long and tedious hearings.

As Senator MCCLELLAN notes, the need for the services of a really effective legislative budget committee has been accentuated by the decision to combine all appropriation measures in a single bill. For it will be late in the session before the House will act on the omnibus bill, and the Senate Appropriations Committee will have little time to consider it before the end of the fiscal year. However, if both the House and Senate Appropriations Committees were supplied in advance with detailed, up-to-date information on the budget and given time to study the recommendations of the budget committee, an omnibus bill could be disposed of without undue delay.

Wisely, in our opinion, the McClellan bill does not authorize the reconstituted budget committee to report directly to Congress. It would be a strictly service committee, making reports to the appropriations committees and, in some cases, to other standing committees of both Houses. The effectiveness of the plan would depend very largely upon the caliber of the experts employed to assist the budget committee, and on the size of the staff. It would cost a good deal to build up an organization equipped to do a good job of screening executive budgetary requests, but the money spent for such

purposes would undoubtedly yield rich dividends by cutting down wasteful and discouraging excessive expenditures.

There is some danger that the authorization given the budget committee under the bill to examine the records of Government agencies and request them to furnish estimates of their budget requirements might bring it into conflict with the Budget Bureau. However, Senator McCLELLAN stresses the fact that the purpose of the proposed legislation is not to hamper the Budget Bureau, but simply to enable Congress to discharge its responsibility for fiscal policies more intelligently. If Congress keeps that implied admonition in mind, we believe that adoption of the McClellan proposal would result in better working relationships between the legislative and executive branches of Government, which are jointly responsible for the formulation of taxing and spending programs.

The Nation's Capital and the Man Who Planned It

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 7 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "The Nation's Capital and the Man Who Planned It," published in the Freedom Fair News, issued by the National Capital Sesquicentennial Commission. This being the sesquicentennial of the Capital, I believe the article will be of interest to everyone.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NATION'S CAPITAL AND THE MAN WHO PLANNED IT

Few Americans realize that their Nation's Capital, Washington, is the only Capital City in the world that was hewn out of a wilderness and based on a government that was created on paper before it was created in brick and stone.

This city, which is celebrating its sesquicentennial year as the Nation's Capital, was George Washington's last great legacy to the American people. Today it has become, as Lafayette prophesied in 1824, "the central star of the constellation which enlightens the whole world."

The debate on the permanent Nation's Capital began in the Continental Congress even while the last shots of the American Revolution were still echoing. Definite action was not taken until the year 1787 when a provision was inserted in the new Constitution for a federally controlled District where the permanent Capital of the Nation was to be established.

The design for the new permanent Capital became a pressing consideration immediately after General Washington was inaugurated first President of the United States on April 30, 1789. The residence bill, which located the Nation's Capital on the Potomac, passed the Congress in July 1790. President Washington was thus faced with producing a plan for the new Federal city and he made it clear that the Nation should provide for a magnificent seat of government commensurate with the expected growth of the Nation. In his instructions to the first three Commissioners of the District, President Washington said it should be remembered that, if a city such as Philadelphia, capital of one State, occupied two or three square miles, the Capital of the then 13 States of the Union should require a city of due proportions.

To plan this ideal city, this permanent home of the best Government the world has ever seen, President Washington selected Maj. Pierre L'Enfant, a talented French artist and engineer, who had come across the Atlantic in 1777 to fight for America's independence. L'Enfant had served at Valley Forge and was severely wounded at Savannah. He was known as the Artist of the Revolution.

The fact is, soon after Washington took office, Pierre L'Enfant applied for the task of designing a future permanent Capital of the Nation. In his formal application, L'Enfant said, "The plan should be drawn on such a scale as to leave room for the aggrandizement and embellishment which the increase in the wealth of the Nation will permit it to pursue at any period however remote."

L'Enfant's dream was of a Capital City for a nation of 50 States and 500,000,000 people.

Soon after President Washington had picked the actual site of the future city he and Pierre L'Enfant rode together across the fields and swamps that are now the heart of downtown Washington, and on to the crest of what was then Jenkins Hill, now Capitol Hill. This was March 29, 1791. The next day, March 30, 1791, President Washington met the 19 original landowners, mostly farmers, in a tavern in Georgetown and there made his celebrated agreement by which these farmers turned over their land to the United States for its future permanent Capital.

Quickly, L'Enfant produced his historic plan for the permanent Capital of the Nation, a plan in which he envisioned a city of great parks, spacious circles, broad avenues, beautiful vistas, imposing public monuments and buildings, as well as a thousand and one features that delight the eye of the American people.

L'Enfant was both draftsman and artist. He produced a city plan of great beauty and reality. The plan was approved by both President Washington and Secretary of State Thomas Jefferson. President Washington then directed Major L'Enfant to proceed with the execution of this plan. It was in the execution of his own plan that L'Enfant's artistic temperament collided with the practical views of the first three District Commissioners, a collision that brought his dismissal within 1 year after he had undertaken the task.

Pierre L'Enfant it was who selected Jenkins Hill as the site of the Capitol. He referred to it in these words: "Jenkins Heights stands ready as a pedestal waiting for a superstructure." Pierre L'Enfant it was who selected the site of the President's house, the hallowed mansion, home of our first citizens, which we today know as the White House. Pierre L'Enfant it was who selected the locations of the Capitol and the White House as the focal points of his masterly plan, thereby creating the famous axis of the Nation's Capital. Pierre L'Enfant today lies buried at Arlington, on the brow of the hill just in front of that historic mansion. Above him is a table of white marble on which is carved his original plan for the Nation's Capital.

There is no monument today in the city of Washington to Pierre L'Enfant, and certainly the Sesquicentennial of the Nation's Capital is an opportune time to erect one. However, in 1909, when L'Enfant's remains were taken from an obscure grave in Maryland and brought to lie in state in the Capitol, on his way to Arlington, a great Frenchman, Monsieur Jusserand, the French Ambassador, and a great friend of the American people, voiced the sentiment of the Nation when he said to those assembled: "Major L'Enfant's monument is your beautiful city of Washington."

But L'Enfant's dream has come true. The exquisite development of the Nation's Capital in the last half century is but the unfoldment of what Pierre L'Enfant envisioned way back in 1791. So also has the dream of President Washington come true. Shortly before his death, Washington made this remarkable prophecy: "A century hence, if this country keeps united (and surely it is its policy and interest to do it), will produce, on the banks of the Potomac, a city, though not as large as London, yet of a magnitude inferior to few others in Europe."

Where Are We Going?

EXTENSION OF REMARKS
OF
HON. E. E. COX
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Donald R. Richberg at the dinner of the Albany Chamber of Commerce, Albany, Ga., on February 2, 1950:

WHERE ARE WE GOING?

On January 4 the President explained the state of the Union today by predicting that 50 years from now, in A. D. 2000, national production would be about $1,000,000,000,000 and "the real income of the average family would be about three times what it is today." This was an extraordinary flight of fancy even in a political manifesto.

The President cheerfully omitted any reference to the gloomy fact that 10 years ago, in peacetime, the average family was taxed only one-fourteenth of its income by the National Government, but today, in peacetime, it is paying one-fifth of its income for national taxes and one-fourth of its income for the total of State, local, and national taxes.

He also cheerfully avoided any estimate of the increased taxes which would be required in the coming years to pay for the prodigal spending which he recommended. But, it is quite evident that long before A. D. 2000 an unreformed, prodigal, parental government will be taxing away the greater part of every man's income, and spending it for the declaimed purpose of doing him good. Indeed, the submissive citizen can be quite sure that, in doing a lot for him and to him—and all at his expense—the tax-eaters of Washington will, in common language, really "do him good."

The prognostication of the President somehow reminded me of the boy who learned his figures quicker than his alphabet. After a few weeks in school he reported his progress to his mother in these words: "Ma, when I comes to a crossroad sign, I can always tell how far, but I can't ever tell where to."

It's easy today to prophesy how far we are going, if we keep on going at our present pace. But, where we are going is a much harder question.

Our industrial progress is terrific. Every year we make more and more machines to give more and more people more and more leisure to enjoy life less and less.

Our financial progress is amazing. Every year we make more and more dollars for more and more people to spend in buying less and less for a dollar.

Our political progress is wonderful. Every year we enact more and more laws to restrict the freedom of businessmen, in order to preserve free enterprise. We socialize

more and more industries in order to avoid socialism. We write more and more laws to equalize the spendthrift and the thrifty, the incompetent and the skillful, the dullard and the wise man, in order to save ourselves from communistic equalizers. We promote more and more monopolies by labor managers in order to protect ourselves from monopolies by business managers. We authorize more and more tyrannical regulation by a remote National Government, in order to escape from the lesser evils of more lenient regulation by neighborly local governments.

In a word, we create more and more instruments of despotic power to rule our lives, for the proclaimed purpose of setting us free from the risks and burdens of a self-reliant, democratic control of our own lives and fortunes. We have made amazing progress in a few years in transforming the United States of America into the "Benighted States of Demagogia."

Of course this political progress has been made possible by a great intellectual advance. In the early days of our Republic, we were essentially a humble, God-fearing people. Confessing our ignorance of the great design of human existence, we believed that it was the simple obligation of every man to work hard for a livelihood which would permit him to take care of himself and his dependents, and to develop a personal security against the inevitable hardships and misfortunes of living.

In this spirit men and women of many races and creeds found the ways and means to work together for individual and common gains, with such success that the most powerful and prosperous nation ever known was built up by the mighty energies of a free people. Not only the material power but also the intellectual power of the American people steadily increased. The level of ordinary education and higher education rose rapidly under universal encouragement of schools which were open to all who had the capacity and patient determination to deepen their minds and improve their ability to realize their ambitions.

The scientist, the inventor and the philosopher became honored even more than the managers of business and finance. Our respect for learning grew so great that millions of people began to feel that a political or economic creed, founded upon the dogmas of the learned, was of greater importance than a religious creed founded upon a faith which could not be proved by a test tube or by a heavy volume of statistical facts.

Millions of people lost sight of the elemental ignorance of great scientists. They did not realize that the masters of electrical science did not even know what electricity was. They did not realize that the mystery of the atom remained a mystery, even after the atomic scientists split the atom. They did not realize that consciousness, the supreme fact of lift, was still a mystery to the greatest of biologists—or philosophers.

One of the outstanding modern scientists, Dr. Robert A. Millikan, wrote 20 years ago that "fullness of knowledge always and necessarily means some understanding of the depths of our ignorance."

He also wrote down his judgment that "if the influence of American churches in the furtherance of socially wholesome and forward-looking movements, in the spread of conscientious and unselfish living of all sorts, were to be eliminated, our democracy would in a few years become so corrupt that it could not endure."

Unhappily there have been many lesser scientists, and a multitude of those who have assumed to assert a small or large intellectual leadership, who have not retained the humility appropriate to their fundamental ignorance. We see great numbers of fanatic reformers and noisy politicians who are now undertaking to play God and to hurl the lightning of political compulsion against all who will not submit to laws written to enforce their concepts of morality.

A man-made government may wisely and safely establish rules to maintain an orderly society which will provide security for the individual from violence, theft and fraud. Only in such security can men and women enjoy the benefits of community life, and work together in enterprises of common gain. Government also offers a practical means through which the more capable or more fortunate members of society can fulfill their humane obligations to alleviate the sorrows of their less capable or more unfortunate neighbors.

But this does not prove that government offers a desirable or practical means of guaranteeing economic security to all persons within its domain. On the contrary, let the free man go on guard whenever government moves into any project of restricting individual freedom of action for the purpose of creating a pattern of living or working which is supposed to be for the benefit of society as a whole, or for the purpose of redistributing the rewards of labor, or determining where and when and under what conditions men shall or shall not be permitted to work, individually or in cooperative enterprises.

Let the free man, and his would-be guide or master, remember that the dominant characteristics of human beings, have persisted for thousands and thousands of years during the long slow rise of man from the jungles into the refinements and complexities of modern civilization. Among these are self-preservation, love of liberty, individuality in likes and dislikes and ambitions, a customary energy in free labor and a customary apathy in compulsory labor.

These enduring characteristics of human nature are not going to be changed by law. Men and women, forced into a planned economy, regimented into socialized industries, will not remain the docile servants of a fictitious master called the State. They will soon learn that their real master is a human being, a political tyrant who is trying to usurp the throne of the God who created them—who created them free.

Why do we seem to be going in the direction of national socialism, which is just a way-station on the road to communism? Why are millions of unhappy people in many lands subject to a communistic tyranny? Why is the shadow of such tyranny spreading over other lands? Why do notable political leaders in our own prosperous land dare to advocate more and more socialism for our free people?

The answer to this last question is that too many of our intellectuals, and too many of their swarming pupils, have inflated themselves in two or three generations from the humility of conscious ignorance to the arrogance of half-educated egotism.

They have not learned enough to know how ignorant they still are. They have not retained the humility of a truly learned man. They have learned just enough to discard childish fears of a finite God, but not enough to gain a mature devotion to the infinite God. They have not learned enough to know that, although their animal eyes will never see God, He is visible through the eyes of a faithful soul. They have not learned enough to know that there are divine laws that overrule all human laws; and that, when God created a world of free men and women, the divine law of self-preservation was established, not a law that human life must be preserved, but that human freedom must be preserved, even at the cost of human life.

You must forgive me for preaching this short sermon, but I am convinced that, whether we are going to make America eventually a heaven or a hell on earth, depends upon whether we continue to pursue happiness as free men and women, which appears to be the divine plan, or whether we shift to a socialistic slavery, planned by half-educated politicians and godless fanatics.

One of the essential steps in persuading a free people to accept the rule of Socialists is to establish the moral conviction that all men are created equal (which is a biological falsehood) and that in a democracy they should enjoy economic and social equality, although the fundamental virtue of a free and democratic society is that it offers the opportunity to enjoy a better living and better associations to those who have better abilities. In truth, the leveling down of citizens to the same income and the same privileges, regardless of the value of their services to others, would destroy all the values, purposes, and objectives of political freedom and democracy.

So the Socialist morality must be based on the assertion and repetitious reassertion of an outright falsehood which is that a Democrat must believe in the equality and equal rights of all human beings. This is supported by another falsehood which is that men are not free unless they are legally free to go where they please, to do what they please, and to associate with whom they please. But even a child can see that every freedom legally granted to one person to do anything means that other people must be denied freedom. If I am free to go into your home, or your place of business, or to use your property in any other way, then your freedom to use your own property as you please is denied. If I am free to force my company upon you, then your freedom to choose your own company is denied.

What the Socialist moralizers are in fact demanding is not equal freedom for all but a special privilege for a favored few to violate the long-accepted freedoms of all the rest of the people. Even as a demand for a special privilege the alleged moral issue is a crafty fraud because no one will be really free in a state of national socialism. The use of moral slogans to accomplish an immoral end is a favorite device of every hypocritical political schemer. A moral purpose is an essential shield for hideous deeds. The lie is an ever-useful weapon of the politician; and the Socialist lies are the seeds of tyranny which bear fruit in vainglorious cruelties of a Mussolini, the inhuman cruelties of a Hitler, the calculated cruelties of a Stalin, and the apologetic cruelties of a Labor government in England—or America.

We can obtain complete social security only in a Government prison. We can attain social equality only in the cold rigidity of death. Neither of these are the avowed goals of our Socialist equalizers, but they are beckoning us to follow them into a national penitentiary and into the death agonies of a free people.

So, let the free man also go on guard the instant the Government undertakes to establish and enforce by law any moral doctrine that has not been sanctioned by the customs and habits of millions of human beings from time immemorial. The cardinal sins have been similarly defined and identified by many races and creeds for thousands of years. The cardinal sinner is a confirmed enemy of society, whom the Government has the right and duty to prosecute and punish.

But the greatest moral precepts ever uttered, which are found in the Sermon on the Mount, cannot be written into law and their observance enforced by a policeman's club. How utterly muddle-headed and wicked are the petty moralists of today who would enact their dubious dogmas of right and wrong into law, and have a Federal police force pound them into the heads of a protesting people, or ram them down their throats with bayonets.

Communists, supported by a host of zealous socializers, are advocating compulsory Federal laws to compel men to associate in work or play with persons with whom they are

unwilling to work or to play. The Communists would enjoy enforcing such laws, because they thrive on disorder and renounce all religious moralities. But, how many of the non-Communist socializers, how many misguided churchmen, for example, would be willing, or would dare personally, to attempt to force other men to employ persons or to associate intimately with persons with whom they are unwilling to associate. The moral right of any free man to choose his companions is so clear, his moral right to a free-will choice, based on reason or whim, based on like or dislike for race, color, or religion, if you please, that moral right is so clear, and the moral wrong of compelling him to accept an offensive association is also so clear, that no one who sincerely believes in human freedom could have the moral courage to face the righteous wrath of a deliberate violator of his oppressive law. No, he would leave law enforcement to men paid to do the dirty work of enforcing the vicious law he made.

This need to employ men to do unto others what you would not do unto them yourself might well be used as a test of the morality of any law. Would you be willing or able to enforce it yourself? Could you face the noble rage of a law violator who was ready to defend at any cost his freedom from your arrogant assumption of a moral dictatorship? Would you dare to try to enforce your law in a community which refused to obey? Or would you order the hired help in brass buttons to do the dirty work for you? A genuine moral leader is usually found facing the guns—not crawling along behind them.

It is particularly difficult to see where we are going today because so many of our misguiders are sincerely trying to achieve good ends by leading us into evil ways. They are trying to help their fellow men by depriving them of the power to help themselves. They are trying to find peace and security by fostering tyrannies that make more wars and greater insecurity inevitable.

They are clamoring for enforcement of what they call the civil rights of minorities, without calling for a corresponding enforcement of the civil obligations of minorities, and with no regard for the necessity of preserving our constitutional protections of the rights and liberties of all the people.

Let me make this misguidance clear by reviewing briefly three major items in the original Communist program that have been adopted by Democratic and Republican socializers.

First, is an anti-poll-tax Federal law. Although payment of taxes by all citizens might well be made a qualification for voting, it can be persuasively argued that it is unfair to deprive only the citizens of a few States of the right to vote unless they pay taxes. However, the Constitution of the United States definitely leaves the right to vote subject to State laws, with only the requirements that the right shall not be denied because of race, color, or previous condition of servitude or because of sex.

It is a far more serious wrong for the Congress to attempt to exercise a power denied to it by the Constitution than for a State to exercise perhaps unfairly a power which it undoubtedly has under the Constitution. As a matter of personal opinion, I think it might be well for every State to enact a law making the right to vote dependent on the filing of a tax return—not on the payment of a tax, but on the making of a tax return. In this way a multitude of tax-dodgers who are now insisting on their right to vote, but evading their obligation to pay taxes, would have the exercise of their civil right made dependent, as it should be, on the fulfillment of their civil obligation to support the government they wish to control. If taxation without representation be tyranny then representation without willingness to pay taxes is also tyranny.

Second, is an antilynching Federal law. No one can morally defend mob rule when there is an orderly, impartial administration of justice provided for the punishment of crimes. But, here again the Constitution definitely leaves authority in the States to prevent and punish all ordinary crimes, and it is an offense of more far-reaching evil consequences for Members of Congress, who are sworn to support the Constitution, to violate the Constitution than for an individual to violate the rights of another individual. To write and enforce a law which you have no authority to make is a form of lawlessness for which there is no emotional excuse.

If there were a widespread campaign against the failure of State governments to enforce their criminal laws, or to protect the victims of crime, or to protect the rights of those accused of crime, we might well consider the wisdom of supplementing State powers with Federal powers in the field of criminal justice. This would, of course, require an amendment to the Federal Constitution.

But, on the contrary, there is not today even a widespread demand to have the National Government exercise the power which it has under the Constitution to prevent and punish crimes that seriously obstruct interstate commerce. The punishment of criminals who, in a labor dispute subject to Federal law, slug and maim and kill their opponents, and often disinterested people, is left to local police who are frequently helpless to resist the numbers of deliberate law breakers who establish mob rule. Only the development of an effective counter mob brings demands for Federal intervention to protect the alleged civil rights of those whose criminal conspiracies are immunized by Federal law.

What justification is offered for an unconstitutional antilynching law? There was one lynching in the entire United States in 1947, according to the Tuskegee records. In that same year there were recorded by the FBI over 7,700 murders and over 17,000 cases of rape in the United States. There were only 6,571 persons arrested for criminal homicide and only 9,742 for rape. Obviously a very large number of murderers and rapists were not apprehended or punished. We know from many newspaper reports and other investigations that a shameful number of the murders were committed by gangsters and other organized criminals. We know from official reports that there were in Detroit 112 murders, in Chicago 209, in New York 333, which are three notorious hotbeds of gangsterism and labor warfare.

Is there a strong demand from the crime-ridden cities of the North for a Federal law to protect the lives of their citizens? There is no such demand. On the contrary we find the Representatives in Congress from these cities and States generally yielding to the demand of pressure groups that they violate their oaths of office and enact a Federal law to prevent and punish mob lawlessness of one kind only, through which only one man in the United States lost his life in 1947. From the graves of 7,700 others murdered in 1947 might well arise an echo of that divine protest: "Woe unto you, Scribes and Pharisees, hypocrites! for ye are as graves which appear not, and the men who walk over them are not aware of them."

Time will permit me to add only a short comment on the third item on the pseudo liberal program, that is the proposal of a Federal law to undermine the private management of private business. This proposal is piously called a Fair Employment Practice Act. It would grant power to a Federal commission to review every act of every sizable employer in the Nation in order to decide whether in hiring, or firing, or promoting, or otherwise dealing with an employee, or an applicant for work, he had given any consideration to his race, color, or religion.

Under this act, as similar laws have been administered, no employer could exercise his freedom of speech or freedom of the press, or exercise his religious freedom, even to inquire as to the race, color, or religion of applicants for work or of his employees. Under this act Federal bureaucrats could override an employer's judgment as to whom he should hire or promote, on the basis of their opinion as to whether he was influenced by any preference for or against a person because of his race, color, or religion. The employer would be forced to accept this outside, arbitrary judgment, or else engage in an expensive lawsuit—not to vindicate his freedom of choice but to demonstrate that his motives were free from any taint of a politically created immorality. He must demonstrate that he has acted free from the prejudices against or in favor of race, color, or religion which have influenced the opinions of mankind since the dawn of history and still influence the opinions of almost every human being, including the half-educated, intolerant Communists who originally gave birth to this new moral doctrine—and devised the new political program of thought control by forced education.

I get easily wound up on the subject of the viciousness of the FEPC program. I must stop myself before I exhaust both the subject and my audience. So, I will leave you to draw your own conclusions as to your respect for the intelligence, or the loyalty to his oath, of any Member of the Congress who supports such legislation. I fear that if I continued you might apply to me the comment of a man who was told that an ancient clock would run 8 days without winding, and who said: "I wonder how long it would run if it was wound up."

In conclusion let me attempt a brief answer to my question: Where are we going?

Our destination, and our destiny, depend on whether a dominating number of the American people will turn away from the allurements of the devil, who offers to all fear-ridden mortals a mythical world of security and plenty, if they will only surrender to him their God-given love of liberty. That was once the political religion of America, burgeoning out of the reverent faith of Americans in the divine origin and purpose of human life.

Surely a majority of Americans will not join those who are willing to put all their faith in Government, because they have lost faith in themselves. We have not lost faith in ourselves. We have not lost faith in our God—who made us to be free.

Fair Deal Mathematics

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 7 (legislative day of Wednesday, January 4), 1950

Mr. MUNDT. Mr. President, mathematics used to be considered an exact science, and the multiplication table was recognized for years as a fixed pattern of consequences. Comes now the Fair Deal, however, with an endeavor to twist the science of mathematics to suit its own purposes and to justify its political conjectures. Tampering with the

mathematical formula is a very interesting pastime for pundits and professors, but from the standpoint of a man owning a Government bond or trying to finance his old age by a pension program the consequences are both serious and tragic.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Magazine of Wall Street which deals with the intriguing subject of Fair Deal mathematics.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO TIMES TWO EQUAL SIX

(By Vermont Royster)

The economic experts of the new school are promulgating a new kind of arithmetic in which things equal to the same things aren't equal to each other. It's already being used in arguments to prove that inflation won't rob the people of any benefits from their social security and pension plans.

Inflation, say the modern mathmaticians, will not milk these planned savings programs for financial security because the programs can be enlarged and expanded to keep pace with the depreciation of the dollar just as wages and prices can adjust themselves to inflated money values.

Even the most liberal economist admits that inflation equals a depreciation in the value of all other forms of dollar savings, as for example, bank deposits. But the Government's security programs and the new industrial pension plans are to escape this erstwhile inflexible rule by the abracadabra of the new arithmetic.

This advance in mathematics comes as a great boon to the planners, who have long advocated inflation as a means of raising dollar wages. Now they have an argument, to allay fears that inflation will rob the worker of his retirement savings funds.

The new view can be discerned in President Truman's economic message to Congress. There he forecast a steadily rising wage-price level (a $12,000 annual average wage) implemented by Government spending; he also simultaneously praised the growth of social-security programs, public and private, which he said were thrift-wise preparations for our old age. There was no suggestion in his message that the one development might adversely affect the other.

There was much more than a hint of the new logic in the report of the Council of Economic Advisers, which endorsed inflation so long as it does not proceed too rapidly. And this philosophy is explicit in the economic programs of the labor unions.

The arithmetic of the argument takes many forms. One of the simplest runs as follows:

A company establishes a pension plan. Let us say that this year it sets aside $100 for employee Smith's retirement 25 or 30 years hence. Now if next year it develops that the dollar's purchasing power has depreciated, the plan is inflated too. If the dollar's depreciation is about 10 percent, the union will demand—and get—$110 put in his pension account that year. The third year this is again increased by whatever is necessary to match the decrease in the dollar's buying power.

Naturally the number of dollars in the pension Mr. Smith is to draw on that happy future day is likewise increased. And so on, and on.

Now how is inflation going to hurt him? As the years roll by he will pay more dollars for his butter and eggs, but he will also find more dollars in his pay envelope. And even his enforced savings in the pension plan are going to be safeguarded by this expansible economics.

It is a neat and plausible argument, and it is obviously politically effective since people seem to be accepting both inflation and the pension plans without much cavil.

Of course what is lost sight of in this little logical progression is what will happen during this inflation to the $100 Mr. Smith has now, in 1950, to his credit. With inflation that $100 is as hard to keep track of as the evanescent queen in the old game of three-card monte.

To see what will happen to that $100, look back at the hours it took the average worker to earn $100 in 1940. Consider the quantity of food and clothes and other goods he had to do without to set it aside. And consider now what he could buy with it if he were drawing on it for retirement income. The deferred payment for his 1940 labor has been sliced in half.

The same thing will happen to Mr. Smith's pension plan if inflation continues. This year he has $100 of savings put aside. Whether he pays it directly or whether his employer contributes it doesn't alter the fact that it is his kitty for the future. That $100 represents a measurable quantity of wealth; today it's equivalent to about 50 bushels of wheat. Those dollars are to Smith the personal equivalent of food stored away for the day he can no longer toil.

Now, it is quite true that as inflation comes his escalating pension plan will credit him with more dollars in succeeding years. In the above example he would get $110 in 1951, and if everything were properly adjusted to the new price level this would again let him save the equivalent of 50 bushels of wheat. He seems to be keeping up with inflation.

But, in the meantime, what has happened to his little hoard put away in 1950? It is still $100, but that $100 is no longer the equivalent of 50 bushels of wheat. With the cheapening of the dollar by inflation, that sum will buy only about 45 bushels of wheat. Mr. Smith, in 1951, has been robbed of 5 bushels that he had in 1950.

At the end of 2 years without inflation he would have $200 in his retirement fund—the equivalent in goods of 100 bushels of wheat. With inflation and his elastic pension plan, he will, at the end of 2 years, have $210 to his credit. But in terms of goods he has the equivalent of only 95 bushels of wheat—and it's goods, not pieces of paper, he needs to live on when he retires.

And so it goes. Further inflation in 1952 robs the 1950 kitty further. It also robs the 1951 investment. Each succeeding year quietly steals from all the hopes of each preceding year.

Until recently no one denied this. It was too obvious that inflation robbed savings. Politicians who advocated inflation and economists who justified it simply ignored the fact, arguing that at worst it only robbed the well-to-do. Indeed, inflation was oftentimes urged precisely because it robbed a minority of savers for the benefit of a majority of nonsavers.

Now, it has become necessary to alter the argument. With the growth of pension plans, union welfare funds, and Government social security, it would not longer do politically to urge inflation through deficit financing and to concede still that it would rob the people's savings, and so the new arithmetic.

Henceforth the pedagogs of the new school will have to teach that inflation is a means of dividing the value of money savings—except where those savings are in a Government or union pension plan. In that case a different set of rules will be taught. Then inflation will be called a means of multiplying the worker's thrifty hoard against a rainy day.

The Point 4 Proposal

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT BEFORE HOUSE COMMITTEE ON FOREIGN AFFAIRS ON IMPORTANCE OF THE POINT 4 PROPOSAL BY J. T. SANDERS, LEGISLATIVE COUNSEL, THE NATIONAL GRANGE, JANUARY 12, 1950

Point 4 involves one of the most important national problems our Nation will be called on to consider during the current postwar period. It involves the question of whether or not we will fit our position wisely and soundly into the present troubled world.

The point 4 proposal is a part and parcel, a continuation of our effort to adjust ourselves into the new world which began with UNRRA, then moved over into our efforts to supplant a failing UNRRA by the ECA. We now realize that ECA was a transitional agency that merely took over where UNRRA was rapidly failing, and now as we pass the midpoint of the contemplated life of ECA we are faced with the realization also that with the second try we have not set our feet as a nation on the path that leads to the proper assumption of our inevitable position as the world's wealthiest, most productive, most admired, and most feared nation.

Until we realize that we occupy this position in the world, and that it cries mightily for a quick, long-time adjustment to a position of real world leadership, we fear that we will continue to grope through other temporary UNRRA's and ECA's, and thus fail to move directly and surely into a better world. Both UNRRA and ECA were great and serviceable agents and undoubtedly led us toward a better world; but as a worker in UNRRA it is my judgment that it lacked both the means and the will to move from a position as a relief agency to a permanent international policy agency, while ECA lacks the former.

As we view the point 4 proposal, and if it is to become truly an instrument of long-time value in solving the world's present economic difficulties and uncertainties, we must be guided by what seems to us the main objectives we as a nation seek. The objectives appear to us to be as follows:

(a) Our immediate and urgent objective is to close the five to six billion gap in our export-import balance and to stop at the earliest possible moment wholesale international charity, that has been just as necessary for us as for the recipients.

(b) Another and dominant objective, it seems to me, is for our Nation to assume a sensible, sound, and inevitable position as the world's main investor nation, and thus to help us in the coming intermediate years to balance and help stabilize the world's exchange situation.

(c) To develop and conserve presently wasted natural and human resources, and thus expand the economy of other nations, and, with their expansion, expand our own economy.

(d) To create a sound, economic base for a peaceful world.

(e) To strengthen the UN as an instrument of world government and hence world peace.

It will be noted that I have not listed humanitarian aims as one of our motives. This does not mean that we think that this

is not, and should not be, one of the all-pervading motives we have in helping to set up and taking the necessary initiative in setting up a sound point 4 program. But the less this can be said to be one of our direct aims, the more practical it seems to me will be our approach. What the world is seeking earnestly, what we should strive for, is an abandonment of wholesale charity at the earliest time.

This point 4 proposition must be approached with the maximum realism. This Nation must of necessity be even a greater proportionate financial contributor to a world-wide or international point 4 program than we were with UNRRA—over two-thirds of all its financial support. The main difference is that UNRRA was a one-way street; point 4 must truly be mutually profitable to the suppliers of financial support and to the recipients. As long as we believe implicitly in the superiority of the capitalistic system and in democracy, practical politics tells us that point 4 cannot be set up so as to stimulate the growth of a totalitarian economy in any country. That, to my way of thinking, was the basic reason the United States abandoned support of UNRRA. Yet any point 4 program will miserably fail if it incorporates means whereby investing nations can and do interfere with the liberty and freedom of the recipient nation.

The faith of the National Grange in the point 4 program rests mainly on our belief in the fundamental soundness and the ultimate triumph in the world of the principles incorporated in the Grange Guide Posts as follows:

1. All prosperity springs from the production of wealth; or anything which retards the production of wealth is unsound.

2. The compensation of each should be based on what he contributes to the general welfare.

3. The prime purpose of government is to protect its citizens from aggression—both physical and economic.

We as a farm organization are deeply interested in the development of an internationally and nationally sound point 4 program. We know that the underdeveloped nature of the nations which a point 4 program will directly help, is due to an unsound balance between their agriculture and their nonagricultural industry. A rough estimate of the occupational distribution in these countries would probably be 80-percent agricultural and 20-percent nonagricultural—the opposite of the situation in our country. Essentially, therefore, a sound point 4 program would work constantly toward a shift from agriculture to industry, and this is indeed a slow, long-time laborious task.

We also cannot support any point 4 proposal that does not coordinate integrally with and enhance the functions of the UN. Our official pronouncement on this score is forceful and unmistakable as follows:

"We are convinced that our policy should be one of wholehearted support of the United Nations and that we should do everything in our power to build it and strengthen it as an instrument of peace. A strengthened United Nations undoubtedly should provide a legislative body to enact laws related to world peace, with some practical and equitable system of weighted representation, a world court to interpret the law, and a world police force to enforce it."

In view of our emphasis on production as the basis of a peaceful world we favor the approach to increased world production, both agricultural and industrial, which is contemplated as the goal of point 4. We feel that the bill, H. R. 5615, represents a farsighted step toward the exercise of United States leadership in improving the productive resources and the conditions of life and labor for those vast populations of the world now far below the standard of economic life which our modern technology can make possible.

The implications of the point 4 program are great. The Grange is not expert in all phases of the contemplated program. But we have studied the two bills before your committee, and studied the official explanations of the program made available to us. We would like to set forth certain general, basic principles which we feel should guide the Congress in writing the point 4 concept into law. These principles are:

1. Since we favor maximum use of the UN, we believe that through the point 4 program nations must act in concert for common ends in the present world, where even a powerful nation as the United States cannot afford to stand alone. If we support the principle of cooperative action with other nations, we must do everything possible to effectuate that principle. Having set up the UN, we must use it so that it can mature in capacity and effectiveness as a world government and consequently as an agency of world peace.

2. Even though we know that our motives toward the under-developed areas are not those of the exploiter, we must realize that real fears of this exist—and can be fanned into flame—against the United States and her alleged imperialist schemes. The way to counteract this is to retain our program as it is contemplated in the Kee bill, but to lean over backwards in our every word and deed to make our intentions incapable of misinterpretation. Use of the UN is one of the best ways we can show our genuine intent to give assistance, not dictation.

3. We must not forget that other countries have technical resources which will be as valuable to under-developed areas as is our technology. Especially can better pooling of technical assistance be achieved through UN, and channelling the major part of the technical-assistance program through UN will also insure that other countries contribute their share of costs. Therefore we approve of the plans laid out in the Kee bill for providing a broad technical-assistance program through which the scientific advances of the industrialized nations can be shared with nonindustrialized areas whose methods of producing the necessities of life are still at a relatively primitive level.

4. It is important to recognize, however, that method must be supplemented with financial aid or investments if productive capacity is to be measurably increased. It is highly desirable that one phase of the technical assistance offered to under-developed areas be that of fiscal advice to the governments, so that every possible step can be pointed out to them for channelling their own available wealth into productive investment. Further, it is apparent that a substantial flow of foreign investment must be directed to these areas. It is hoped that additional study will be given by the United States Government to determining how best to stimulate private investment. It may be that a considerable volume of public investment is needed in the initial stages of a region's economic development, especially in the matter of development of such natural resources as water power, before the area will attract equity capital. We are not prepared to make recommendations on this question, but we do feel strongly that the program should not be limited to technical assistance. Technical assistance is an ingredient in economic development, but technical assistance alone cannot yield the results we want from this program. Intensive study should be given to ways of insuring that economically under-developed areas increasingly gain access to domestic or foreign sources of investment capital.

5. Since United States help to under-developed areas is a program which should involve all segments of the Nation's economy, it appears that an advisory board should be established by law, composed of representatives of agriculture, business, labor, and the professions. This board should be a real advisory body to the administrator, and should be composed of informed men and women of experience in matters affecting public policy. It would serve the purpose of keeping the program as close to the citizen as possible so that the honest humanitarianism and good practical sense of the average American can be incorporated into the missions of assistance which we send abroad. For the spirit in which this program is undertaken will determine its success as much as anything else.

Is the West Against Itself?

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. HELEN GAHAGAN DOUGLAS at Stanford University, California, November 11, 1949:

IS THE WEST AGAINST ITSELF?

I appreciate greatly the opportunity that you are giving me to speak at Stanford University on a question of public policy. Your university is well known throughout the length and breadth of the land as a center for thought and reflection, for investigation and teaching. In creating this occasion you are saying, if I interpret your invitation correctly, that a university may also offer itself, upon appropriate occasion, as a place where the university community may gather with members of the public to hear discussion of great public questions—even by a person who is active in the political life of the State. I appreciate this occasion and I respect its high character.

Your institution has been playing a role in the life of the West, now for some 60 years. In those two generations you have identified yourselves as contributors to its cultural and material growth. It has seemed proper to me, therefore, that I have chosen the West itself, as my topic of the evening. I should like to tell you some of my thoughts about the West—its past and its future, but especially its future. Also I want to tell you some of the questions that come into my mind as I contemplate the programs and forces that are shaping our future. They are serious questions, they demand answers, and I ask your help in finding the right answers.

Last May a great Californian was asking Congress a question, "Is the West against itself?"

A few weeks after he asked it Richard J. Welch, of San Francisco, died, leaving the question behind him to be answered.

Dick Welch's long consistent fight to develop western waters will place him, in the history of Congress, among the men who for a hundred years have understood how to realize the full benefits from our land and water resources, for all the people. His name will stand alongside the defenders of the Homestead Act—Andrew Johnson, of Tennessee; Galusha Grow, of Pennsylvania; George Julian, of Indiana—and beside those

Members who fought, or are now fighting, in defense of reclamation—Newlands of Nevada; Hansbrough of North Dakota; Mondell of Wyoming; Norris of Nebraska; Hayden and Murdock of Arizona; Murray of Montana—and others with a similar sense of the future.

There are men in Congress, today as always, who do not see the need of solving problems until the problems press so hard that all can see them; they are the men who arrive after the house has caught fire.

Then there are those others—the Norrises and the Welches—who look ahead, seeking to prevent the social and economic tragedies that men of the first type recognize only after they run into them face to face.

There are still others who are indifferent, and there are some who, for one reason or another, create obstructions.

Dick Welch is remembered now by the people of San Francisco with affection. He will be remembered in the years to come by the people of the entire West with gratitude and respect.

Is the West against itself?

Dick Welch asked this question on May 4. He was defending the unity of Central Valley development against those others who, for reasons of their own, were willing to see it destroyed on the American River.

Is the West against itself?

It is a seaching question and a fair one.

Fifty years ago the West was not divided against itself. Western men were united by a common purpose. They wanted fuller development of western waters. They wanted actual settlers to get the water so they could make homes on the land. They wanted them to get the water without having to pay anything to speculators. They wanted no monopoly.

In 1891 western citizens began to meet annually, first in one city then in another, to see how the costs of what they wanted could be met. They examined very possibility and came to an agreement. They agreed that if left to private corporations alone, only the less expensive river diversions would be made, because corporations could not afford the costs of the great reservoirs that are the backbone of full development. They agreed—and the records of Congress are explicit on this point—that even if, like the railroads, corporations were to receive great blocks of land out of which to recoup themselves, they did not want the monopoly and speculation in water and land that that method would create. They agreed, somewhat reluctantly, that the States were not able to pay the costs. They agreed that the Federal Government alone could finance this job.

It was necessary to convince the Federal taxpayers, most of them in the East, that they ought to help the West to develop. A formula fair to all had to be found. It was found, and in 1902 Congress wrote it into the statutes, and called it the national reclamation law.

By its terms the beneficiaries were to repay the capital cost of irrigation in installments spread over many years. The Federal Government would grant the money interest-free, a simple formula that cut the cost to irrigators to less than half. Since 1902 still other ways to increase the amount of Federal assistance to western irrigators have been added to the law.

When the reclamation bill was in debate prior to passage, the representatives of the entire country, West and East alike, agreed that the expenditure of public money could not be justified if it was to result in private monopolies of water.

So they wrote into the law, with care and pride, a provision that if any private lands should receive the benefits of reclamation law no individual landholders could receive more water than sufficient for 160 acres. Remember that no landholder was obliged to ask for the benefits of reclamation law, but if he chose to do so, he had to comply with its terms. As a citizen he could not receive more than this—his share.

The congressional delegations of all the Western States were solid in their support of the reclamation bill. When President Theodore Roosevelt signed it on June 17, 1902, it became law.

I am telling you about a great episode in western history. Sometimes I think there are those who would like us to forget it, or at least to forget the part of it that records a determination that western waters developed by public money shall not be turned to the uses of monopoly. A determination that our society shall be molded in forms that benefit the many, not the few.

I think there are those who would like us to forget that in 1902 Theodore Roosevelt said the purpose of reclamation is to make homes on the land.

I think there are some who would like us to forget the western Congressman who said: "The policy of the Government is—not to encourage the prosecution of agriculture by large corporations."

Sometimes I think that in these days when corporations and individuals with tracts of 1,000, 5,000, 10,000, and more acres wait hopefully to have their great holdings watered and their land values increased at public expense, there are some who would like to have us forget Thomas Jefferson.

Thomas Jefferson knew what makes a good society and a just one. In 1776 he brought before the legislature of the colony of Virginia his famous bill to abolish entailed estates. "In the earlier times of the colony," he said, "when lands were to be had for little or nothing, some provident individuals procured large grants; * * * desirous of founding great families for themselves. * * * the transmission of this property from generation to generation in the same name, raised up a distinct set of families * * * privileged by law in the perpetuation of their wealth, (and) thus formed into a patrician order * * * to annul this privilege, and instead of an aristocracy of wealth, more harm and danger than benefit to society, to make an opening for the aristocracy of virtue and talent, which nature has wisely provided for in the direction of the interests of society, and scattered with equal hand through all its conditions, was deemed essential to a well-ordered Republic." The colonial legislature deliberated, then under the leadership of Jefferson struck down the legal device of entail by which large landed estates then were perpetuated. Primogeniture went out the same way, and Americans of a former day felt secure that monopoly of the land, and of the power over the lives of other men which it confers, never would survive in America.

There are men today who seek repeal of the 160-acre water limitation. Whether these men understand that by doing so they are strengthening the pillars of monopoly and weakening the supports of democracy, I do not know. But I have faith that the people can understand.

No one had to ask the question in 1902: Is the West against itself? For the West knew its own best interest, and no voice from within was raised against it.

This is the centennial year of our State. We are telling again the old story that gold was the cornerstone of California. True, when this State was not yet 10 years old. The 1850's had not run their course, however, before man were saying that gold was only one of our resources. They had already turned to the rivers in the foothills to bring water to the land.

Today we have a new technology they did not have. We can use the power of the falling waters to create industries and jobs as well as to irrigate the land.

The future of California depends on how we use our natural resources—our forests and soils, our oil and natural gas, but above all our water.

Water is the perpetual self-renewing resource. By its proper use we can turn the deserts into farms, and make electric power—like food and fiber—into a crop that will spring into life anew each year with the rhythm of the seasons.

Our generation has this chance—to lay a foundation for the perpetual sustenance and well-being of the generations to follow. That is why the use of water is the highest issue of public policy within our Commonwealth today.

When Dick Welch asked the question, "Is the West against itself?" He was asking whether the people understood the foundation of their own future.

I, for one, believe that if Californians do understand it, they will not work against themselves. They will defend their heritage and protect their future.

This evening I want to discuss the Central Valley.

When I speak of Central Valley I am talking about a vast valley that stretches from Mount Shasta in the north to the Techachapis in the south. From the crest of the Sierra on the east to the hills of the coast range on the west—one-third of California. I am talking about an area as large as the State of Massachusetts, the State of Connecticut, the State of Rhode Island, and one-half the State of New Jersey.

I am talking about a project in that valley that will extend over the next 50 years. I am talking about a project in which the ultimate Federal investment will be perhaps three times the Federal investment in the Tennessee Valley.

The President of the United States recently authorized the Secretary of the Interior to transmit a report to Congress on full development of the Central Valley Basin. Congress has received the report. It is being printed now. I suggest that you obtain a copy when you can, and study it.

This Central Valley Basin report proposes a unified system under reclamation of 38 major reservoirs, 3 enormous pumping plants, 15 major canals covering almost 1,500 miles, together with thousands of miles of laterals and drains, 28 hydroelectric power plants, supplementary steam plants, and power transmission lines to carry the power generated at the dams to the giant pumps that form links in the canal systems, as well as to factories in the cities, to the irrigation pumps and milking machines on the farms, and to homes everywhere.

It proposes to protect 360,000 acres in the Sacramento-San Joaquin Delta from the intrusion of salt from San Francisco Bay. It provides for bird refuges, for fish ladders and hatcheries, and for recreation on a chain of lakes within easy reach of the floor of the valley.

Construction started on the first part of this great program in 1935. More than $300,000,000 has been spent on Shasta, Keswick, and Friant Dams, on the Delta cross-channel, Delta-Mendota and Friant-Kern canals, and on power generators, transmission lines, and pumping machinery. This construction could not have begun until men conceived and accepted the idea that the Sacramento and San Joaquin Valleys are parts of the same watershed that man can make into an effective unit.

Nature has distributed water and land unevenly in the Central Valley—about two-thirds of the water in the Sacramento, and about two-thirds of the irrigable land in the San Joaquin. The present construction will impound most of the floodwaters of the San

Joaquin River behind Friant Dam, then release them north to thirsty land through Madera canal, and south for 150 miles through the Friant-Kern.

The flow of the San Joaquin River, diverted in this way from its natural course, will be replaced and augmented by water from the Sacramento River, carried through channels across the delta, hoisted 200 feet up, through huge steel and concrete tubes, by a battery of pumps, then let flow for 120 miles, down a concrete-lined canal that slopes gently—to Mendota where it will refill the channel of the San Joaquin and replace the waters diverted above at Friant Dam.

There would be no present project without unity between the Sacramento and San Joaquin. We never will get the fullest possible use of the waters of Central Valley without unity throughout the basin. Without unity we cannot coordinate the various streams within the various parts of the basin.

Flood control demands empty reservoir-space at some seasons. Irrigation requires that as much water as possible be held back in winter, for release months later. Power generation requires that water be released in a flow through the turbines coordinated carefully to the fluctuating power load. These requirements of flood control, irrigation, and power are partly in conflict with each other. Therefore, only the most skilled operation in control of the entire system, can strike the essential balances that will wring the maximum benefit from every drop and snowflake that falls on the 500-mile watershed. California cannot afford to waste one drop.

Yet there are some, who for whatever reasons, have not hesitated to work for the destruction of unity in the Central Valley.

The Central Valley Basin report now in the hands of Congress proposes to make water available for nearly 2,000,000 acres of land now irrigated inadequately, and for about 3,000,000 acres not now irrigated at all. It proposes to generate 8,000,000,000 kilowatt-hours of electricity every year. With unity this can be done. Without it, some water will waste to the sea every year, some land needing water that could have it will not get it, and some electricity that might have done work will never be generated.

I suggest, if you want to see this spelled out, that you get from your library a copy of the recent report by the Hoover Commission on Reorganization of the Executive Branch of the Federal Government. Ask for the volume that contains the Task Force Report on Natural Resources, and read the special study that tells part of the price of destroying Central Valley unity on the Kings River.

The program for unified development of the Central Valley Basin is a program to enable our sons and grandsons to employ their skills and ingenuity to the greatest advantage, and to dig their roots deep into the soils that nourish our democracy.

I believe that the people of California will defend and support a fair and full and unified development of water. Why do I believe it? For many established localities, this kind of development is not a theoretical issue. It is a matter of survival.

A few weeks ago the people of Orange Cove celebrated the first bringing of project water to that community and the surrounding farms. Out of a man-made river—the giant Friant-Kern canal—came water to a community where the citrus and olive groves, the vineyards and the truck-farms were threatened because the underground water on which they depended had practically disappeared. On July 10 water came to Orange Cove, it had been carried 45 miles from the man-made lake behind Friant Dam to the people of Orange Cove. Because men have vision water had been stored for the day of use, instead of wasting to the sea. Little wonder the people celebrated.

They could not wait for a permanent distribution system to be built. When water released at Friant, the day before, came to Orange Cove on July 10, 1949 they siphoned it out by all manner of crude but ingenious devices. The Central Valley project was placing a firm foundation under their community. They had signed a water contract with the United States: "Stabilized the community" is the way one of the founders of Orange Cove put it. He proudly gave me a copy of a letter he had sent to the newspaper to express his feelings toward the whole reclamation program. This is what he had to say:

" 'Young men dream dreams, old men see visions.' Thirty years ago the Central Valley project was a young man's dream, and for many years remained only a dream, and to this day would have remained so, and a faded dream at that, had it not been for the Bureau of Reclamation, coming to our rescue in transforming these dreams into visions and the visions into vivid reality.

"While the picture of the 30 years ago situation is now happily turned to the wall, it may be impressive to take a parting look at what it 'might have been' had it not been for the saving grace of the Reclamation Bureau and its quota of able men to do the job. We of Orange Cove and other communities of similar situation could be walking down the road with packs on our backs talking to ourselves about 'what it might have been,' instead of the happy event of celebrating the coming of the water."

I think I know how this "young" man of 86 years felt. I stood on a citrus farm in his district that canal water had not yet reached. I watched the farmer's pump suck air instead of water on three strokes out of every four. I saw the withered leaves on his citrus trees and the stunted oranges the size of walnuts.

In another place I met a man who had helped to organize his neighbors into an irrigation district for the purpose of signing a contract for water from the Friant-Kern Canal.

He was in the field picking his last squash of the season. He told me the wells there, too, were being pumped dry. Unless the district can get emergency water, its farmers face the prospect of having to turn wholly to dry farming. He pointed and said, "These fields were once planted in vineyards and orchards. You can see there are only a few left, and there is hardly enough water for them."

The soil was rich. He told me that in his opinion a family could make a good living on 20 acres if they had water.

It may not occur immediately to some that labor and industry and the cities have as big a stake in full water development as these farmers in their fields. But they have. And as recently as last year during the power shortage many laborers and industrialists had good reason to learn it. I have talked with some of them.

Around the bay there are industrial plants that know what it means to curtail operations and even to shut down for lack of power. More than 5,000 factory workers have had to count the dollars cut from their pay checks for the same reason. The State of California found that in 39 factories the average weekly earnings had dropped from $62.04 in February 1948 to $53.17 in March because of power shortages. Every electric clock in northern California ran slow, the entire State went on daylight-saving time, and stayed there in the winter, because power was short. Little children went to school in the dark because power was short.

Some people said power was short because rainfall was short. It was not so much the lack of rain as it was that some men lacked foresight and were willing to retard the public-power building program in Central Valley for their own purposes at the hazard of other men's incomes and other men's earnings and other men's jobs.

That shortage of power in 1948 is a warning of the price this State may have to pay again and again. We need not expect that new industries will be established here unless we face this fact and get ample supplies of low-cost power.

The issue of water and power in our State neither can nor should be kept out of politics. For under our Constitution politics is the arena where the principles to guide public policy are decided upon.

In the highest sense, this issue rises above partisanship.

Its proper solution affects every segment of our population—industry, labor, agriculture, commerce. On its material side it will determine our standard of living in the future. On the cultural side it will go far to determine the quality of our society.

For these reasons the Republican, Richard Welch, could press for the unity of the Central Valley under reclamation law, and the commission of ex-President Hoover could point to the placing of the Army engineers in charge of Pine Flat Dam on the Kings River as a sacrifice of the public interest.

And Democratic Congressman CECIL WHITE can lead the movement to bring the Kings River into the great Central Valley project and introduce legislation to transfer the functions of the Army engineers to the Department of the Interior as recommended by the Hoover Commission.

As a practitioner in politics, I wish to pay tribute to the contributions that universities make to the solution of the problems that I and my colleagues must grapple with. It has not escaped me that the Hoover Commission study of the Kings River was made by a Harvard professor, Arthur A. Maass, and that the most illuminating and objective book on the Central Valley, The Thirsty Land, by Robert de Roos, bears the imprint of Stanford University Press.

I hope that universities generally will support this kind of study and that they will carry their public education even further on great questions. I invite them to investigate, for example, into why some men work for ends that destroy the unity of Central Valley, and inquire, What will be its results?

Why were the Army engineers injected into the vitals of the Central Valley project area on the American and Kings Rivers? What can we expect the results to be of the fact that Congress has not united the American River with Central Valley project, but has left the Kings outside?

When efforts are made from within the legislative branch of Government to control individuals in the executive branch, does it promote or injure good public administration? Does it make the public service more attractive or less attractive to young men choosing their career?

How will it affect the Central Valley and the State of California if Congress should not sustain the 160-acre water limitation?

These are the kind of problems that press, and I assure you that many of us in political life will welcome the results of your investigations.

This is the Armistice Day of World War I, the war men fought, in the words of Woodrow Wilson, "for democracy." In coming to your university this evening, it has been in my thoughts that to discover the truth about the issues I have laid before you and to decide them rightly, will be a real contribution to the perpetuation of the democratic faith for which they—regardless of party, race, or creed—fought through that war to its end.

UNIVERSITY OF MICHIGAN LIBRARIES

Address of the National Commander, the American Legion

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I present the address of National Commander George N. Craig before the twenty-seventh annual national rehabilitation conference banquet of the American Legion at the Statler Hotel, Washington, D. C., Monday night, February 6, 1950.

Commander Craig made a most forceful speech, in which he called upon the membership of his organization to fight against the recommendations of the Hoover Commission as they pertain to the Veterans' Administration.

When Commander Craig appeared before our Committee on Veterans' Affairs on January 17, I assured him of my wholehearted opposition to the Hoover Commission VA proposals. On January 31, I spoke at length here upon the matter. I hope every Member will read Commander Craig's address. It follows:

My fellow Americans, I am grateful for this opportunity to discuss with you certain problems that not only face the veterans of this Nation but the general public as well.

All citizens are affected by certain proposals of legislation now pending before the Congress and certain proposed legislation that is being authorized by certain sponsors.

Throughout our 31 years of existence, the American Legion has attempted to preserve in time of peace the principles of Government and human conduct for which we fought in time of war.

Realizing as we do the tremendous cost in health, welfare, and life by which these principles were purchased upon the battlefields and seas, our Nation, based upon a system of free enterprise, has paid heavily for the burden of war. The tools of war were paid for in cash. The human cost of war was charged—charged because amounts could not be calculated and only future events and circumstances could determine the requirements. Because of the human cost of war, veterans' legislation, since the inception of our Nation, has been enacted not with the view of giving to the veteran of wars a bonus or a premium, but with the sole purpose of rendering him more capable of competing in a highly competitive society.

All of the displaced persons are not in Europe. A man or woman who gives valuable years of his or her life, who gives of health, who gives of mind is less able to take his place in society and to maintain a standard of living comparable to that of his fellow who has not been compelled to make these sacrifices and, too, he will die younger. Therefore, a wise Congress, speaking for a grateful people, has from time to time placed upon the statute books certain laws in an attempt to give the veteran equal opportunity.

Marked efforts in this field came succeeding World War I, but our Nation found itself without experience. As a result, much money was wasted and a slight degree of proficiency was achieved. Separate and distinct bureaus and commissions were formed, each attempting to carry out the responsibilities of their office and each failing because of a duplication of effort, because of the lack of central authority, because of the lack of experience in handling such an emergency.

You formed the American Legion to act as counsel to the Government in carrying out rehabilitation. You were most fitted for this purpose because you yourselves had experienced war, you knew at first hand the problems confronting the individual, you knew the toll that war takes in the life of any man who engages in it. You knew of the lessened opportunities, the hardships; you knew what it was to see the fine sentiments borne of our society blunted and blurred in the minds of persons who were required to destroy life so that our Nation, our homes, and our families might remain free; this, even though an individual may be sound of limb and mind.

You knew the great difficulty experienced in the attempt of an individual to reorient himself, to try hard to retake his place in society and to contribute the maximum which is the duty of every law-abiding citizen.

Finally, after bitter experiences, after much suffering and hardship, and 11 years after the cessation of the first war, the Veterans' Administration, at the suggestion of President Hoover, was formed. Here, for the first time, was created a bureau whose responsibility was fixed to carry out its purpose. Here for the first time was unified under one roof and within four walls an agency whose sole purpose was to care for those who had served in war.

To be sure, the Veterans' Administration has not at all times performed without error duties imposed upon it. But basically it has impartially and without political interference performed its intended function. To be sure, its operation is expensive to the taxpayer. Wars are expensive, the care of the disabled veterans of this Nation is still a cost of war.

In 1947, the Congress of the United States thought it wise to inquire into the executive branch of our Government with the view of making a study to determine whether or not economies could be exacted and efficiency improved. Upon the recommendation of the Congress, the President of the United States appointed a Commission to give study and make report. Heading this Commission was the Nation's only living ex-President, Mr. Herbert Hoover, who has a record of public service second to none. His very name rightfully has become a synonym of integrity in Government because of his civic virtues and his unassailable loyalty to American principles.

Four million members of the American Legion and its Auxiliary bear good will, affection, and respect toward him. Would that there were more men of his caliber in our public life.

However, this small Commission could not in itself delve into the details of each department of our executive branch of Government, and so 24 task forces were appointed to serve under the over-all Commission to report to it. And tonight, I wish to speak of that portion of the report that deals with the matter of veteran affairs. In so doing, I do not for one second criticize any other portion of the report. As a matter of fact, the American Legion commends those savings in Government that have been made in the Department of Defense under Secretary Johnson, the unification of the armed forces that has stemmed from the study made by this Commission, and I am confident that within the remaining 18 volumes of information there is much good and many wholesome axioms that would be wise for the American people to follow. After all, the American Legion is for economy in government. It is for the maximum efficiency in the discharge of governmental functions. In the expending of taxpayers' money for the disabled and needy veterans of this Nation, we are more interested than anyone else to see that each tax dollar is devoted to a maximum of service with a minimum of administration burden.

For many months, the veterans' task force deliberated. It met only four doors from our headquarters here in the District of Columbia. On four separate and distinct occasions, your representatives asked the privilege of placing before this group the experience of 31 years gained and upon four separate and distinct occasions they were refused that opportunity. The excuse given was that the task force was not interested in the experience of the past, and it was seeking an objective view devoid of interference.

It is also interesting to note at this point that the Veterans' Committee of the House of Congress was not called upon to give its views and versions, even though it had for 25 years been charged with the responsibility and study of this great social problem.

It was with shock, chagrin, and manifold disappointment that we learned when the report was made it called for the American people to destroy and dismember the handiwork of Government born of time, study, and experience. It was with equal amazement and concern that we learned that there has been formed throughout this Nation a committee of varied interests known as the citizens' committee, subsidized by powerful interests, whose sole purpose was and is to ask the American people to adopt these 19 volumes of reports without consideration or study. They stated then and they state now, either you take the entire package or you are against the recommendations.

Now, we Americans gained proficiency in government by careful consideration of laws and modes of human conduct. We have a free, God-fearing democracy only because we have looked to the experiences of the past and weighed them heavily in our considerations for the future.

The people of the United States don't buy "pigs in a poke," and other nations have disintegrated and vanished because of blind acceptances. So we of the American Legion and its auxiliary, joined by the other veterans' organizations chartered by Congress, ask the American people and their representatives to weigh carefully the facts placed upon the scales of economy and efficiency.

The first dismemberment that the citizens committee would ask you to approve is to take from the Veterans' Administration its medical facilities. Those facilities that have made such great strides in the advancement of medicine, those facilities that have been the recipient of the services of the finest medical minds in the world, those facilities that have made such great progress in curing the minds and health of those of your citizenry who can no longer speak for themselves, and who must rest their case in your hands.

They would place it in the hands of a governmental gargantua known as the United Medical Administration, and combined with it would be military and naval medicine, the medicine of your Federal penitentiary, the medicine of the merchant marine, and with this galaxy of patients, the veteran would be required to stand in line. What chance would he have? There are already 20,000 veterans awaiting beds in Veterans' Administration hospitals. But the proponents of the citizens committee say, "We are not going to destroy the Veterans' Administration." Let us see.

What do they secondly consider? The matter of Government insurance. Do you know what they propose to do with that? In the name of economy and efficiency, they

have decided to form a new Government corporation, a corporation that must of necessity bear administration costs in itself. Our experience has been, and I am confident it is true of all people, that Government corporations are expensive. And so they would divest the Veterans' Administration of this particular function, but they still say, "You will have a Veterans' Administration."

The next matter they consider is the building of hospitals, and who do you suppose they would place this responsibility with? The Department of the Interior—the branch of our executive department that is charged with rivers and harbors, public grazing lands, and reclamation. A department that is, of course, necessary in function, but whose history is replete with political government and pork-barrel raids. And here there would be injected politics in hospital construction, a matter that for some time has been divorced from veterans' affairs. But the citizens committee says, "There will still be a Veterans' Administration."

Next, they consider the matter of loans and guaranty, and do you know what they propose to do with that? Why, bless you, they insist that it be placed with the Housing and Home Finance Agency. Federal housing, if you please. Under the GI bill of rights, loans for the building of homes were obtained from local banks. To be sure, the Government guaranteed repayment, but private capital was given the privilege to invest, and it has to the extent that 1,746,000 veterans have obtained homes by this medium. Only seven-tenths of 1 percent have defaulted, establishing the veterans of your last war as the highest and finest credit risk your Government has, and they want to put it in the class and category of Federal housing. When the GI bill of rights was written, Federal housing did its utmost to obtain jurisdiction over veterans' housing, and I say that the proponents of this recommendation now are more interested in expanding and making larger Federal housing than they are in administering to the needs of their former defenders. But they still say, "You will have a Veterans' Administration."

I imagine the building will still be standing over here on the corner, but I am confident it will be unoccupied.

The Veterans' Administration is granted the right to handle pensions, retirement benefits, disability compensation, and guardianships, but where in the world would the records be? United medical would have to have some; the insurance corporation would have to have some; Housing and Home Financing would have to have some; the armed forces, of course, must retain some; and by the time a poor claim would have run the gauntlet and passed through the maze of bureaucratic machinery and red tape, the claimant would have either passed to his reward or given up in disgust. All of this in the name of economy and efficiency, in the name of trying to help the veteran.

I indict the authors and proponents of these suggested changes as men without experience in the matter of veterans' affairs. I indict them for asking the American people to not look, to not study, to not consider suggested changes relative to a sacred duty. The American Legion, its auxiliary, and the 16,000,000 persons for whom it may speak indict the paid hirelings of the citizens committee for its attempt to flood this Nation with propaganda composed of half-truths and falsehoods. I am confident in my mind that the majority of the members of the citizens committee is not familiar with the conduct of some of its paid agents. I am confident that the great majority of the committee members wish to see economy in government, wish to see efficiency and desire fervently to see those cared for who can neither care nor speak for themselves.

As I have previously suggested, I am not one who says that the Veterans' Administration is perfect. I am confident in my own mind from the studies made that savings can be effected, administration simplified—matters that should be corrected within the structure. It is an old saying that you need not tear down the house to fix the chimney.

The attack of the American Legion upon legislative suggestions trickling from the report does not lessen our desire to cooperate with all who seek good government. Nor would we for one moment wish that anyone would lessen their action to assist in the passage of such laws because of our attack upon this portion. We, of the American Legion, are only doing what we know to be right and proper.

To combat the noxious propaganda flowing from the heavily subsidized citizens committee, you have but one weapon—the truth.

The truth consists of facts and figures which the American Legion has gathered so that you can meet hostile and misleading propaganda with statements of actual conditions, problems, and needs. This factual information was compiled by our national staffs in Indianapolis and in Washington, by our national rehabilitation, legislation and economic commission, and by a great many well-informed and experienced Legionnaires. To all of them I am very grateful for a fine job.

There is no more loyal task force in the American Legion than that made of the thousands of our department and post service officers. They are the ones who have made the name of the American Legion the greatest name of rehabilitation. They too have rallied to repel this attack upon the welfare of the Nation's veterans. We are proud of our service officers. They exemplify the finest ideals on which the American Legion was created.

We face a tough fight. The American Legion alone cannot defeat these ill-advised proposals of legislation spawned by the citizens committee. But I am confident that when you have carried your message of truth to the American people that they and their representatives will place the stamp of disapproval upon the advocacies of the citizens committee.

The majority leader of the House of Representatives, JOHN W. MCCORMACK, correctly states:

"In its recommendation on veteran affairs, the Hoover Commission failed to recognize that the Veterans' Administration was already set up on the one basis on which veterans' affairs could be handled with the greatest dispatch and the least cost. The lesson of the past is most emphatic that there must be no division of authority in the vast operation of administering the affairs of 19,000,000 veterans. Yet the Commission proposes such a division of authority. It is uneconomic because divided authority means divided responsibility. Divided responsibility means no responsibility.

"If the Hoover proposal to split up the Veterans' Administration into five separate Federal agencies should be adopted, it would wreck the principle of unified service and of single responsibility in the handling of veteran affairs. It would require more time, more labor and more money to administer the affairs of veterans.

"I do not think it is in the interest of the veteran or of economy to divide the Veterans' Administration as presently constituted and in particular to take away from this agency the control and operation of veteran hospitals and transfer them to a new or another agency."

I regret to say that the campaign that has been conducted by the citizens committee has attempted to bring into disrepute the veteran. And while it has only been a few short years since the last shots were fired, which terminated the slaughter of our friends, an attempt is being made to vilify the veteran, to charge him with being a Treasury raider. Why even in the press if a crime is committed it's not a lawyer who committed assault; if he has had service it is as a veteran that he is charged. If civil suit is brought against a person, it isn't a truck driver who is being sued, it is a veteran who is being sued, an attempt to defile the status. For those who did their best in time of emergency, to preserve our Government, I ask the American people in your name, not for special privilege, not for premium, I only ask them for that which is equitable, right, and just. So as we go down through the years together meeting the common problems to us all, each contributing in his own way to carry out the responsibilities and duties of citizenship, working together with all lawful interests, having confidence in ourselves and in one another, believing in America and having faith in divine guidance, we will permanently preserve the principles of America and bring to the world enduring peace.

Unification and Integration

EXTENSION OF REMARKS
OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. FORD. Mr. Speaker, while reading the Infantry Journal magazine for February 1950, my attention was directed to an article written by Commodore Dudley W. Knox, United States Navy, entitled "Unification and Integration." My curiosity was arcused. What is an article on naval aviation doing in an Infantry Journal?

The central theme of Commodore Knox's essay is found in the following two quotations:

After World War I, naval aviation pursued a policy of becoming more and more closely integrated with the general body of the Navy until by World War II it was an inseparable part of naval bone, sinew, and flesh.

Army aviation, on the other hand, followed the Army tradition of semi-independent corps and departments until it became a completely separated and independent Air Force.

My own conclusion, after reading this article, is that the Army and the Air Force should bear in mind that unification does not mean jealousy, suspicion, and hostility, but rather a cooperative spirit of sane and sensible men working hand in hand to accomplish a job in the most efficient and proficient manner that is possible.

The article follows:

UNIFICATION AND INTEGRATION

(By Commodore Dudley W. Knox)

Those with the welfare of our country and its armed forces at heart have naturally felt great concern over the constant bickering that has become associated with processes leading toward the unification, now prescribed by law. The admirable degree of harmony that prevailed in wartime seems to have deteriorated and become transformed into a predatory spirit of jealousy,

UNIVERSITY OF MICHIGAN LIBRARIES

suspicion, and even hostility. Such a spirit could surely defeat genuine unification, regardless of the organizational and administrative measures that may outwardly seem to give it effective form and substance. The intangibles of conviction must be resolved first. Otherwise unification can only be a deceptive sham.

As I view the matter, the respective service prides and loyalties commonly assumed to be the principal obstacles are usually secondary. The real trouble is much deeper and more basic. In War College terms it is conflicting conceptions of war. We think differently of the ways war should be organized for and conducted. In a word we are indoctrinated differently.

A great part of this conflict lies in the traditional differences between Army and Navy in their organizational and administrative concepts. And these are in turn a product of operating conditions. Of necessity a ship must be a tightly integrated unit. A fleet of such units needs to be, and is instinctively, itself well knit. But an army has no such basic need. Ours has always been a loosely woven aggregation of corps or branches, each one semi-independent. A corps complex still prevails in our Army's conception of unification, whereas to the Navy a much more intimate integration is implied. In these basic respects the two services think in different terms, and the Air Force has inherited the Army viewpoint. The Marines cling to the Navy concept.

I may be in a better position than most officers to understand these basic differences. Having been born a yellow leg and become a deserter to the Navy at a tender age, I have an ingrained sympathetic interest in both the Army and Navy. And this extends to the Air Force through a long friendship with the late Billy Mitchell. In the days when Billy, as a Signal Corps officer, was learning to fly, he and I collaborated in undercover publicity for preparedness. We could not write under our own names because of President Wilson's ban against it during the long period of American neutrality in World War I. So Billy sought my naval advice and used it in his articles, and I was similarly guided by him on military questions.

After the Allied victory in Europe, and Billy's brilliant part in the air operations that led to it, we had frank and friendly talks on the future of aviation, including its organizational relation to other branches of the services. He was sold on the British solution of an independent Royal Air Force. But I had served most of the war in London and talked to British officers of all services, and I favored the integration rather than the separation of aviation * * * more especially for the Navy.

Since then Billy Mitchell's way has become the gospel for the Army. The cleavage between aviation and ground forces grew wider and wider until the Air Corps became a completely independent Air Force after the British pattern. To our Navy this was a mystifying evolution, for during the same era, which included World War II, development of naval aviation took an opposite course, the wisdom of which was proven by a wealth of experience. Starting in 1919, the top-level naval policy was to integrate naval aviation more and more closely with the general body of the Navy. And by now naval aviation is so intimate a part of naval bone, sinew, and flesh as to be inseparable.

How could such diametrically opposite developments come about—in the same era and the same war—in American sister services? The conflicting causes are even yet so vigorous and uncompromising that they actually give impetus to the deplorable feuding between Air Force and Navy, within the unified national defense organization created to gain harmony and cooperation.

And in this situation how can the Army seemingly stand supinely aside with but a flabby interest in providing for its ground forces the tactical aviation they so sorely need? It seems possible to explain this paradox and seek a remedy for it only by examining the enduring habits and customs of the different services—what psychologists or sociologists might call their "mores."

Since its very origin the Army has been split up into corps, each a semi-independent empire. The cleavage between Cavalry, Infantry, and Artillery was for long very great. More recently these branches have been merged at top level into the Army Field Forces. But even yet they do not seem to be well integrated at the lower levels. In addition, there have been the Corps of Engineers and the Quartermasters, Adjutants, Inspectors, Judge Advocates, and so on. And each of these has been largely sufficient unto itself, though perhaps only less so today than in the past. And as the art of land warfare grew in complexity and armies increased in size there was ever a strong tendency to create additional corps. Within recent decades Artillery was split into two corps (Field and Coast) and new corps included Signal, Ordnance, Chemical, Transportation, Finance, and Air.

With different service conditions, the naval tendencies have been just the opposite. Early in the present century the Navy's Engineer Corps was amalgamated with the line, and later the same was done with its Construction Corps. And much consideration has been given to similarly amalgamating the Supply Corps, whose officers and men have battle stations when afloat. The same strong trend to integration has ever characterized the Marine Corps within itself.

And so the coming of aviation as a major element of combat and reconnaissance naturally reacted upon the Army as a reason to add one more to its large assortment of greatly independent corps. Whereas the Navy chose instinctively the oposite path of closely integrating its aviation. And so did the Marines. Thus, for the Navy and Marines aviation developed into a vital organ, not merely an appendage as in the Army—an appendage easily separable.

This profound difference largely accounts for the heated controversy that developed between the Navy and the Army Air Corps. The latter looked upon naval aviation as something almost apart from the Navy, as loosely knit to it as the Air Corps was to the Army. It saw it more as an extra leg or arm than as a circulatory or nervous system. It saw it as something which could readily be severed from the Navy and attached to itself. But from the Navy's viewpoint, to have a circulatory system dissected out of its general body clearly meant a fatal operation.

The late war seemed to demonstrate amply the soundness of our Navy's solution of air organization. The armies and navies that employed planes closely integrated with surface forces were conspicuously successful, so long as their total means permitted success. Illustrations could be multiplied. The spectacular successes of the German Army offer sufficient examples on land, though Russian practices are also worth noting. Afloat, only the American and Japanese navies had well integrated aviation with which to start the war, and their performances clearly prove the point.

On the other hand, the want of adequate air support resulted in trouble and even disaster almost without exception, even when surface forces were otherwise in superior strength. A striking illustration is the early British experience in North Africa, where at first the Royal Air Force planes operated independently of the troops. Whenever the commanding general needed air support from planes close by his forces, he could only get it by communicating with London, and the air authorities there might or might not meet his request. The result was a series of disasters on the ground. The tide turned toward victory only when the local aviation was placed under the direct control of the ground commander.

Both ashore and afloat the independence of the Royal Air Force worked badly for the British. In theory, due air support was to be given as needed to military and naval forces. But in practice such support proved very inadequate. The aviators lacked proper understanding of surface problems. And surface forces were unable to appreciate air problems. In short, the Air Force was so engrossed in strategic bombing that it neglected what it regarded as secondary missions—those of close cooperation with the Army and Navy.

A great wealth of experience in the late war has made it axiomatic that adequate air support is essential to success in surface warfare. The better the support from aloft, the more certain and more complete becomes the victory below. It does not require close reasoning to conclude that the value of air support depends not merely upon its quantity but even more upon its quality; nor that its quality is first of all a product of proficiency of the men in the air.

However good an aviator may be as a flyer, and however good the combat characteristics of his plane, he cannot be proficient enough in supporting surface forces unless he understands how they fight and what their combat problems are. And it is similarly important for surface personnel to have a due comprehension of the capabilities and needs of aviation. The two arms must work together as a well-coordinated team. They must be thoroughly integrated if the full value of air support is to be realized.

And there lies the basic difference between the thinking of Navy and Marine Corps, on the one hand, and Army and Air Force on the other. And this difference offers the main explanation for the superlative effectiveness of the Navy and Marine Corps aviation in the close support of surface forces. However good the Air Force may be in strategic bombing—however greatly we admire its superb contribution to victory by paralyzing German communications during and after the Normandy invasion—hundreds of cases can be cited to reveal its substantially lower efficiency in the combat role of close tactical support, compared with naval and marine performance in this role.

The fundamental reasons for this naval-marine superiority are clearly put by Admiral C. M. Cooke in a recent article in Foreign Affairs, entitled "Soldiers Need Wings." He points out that since 1920 "a naval aviator was a qualified naval officer, and naval officers, many of them aviators, became increasingly indoctrinated in aviation. Naval officers were air-minded, and, no less important, air officers were surface-minded; without this general understanding of naval principles, and experience and proficiency in surface operation, the air officer could not understand the possibilities of his own arm." Neither could the surface officer otherwise appreciate the tremendous potentialities of a truly integrated air-surface force.

Admiral Cooke goes on to argue for applying the same principles and practices to our Army. He believes that "years will be required to create an experienced body of ground-indoctrinated air personnel and air-indoctrinated ground personnel and to develop special equipment and methods. This growth will be accompanied by continuously changing tactical concepts, and even changes in strategic concepts, to fit in with the increased mobility and offensive power that

our ground-air force will acquire." He feels that "the integration of our ground forces, which are first rank in quality, with an expanding ground-air element, is today the most pressing task of our military leaders."

These views find strong corroboration in the example of the Marine Corps. The Marines are the only proficient ground-air and air-ground organization in the country. There are many potent reasons against the half-baked suggestions that have been made to abolish this splendid corps d'élite, or to abolish its aviation element. Among the strongest of them is simply that the art of close aviation support to ground troops would be lost in this country, and many years would be required to regain it. It is paradoxical that such abolitions are advocated at the very time the Army is urging the Air Force to begin providing almost nonexistent suitable Air Force planes, and to begin appropriate training of personnel to give our ground forces a sorely needed, adequate tactical air support.

There is room for misunderstanding of what constitutes close tactical air support to troops. As I am using this term, it refers to what the marines call "close-in" air support. They define it as: "Attack by aircraft of hostile ground targets which are at such close range to friendly front lines as to require detailed integration of each air mission with the fire and movement of the ground forces, in order to insure safety, prevent interference with other elements of the combined arms, and permit prompt exploitation of the shock, casualty, and neutralization effect of the air attack."

The marines consider that their aviators should be competent to make such attacks effectively on targets as close as 200 yards from their front-line troops. This accurate and extremely helpful performance was not uncommon for them in the late war, not only in support of Marine infantry units but also Army infantry. On Okinawa they gave support as close to troops as 50 yards with great success. It is obvious that an aviator should be a well-trained soldier first, before he can clearly understand what is expected of him and how best to do it. And before he is entrusted with such difficult tasks as these.

Perhaps less of the soldier is required in an airman for interdictory attack at greater ranges. Yet the better his military understanding and training, the better will he succeed in supporting ground forces at any range. Besides, interdictory attacks and "close-in" attacks are likely to merge in the course of battle. For both of them, general direction and complete general control of air operations must necessarily rest with the ground commander, if satisfactory results are to be expected below. And certainly the ground commander must also be proficient in this vital part of his authority and responsibility.

Whether the present defense organization will be able to properly develop and integrate ground tactical air with the ground forces is a question that Admiral Cooke thinks "remains to be seen." "It certainly will not do so," he says, "unless the top command in both Army and Air Force place greater emphasis upon its importance," and effect necessary changes in organization "worked out by the two services in close collaboration, aided and prodded by the Secretary of Defense."

The most favorable factor for a happy solution is the availability of the Marine Corps pattern for imitation. The greatest obstacle appears to be the Army's traditional "corps complex," resulting now in insufficient mutual understanding between air and ground personnel of each other's techniques and problems, with a corresponding want of interest and sympathy. Had there been a warm sense of an important common need of unity, the Air Force never would have driven so hard to separate itself from the Army. Nor would the Army have consented to that separation with such seeming indifference.

One of Billy Mitchell's strongest early complaints was the Army's lukewarmness toward the importance of aviation. In this he was probably well justified at the time. The same criticism can be leveled at the Navy before 1919. Until then, pioneer naval enthusiasts were met principally by skepticism from the Navy at large. But being themselves naval (or marine) officers, their vision looked toward ways in which aviation would enhance naval power, and accordingly they made and won that fight within the Navy itself on those grounds.

On the other hand, Mitchell's similar frustrations from the Army turned him against it. Having had no considerable line training or experience, with correspondingly little understanding of line problems and techniques, his natural impulse was toward the development of air functions quite independent of the combat ground forces—thoroughly believing in fact that aviation would supersede them, or render them quite secondary in warfare. Merely as one of many examples of this attitude, he strongly contended that the principal future role of ground armies would be to occupy territories conquered by air forces. This general doctrine was ardently seconded by his followers. And so persistently was it supported that we have now witnessed the actual severance of the Air Force from the Army. And this, paradoxically, under the guise of unification.

Such a background seems a rather sterile one in which now to begin cultivating the true integration between combat ground forces and the tactical aviation which is so indispensable to military success on land. Certainly British experience after creating their independent Royal Air Force at the end of World War I is not reassuring. In theory their Army and Navy were to receive from the RAF such air support as they might require. In practice their naval aviation and ground tactical aviation became mere stepchildren. Neither the proper types of planes nor good specialized equipment were developed. These grave deficiencies in World War II cost many lives and nearly cost the war.

I understand that some such arrangement as the British tried out after World War I, to their great sorrow, is now proposed for our Army's tactical air support. The Air Force is to supply the planes, equipment, and aviators. What degree of control the Air Force will retain over them, I do not know. Presumably it will at least have control over the all-important funds. Let us pray, sincerely, for the sake of future blood and victory that whatever arrangement is made will work out with pronounced success. Personally I cannot help but be skeptical and fearful unless true integration is achieved.

The potency of the lessons from naval and Marine Corps experience in this regard are beyond doubt. The integrated forces must be under single control and command. And this not merely for combat operations but also during the needful years of preliminary training and indoctrination. Neither the aviation nor the ground elements in such an integrated force can serve two masters well and stay a hard-hitting team.

Obviously, in the final analysis this may well mean that the Army must have complete control of its own aviation as an integral part of itself, and graduate out of the corps complex.

Economic Problems of the Year Ahead

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. JACKSON of Washington. Mr. Speaker, the following article, entitled "Economic Problems of the Year Ahead" appeared in the New York Times Sunday magazine of February 5, 1950. Its author, Sumner H. Slichter, holder of the highest professorship in economics at Harvard University, is well known and respected as an economist throughout the country. I think it is fair to say that he generally is regarded as a conservative, rather than a liberal thinker, if those labels have retained any meaning at all.

Because of Professor Slichter's reputation and his position in the field of economics, I think it is noteworthy that he advocates, under certain circumstances, a permanent, or at least a very long-range Federal deficit as an intentional part of a fiscal policy designed to maintain prosperity and high employment. He says:

Many people believe that anyone who does not advocate that the budget be balanced over the period of the business cycle or that the debt be gradually reduced is indifferent to sound fiscal policy. This is far from true. It is just as important that the Government deficit be not too small as not too large.

I am not an economist myself, and so I cannot presume to pass expert judgment on this argument. But at a time when deficit financing is almost universally deplored, I think it is important to note that another side to this problem can be supported by an economist as highly regarded as Professor Slichter.

ECONOMIC PROBLEMS OF THE YEAR AHEAD
(By Sumner H. Slichter)

"As 1950 opens," said President Truman, in his economic report to Congress, "renewed confidence prevails in the American economy. This confidence is in itself an element of strength; and it is justified by the facts." Mr. Truman goes on to give the country the goal of reducing unemployment from 3,500,000 to 2,500,000, or possibly to 2,000,000, during the next 12 months. Since the normal yearly increase in the labor force is about 600,000, this would mean a total increase of 1,600,000 to 2,100,000 in the number of people at work—a fairly substantial expansion.

Although Mr. Truman has reason to be well satisfied with the present state of business, difficult problems are raised by the fact that the cash budget of the Federal Government for the present fiscal year shows a deficit of about $5,000,000,000. At a time of high employment such as the present, ordinarily the budget ought to be in balance or perhaps show a surplus. But increases in taxes might produce a contraction in business, and cuts in Government disbursements would reduce the incomes of many individuals and enterprises, which would also be depressing. And yet many persons fear that failure to cut or eliminate the deficit would lay the foundation for inflation.

What is the business outlook for 1950? Is the President unduly optimistic in suggesting that unemployment can be reduced to 2,500,000 or even 2,000,000 in the next 12 months? What should be done about the budget? Should taxes be increased? Should expenditures be cut? Should taxes be cut?

I. THE GENERAL OUTLOOK

In judging the outlook for 1950 one should distinguish between the first half and the second half of the year. The outlook for the first half is bright. In this period business will receive important stimulus from the large special insurance dividend paid to veterans. The outlook for the second half is quite uncertain. After the middle of the year a moderate decline in business is more than likely. The prospect that a decline can be averted is good, but far from certain. Underlying conditions are strong and give reason to believe that the economy will be responsive to efforts on the part of business concerns and Government to stimulate demand. The great question is whether business enterprises and Government will make the necessary efforts and whether action will come soon enough and be vigorous enough.

Even since the end of 1948, gross private investment (outlays on plant, equipment, housing, and inventories) has been slowly dropping. Only prompt and well-planned policies by business and Government will bring the slow drop in private investment to an early halt and will cause consumer expenditures to rise sufficiently to offset the gradual weakening stimulus from the insurance dividend to veterans.

II. THE FIRST HALF YEAR

What are the reasons for being optimistic about the first half of 1950? It is true that the drop in private investment which has been going on since the last quarter of 1948 will probably continue at least throughout the first half of 1950. Present estimates are that the outlays of nonagricultural business concerns on plant and equipment during the first quarter of 1950 will be about 14 percent below the corresponding quarter of 1949. A moderate further drop in business expenditures on plant and equipment during the second quarter of 1950 would not be surprising because more and more enterprises are catching up on investment needs which accumulated during the war.

Despite the prospect that gross private investment will be slowly decreasing, the level of business during the first half of 1950 will continue to be high and will possibly continue to rise. There are three principal reasons for this belief.

One is the prospective high demand for consumer goods for which the special life-insurance dividend of approximately $2,800,000,000 to veterans will be partly responsible.

A second is the large volume of construction contract awards and of new housing starts during the late months of 1949. Both contract awards and housing starts were substantially above the corresponding months of 1948. This assures an abnormally high level of construction during the early part of 1950.

Finally, the cash deficit of $5,000,000,000 in the budget for the fiscal year 1949–50 means that the Government is adding to people's incomes more than it is taking from them. All in all, a very satisfactory level of activity for the first half of the year is in prospect.

III. THE SECOND HALF YEAR

The outlook for the second half of 1950 is much less favorable. Even Mr. Truman does not appear to believe that he will achieve his goal of reducing unemployment during the next 12 months to two and one-half million or two million. In estimating the Government's revenues he assumes virtually no change in incomes, and that means, at fairly steady prices, little change in employment.

There are three principal conditions that make a decline in business likely in the second half of 1950. One of these is that the level of private investment is likely to be lower than it is at the present time, and may be continuing to drop. By the middle of 1950 outlays on private plant and equipment, and possibly housing as well, will probably have dropped to normal levels. There is a possibility, it is true, that private investment may not fall below normal because the backlog of deferred demand has not been entirely met. Furthermore, as I shall point out, prompt steps to stimulate private investment would probably bring about a rise by the middle of the year. Nevertheless, one is not justified in counting on such a rise until steps to stimulate investment appear imminent.

A second reason for expecting a decline in business during the second half of the year is that much of the effect of the large life-insurance dividend payments to veterans during the first part of 1950 will have worn off by then. Of course, the effect of the payment will not have entirely died out because a large part of the incomes generated by the payments will continue to be spent.

A third reason for expecting some decline is the prospect that expenditures by government will be less. The States and cities will probably be spending more in 1950 than in 1949, but it looks as if the Federal Government will be spending less. The expenditures of the Federal Government were boosted to an abnormal high in the fiscal year 1949–50 by the dividend payment to veterans of $2,800,000,000. There will also be a drop of about $1,000,000,000 of Marshall-plan aid. President Truman is asking for some cuts in expenditures, and there is powerful support in Congress for reductions. Increases in certain items asked by the President will not be granted. Consequently it is likely that the cash outlays of the Federal Government for the next fiscal year will be at least $4,000,000,000 less than in the present one. This would more than offset any rise in expenditures by State and local governments.

The tendency for a drop in investment expenditures to reduce the demand for goods will be mitigated to some extent by a drop in the rate of saving. Corporations have recently been doing about half of the saving of the community. As outlays on plant and equipment drop, corporations will pay out a larger proportion of profits to stockholders. The proportion of personal incomes saved also will drop. The large rise in personal savings during 1948 was caused in the main by large purchases of houses by individuals and of plant and equipment by owners of unincorporated enterprises. If these expenditures of individuals and unincorporated enterprises decrease, the proportion of incomes spent on consumer goods will rise.

Unfortunately, the shift into the buying of consumer goods cannot be counted upon to prevent a drop in total demand for goods. The reason is that, as corporations and individuals reduce their expenditures on plant, equipment, and housing, they will use a larger part of their incomes to repay their debts. Hence a drop in investment expenditures will mean some decrease in the total demand for goods.

IV. STEPS TO AVERT DECLINE

Can the prospective drop in business during the second half of 1950 be prevented? Fundamental conditions are favorable to a high level of business. For example, expenditures on consumers' goods are small in relation to personal holdings of cash and demand deposits. At the present time the annual rate of personal expenditures for consumer goods is only three and six-tenths times the average personal holdings of cash and demand deposits, as against five and nine-tenths times the average in 1939. Under such favorable conditions it ought to be possible to maintain a high level of sales. President Truman, in his economic message, indicated he might have some real interest in encouraging investment. Such a change in Government policy under present favorable conditions would have important effects.

The steps which might be taken to avert a business contraction during the second half of 1950 may be divided into three groups—those relating to private investment; those relating to consumer expenditures; and those relating to Government spending and tax policies.

1. Steps to encourage private investment: Since the amount of private investment depends immediately upon the decisions of business concerns, managements have the best opportunity to influence its volume. The opportunities of enterprises to spend a dollar in order to save or make a dollar are enormous. Some managements are more cautious than others, and managements as a whole are more cautious at some times than others. There is danger that caution will be overdone, and that an undue proportion of capital expenditures will be held in abeyance pending political and economic developments. An economy which is too cautious will not be very progressive. In particular, there is little prospect that the postponement of investment expenditures will enable business concerns to buy plant or equipment at substantially lower prices.

Several useful steps might be taken by the Government to encourage investment. One would be to permit losses to be carried forward against income for 5 years instead of 2 years, as at present. This change in the tax laws would be particularly helpful to new concerns, which frequently do business at a loss for a year or two. Such enterprises should have a good chance to earn enough to offset their initial losses before becoming subject to the full corporate income taxes.

The present corporate income tax makes corporations with incomes of less than $50,000 pay a 53-percent tax on all income between $25,000 and $50,000. The standard corporate income-tax rate is 38 percent. Thus the corporate income tax makes it harder for small corporations to grow to moderate size. Such a provision in the tax law is preposterous and should have been eliminated long ago.

Still another way in which the Government might stimulate investment is by permitting enterprises to charge off new equipment in a 5-year period rather than over the life of the equipment. This change would permit depreciation allowances to be adjusted to the state of economic visibility. In the long run the change would undoubtedly yield the Government an increase in revenue because it would stimulate business activity. More important, by encouraging earlier replacement of equipment which is not ready for scrapping it would raise the productivity of industry.

2. Steps to increase consumer expenditures: Persuading individuals to buy consumer goods is primarily the job of business concerns. If a good proportion of enterprises are aggressively attempting to increase their share of sales and willing to give better quality or lower prices in order to take business away from competitors, the total volume of sales will expand. Unfortunately, much business planning is done on the assumption that the concern can expect to get only its present share of the sales in the industry.

This kind of planning does not lead to general expansion of business. Expansion is produced by aggressive driving for a larger share of the sales and by willingness to give better quality or lower prices in order to take business away from competitors. During the sellers' markets that have existed most of the time since 1946, there was not much occasion for price cutting. At the present time the economy needs plenty of price cutters.

The worst offender in keeping up prices is the Government. The competition between Democrats and Republicans for the votes of the farmers has led to legislation which is causing the Government to spend $1,400,000,000 during the present fiscal year supporting the prices on farm products. (Incidentally, the British are spending almost an equal amount in subsidies to keep the price of food down.) Support prices for agricultural products made sense as a device to encourage agricultural output during and immediately following the war. Likewise, some support to agricultural prices is desirable during periods of more or less severe unemployment because prices of farm products are unusually sensitive to drops in demand.

The present, however, is a time of high employment. At such periods farm products should be permitted to sell for what the market will bring. At the same time that the Government is spending $1,400,000,000 on the support of agricultural prices, it is putting into effect acreage-restriction schemes. Such procedures belong in Alice in Wonderland.

Congress would be wise to modify the price-support program so that it would come into operation only after prices are well below "parity." This would save the Government over $1,000,000,000 which it would otherwise spend during the coming fiscal year on keeping up the prices of farm products. This saving might well be promptly passed on to the community as a whole by reductions in excise taxes, thus also stimulating the sale of various nonfarm products.

3. Adjustments in Government spending and tax policies: The fact that the cash budget shows a deficit of about $5,000,000,000 at a period of high employment leads many people to believe that an immediate effort should be made to balance the budget. If the budget cannot be balanced during a period of high employment, will it ever be balanced?

Some of the proposals to balance the budget would greatly increase the likelihood that business might contract during the latter half of 1950. Certainly tax advances now would greatly increase the danger of a decline in business because they would reduce the ability of individuals and business concerns to buy goods. Consequently, President Truman's proposal of even moderate tax increases is ill-timed. The demand for reductions in Government expenditures is widespread and has much merit. Such reductions would stimulate business to the extent that they created the hope of eventual cuts in taxes—provided that they were not made by reducing the productive services furnished by the Government. Cuts in disbursements by the Government, however, would have the immediate effect of reducing the incomes of individuals and enterprises and, to that extent, of inducing contraction in business. Consequently, the Government should not cut its disbursement without passing on most of the saving to individuals and enterprises in the form of reductions in taxes.

If cuts in expenditures are offset in large measure by reductions in taxes, how and when will the budget be balanced? As a matter of fact, the condition of the budget is not as bad as the figures suggest. A substantial part of the deficit of $5,000,000,000 is caused by the dividend disbursement of $2,800,000,000 to veterans—a nonrecurring expenditure. Furthermore, the Federal Government is spending about $1,300,000,000 during this fiscal year in purchasing guaranteed mortgages. These mortgages may properly be regarded as an investment.

The best way to reduce the deficit in the budget is to let the normal growth of the national output raise the revenue of the Government. Under present tax rates the normal growth of output and incomes will increase the revenue of the Government by over a billion dollars a year. If increases in expenditures are avoided, the normal growth of the economy will eliminate the deficit within several years.

V. A BALANCED BUDGET?

Is it clear that the Federal Government should aim at least to balance its budget over the period of the business cycle, or even to achieve a net surplus in the budget over the period of the business cycle, so that the national debt can gradually be reduced? Most people undoubtedly believe that the Government should avoid a long-run increase in the public debt and should gradually pay off the debt. And yet an attempt to balance the budget over the period of the business cycle, and even more to reduce the national debt, might prevent the supply of money (cash and bank deposits) from increasing rapidly enough to prevent a decline in prices and the development of chronic unemployment.

Little attention has thus far been paid to how rapidly the country needs to expand its supply of money and what is the best way for it to get the needed increase in money. Unless there is a rise in the rate at which money is spent (and the rate has been decreasing for many years), the country will need to increase its money supply during the next 30 years by about $120,000,000,000, or approximately 75 percent. This is merely the growth in money supply that will be needed to avert a drop in prices. Such a rise in the money supply would be the slowest in the history of the country. During the last 20 years the money supply of the United States trebled; in the 30 years between 1900 and 1929 it increased about sixfold.

How can the country increase its money supply by about $120,000,000,000 in the next 30 years? Part of the increase may be expected to come from the growth in short-term borrowing by business enterprises from commercial banks. It would be undesirable for the short-term borrowing of business to rise faster than the dollar volume of production because a high ratio of short-term business debts to output makes the economy unstable. If short-term business borrowing rises no faster than production, and if the price level is stable, an increase of about $30,000,000,000 in the money supply might be obtained during the next 30 years from short-term business borrowing.

Perhaps another $30,000,000,000 increase in the money supply might be obtained by purchases of mortgages and other long-term private, municipal, and State securities by commercial banks. Such an increase would mean a very rapid rise in the buying of such securities by commercial banks. Still another increase of $30,000,000,000 in money might be produced by imports of gold of about $1,000,000,000 a year. Gold imports will be large because the United States levies no duty on gold and is always willing to buy it in unlimited quantities at a fixed price. If gold imports are about a billion a year the stock of gold at Fort Knox would be somewhat more than doubled in 30 years.

There would remain about $30,000,000,000 of money supply to be obtained from some source. It might be provided through the banks' buying up part of the public debt, but concentration of the public debt in the hands of the banks is not desirable. Hence an increase in the public debt would probably be the best way to obtain the remaining $30,000,000,000 of new money. This would mean that during a 30-year period the budget would need to be in the red, on the average, about $1,000,000,000 a year.

If the debt of the Federal Government rose from $257,000,000,000, the present level, to about $287,000,000,000, while the net national product was rising from about $247,000,000,000 to over $400,000,000,000, the burden of the debt in relation to the net national product would substantially drop.

Many people believe that anyone who does not advocate that the budget be balanced over the period of the business cycle or that the debt be gradually reduced is indifferent to sound fiscal policy. This is far from true. It is just as important that the Government deficit be not too small as that it be not too large. Once a judgment has been reached as to the rate at which the money supply needs to increase and as to the extent to which the rise in the money supply should be made possible by growth in the public debt, it becomes important to insist that the average size of the deficit correspond to these judgments—that it be no larger and no smaller.

Allowance must be made for the possibility that the operation of collective bargaining will require a slow rise in the price level of the country. If unions push up wages faster than engineers and managers are able to raise output per man-hour, prices must rise in order to prevent the growth of chronic unemployment. In that case the increase in the money supply must be large enough to make possible the needed rise in prices. If the community does not like a rise in prices, it must insist that employers do a good enough job of bargaining to prevent wages from outrunning output per man-hour.

VI. THE NEED FOR WELL-PLANNED AND VIGOROUS POLICIES

What conclusion does one reach about the outlook for business in the second half of the year? The sound underlying condition of the economy indicates that efforts to stimulate demand have a good chance of being successful. It is uncertain, however, whether business and Government will act soon enough and vigorously enough. Only prompt and well-planned policies will halt the slow drop in private investment, will offset the gradual weakening stimulus from the insurance dividend to veterans and will prevent the prospective drop in Government expenditures from reducing the demand for goods.

Surpluses

REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, the gentlewoman from California [Mrs. DOUGLAS] said that we had a surplus of potatoes. She intimated that they were rotten, and that the Congress was to blame for that situation. I deny that the Republican Members of Congress are responsible for the potato, the egg, or the milk situation. Nor is the Congress to blame for the rotten Communists who are in this Government of ours.

If my recollection is correct, the potato and other similar legislation came down here with the blessing of the administration, and the Congress, with the Democrats in the majority, put that through. The House, on the other hand, did its utmost to get rid of the Communists, just as smelly as any potato that ever rotted, but the Congress was not successful. The Congress was opposed all along down the line from the time the committee to expose subversive activities was first created, from the time that Mr. Dies had charge of it and was finally driven out of Congress, right down to and since the President accused that House committee, or more accu-

rately the Republicans on it, of drawing a "red herring" across his political trail. The House opposed by the administration then in power from the day that committee was born until after Hiss was convicted.

If we have too many potatoes now, sound or rotten, and if we have too many Communists now, all rotten, the fault lies right on the doorstep of the present administration.

You Can't Compromise With Communism

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mr. MULTER. Mr. Speaker, the article entitled "You Can't Compromise With Communism," written by Hon. Charles Solomon, appeared in the January 1950 issue of the American Federationist. I am happy to commend this article to the attention of my colleagues. I have known Judge Solomon for many years, during all of which time he has been an ardent foe of totalitarianism in all its forms and in all its disguises.

The article follows:

YOU CAN'T COMPROMISE WITH COMMUNISM

(By Charles Solomon)

Between communism and the democratic way of life there is a basic and irreconcilable divergence. Contrary to Winston Churchill's characterization of Communist Russia as "a riddle wrapped in an enigma," the literature of communism is unequivocally clear as to its objectives and methods.

The spokesmen for communism have taken pains to leave no possible doubt as to their purpose and the means by which they propose to achieve it. One is reminded of Hitler's full disclosure of his aims in Mein Kampf, which was generally available and as generally either unread or not taken seriously.

We can be thankful for the fact that circumstances have finally compelled our own national leaders to take to these sources for this indispensable information in dealing with Communists. The result has been a somewhat belated disillusionment and awakening, which explains our stiffened attitude and such policies as the Truman doctrine, the Marshall plan, and the North Atlantic Defense Pact.

Certain basic facts must be faced if we are to understand why our relations with Communist Russia are as they are; why, in fact, it is impossible to have with Russia the kind of relations we enjoy with other countries, such as Britain, France, Italy, Canada, and Australia. These facts are so foreign to the democratic orientation they are at first difficult to grasp. Furthermore, they have implications the significance of which is not always readily apparent, especially to the uninitiated.

To begin with, communism represents a fundamental and unbridgeable break with the ethics, morality, and way of life of the democratic world. What we regard as decent, honorable, fair—these and similar concepts are contemptuously rejected by communism as so many bourgeois prejudices and bourgeois superstitions by which Communists in pursuit of their revolutionary objections will not permit themselves to be encumbered or deterred.

This primary Communist postulate controls regardless of where the particular Communist finds himself—in a labor organization, a cultural group, a religious group, a fraternal organization or in public office or employment.

Lenin gave positive expression to this article of Communist faith in the following language:

"It is necessary * * * to use any ruse, cunning, unlawful method, evasion, concealment of truth" in the pursuit of Communist ends.

On another occasion Lenin enunciated the Communist doctrine of the ends justifying the means in these words addressed to a young Communist group:

"In our own opinion, morality is entirely subordinate to the class war. Everything is moral which is necessary for the annihilation of the old exploiting social order. * * * We do not believe in external principles of morality. * * * Communist morality is identical with strengthening the dictatorship of the proletariat."

We can trace this revolutionary morality back to the anarchism of Bakunin who many years ago, in the Catechism of a Revolutionist, wrote:

"Everything which promotes the success of the revolution is moral; everything which hinders it is immoral."

The principle followed by the Communists is that if lying, deceit, duplicity, and misrepresentation will promote the achievement of Communist objectives, they are thereby sanctioned. If the democratic world chooses to believe in fair, decent, and honorable dealing, so much the worse for it. That is the Communist code.

I have referred to the significance of the implications of this position. No kind of agreement can be permitted to stand in the way of what the occasion may require from the Communist point of view. Signatures are affixed to otherwise solemn documents with the reservations herein recited. And this goes for high and solemn compacts between Communist Russia and other non-Communist states.

Words frequently cease to have what we regard as their commonly accepted meaning when used by Communists. This is outstandingly so when we talk of democracy. When we use this word we mean, among other things, freedom of speech, press, and assembly; the right to petition for a redress of grievances; the right of habeas corpus; the existence of multiple political parties, free labor, and other free organizations. Yet Soviet Russia, where none of the foregoing exists, is denominated by Communists as the only true—the new—democracy.

Notwithstanding statements made for public consumption by Communist spokesmen in high positions, including Stalin himself, to the effect that the Communist and democratic systems can live together in the same world, the accepted literature of communism reveals a completely contrary belief.

Communism is committed to total war on our way of life, in which they can find not a single saving grace and which they hold must be exterminated, root and branch, by any means effective under the circumstances. Here we have an intriguing resemblance to fascism, between which and communism ideologically there are deep and striking similarities. In fact, communism, which preceded fascism, can be said to have been its schoolmaster. Stalin, who has on several occasions publicly stated—speaking as the head of the Russian state—that Communist Russia and we can live alongside each other in peaceful competition, has in his capacity as Bolshevik theoretician taken his position squarely on Lenin's pronouncement:

"It is inconceivable that the Soviet republic shall continue to exist for a long period of time side by side with the imperialist states. Ultimately one or the other must conquer. Meanwhile, a number of terrible clashes between the Soviet republic and the bourgeois states are inevitable."

Here we have the ideological background of the bitter and concentrated attack on the United States, strongest of the bourgeois states and bulwark of the democratic way of life. We are to the Communist world the principal barrier to what it regards as the certain, ultimate triumph of bolshevism. Only in the light of this teaching does the vicious attack on the Truman doctrine, the Marshall plan, and the Atlantic Pact become intelligible.

Unless our Nation understands the unvarying ideological motivations of the leaders of communism, from Stalin down, we shall flounder in a morass of confusion and futility. It shall ever be a case of too little and too late.

Communist Parties the world over are essentially identical. This goes for the Communist Party of the United States. Note I do not say the American Communist Party because there can be no American Communist Party. The concepts of Americanism and communism are completely antithetical.

For the true Communist there is one exclusive loyalty—to Soviet Russia—which is regarded as "the workers' fatherland" which can do no wrong.

Communism is more than a political philosophy. It is for many millions tantamount to a religion, evoking fanatical and unquestioning dedication. If this spells betrayal of country, friends, those whom we would regard as loved ones, fellow trade unionists, this would only apear as "revolutionary virtue" in the eyes of a true Communist.

In a now almost unavailable Communist publication entitled "The Communist Party, a Manual on Organization," by J. Peters, it is stated:

"The conditions for membership in our party are contained in the following pledge read by Comrade Browder to 2,000 workers who were initiated into the party in the New York district in 1935."

The heart of this pledge is contained in the following excerpt therefrom:

"I pledge myself to rally the masses to defend the Soviet Union, the land of victorious socialism. I pledge myself to remain at all times a vigilant and firm defender of the Leninist line of the party, the only line that insures the triumph of Soviet power in the United States."

Not a single word in the entire pledge indicating loyalty to the United States and its democratic institutions and way of life. Communist leaders throughout the world, including William Z. Foster, in our own country, have made it clear that in the event of war between their own countries and Soviet Russia they would refuse to defend the former against the latter.

That our own Communists fall completely into this category is revealed with blunt forthrightness by Foster in his book entitled "Toward a Soviet America." The title should be sufficient to indicate the thesis of the author. If you would know what a Soviet America would be like, if you are not already apprised, you need only contemplate Soviet Russia, with its brutal dictatorship, with its totalitarianism, which extends into every walk of human life—literature, art, science, poetry, architecture, the theater, philosophy. All must rigidly toe the ideological mark.

Communist parties cannot be compared to political parties as we know them in the western democratic sense. There is a basic divergence in the purpose of political organization and activity. This is strikingly revealed by Stalin himself. In his Foundations of Leninism he has written as follows:

"The revolutionary will accept a reform in order to use it as an aid in combining legal with illegal work; to intensify under its cover the illegal work for the revolutionary preparation of the masses for the overthrow of the bourgeoisie."

This "overthrow of the bourgeoisie" can only be accomplished through civil war and by resort to violence. We have Lenin's own authoritative statement in this respect.

"The replacement of the bourgeoisie by the proletarian state is impossible without a violent revolution," wrote Lenin in State and Revolution. The proletarian state is only another way of saying dictatorship of the proletariat and the latter is defined by Stalin himself in Foundations of Leninism as "the rule * * * unrestricted by law and based on force * * * of the proletariat."

William Z. Foster has set forth what a Communist dictatorship would mean in our own country.

"Under the dictatorship," he says in his book, "all the capitalist parties—Republican, Democratic, Progressive, Socialist, etc.—will be liquidated, the Communist Party functioning alone as the party of the toiling masses. Likewise will be dissolved all other organizations that are political props of the bourgeois rule, including chambers of commerce, employers' associations, Rotary clubs, American Legion, YMCA, and such fraternal orders as the Masons, Odd Fellows, Elks, Knights of Columbus, etc." And, adds Foster, all this "will mark the birth of real democracy in the United States."

Winston Churchill, in a message a year ago to the Alfred E. Smith Memorial Foundation dinner, said:

"We are a socialist government—you may have heard of that." He did not say, although he could have done so, "There is a socialist government in Britain," or "They have a Socialist Government in Britain." Churchill employed "we" and thereby hangs a tale. Churchill was saying, in effect, that there had been a democratic parliamentary election in his country; that the Labor Party and the Conservatives had been the chief antagonists in that campaign; that each had had a full and democratic opportunity to present its side to the people; that under these circumstances the people had gone to the polls and overwhelmingly chosen Labor.

Therefore we have a Socialist Government in Britain.

This is the democratic concept. Such a concept is utterly foreign to communism. This kind of give-and-take, this kind of compromise rests on the mutual acceptance of certain common basic postulates. These are the basic postulates of our democratic way of life. Such give-and-take, such compromise has no place in the Communist lexicon. To Communists "we" in the sense that Churchill employed the term, does not exist. No government is that of the Communist unless it is a Communist Government and that government is his, commanding his subservient loyalty, regardless of where it happens to be. For Communists, every other government, no matter how arrived at, exists only to be overthrown.

What does all this mean? One of the things it certainly does mean is that there can be no agreement in our sense of the word between Communist Russia and ourselves; no genuine compromise or give and take. To compromise sincerely and genuinely with the bourgeois world is, in the minds of Communists, to betray the revolution.

If we will only look these facts squarely in the face, the rest is comparatively simple.

We must make and keep strong increasingly all the agencies and institutions of democracy.

We must be strong economically, politically, morally.

We must confront the Communist world with superior power, the one thing the Bolshevik understands and respects.

We must do all this and more. We must do social justice by eliminating economic, social, and political injustice.

Here the trade union movement is contributing valiantly. The democratic way of life has no firmer pillar.

Rivers and Valleys

EXTENSION OF REMARKS
OF

HON. WILL M. WHITTINGTON
OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks, I include the following address which I delivered at the Thirty-first Annual Convention of the Mississippi Valley Association, St. Louis, Mo., on Monday, February 6, 1950, to wit:

RIVERS AND VALLEYS

There are two statues at the entrance to the National Archives Building in the city of Washington. On the pedestal to the right is the figure of an old man in a thoughtful mood, and beneath the statue is the arresting phrase: "Study the past." On the left is the statue of an attractive woman with an open book in her hands. There is an appropriate inscription below the figure: "What Is Past is Prologue." The study of the past of countries and nations is useful as we plan in the present for the future.

PURPOSE

The study of the neglect of soils and waste of waters in the civilizations of the past is most helpful as we plan to improve our natural resources. Water gives life and must be conserved. Where it is scarce it must not be wasted. Where it floods it must be curbed. The purpose in all plans is most important. The Spaniards came to the New World in search of gold. They sought and they won gold, but they lost their empire. The Pilgrim Fathers came to Plymouth Rock in search of freedom. They won their freedom, and their descendants won their independence.

Civilizations must promote the welfare of all the people. The dynasties of Egypt, the golden age of Greece and Rome, the Renaissance in Europe were great eras; art, science, literature, and philosophy flourished, but the civilization promoted wealth and fame for the fortunate few. It was founded on slavery.

The basic concept of free enterprise is the dignity of the individual. Today modern machines and inventions have given to every man, woman, and child in this country the equivalent of the power and services of 50 slaves.

The rise and fall of civilizations through the centuries have been largely determined by the conservation and the utilization of the bounties of nature. The misuse of land is a warning that the resources of nature are not inexhaustible, and that once lost, it is difficult to replace. The pioneers of America may have had both land and water to misuse and waste, but their descendants are not so fortunate. The natural resources of the United States enhanced by science and invention are the foundation of the unparalleled production in World War II that made our country the most powerful in history.

The United States is determined in the programs for reforestation, soil conservation, flood control, and river and harbor improvements, to profit by the experiences of other countries. An inescapable conclusion from the study of the past is that the problems of soil erosion and overpopulation go hand in hand.

There is today a connection between the peasant revolt in Italy and soil erosion, for the lands of Sicily are constantly eroded as overpopulation obtains. The Carthaginians used elephants when they invaded Sicily. The people of Sicily used a scorched-earth policy against the elephants of Hannibal. They burned the forests. For 2,000 years forests have been burned. The problem of erosion is tremendous. There is overpopulation in Sicily today.

STREAMS AND LAKES

Nothing in nature is more interesting to me than streams and lakes. They appeal to poets. They are the inspiration of artists. They are useful to the historian. They are the delight of sportsmen. They invite lovers. They are attractive to the writers of fiction as well as verse. They appeal to the engineer as he dreams of building and ministering unto man.

Above the streams and lakes are the sources of both; there are the brooks, there are the forests that have aptly been termed the cradles of rivers. Walking by the side of the still waters of lakes appeals to me, and nothing is more delightful than to roam through the green pastures of valleys. As I linger along streams, my thoughts as I have dreamed for years always turn to the improvement of rivers and to the protection of valleys. Nothing intrigues me more than "the journey of the raindrop to the sea."

WONDERS

The Pyramids, Karnak, Persepolis, and other wonders of the ancient world, are not to be compared to the bridges, dams, skyscrapers, highways, and great cities of our country. The flood control works and the river and harbor improvements of the United States surpass those of this or any other age and of any other country. No nation has ever made more or comparable progress in production and construction than the United States.

As we go forward at present and plan for the future, we recall the lines from Longfellow:

"Build on and make the castle high and fair,
Rising and reaching upward to the skies."

SPIRIT

We must carry on in the spirit of the founders and the defenders of the Republic and in the spirit of those who fought in World War II on all continents, in all skies, and in all oceans to preserve freedom. That spirit is embodied in the following lines:

"From dream to deed, and from that deed again,
To further dream, and deed more mighty yet."

FOUNDATION

The Corps of Engineers was organized by George Washington, and it has functioned in river and harbor improvements authorized by Congress since 1824. Flood-control improvements beginning with the organization of the Mississippi River Commission 70 years ago and culminating in the declaration in the Flood Control Acts of 1928 and 1936 that flood control is a national problem rests upon the solid rock of a sound national policy. The foundation is that in all improvements the benefits must exceed the costs.

RIVERS AND HARBORS

There have been authorized some 1,300 river and harbor projects in the United States and Territories. They provide 28,000 miles of improved waterways, 490 locks and dams, and 270 harbors. One billion six hundred sixteen million one hundred forty-five thousand six hundred and ninety dollars have been appropriated. The vast inland waterway, coastal, and Great Lakes networks are without a peer. An all-time record high total of 791,541,717 tons of water-borne traffic was reached in 1948, which is more than double the tonnage of 15 years ago. There are many more harbors to be constructed and waterways to be improved.

FLOOD CONTROL

Some 1,000 projects for flood control have been authorized; $2,434,092,400 have been appropriated. At the close of the 1948 fis-

cal year 56 dam and reservoir projects and 170 local protection projects had been completed at a total cost of $483,000,000. The engineers estimate that the amount of damages already prevented is in excess of $500,000,000. The project for the lower Mississippi River and tributaries, including projects in the valley authorized as a part of the project is substantially 60 percent complete. Already the project is preventing damages that aggregate $5,000,000,000, or about eight times its cost to date.

The improvements of the rivers include dams for the generation of power and for navigation. They save the lives and property of river basins and increase the supply of power for industry, for homes, and for production to keep America invincible. The accomplishments of flood control under the sound program that constitutes its basis are outstanding. The people of all river basins are anxious to have the construction extended from the basins where the improvements have been made to the basins where they live. There are 160 separate river basins, and there are valleys of more numerous small streams. Most of these valleys are subject to flooding of various degrees of destructiveness. The works planned will prevent 75 percent of this flood damage. The policy is realistic. The program contemplates that it is not practical to prevent all damage. To be authorized the benefits, I repeat to emphasize, must exceed the costs. Flood control pays for itself. All improvements are capable of being expanded. The works are among the more valuable assets of the Nation.

RECLAMATION

Another national policy was adopted in 1902. Reclamation was authorized. The progress has been notable. The desert is being made to blossom as the rose. Waters are being conserved. Lands are being preserved. The program is sound.

APPROPRIATIONS AND ESTIMATES

The appropriations for flood control, rivers and harbors, and reclamation for the current fiscal year, while the largest ever made, were not finally approved until late in the first session of the present Congress. The civil-functions bill for the current year was approved October 13, 1949, although the fiscal year began on July 1, 1949. Valuable time was lost. Good weather was not utilized. Such weather is essential for river improvements. The budget estimates for the next fiscal year provide for $354,119,100 for reclamation, including $321,000,000 for construction. The budget estimates for national flood control for the next fiscal year are $478,477,000, which is an increase over the estimate of the current year of approximately $110,000,000. The estimate for rivers and harbors is $240,714,000 against the estimate for the present year of $197,985,790. The budget estimate for the Mississippi River and tributaries is $72,000,000, whereas the estimate for the current year was $70,000,000. I repeat that while the full amount of the estimates for the current year was not appropriated, the largest amount ever appropriated was made available by the Congress. It was most unfortunate that many months elapsed at the beginning of the fiscal year before the appropriation was finally made. This delay should not occur during the present year. The program will be promoted by funds being made available at the beginning of the fiscal year.

DEPARTURE

Formerly appropriations for rivers and harbors were contained in the appropriations for military affairs. Some years ago separate bills were considered. The bill for flood control and rivers and harbors is now called the civil-functions appropriation. For the first time the Committee on Appropriations in the House of Representatives during the present session has determined to submit one over-all appropriation bill for all of the departments of the Government. Hearings will be conducted by the subcommittees, but it is planned to report one bill. It is an experiment. A one-package bill should be of benefit with respect to balancing the budget. Departments can be more familiar with appropriations for other departments. I trust the policy will be successful. Such a policy obtains in the English Parliament. It is an experiment in the United States. I am apprehensive of delay. This association is always on guard. I am sure that it will spare no effort to urge that the appropriations be promptly made.

PENDING BILL

There is a second matter that is vital and of importance to the country. The House Committee on Public Works, after comprehensive hearings, reported probably the most constructive flood-control and river-and-harbor bill ever submitted to Congress. It provides for increased authorizations in river basins. It provides for new projects in both flood control and rivers and harbors. All projects were carefully screened. The bill was unanimously reported by the committee. Meantime, appropriations for all purposes increased. They were at an all-time high. The committee was diligent in applying for a rule. The leadership was cooperative. However, a rule for the passage of the bill was not granted. Finally, under the amendment adopted to the rules of the House at the beginning of the Eighty-first Congress, the bill was brought up for consideration on August 22, 1949, and after much opposition and over many difficulties, the bill was finally passed by the House by the overwhelming vote of 202 to 1. It was a great victory, but this association and other advocates of river and harbor improvements cannot rest upon their laurels. The bill is pending in the Senate. It was there for 2 months before the session adjourned. It has not been taken up on the floor as yet. The Senate has always been cooperative. I trust that the bill will be promptly passed and approved by the President. It is a prior objective with this association, and I am sure that the leadership of the association will continue to cooperate for its prompt passage.

MISSISSIPPI VALLEY

The Mississippi River is one of the world's greatest rivers. None holds more interest. None wields more influence upon the country through which it flows than does the Mississippi. No river has so vast a drainage basin. Its supply is drawn from the vicinity of the Delaware on the Atlantic seaboard and to the State of Idaho in the Rockies and near the Pacific. Mark Twain said that the basin of the Mississippi is the body of the Nation. All other parts are but members, important in themselves, yet more important in their relationship to the body. The basin contains 1,200,000 square miles. One-half of the people of the United States live in the basin. One-third of the total population of the country resides within a 50-mile radius of the Mississippi River and its tributaries. This basin is the bread basket and the storehouse of the Nation.

As has been well said, "As a dwelling place for civilized man, it is by far the first upon the globe." It is the second great valley of the world. It is exceeded only by that of the Amazon. "Ol' Man River" starts to rolling at the Twin Cities, and it flows as it just keeps rolling along to the Gulf, where it discharges 3 times as much water as the St. Lawrence, 25 times as much water as the Rhine, and 338 times as much water as the Thames. With the Missouri, it is the longest. In some places the Mississippi is the most crooked river in the world. In one section the distance as the crow flies is 675 miles, but as the river flows it is 1,300 miles.

The flood-control project of the Mississippi River and tributaries is the most gigantic ever adopted by any nation. The lower or alluvial valley consists of 30,000 square miles. The improvement of that river and the protection of that valley was never more important than it is today. As the valley grows so will the Nation grow. Progress is rolling through the basin today as new industries are being established in the valley. The opportunity with soil, oil, and rivers is unparalleled. The eyes of the Nation are turned toward the Mississippi Basin today as never before in the history of the Republic. Progress rolls just as "Ol' Man River" rolls in the Mississippi Valley.

COOPERATION

A great flood is passing down the Mississippi River today. It reached a maximum height at Cairo. In the beginning of the TVA, essentially a power project, and in former maximum floods, there was general complaint of lack of cooperation, as was in the case of the flood in 1937. The country knows that the TVA will not prevent floods along the lower Mississippi River, but the country also knows that, especially with the recent Kentucky Dam and with the two dams under the supervision of the Corps of Engineers along the Cumberland, flood heights at Cairo can be reduced. It is estimated conservatively that reduction in the present flood crest at Cairo was 2½ feet. There was cooperation. Government agencies, like individuals, as they grow older become more sensible. I commend to the Corps of Engineers and to the Bureau of Reclamation the very sensible example of cooperation that has obtained during the flood that is now in progress on the Mississippi River as the kind of cooperation that the country expects in the Missouri, Columbia, and California adopted projects.

WARNING

There is a campaign for Government reorganization. Such reorganization is greatly needed. To be sound it should eliminate waste and extravagance. It should prevent duplication. The program is generally sound. Personally, I have sponsored it in the past. I support it at present. Often, however, reformers, without supporting reason, advocate under the guise of reorganization the crippling, if not the destruction, of existing agencies that have proved their worth, of agencies that have been tested, and of agencies whose construction has been approved and whose plans are sound.

For years theorists or selfish individuals have advocated stripping the Corps of Engineers of their civil functions and have urged that their civil functions be removed from the Department of the Army. We should make no mistake. The enemies of the Corps of Engineers are still active. Their supporters should be on guard. Many fallacies are urged. Coordination is emphasized.

I have answered that contention by showing the coordination between the Corps of Engineers and the TVA in the flood of 1950. Again it is fallaciously urged that there would be better coordination in reclamation and flood control. The answer is that a new agency to supplant a successful and an established agency may result in disorganization and inefficiency. There should be coordination, and such coordination obtains today in the Missouri Valley where there is both reclamation and flood control. It will obtain in the Columbia River Valley. The remedy is to promote coordination and not to provide for the experiment of a new construction agency to supplant the Corps of Engineers whose experience in peace is most valuable for war. It is unthinkable that the Corps of Engineers should be deprived of their civil functions when their achievements are without parallel. We say to the advocates of reorganization that the public welfare in the

future as in the past will be promoted by continuing the civil functions of the Corps of Engineers under the jurisdiction of the Department of the Army, and by continuing to authorize the construction of flood control and river and harbor improvements by the Corps of Engineers of the United States Army.

CORPS OF ENGINEERS

No agency of the Government has ever wrought better than the Corps of Engineers. George Washington appreciated their worth. A great administrator, he provided for the construction of non-military works by them 175 years ago. They are the servants of the Congress, the elected representatives of the people. They are selected and appointed to West Point by Senators and Representatives. The corps is selected from the high men of the class. They take postgraduate courses after graduating at West Point. No engineers are better trained. They are prepared to meet the challenges of peace as well as war, of emergency, and of disaster. They respond when there is an explosion such as occurred at Texas City. They are on the job when cities, states, and regions are snowbound. They respond to rehabilitation from hurricanes and storms along the Gulf and the ocean where disaster strikes, and where emergency calls. They serve the American people in rain, and in sunshine, in prosperity, and in adversity. They should be encouraged. I believe in flowers for the living as well as flowers for the dead. The civil functions of the Corps of Engineers must be preserved and strengthened.

The services of the Corps of Engineers are essential to the protection of our valleys and the improvement of our rivers. The dams prevent erosion below them as they prevent floods. They also prevent silt below as they prevent floods. They promote reforestation as they store the waters above the dams. The flood dams raise the low-water flow, and they lower the high-water flow. While the Corps of Engineers needs no eulogy or defense at my hands, when I think of their achievements, and their opponents, the lines of Wordsworth come to me:

"Him, only him, the shield of Jove defends,
Whose means are fair and spotless as his ends."

BUREAU OF RECLAMATION

I would like to say that there is no more occasion for depriving the Bureau of Reclamation of its functions than there is in destroying the Corps of Engineers. It is an established agency. It is doing an outstanding job. It should be strengthened and encouraged. It would be most unwise to supplant the achievements of this organization for almost 50 years by an untried agency.

COLUMBIA RIVER BASIN

There is pending in Congress today a coordinated plan for the Columbia River Basin with the projects named and with careful studies covering the economic and engineering problems involved. That coordinated report with division of authority between the Corps of Engineers and the Bureau of Reclamation should be adopted. It should not be supplanted by the creation of an administration that would duplicate in the very beginning the years of studies and investigations made by the Corps of Engineers and the Bureau of Reclamation. The two existing agencies would be destroyed. Their works would be duplicated at the expense of the taxpayers under the guise of coordination, but in reality for lump-sum appropriations and for supplanting the way of life in the region.

DISCRIMINATIONS IN LAWS

I am not saying that our flood-control and reclamation laws are perfect. I emphasize that they are on a sound foundation. Much of the criticism that now obtains, however, can be eliminated by the Congress of the United States. I like to be constructive. I want to help my friends. I always want to be fair to my enemies. I want to help the agencies of the Government that control our rivers and reclaim our lands. The remedy is not the creation of administrations, but the forward step is legislation eliminating differences in laws by the Congress of the United States. I believe that such legislation will do much to defeat the authorization of expensive and spending administrations.

I assert that in evaluating benefits the same rate of interest should obtain; the same charge for the disposal of power and the same system of costs and benefits with allowance for the essential differences that may be involved should obtain in both reclamation and flood control. The discriminations in existing laws between flood control authorizations and reclamation authorizations should be abolished. The two agencies have grown older, and with age they have grown more sensible. Dissension will be eliminated, expansion will be promoted, and new agencies will be defeated by the passage of a statute that would prevent and eliminate the fundamental differences in the laws that now obtain between reclamation and flood control authorizations.

WATER, RAIN, AND DISTILLATION

The attention of the country is being focused on waters today. The mismanagement of waters gives rise to fears that we are running out of water. The fact is that we have ample water. The demand with increasing populations and increasing needs, however, is increasing. Formerly there was ample water in the East. The lack of water for domestic purposes in New York City has appeared constantly in the headlines in recent months. When I visit the Great Salt Lake in Utah and the Salton Sea in California, and when I am on the Atlantic and on the Pacific, and whether near New York or Los Angeles, I am reminded that the water problem is most important, and it brings to mind the lines of Samuel Coleridge in the "Rime of the Ancient Mariner," written 150 years ago:

"Water, water everywhere, nor any drop to drink."

Experts tell us that the supply of water is ample and that if we conserve the supply there will be ample water. Research will be of aid. Here again science will play an important part. Today artificial rain is being studied by private and public agencies. They have not yet perfected plans to obtain water, but there is hope that the clouds as they are sprinkled with dry ice may provide rain. If the process is developed, it can be applied to arid regions where the need is greatest and to other regions where water is sometimes more precious than gold.

The methods of salt-water distillation used for stranded airplanes especially during World War II is being further explored. If scientists can produce the hydrogen bomb, they can surely eliminate the salt from the waters of the gulf and ocean. It is particularly important at the mouths of the rivers. Salt water distillation will result in the supplying of water that will make the deserts of the west more productive than most of the fertile valleys in other parts of the country.

ENGINEERING AND RESEARCH

Engineering and research have made possible the spanning of our rivers, the reclamation of our deserts, the construction of transcontinental highways, the building of transcontinental railways, the harnessing of mighty waterfalls, and the bringing of pure water through mountains, under gorges, and across lands to supply the teeming millions of cities. With the advance in engineering discoveries, science, and invention, there is the opportunity for free America to extend and maintain the highest standards of living ever attained by man.

GREAT OPPORTUNITY

Following war, and even in the uncertain days of peace, and with hope of a permanent peace, with unparalleled natural resources promoted by invention and science, the United States has the greatest opportunity in human history to provide for the well-being of man. In the Republic all are equal. There are no classes. The door of opportunity is open to all. If we keep faith with the lads who went out in World War II never to come back, and if we put first things first, there will be a new era of progress in the United States. There is opportunity for peace and for progress in the United States that has never been afforded to any people of any other country. Our plans must be sound. Our Government must be stable, and our faith must be abiding in man, country, and God.

DANGERS

After the stress of war, there is always danger. The tendency is to be soft. The temptation is complacency. We think more and more of our rights. We overlook our responsibilities. We think more of security than sacrifice. We confuse the meaning of public welfare. We must take advantage of our opportunity for progress, but unless America is strong, the opportunity may be lost. The Government must be stable. Public expenditures must not exceed public revenues. A paternal state must be avoided. Emphasis must be more on the responsibilities than on the rights of citizens. There are always dangers, and there are many dangers to the freedom of democracy in the United States today. I mention a few. There is confusion of the meaning of welfare. The private welfare and public welfare must not be confused. Those who advocate the so-called welfare state point out that Jefferson's program to purchase Louisiana was opposed by the conservatives of his day. There is a difference between the public welfare as promoted by the extension of our national domain and the private welfare of those who expect the Government to do for them what they should do for themselves. An unbalanced budget is a danger. The government that cannot live within its income in prosperity is in great danger of being destroyed in the event of either war or widespread inflation. It is time to think clearly and to speak frankly. Measures for the general public health are in order, but socialized medicine is a national danger. Home-owning is to be encouraged, but socialized Federal housing will result in the socialistic if not the communistic state advocated by those who first proposed public housing. Socialized farming will result in the regimentation and control of the farms and food of the Nation.

The plan of subsidizing agriculture has been tried, and it has failed. No course can more fully lead down the path to state socialism than the socialized programs that lead to a soft citizenship that deprives the country of the initiative and the independence of patriots. I cannot help but believe that the appropriations for the Army, Navy, and Air Force, while adequate defense is imperative, can be reduced, and I believe that we can reduce the appropriations that we have been making for the past 2 years for the recovery and the rehabilitation of the countries of Europe. A sound America, and a strong America is the best assistance that can be rendered to the oppressed peoples of the earth today.

ATOM BOMB

The strength of America does not consist in the atom bomb nor in any other source of power, but the strength of America consists in the faith and spirit of the people of America. The splitting and utilization of the atom should be applied for the benefit

UNIVERSITY OF MICHIGAN LIBRARIES

and not for the destruction of man. I am a lot more afraid of other bombs than the atom bomb. For the want of a better name, I am apprehensive of the spending bomb that is likely to explode in unbridled inflation and national bankruptcy to the destruction of the American economy unless checked and checked now.

We must be prepared for war, for there is still both chance and change in the world, but there is no occasion for fear of the destruction of the world in the event of another war. I do not underestimate the effect of the atom bomb, but it takes something more than the bomb to make the bomb effective in war. Only the rich nations can produce the atom bomb, and only the rich nations can transport it to the enemy country when it is produced. I repeat, I do not underestimate the importance of the atom or the hydrogen bomb, but it is well to keep in mind that Japan was really begging for peace with the destruction of her air force and her navy when Nagasaki and Hiroshima were bombed.

It would be most unfortunate if America were dependent upon the atom bomb or any other weapon. We would relax and become soft. We would not be vigilant. America will only lose its liberty when it abandons it. I do not underestimate the force of the atom bomb, but I believe that the scientists who split the atom will provide for a defense against the atom bomb. Our weakness is in the selfishness of minority groups, in high taxes, and in unsound spending rather than in providing for permanent measures in the public benefit. When we encourage paternalism, when we encourage the Treasury raids of the minorities, we are destroying the freedom of the individual. It is time today in America to stop, look, and listen. If we do not watch our steps, it may be most difficult to retrace them. The strength of America is in the faith and courage of the people.

BULWARKS

I spoke of the prologue as I began. I come now to my epilogue. "It is time to steady the national ship of state." It is not an accident that the United States is the leading democracy of the world today. Those who founded our Nation were sturdy souls. They suffered persecution. They sought to exchange the oppression of the Old World for the freedom of the New. They endured sacrifices. They paid the price for freedom. We must be willing to pay the price for continued freedom. We must be realistic. We must convert our dreams into realities. We must take advantage of our opportunity as a nation. We must be "guided by the stars and not by the lights of each passing ship."

MAN MAKING AND NATION BUILDING

I am anxious for the security of America. I know that security can only come with the strength of America. I am ambitious that America may grow and prosper. I would like for our generation to be constructive. The individual, like the government, that does not grow will die. Democracy is not only a growing but a dynamic faith. Over the gate of a city in the interior of ancient China is found an inscription which, when translated, reads, "It is later than you think." What was true centuries ago is true in the world today. Only in the United States today is there peace. Only in North America today is there security. Time is running out. It is later than we think. It is time for all citizens to take their places in the front lines of citizenship as we plan and build for the future.

A lad in the invasion in World War II wrote to his father as the American forces were landing on the Normandy beaches: "I am not in the grandstand nor on the sidelines, but in the front line of the invading forces." There was no place for the summer or sunshine patriot in that invasion. It tried men's souls. There is a place today in the front lines of citizenship for the patriotic American as humanity advances toward a better day.

No man or nation was ever great whose primary concern was security. The men who engaged in great adventures and the nations that took the risks have made the greatest contribution to the world. George Washington was a wealthy man. He did not seek a soft or an easy place. He was not satisfied with mere personal security. If he had lost, he would probably have died a traitor's death and forfeited all of his property. He took the risk. He is among the immortals.

Jesus of Nazareth did not seek mere security for Himself. He said that the man who loses his life in service shall save it. He dared to bring to the world a new appreciation of values and a new way of thinking. He gave His life for humanity. He dignified and loved man. Citizens must have faith in themselves and in their country. They must prefer sacrifice to security. The old-fashioned virtues of honesty, industry, thrift, and self-reliance are essential to a better man and a greater nation.

I close with these lines of Edward Markham:

"We are all blind until we see
That in the human plan
Nothing is worth the making if
It does not make the man.

"Why build these cities glorious
If man unbuilded goes?
In vain we build the world unless
The builder also grows."

Franklin Delano Roosevelt: A Tribute

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. KLEIN. Mr. Speaker, I have been glad and proud to identify myself as a Roosevelt Democrat for so long that I can scarcely remember any other badge of political devotion that I have worn.

My admiration for and devotion to the late Franklin Delano Roosevelt has been made a matter of record in many ways. I was not slow to recognize him as one of the greatest of all Americans, and one of the greatest men of all time, worthy to walk with the great leaders of history, a man who shaped his own destiny and the destiny of the world about him.

However, the hatred he evoked from a powerful and vocal minority in America is equally green in my memory; I can still see in my mind's eye some of the scurrilous and slanderous cartoons, lampoons, editorials, and articles published in derogation of that great man by lesser men.

You can understand, therefore, with what pleasure I read a full-page editorial in the Wichita (Kans.) Beacon eulogizing the late great wartime President. Under leave, I am inserting the text of the editorial in the RECORD. Since the rules do not permit its reproduction in its original format, I want to make special mention of the fact that the page is set up in very large type so that truly "he who runs may read".

This, Mr. Speaker, is recognition indeed, from the rock-ribbed Republican plains of Kansas, of a great man; and the display given by the Wichita Beacon is a gracious gesture from a newspaper which seldom agreed with his domestic policies in his lifetime.

It gave me pleasure to read this tribute and it gives me pleasure to place it in the RECORD.

FRANKLIN DELANO ROOSEVELT—"MAN OF THE HALF CENTURY"

Franklin Delano Roosevelt, the thirty-second President of the United States, who served 14 years as this Nation's Chief Executive after having previously played a major role in American history, is the choice of a vast majority of the world's peoples as "man of the half century."

Certainly no other man ever did so much for so many in a lifetime of public service. The tradition-shattering presidential career of Mr. Roosevelt spanned turbulent years of peace in which he worked to lift the Nation out of its deepest depression and tumultuous years of war when he played a dominant role in charting an Allied victory.

Mr. Roosevelt, without whose able leadership the Second World War, greatest confict known to man, might have been lost, had attained a substantial international stature in the years when he was concerned primarily with applying revolutionary remedies to an economic blight rooted in World War I.

And after the flames of a second global conflict were kindled, he became the pivotal statesman of more than 30 united nations which pooled their might to smash a German-Italian-Japanese Axis.

Kings and queens, presidents and prime ministers traveled to the White House to consult him. International conferences on a scale never before seen in history resulted from Mr. Roosevelt's tremendous driving energy during the trying years immediately preceding and during the great conflict.

The military strategy of nations representing 75 percent of the earth's surface and 60 percent of its population—a strategy that sent American fighting men, American war weapons, American food, and American dollars to combat the Axis—was mapped at conferences in which he took the leading role.

A big man physically as well as mentally, Mr. Roosevelt shouldered burdens heavier than any ever before carried by a chief executive of any nation. When he went into the Presidency at the age of 51, the United States had an estimated 12,000,000 persons unemployed, prices were depressed to new low levels, foreign trade shrunken, and the national banking system on the brink of collapse as the result of widespread bank failures.

War was far from the thoughts of most Americans when Mr. Roosevelt declared in his inaugural address of March 4, 1933, that the only thing America had to fear was fear itself. Those words did much to relieve the minds of the masses who were faced with starvation. The drastic economic changes he offered to Congress were accepted and a new feeling of security was born. Faith and dignity returned to the common man. Security was just beginning to be felt by the American people when the rise of totalitarianism swept some parts of the world.

Mr. Roosevelt saw the threat as something more significant than a mere change of government in western European nations. He warned the world that dictators were threatening the very existence of democracy. He piloted this Nation through its greatest preparedness program. He told the rest of the world that America was ready to fight to preserve the rights of free men everywhere. It was up to the American people to do the rest. Pearl Harbor cemented American opinion behind the President and his stewardship led us successfully through the greatest war in world history.

Thirty days after Pearl Harbor, Congress gasped when he proposed a 2-year production of 185,000 planes, 120,000 tanks, 55,000 antiaircraft guns, and 18,000,000 tons of shipping. He told the world that the militarists of Berlin and Tokyo started this war, adding that the massed, angered forces of common humanity will finish it. Production goals, mammoth though they were, were met and surpassed and the Allies achieved a crushing superiority of arms over their foes. Four years after the United States entered the war, it had 11,000,000 men under arms, with more than 7,000,000 overseas fighting in all parts of the world.

By every standard by which global renown is measured Franklin Delano Roosevelt is head and shoulders above any other man on the world scene during the first 50 years of the twentieth century. In every standard of measurement—as a leader, as a statesman, as a man, as a power in world politics—he tops all others during the 50-year period.

Mr. Roosevelt was more widely loved and respected, the world around, than any other person in the past half century.

Yalta Agreement

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. LODGE. Mr. Speaker, 5 years ago on February 7, 1945, at Yalta, a secret agreement was made which doomed the gallant Poles to Communist slavery and which condemned the anti-Communist Chinese to the reign of oppression to which they are now subjected.

I am inserting in the CONGRESSIONAL RECORD a challenging statement by Charles Rozmarek, president of the Polish-American Congress, regarding the sad and unbecoming actions which occurred at Yalta. Many of the difficulties with which we are now faced in the international field stem from this original sin. Much of the threat to American national security for which we are now desperately seeking an escape are the result of the ignominious betrayals of Poland and China at Yalta. No one can foretell when or by what means Poland and China will be liberated from their subjugation by these godless despots. But this we know: That aside from the fact that our own national interest was heavily involved and was badly served on this occasion, we have a great moral commitment to the freedom-loving peoples in both these nations.

It is time that we returned to the policy of open covenants openly arrived at. It is time indeed that we launched a great moral crusade. There can be no better beginning than by recognizing our moral commitments to the people of Poland and to the people of China. Let us not allow the high moral tone which we should assume at this time to be in any way diminished by the shameful and cynical expediencies to which we resorted at Yalta.

The statement follows:

DEAR EDITOR: The abandonment of Nationalist China by Britain and the United States, brings to mind the forsaking of another loyal and valiant ally, Poland. The fate of both these allies was sealed at the same time and at one and the same place, at Yalta, 5 years ago, on February 7, 1945.

Today, no penetrating analysis or any deep study is needed to properly evaluate what Yalta was or is. A mere glance at the map of Europe and Asia is all that is needed to see the results of the shameful bartering of loyal nations that took place in that obscure Crimean town.

Yalta, was that single moment at the tragic crossroads of history that decided the life and death of millions of people, the fate of many nations and the outcome of the Second World War. There it was where we lost the peace while winning the war.

As long as the apparition of Yalta is upon us, so long will our hopes for peace remain but idle dreams. We must break away from Yalta so that history's course can again find its proper channel.

The Yalta decisions were not only politically pernicious but what is more, they bore the seeds of future conflict. The evil seeds sown at Yalta are now bearing evil fruit.

It was always the opinion of the six million Americans of Polish descent united in the Polish American Congress that the Yalta agreements would bring nothing but trouble. We knew that the course of American foreign policy which led to Yalta was not charted with the knowledge or consent of the American people and their Representatives in the United States Congress.

The Yalta agreement was never ratified by the United States Senate and is, therefore, null and void.

Speaking of Poland, which lost the most at Yalta, half her territory and what was left made into a puppet of Communist Russia—freedom and democracy can be restored to her people only if and when America repudiates all Yalta decisions regarding that country.

CHARLES ROZMAREK,
President, Polish American Congress, Inc.
CHICAGO, ILL.

"Pie in the Sky" Tariff Slashes—Third Round Coming Up

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. JENSEN. Mr. Speaker, the phoney "pie in the sky" philosophies of the administration and the Democratic Party should now be crystal clear to the midwestern farmer. While his alleged friend, the Secretary of Agriculture, attempts to talk up a farm depression and further depress farm prices, the administration's policy is to preach fear—fear of surpluses. The same spokesmen who stated that they favored a broader price-support program with higher price-support levels are, in practice, curtailing the price-support program and threatening more and more control. The Secretary of Agriculture, who is so concerned about the farmer's income, gleefully slashes production and reduces the farmer's income through acreage allotments and marketing controls.

Fact is that the Secretary of Agriculture is not attempting to move our food surpluses. Fact is that he apparently is trying to build them up. The free-trade tariff-slashing policy is hitting right at home, at our own farmers, and directly forcing further curtailed production and lower price-support levels. The Secretary of Agriculture has the power and the authority to stop the flooding of our markets with foreign food products that we have in surplus supply or under price-support programs. The fact is he is not. There is a case on record in the Department of Agriculture that dates back to the fall of 1948. The nut growers protested the reduced tariffs and heavy imports of foreign nuts into the American market. They have petitioned and protested, but Secretary Brannan has failed even as yet to take any action.

In progress is the third round of tariff slashes since the end of the war. The lists are being prepared and the final meetings are scheduled to get under way next September. This, in spite of the recent report by the Department of Agriculture that many countries are beginning to be faced with surplus and marketing problems for their own agricultural products. During the period July-November 1949, we imported approximately $45,000,000 in value of food commodities that we had in surplus supply—Commodity Credit Corporation loans and inventories. Certainly our losses on these same commodities would have been reduced by this amount. But the flood of imports is but starting. Our exports meantime are being curtailed.

From July to November we imported 795,000 bushels of wheat—Government stocks on November 30 were over 375,000,000 bushels.

From July to November, we imported 288,000 bushels of corn—Government stocks on November 30 were over 400,000,000 bushels.

From July to November, we imported 18,500,000 bushels of barley—Government stocks were on November 30 over 58,000,000 bushels.

From July to November, we imported over 12,000,000 bushels of oats—Government stocks on November 30 were over 40,000,000 bushels.

From July to November, we imported 45,480 bags of dried beans—Government stocks on November 30 were over 9,000,000 bags.

From July to November, we imported the equivalent of 90,000,000 shell eggs in shell, frozen, and dried form—imported most of them from Red China, where the industry is being expanded and shipments increased. Farm wives were getting 20 cents a dozen for their eggs, which were then dried and added to the over 70,000,000 pounds now owned by the Government. From July to November, while hog prices skidded badly throughout the Midwest, we imported over 1,500,000 pounds of pork and pork products.

How long can this give-away last? When is the Secretary of Agriculture going to act to protect our farm markets?

Should the American People Finance the Puerto Rican Rum Campaign?

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. BRYSON. Mr. Speaker, public funds are now being used to advertise and promote the sale of liquor and whether they know it or not, the American people today are lending their direct support to the subsidization of a $1,500,000-a-year Government campaign of advertising and publicizing of Puerto Rican rum.

This campaign has now reached such proportions that its promoters are seeking to entice our teen-agers to sample this Puerto Rican product.

The clever way in which this propaganda is being packaged prevents the average citizen from realizing what is involved.

Here is how it works. The government of Puerto Rico, whose officials have publicly announced that that government is a partner in the rum business, have realized annual revenues ranging from $5,000,000 to $60,000,000 per year from Puerto Rican rum sold in the United States. Out of these funds last year the Puerto Rican government appropriated $1,500,000 for an advertising and publicity campaign directed at American consumers of that Puerto Rican product. In other words, the Puerto Rican government is taking $1,500,000 out of its treasury to spend on this campaign. It is just the same as the Congress of the United States appropriating from United States Treasury funds several million dollars a year to propagandize Kentucky whisky or any of the other alcoholic beverages manufactured in this country.

Now, how is this Puerto Rican campaign being designed to entice our young boys and girls to sample that island's demon rum? Well, one of the first endeavors of the propagandists working on this campaign was to get someone to dream up what they at least hoped would become a popular song hit in the United States. And they called it Rum and Soda. They had recordings made of the song and sent it, together with samples of Puerto Rican rum, to practically every disc jockey in the United States, obviously hoping that the samples would put the disc jockeys in such shape that they would push the tune over the air right into your home and mine. Naturally—and the Puerto Rican rum campaign propagandists know this as well as you and I—it is the teen-agers who follow these novel tunes on the air, so there can be no doubt that these rum salesmen were setting their sights on our children as the best target for their rum sales.

It would appear that this government-sponsored and supported Puerto Rican rum campaign is a new low in a business that has already done enough to bring suffering, misery, and wrecked homes and lives to the people of the United States.

Puerto Rico is a part of the United States. Its citizens are citizens of the United States.

The Federal taxes collected on tobacco grown in South Carolina goes to the United States Treasury. So do Federal taxes collected on products made in other States. Why then should Federal taxes collected on rum be returned to Puerto Rico just because it happened to be made there? It is clear they have abused the use of this money. Therefore, I propose that the law be amended to require that this money go to the United States Treasury.

A typical example of the brazen efforts of the Puerto Rican rum interests to promote the sale of Puerto Rico rum in the United States is the following advertisement of the Puerto Rico Industrial Development Co. of San Juan, P. R.:

HERE'S SWEET MUSIC FOR YOUR CASH REGISTER

Newly released by MGM records, Rum and Soda is a sparkling song hit. It's written and played by Noro Morales, the rhumba king. It's dedicated to the Governor of Puerto Rico. And it's being promoted by a great campaign.

All of that promotion for Rum and Soda promotes your business. National advertising—bar and record shop streamers—cooperative displays by Canada Dry at retail club-soda outlets—newspaper publicity—it all adds up to a hard-hitting campaign that shouts rum and soda to millions of people, including your customers.

So the smart thing to do is to get on the bandwagon. Help promote Rum and Soda—not just the song but the drink. Suggest it to customers. Put your Puerto Rican rums where they can be seen—at eye level on a center shelf, and a few bottles right out there on the counter.

As the old Puerto Rican proverb says: Sweeter than the guitar is the rustle and jingle of cash. Or, in other words, sell, brother, sell.

This is another concrete illustration why favorable action should be taken by Congress on the Langer and Bryson bills prohibiting all liquor advertising in Interstate and Foreign Commerce.

Role of Farm Co-ops

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include the following article from the Wisconsin Rapids Tribune of February 2, 1950:

ROLE OF FARM CO-OPS DISCUSSED AT JOINT MEETING OF CLUBMEN, FARMERS

"Farm cooperatives have operated in the United States for over 100 years—they want to be recognized for what they are, a small but vital force in American life."

That was the opinion expressed by C. L. Jackson, assistant secretary of the Wisconson Council of Agriculture, speaking Wednesday evening at a joint meeting of the Wisconsin Rapids Kiwanis Club and Wood County Farm Supply Cooperative held at the Congregational Church in Vesper.

Jackson, who substituted on the program for Milo Swanton, council secretary, originally scheduled to speak at the meeting, charged that while farmers have always done an excellent job of production, they have fallen down in their public relations with other groups.

"There has been too much pitting of one group against another. The policies of farmers affect those of businessmen and labor, and we must get together to learn what the other fellow is doing," he urged.

Concerning farm problems, Jackson said that the average American must look beyond the daily newspapers and radio programs for sufficient information to form sound opinions. He declared that the general public too often takes a portrait of a single farmer, as presented in a national magazine, as representative of the general situation.

Three problems were listed by the speaker as the most urgent now facing Wisconsin farmers: (1) The decline in prices paid for farm products, (2) the oleo producers' attempts to escape restrictions in marketing their commodity in competition with butter, and (3) the attack on the cooperative movement by various groups.

Jackson stated that farm income in Wisconsin has decreased 30 percent in the last year without "a comparable drop in the cost of operations. Instead, freight charges have increased 52 percent, and costs of labor and equipment have remained at high levels," he said.

He added that consumer services, including such things as distribution and delivery of farm products, are one of the biggest items in the cost of food, remarking that the price of a 16-cent loaf of bread would decrease only to 14.7 cents if the farmer donated the wheat for it. Jackson listed comparable figures for several other commodities, and urged that the probable solution to the problem was for the farmers to organize selling cooperatives in the same manner in which they have organized supply cooperatives.

As for the oleo battle, the speaker asserted that 29 huge corporations have fought the battle for repeal of Federal taxes, and that success on their part would be the beginning of the marketing of filled milk products of all sorts. He added that repeal of the tax will allow movement of yellow oleo in 32 States, pointing out that 75 percent of the butter produced in Wisconsin is marketed outside of the State in just such areas.

Turning to the problem of the cooperatives, Jackson said that the farmer has two alternatives: To ask the Federal Government to completely underwrite agriculture, or to build their own organizations. He expressed the opinion that the latter solution is the much more effective one, but hastened to add that he did not therefore envision a "co-op commonwealth."

Jackson explained that farm co-ops are taxed in the same manner as private business owned individually or in partnership, and denied that they are monopolistic. Of all the businesses in the United States, 86.4 percent are owned either by individuals or in partnership, 13 percent are corporations, and only 5 percent are cooperatives, Jackson said. He further stated that cooperative growth has not been relative to the growth of farm business in the past 10 years, and ridiculed the charge that cooperatives are communistic, pointing out that they depend upon the same set of values as other business organizations.

A. P. Bean, president of the Wood County Farm Supply Co-op, which was host to the Kiwanians at a 6:30 dinner, briefly outlined the history of the organization. He said that the first step was taken on July 28, 1907, when a cranberry co-op was formed that was in existence for about 10 years. The present organization came into being later when three Farm Bureau groups at Arpin, Pittsville, and Vesper were merged with a total capital of $150,000, he said.

Max Leopold, of Arpin, manager of the farm organization, and Martin Hoeneveld,

president of the village of Vesper, also extended welcomes to the visiting Kiwanians. Jackson was introduced by W. W. Clark, of Vesper, Wood County assemblyman.

Prior to the dinner, a tour of the cooperative building at Vesper was taken.

Any Extension of the Selective Service Act Should Prohibit Discrimination and Segregation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. MULTER. Mr. Speaker, following is a statement which I submitted to the Armed Services Committee today. I commend it to the attention of my colleagues:

Mr. Chairman and members of the committee, a little more than a year ago I introduced a bill in the House, H. R. 1403, which was referred to this committee. Specifically I sought to amend the National Defense Act by adding a paragraph which provided that Federal aid is to be withheld from National Guard organizations which practice discrimination or segregation on account of race, color, or creed.

The exact wording of that paragraph was as follows:

"Whenever any unit of the National Guard practices discrimination or segregation on account of race, color, or creed with respect to members of, or applicants for membership in, such unit, the National Guard of the State, Territory, or the District of Columbia, as the case may be, of which such unit is a part shall be debarred from receiving from the United States any pecuniary or other aid, benefit, or privilege authorized or provided by this act or any other law."

Now, you have under consideration a bill to extend the Selective Service Act, which is due to expire in June of this year. In the event your committee decides to recommend to Congress a further extension of this act I hope and trust that it will at the same time make an earnest effort to correct some of the abuses still rampant in our armed services whereby some of our citizens are reduced to the status of second-class citizenship.

I am referring specifically to the treatment of Negroes in our armed services. How can we truly and honestly expect the Negro to fight for democracy, when he himself is a victim of racial prejudice and is not given the opportunity to enjoy the benefits of democracy? How can we ever expect the Negro to enter our armed forces and not grow increasingly resentful and distrustful, when he discovers that he is faced with the same limitations and Jim Crow treatment he had to endure in civilian life?

It is, therefore, imperative that your committee should amend the Selective Service Act along the following lines:

(a) Prohibit discrimination and segregation in the entire selective-service program. Persons subjected to such treatment should have the right of injunctive relief and writs of habeas corpus in Federal courts.

(b) Discrimination and segregation should be prohibited in interstate travel on busses, trains, planes, and boats for all military people; where practiced or enforced, such act should be a Federal offense.

(c) Any attacks upon or lynching of a person in military uniform shall be a Federal offense and severely punished.

(d) Prohibit discrimination against members of the armed forces by public authorities or in places of public accommodation, recreation, or other public service.

(e) Private contractors or commercial firms, as a condition of getting Government contracts under the Selective Service Act should be required to use fair-employment practices in their hiring of labor.

(f) Segregation in the National Guard must be forbidden, and no one should be exempted from selective service by virtue of service in a segregated National Guard unit.

Mr. Chairman, I want to emphasize particularly the last section where I refer to the National Guard organizations. By incorporating my suggestions concerning the National Guard, you will include some of the purposes I had in mind when I introduced my bill last year. My original suggestion to withhold Federal aid from National Guard units which practice discrimination still stands, and I am as much in favor of it today as I was a year ago.

I hope the committee will give serious consideration to the amendments suggested above and will incorporate these in any Selective Service Act you may recommend.

In conclusion, permit me to extend my sincere thanks to your committee for the opportunity to present this statement to you.

Development of California's Electric Power Potential

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mrs. DOUGLAS. Mr. Speaker, nothing is more vital to the continued growth of California than a full development of its electric power potential. The people of California know this and are fighting for such a development for both present and future needs. Under leave to extend my remarks in the RECORD, I bring your attention to two editorials on this subject from leading newspapers in the State. The first of these is "Governor Warren's Answer Is Vital" from the San Francisco News, and the second is "CVP Steam Plant Should Be Started This Year" from the Sacramento Bee.

The editorials follow:

[From the San Francisco News]

GOVERNOR WARREN'S ANSWER IS VITAL

The question of public versus private development of hydroelectric power on the North Fork of the Kings River will have to be answered by Governor Earl Warren (through his representative, Public Works Director Charles Purcell) by the middle of next week. His decision might settle the controversy between the United States Bureau of Reclamation and the Pacific Gas & Electric Co. over rights to build power plants on the river.

Last fall the Bureau recommended a program of development that would exclude the Pacific Gas & Electric Co. from the river entirely. Under provisions of the 1944 Flood Control Act the recommendation was referred to the United States Army engineers and Governor Warren. The act provides that they must approve or disapprove the recommendation within 90 days. That would be by January 25. If they approve, the project becomes automatically allocated to the Bureau. If both ignore it, their action is construed by the law as tacit approval. If they disapprove, the matter goes to Congress for special legislation.

Several weeks ago the P. G. & E. won approval of the Federal Power Commission for a project to enlarge its present power developments on the river. A rehearing on that decision has been granted for March 20 to enable the Reclamation Bureau to present its further claims. However, it is the contention of bureau lawyers that approval by the governor and the Army engineers would settle the matter finally regardless of the FPC decision.

The outcome is important in connection with a Central Valley project plan to bring water to the dry west side of the San Joaquin Valley, now rapidly becoming California's dust bowl. That plan involves building a reservoir on San Luis Creek into which water would be pumped from the Delta-Mendota Canal in period of heavy winter run-off and stored for irrigation use in the rainless summer months. Some 250,000 acres would be brought under irrigation thereby.

To pump water from the canal to the reservoir would require an abundance of cheap power. That's where the Kings River power project comes in. It would be the source for the west side project pumps. Private power would be too expensive.

The question thus posed to Governor Warren and the Army engineers, therefore, is whether to encourage with their approval this plan to put water into the western dust bowl, or to reject the plan and thus subject it to the uncertainties of the Congress.

Anticipating that eventuality, Congressman CECIL WHITE, of California, has introduced a bill authorizing the Reclamation Bureau to acquire the P. G. & E. power works and rights on the river, and to build additional power facilities, as well as to operate the power features of the Pine Flat Dam the Army engineers have been authorized to build.

It is likely Governor Warren would be asked to express his approval or disapproval of that legislation when and if it reaches the voting stage in Washington. Inasmuch as the proposed development is entirely within the State of California, the Governor's attitude is important and should be influential in Congress' final decision.

What does Governor Warren say?

[From the Sacramento Bee]

CVP STEAM PLANT SHOULD BE STARTED THIS YEAR

Secretary of the Interior Oscar L. Chapman is urging Congress to approve funds to begin construction during the next fiscal year of the Central Valley's project steam plant. President Truman's budget recommendations include $2,000,000 for this purpose.

The case for the steam plant and for the immediate start of construction is a strong one.

The Federal Government definitely is committed to the policy of public transmission lines from Shasta Dam. It would be folly of the first water to haul the kilowatts to the central California market areas and then virtually abandon them to the privately owned power utilities.

Shasta power can be of benefit to the public only if it is firmed up by the adjunct of a steam plant.

Secretary Chapman told the House Appropriations Committee this week that Government power is necessary to pump the Sacramento River water into the San Joaquin Valley irrigation canals, and to supply Government installations and other users in central California.

The need for haste in getting the steam plant built is underscored by the fact the irrigation operation is scheduled to begin in the summer of 1951.

UNIVERSITY OF MICHIGAN LIBRARIES

There should be congressional agreement with Secretary Chapman's statement that "it is most important the steam plant be placed under construction at once."

The private power lobby, of course, will be on hand in force to try to kill the CVP steam-plant appropriation.

This lobby fought for years to block the construction of transmission lines, in order to make it necessary for the Government to sell the power at the generating plants to a private utility.

But, having lost the transmission-line battle, the lobby now will concentrate on blocking the steam plant in an attempt to keep the transmission lines from being of practical benefit to the people.

In many respects this is a crucial contest, and Congress should deal with the power lobby in the steam-plant controversy as it did in the transmission-line fight—only it should not take so long.

How Federal Funds Are Wasted on the Apple Program

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, the following letters show the complicated, costly trade program:

UNITED STATES TARIFF COMMISSION,
Washington, D. C., December 23, 1949.
Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: I have your letter of December 16, 1949, requesting information concerning the quantity and value of United States apple imports and exports during the fiscal year ending June 30, 1949.

United States imports of apples for the fiscal year ending June 30, 1949, amounted to 1,900,000 bushels, valued at $5,800,000; exports during the same period amounted to 1,300,000 bushels, valued at $5,500,000.

To furnish you with basic information on the trade in apples we are enclosing a copy of a reprint from our Summaries of Tariff Information with statistics brought down to date.

If we can be of further service, please do not hesitate to call upon us.

Sincerely yours,
OSCAR B. RYDER,
Chairman.

JANUARY 9, 1950.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your letter of December 16, 1949, asking the number of bushels of apples purchased for the school-lunch program this year, and their value.

Through December 17, 1949, the Department had purchased a total of 1,673,931 bushels of apples from the 1949 crop. These apples are purchased under authority of section 32, Public Law No. 321, Seventy-fourth Congress, as amended, and are delivered to agencies authorized to receive such commodity for distribution to nonprofit school-lunch agencies, and to other agencies and institutions eligible to receive them. The estimated total delivered cost of these purchases is $4,373,820. Approximately 85 percent of the total purchases are used by the school-lunch agencies.

The total quantity to be purchased will depend largely upon market conditions for apples. For this reason we have not yet established an absolute quantity to be purchased.

Sincerely yours,
K. T. HUTCHINSON,
Acting Secretary.

Mr. Speaker, the above official letters show, first, that we imported 1,900,000 bushels of apples valued at $5,800,000 and exported 1,300,000 bushels valued at $5,500,000; second, that we used section 32 funds to dispose of surplus apples that represented 1,673,931 bushels valued at $4,373,820 for the school-lunch program.

The facts are that more apples were imported than were given away and $4,373,820 of the taxpayers' money was spent on the program. This is just a sample of the other programs being followed wherein we imported over $1,532,000,000 worth of competitive agricultural products at the same time other millions are spent to subsidize exports of other agricultural products. Is this not another argument in favor of an international agricultural agreement similar to the international wheat agreement, as proposed by Mr. Albert Goss, of the National Grange, and the FAO?

Yalta: Crime Will Out

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. SADLAK. Mr. Speaker, 5 years have passed but the passage of time has not diminished the lingering stench of the foulest, the stealthiest, and the most shameless diplomatic maneuver of all time.

The Yalta agreement dangles over our heads like the sword of Damocles and history will forever point to our glaring repudiation of moral standards. The United States will not be able to forget that disgraceful retreat when a friend, a faithful ally, was left in the lurch. The world will continue to remind that we were partners in crime with Churchill and Stalin in a tragic betrayal of Poland. At Yalta the United States agreed to the fixing of the Curzon line as the western border of the Soviet Union, thereby incorporating a sizable area of prewar Polish territory. What hypocrisy. The Atlantic Charter specified that there would be no territorial changes that could not accord with the freely expressed wishes of the people concerned. But, apparently in our great haste to appease Stalin these considerations were left by the wayside, for little imagination is needed to realize that earlier in this game of betrayal the State Department with its horde of pro-Soviet advisors prepared the terms of the Yalta Agreement and upon arrival in Yalta when notes were compared there was scarcely anything to pick up for disagreement between the Western Powers and the Russians. Alger Hiss had masterminded and engineered the terms to the satisfaction of the Soviets.

The administration in power at the time of the Yalta agreement and currently holding the reins of Government and messing up not only our foreign policy but everything in general should be held to account for the reckless trampling of the principles of humanity and liberty. The blame for the dismemberment of Poland comes to rest squarely upon the shoulders of the Democratic Party, for the Yalta agreement is undoubtedly the most monstrous and grievous diplomatic faux pas of our time.

When it is remembered that Poland was deliberately forgotten and abandoned and 40 percent of her territory turned over to Russia it is amazing that the blush of guilt does not continually cover the faces of the members of the Democratic Party. We demanded unconditional surrender from our enemies and then with one stroke at Yalta President Roosevelt surrendered ignominiously and unconditionally to Stalin, thereby setting in motion the gigantic totalitarian expansion in eastern Europe and the present debacle in the Near East.

In the light of what we have learned to date there certainly was no need for the meeting at Yalta. We were winning the war—supplying the needs of a worldwide struggle and yet we were appeasing Stalin. We were giving early indication of fearing Russia. Our dealings with her indicate a continuing parade of concessions. The State Department and the administration just simply neglected to remember that the honor of the United States as a protector of free peoples is an important factor in our relations with other countries and should be upheld at any cost. But what is worse is the fact that the American people and the Congress were left completely in the dark as to the deals at Yalta which shoved Poland, our valiant ally, behind the iron curtain, and set off a chain of similar tragedies in eastern Europe.

The administration is responsible for Alger Hiss and his ilk that clutter the State Department with their Soviet-slanted advice and assist in formulating the cock-eyed foreign policy which has been causing the United States such discomfort and loss of prestige throughout the world that the possibility of graceful extrication from this dilemma appears remote for some time to come.

We have all been given ample proof that the pledges made at Yalta were utterly disregarded by Stalin.

The decisions of Yalta no longer bind us. We have every right to repudiate that ill-conceived venture that is steering us into another conflagration. Nothing is to be lost by throwing away something that was worthless to begin with.

After 5 years of keeping the Yalta document under wraps is it not high time to bring out into the light of day, for all to see, the details of that infamous cabal.

Since the Yalta agreement is presumably long overdue in the Senate of the United States there should be no further delay and it should now be sent to the Senate for consideration.

Our stand at this point in our history should be expressed by a firm and convincing action aimed at restoring to

Poland and other nations swallowed up by the Communists, the freedom that has virtually disappeared from their midst.

There has been no ratification of the Yalta Agreement by the Senate of the United States and there is no earthly reason why we should continue to honor a piece of paper that has no meaning except to further the Soviet expansion in Europe and the world. We have gone far enough along that road. It is time to call a halt.

More on the Jews in Russia

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. MULTER. Mr. Speaker, only yesterday I brought to the attention of this House the very interesting study of the situation of the Jews in Russia, which was made by Dr. Sergius Yakobson of the Library of Congress. I hope many of the Members found the opportunity to read this study which I placed in the RECORD.

Entirely by coincidence, the Executive Council of the American Federation of Labor, at its meeting in Miami, Fla., issued a statement urging quick ratification of the genocide convention and in it the charge is made that Russia is trying to wipe out the Jews behind the iron curtain. The A. F. of L. council says: "The new drive to make impossible the continued existence of Jews in Russia and in its satellite areas is going on under the flag of a savage war against so-called cosmopolitanism."

At the same time, we still hear the ridiculous charges made by anti-Semitic elements of a Zionist-Communist global plot" and the illogical reasoning that every Jew is a Zionist and every Zionist is a Communist. It should be clear by this time to anyone who is honest with himself and with his fellowmen that, in the light of Russia's attitude to the Jewish religion and its treatment of its Jewish nationals, there is no future and no hope for Jewish survival in Communist Russia.

Mr. Speaker, I am placing in the RECORD two items which deal with this subject. One is from the Washington Star, February 5, 1950, entitled "AFL Charges Russia Is Trying To Wipe Out Jews as Hitler Did"; the other is from the New York World-Telegram and Sun, February 3, 1950, "Red-Hater Don Levine Swings at Right, Hits Hart as Anti-Semite" by Frederick Wiltman. They are as follows:

[From the Washington Evening Star of February 5, 1950]

AFL CHARGES RUSSIA IS TRYING TO WIPE OUT JEWS AS HITLER DID

MIAMI BEACH, FLA., February 4.—Leaders of the American Federation of Labor charged today that Stalin is trying to wipe out Jews behind the iron curtain.

The AFL's executive council said Russia is imitating Hitler by making life miserable for Jews as a class in a way that means virtually sentencing these human beings to death.

These charges were included in a council statement urging the Senate to ratify quickly the pending international treaty against genocide. This is the term that has been given to the international destruction of racial, national, or religious groups.

BASED ON CULTURAL GROUNDS

The AFL council said what Stalin is doing to the Jews is a tragic extension and frightening innovation in this crime of mass murder.

The American Federation of Labor keeps a force of trained observers in Europe operating closely with underground movements in Russia-dominated territory.

The council's statement said:

"Behind the iron curtain—and particularly in Soviet Russia—governmental authorities have developed a fiendish plan based on cultural grounds and have launched a terrific campaign to wipe out entire groups of their population.

"The new drive to make impossible the continued existence of Jews in Russia and in its satellite areas is going on under the flag of a savage war against so-called cosmopolitanism.

"Their crime is that they have, or might develop, a culture different from the ultranationalist and imperialistic brand supported by the ruling party, by the totalitarianism dictatorship in Russia.

"VICIOUS CAMPAIGN

"A vicious campaign is afoot to chase out all Jews from employment in occupations entailing contact with the mass of people in the U. S. S. R. or with the people of other countries.

"All citizens of Jewish origin have been eliminated from the Soviet occupation administrations in Austria and Germany. Jews are no longer permitted to be members of Soviet delegations and foreign missions or to undergo training for diplomatic service.

"The door to employment in the Soviet Ministry of Foreign Trade has been slammed hard in the face of Russia's Jews—on cultural grounds. The same process of elimination of Jews continues ruthlessly in the ranks of the ruling Communist Party and its government apparatus."

What is happening in Russia, the council said, means that prompt international action to check the spread and stop the perpetration of this heinous crime is most urgent.

The council said the genocide treaty would mean international sanctions could be applied against this treatment of the Jews and against the destruction of life through slave labor.

[From the New York World-Telegram and Sun of February 3, 1950]

RED-HATER DON LEVINE SWINGS AT RIGHT, HITS HART AS ANTI-SEMITE—SAYS NATIONAL ECONOMIC COUNCIL BREWS ZIONIST-COMMUNIST MYTH

(By Frederick Woltman)

Plain Talk, the monthly magazine which specializes in exposing the Communists, today delivered a blast in another direction.

The leading article of its February issue, signed by Isaac Don Levine, editor, attacked Merwin K. Hart, founder and president of the National Economic Council, Inc., Empire State Building.

It charged that the head of the council, which lists prominent industrialists and businessmen among its backers, is in the business of merchandising anti-Semitism.

QUOTES HART ON ZIONISTS

"And," continued the article, "he wraps his contraband in packages bearing the labels of free enterprise, anticommunism and Christian love."

His Economic Council Letter of December 15, according to Plain Talk, "leaps to the startling conclusion that 'the controlling influence in the world is not the United States, nor the UN, which the United States did so much to set up, but the Zionists'."

This was part of a 2-year design by Mr. Hart to create the myth of a Zionist-Communist global plot to destroy the Christian religion, wrote the editor. It ignores, he added, the fact that Communist Russia was the first modern power to outlaw Zionism as far back as 1920 and that thousands of Zionists have been sent to Soviet slave-labor camps, many of them to perish.

CITES EXHORTATION TO ARM

That every Jew is a Zionist and every Zionist is a Communist is an integral part of the Hart myth, according to Mr. Levine.

To show he is in dead earnest, Mr. Hart wrote in his January 15, 1948, council letter:

"We have one concrete suggestion to make to every citizen who is impressed by the potential danger.

"Let him possess himself of one or more guns, making sure that they are in good condition, that he and other members of his family know how to use them, and that he has a reasonable supply of ammunition."

CONCERNING JEWISH NAMES

The letter went on to advise its readers to acquire the weapons in accordance with the statutes of their particular States.

Like the press of Nazi Germany and the Communist press of Russia, according to Mr. Levine, "Mr. Hart knows how to underscore Jewish-sounding names and to put in quotation marks non-Jewish-sounding names when it is common knowledge that their bearers are of Jewish origin."

Among the council's supporters or deluded followers, Mr. Levine pointed out, are captains of industry, prominent members of the bar, politicians, clergymen, and educators.

SEES COMMON ENEMY SERVED

"The tragedy is that Mr. Hart brings to the noble cause of freedom the disease-carrying elements of hate and civil strife," declared Plain Talk.

"He unwittingly serves the common enemy and furthers the divisive and wrecking operations of Stalin's fifth column."

Isaac Don Levine for decades has written against Soviet totalitarianism and the Red underground in this country.

A Necessary Amendment to the Electoral College Resolution

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. CASE of New Jersey. Mr. Speaker, the Committee on the Judiciary has approved House Joint Resolution 2, commonly known as the Lodge-Gossett Resolution. This resolution proposes certain changes in the provisions of the Constitution for the election of the President and Vice President.

I am strongly opposed to House Joint Resolution 2 in its present form for the reasons presented in my minority views which are appended to the report of the Judiciary Committee.

Among my reasons for opposing the resolution is my conviction that its provision for the division of each State's

electoral votes in proportion to the popular votes in that State would result in further restrictions upon the franchise in the safe or solid States.

In my minority views I stated that when the resolution reached the floor I would offer an amendment to prevent this most undesirable result.

By my amendment each State's electoral votes in any particular election would be reduced in the proportion that the number of persons actually voting is less than the total number of citizens of voting age in that State.

The text of House Joint Resolution 2, showing my proposed amendment, is set out below. My amendment would eliminate the language printed in brackets and would add the language in italics, which appears immediately thereafter.

Joint resolution proposing an amendment to the Constitution of the United States providing for the election of President and Vice President.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That an amendment is hereby proposed to the Constitution of the United States which shall be valid to all intents and purposes as part of the Constitution when ratified by three-fourths of the legislatures of the several States. Said amendment shall be as follows:

"ARTICLE—

"SECTION 1. The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of 4 years, and together with the Vice President, chosen for the same term, be elected as herein provided.

"The electoral-college system for electing the President and Vice President of the United States is hereby abolished. The President and Vice President shall be elected by the people of the several States. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature. Congress shall determine the time of such election, which shall be the same throughout the United States. Until otherwise determined by the Congress, such election shall be held on the Tuesday next after the first Monday in November of the year preceding the year in which the regular term of the President is to begin. [Each State shall be entitled to a number of electoral votes equal to the whole number of Senators and Representatives to which such State may be entitled in the Congress.] *Each State shall be entitled to a number of electoral votes in any election for the Presidency which bears the same ratio to the whole number of Senators and Representatives to which such State may be entitled in the Congress as the total number of votes cast in such State at such election for all candidates for the Presidency bears to the total number of citizens of voting age in such State according to the last preceding decennial census.*

"Within 45 days after such election, or at such time as the Congress shall direct, the official custodian of the election returns of each State shall make distinct lists of all persons for whom votes were cast for President and the number of votes for each, and the total vote of the electors of the State for all persons for President, which lists he shall sign and certify and transmit sealed to the seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall in the presence of the Senate and House of Representatives open all certificates and the votes shall then be counted. Each person for whom votes were cast for President in each State shall be credited with such proportion of the electoral votes thereof as he received of the total vote of the electors therein for President. In making the computations, fractional numbers less than one one-thousandth shall be disregarded. The person having the greatest number of electoral votes for President shall be President. If two or more persons shall have an equal and the highest number of such votes, then the one for whom the greatest number of popular votes were cast shall be President.

"The Vice President shall be likewise elected, at the same time and in the same manner and subject to the same provisions, as the President, but no person constitutionally ineligible for the office of President shall be eligible to that of Vice President of the United States.

"SEC. 2. Paragraphs 1, 2, and 3 of section 1, article II, of the Constitution and the twelfth article of amendment to the Constitution are hereby repealed.

"SEC. 3. This article shall take effect on the tenth day of February following its ratification.

"SEC. 4. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the States within 7 years from the date of the submission hereof to the States by the Congress."

Percentage Depletion

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. REES. Mr. Speaker, under permission granted me by the House, I am including an editorial that appeared in a recent issue of the Oil and Gas Journal. The article is entitled "Percentage Depletion."

This statement, in my judgment, sets forth quite concisely the position of the independent oil operators with respect to the proposed legislation to reduce the depletion allowance presently in effect.

PERCENTAGE DEPLETION

The President's attack on percentage depletion in the oil and mining industries as a tax loophole is in character for an administration which knows that it can perpetuate itself only by continued reckless spending, and which is desperately seeking new sources of revenue which will not have unwanted political repercussions in an election year.

Nothing new has developed indicating that the present oil and gas depletion provisions should be ended or reduced as to percentage. In fact, if a fair and complete investigation results, the weight of the evidence will be on the side of liberalization.

The Depletion Act became effective in 1926, after long investigation by Congress. It was a practical application of a taxing principle previously recognized by Congress and which in turn had a background of English mining law going back more than three centuries.

Briefly reiterated, the 27½ percent depletion allowance isn't a "tax gift," a "tax avoidance," or anything of the kind, but represents a return of capital to those engaged in the hazardous pursuit of finding and producing oil. In principle, applied to an irreplaceable asset, it is exactly the same as depreciation allowance for manufacturing enterprises and other replaceable business operations in arriving at taxable income.

The 27½ percent depletion figure originally was a compromise figure of the two branches of Congress, arrived at after an investigation had shown that the allowance should be in excess of 30 percent in an industry-wide application. Actually, because of the statutory limitation based on net income, operators as a group do not receive the full 27½ percent.

So much for the position of the oil and gas industry. What about the depletion provisions in relation to public policy?

A practical objective of the depletion allowance is to encourage operators to find plenty of oil. This they have done—too much at times for their own good. These supplies have not only been large enough to take care of the steadily expanding needs of a peacetime economy but have been adequate for two major war emergencies.

Then there is the matter of petroleum's cheapness. The latest Government report shows the all-commodity index to be 152.2, that of petroleum 110.1. This means yearly savings to users of petroleum many times greater than the total depletion allowances.

Outstanding efficiency in production, refining, and transportation are factors in the low index of petroleum extending over many years, but it starts with the fact that the capital protection that depletion affords producers has supplied in part the wherewithal needed to find sufficient oil. Without that incentive oil prices most assuredly would be more in line with the commodity levels.

The oil industry has much at stake in defending this latest attack on its tax position, but that of tens of millions of consumers is much greater.

A Plea for Brotherhood

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the East Orange (N. J.) Record of February 2, 1950. I think this fine and thoughtful editorial is deserving of the attention of all Members, particularly at this time when the legislative proposals to implement the Christian concept of the brotherhood of man under the fatherhood of God are under such violent attack. As the writer of the editorial observes, our need for brotherhood is even greater today than it was when the Republic was founded. If we are to survive as a Nation, we must give unreserved allegiance to the credo upon which our great country was established and wipe out the breach between ideals and practice so that all Americans can enjoy full civil and political rights.

A PLEA FOR BROTHERHOOD

"Almighty God, we make our earnest prayer that Thou will keep the United States in Thy holy protection; that Thou will incline the hearts of the citizens to cultivate a spirit of subordination and obedience to government; to entertain a brotherly affection and love for one another and for their fellow citizens of the United States at large."

It is fitting that Washington's prayer after his inauguration should be the prayer with which we celebrate Brotherhood Week. Our Nation was founded upon the principle which is the foundation of all monotheistic religions—the fatherhood of God and the brotherhood of man. We gave allegiance to this credo when we accepted as the cornerstone of this Republic, the declaration that all men are created equal.

Consider the prayer of our first President. He prayed first for divine protection for the United States. Next for the willingness of Americans to submit themselves to the laws which they themselves should make, to the will of the majority, and lastly he prayed that they have brotherly affection and love for one another as fellow citizens. By submission to law, Washington did not mean blind subservience. His formula left room for laws to be tested, to be subject to repeal, to be put to a high and supreme authority to establish their justice. Those rights come under our procedures as Washington understood them.

Here was no mention of creed, race, or color. Here were drawn none of the differentiating lines of the Old World. He prayed to the Father of all mankind that His children might recognize their kinship and display the spirit of brotherhood.

Our need for brotherhood is even greater today than it was when the Republic was founded. If we are to survive as a Nation, if we are to take our proper place in the world of nations, we must have brotherhood—not a condescending charity toward those whose ancestry, faith, or work is different than ours, but a wholehearted acceptance of the kinship of all right-thinking men, of the brotherhood of man under the fatherhood of God. America is made up of all races and creeds, but Americans to be true Americans, must respect individuals for what they are individually, regardless of color or creed.

The strength of brotherhood is the strength of love. If we as individuals cannot get along with our neighbors, how can we ever hope to live peaceably with other nations. Prejudice and bigotry are the subterfuge and the foundation of all wars.

The full expression of brotherhood is the Golden Rule which has never been surpassed as the most practical rule of life and as the only basis for peace on earth. As we celebrate the birthday of the father of our country during Brotherhood Week, let us pause to pledge ourselves again to that golden rule of life—"Therefore all things whatsoever ye would that man should do to you, do ye even so to them; for this is the law and the prophets."

It Is Vitally Important That We Work Out a Plan Whereby Every American Citizen, in All Areas of Our Country, Have Medical, Surgical, and Nursing Services Adequate to His or Her Needs

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, subsequent to adjournment of this House on January 20, our colleague, FRANCES P. BOLTON, flew back to her congressional district in Cleveland. She made that journey in order to discuss with the Cleveland Medical Library Association, holding its annual meeting on that evening, various phases of a national health program as comprehended in the many bills that have been introduced into the hoppers of the House and the Senate, by Republicans and Democrats alike.

Mr. Speaker, there is probably no Member of Congress who has given more time, thought, substance, and study to the problems of public and private medicine, nursing, and child care, to the field of preventive and curative medicine and related fields, than has our distinguished colleague from the Twenty-second District of Ohio.

We in this House who know Congresswoman BOLTON, for years have listened while, with knowledge and logic, she has urged the passage of bills that looked to the welfare of the Nation's children, its mothers, its sick, its indigent, and blind.

Mr. Speaker, I know of no one in this body who can speak from a greater personal experience and with a more sympathetic understanding on any question involving the mental, physical, and spiritual health of the American people than can FRANCES BOLTON.

Rich in its quotable parts, the Congresswoman's address to the Cleveland Medical Library Association discloses in large measure the important changes that have taken place here in these United States which give rise to the questior as to the adequacy of existing medical and hospital services available to our people, regardless of their age group or economic status.

It is because of the factual and practical manner in which Mrs. BOLTON addresses herself to this problem that I am asking the unanimous consent of the Members of this House to insert into the records of our proceedings today the address which Congresswoman BOLTON made on January 20. I commend its reading and study to every Member, with the assurance that if and whenever such a bill comes to this floor for passage, the House will have the benefit of the perception and experience of this great humanitarian.

Congresswoman BOLTON's address to the Cleveland Medical Library Association follows:

Mr. President, members of the Cleveland Medical Library Association, ladies and gentlemen, I am greatly honored to be the first woman to address this distinguished group of Cleveland physicians and surgeons and those interested in various fields of care for the sick and prevention of disease.

No old Clevelander like myself could come to this Allen Memorial Library and not be flooded with memories of the many consecrated physicians who have influenced the life of this great community. This beautiful building in itself is evidence of a certain capacity they had for bringing the layman to recognition of the part he should play in making medical and nursing care available to all the sick. It is a monument to the constructive altruism of those responsible for great wealth.

Cleveland has become known everywhere for its social conscience and for its community spirit, a spirit that makes one both proud and humble to be a Clevelander.

This library has on its shelves and in its archives priceless material for those who search out historic backgrounds, as well as for those who reach out with eager and never-ceasing curiosity into the realms just beyond the proven wonders, into the areas still to be proved.

Who knows, friends, what new life may not be stirring at this moment within the hearts and minds of those who come and go in this building? Who can say what the membership of this medical library will bring to birth at the appointed time?

There are many matters I should like to talk over with you—all of them far reaching—all of them having to do with the one great problem with which we must come to grips—the protection of freedom here in these United States.

I am particularly appreciative of the opportunity to come here tonight and participate in your proceedings because one of the most vital matters before us all is that of the physical and mental well-being of our people—not parts of them, but all of them.

I am referring to the so-called national health plan and program which, as advanced by the Federal Security Administration under Mr. Oscar Ewing, is, in fact, a proposal to inaugurate a new Federal pay-roll tax to be superimposed upon the pay-roll deductions and other taxes already being collected from the workers in these United States.

The compulsory plan as proposed would, by law, compel the employer to take out of the pay envelopes of the employees an additional 3 to 4 percent on every dollar earned, in order to create annually in the Federal Treasury a fund of from three to six billion dollars, to be redistributed by some newly created Federal agency employing an estimated fifty to eighty thousand new Federal pay-rollers.

But more about this later.

I feel it altogether unnecessary for me to point out to this audience of Cleveland physicians and surgeons the all-consuming interest I have maintained for some 40 years in matters affecting the health and welfare of our people. The record of that service began more than a quarter of a century before I went to Congress—in the field of health and hygiene, as well as in the field of public-health nursing. It began in the early days of the Visiting Nurse Association with what was known as the Brownie Club. This little group became the surgical dressings committee of the Visiting Nurse Association. We were given the task of making the dressings used by the nurses. We went out eagerly with the visiting nurses into the homes, carrying their bags, tidying up the houses, washing anything that needed washing, helping the nurse at every turn. As I look back upon a full life I know that no experience I have had was more vital to my understanding of life as it really is rather than as we hope that it will be.

I shall not spend my short time with you elaborating upon the accomplishments made by the medical profession which have come within my personal experience since the turn of the century. The over-all accomplishments of medicine have opened up vistas of well-being beyond those of any other science.

Humanity will ever affirm that the work of Louis Pasteur in his researches with respect to germs, of Drs. Norton and Long in their discovery of anesthesia, of Koch in isolating the tuberculosis germ, of Madame Curie in radium, and many others have not alone brought greater comforts to mankind, mental as well as physical, but also were the early waymarks that have brought us into new areas of scientific knowledge.

For we stand today at the end of a momentous half century. We are at the gateway that opens into an area awesome to contemplate. One prays that those who deal with nuclear fission, who dare to propose upsetting the balance of disposition of so volatile and terrible a force as hydrogen—in essence the central spark of light and

UNIVERSITY OF MICHIGAN LIBRARIES

fire—that those who deal with it will be constrained by sheer love of humanity from bringing upon the earth a destruction beyond the imagination of man to conceive.

Because health is so vital to sound judgment, at a moment in time when not only judgment but great wisdom are imperative if freedom is to survive, I could not come to you tonight without discussing some of the problems awaiting solution in this field and in the field of adequate care of the sick.

The solution of this problem, sought and found within the American formula for freedom, as I believe it can be, will indicate the direction in which we, as a Nation, will go in the second half of this century.

The questions uppermost in our minds are: Shall we accept the suggestions that are being poured out upon us that Americans can no longer do for themselves, or shall we gird up our loins, alert our minds, face the facts, and solve the problem?

Do we want the Federal Government to reach down into every department of our lives? Granted that there are many things which we as individuals, as communities, and as States can no longer do without Federal help, but surely we can find methods by which freedom from an all-encompassing central authority can be maintained.

It is in the light of this fundamental need to protect our basic freedom that I want to discuss for a few minutes the principles involved in a national health program, for just as it is on your minds every day, so is it a matter of constant argument and discussion in the cloakrooms of the Congress.

May I say to you that more than a million words, on every issue and on every side of this question, have already been written into the records of committee hearings during the first session of the Eighty-first Congress.

It is definitely incumbent upon all of us to have a clear understanding as to what constitutes the national health problem. Once the question is clearly posed, and not until then, can we formulate principles and policies which, when enacted into law, will retain all of the benefits and eliminate as much of the error as can be discovered in the free-enterprise system that we have historically enjoyed in the practice of medicine as part of our way of life here in America.

We can well be proud of what has been done for the health of our people. Nowhere on earth are so many of the results of scientific research available to such numbers. We cannot close our eyes, however, to the fact that there are still areas in our country—there are still groups of our people—unable to secure the medical care they need. It is of utmost importance that we work out a way by which every last one can have a plentitude of medical, surgical, and nursing services commensurate with and adequate to his or her needs.

Now, as never before, there is a patent and a particular need for some national health program, and that need, of which we hear vocal expression on every hand, makes it the more necessary that we take the formulation of such a program out of the hands of the economic crackpots and political "do-gooders" scattered throughout every bureau in the National Government in Washington.

If we are to maintain the American way, such a plan cannot be laid down along lines which will regiment the medical, surgical, and nursing professions and the technicians serving with them, giving society services rendered under a compulsory system, supported by taxes taken out of the pay envelopes of the workers, and later dispensed by a federalized medical bureaucracy—by doctors employed by the Government.

"Economic crackpots" are nothing new! Years ago when congressional enactment of a compulsory medical system was first discussed, I was talking with the editor of a nationally known publication about the program advanced at that time to establish a cabinet post—with a Secretary presiding over a newly created Department of Health. The proposal, then as now, was that any man appointed to administer such a post should by no means be a medical man!

When one fully appreciates the tremendous economic, social and financial changes that have taken place in Government during these last 20 years, one can more clearly understand and weigh the demands being made by the electorate that something be done by the Federal Government in the field of medical care.

First and foremost of the factors which give rise to these demands is the fact that the national system of taxation as administered during the past 2 decades, has in a large measure dried up the sources of private funds which long gave philanthropic support to extended and never-ending research in the field of both preventive and curative medicine.

I have quite recently done some interesting research on the subject of "Foundations" and our "Public Trusts" * * * their effect upon our society at the turn of the century and what, generally, is happening in regard to them today. I would like to give you some of my findings.

A study of the larger "Foundations," "Trusts," and other types of "Endowments" as reported in the World Almanac of 1949, reveals most important and significant facts that have to do with the present problem of health and nursing care. Statistic-wise, they set forth the year the trusts were founded * * * the amount of the original endowment * * * other assets, and the amount expended between the years 1902 and 1941.

During the 10-year period 1939–49, there was expended by our foundations listed in that decade the small sum of $2,500,000, of which $321,443 was spent right here in the city of Cleveland, by our own Elizabeth Severance Prentiss (Allen) Foundation.

In the preceding 10 years, the expenditures of these foundations amounted to the sum of $65,000,000 * * * while in the previous 20-year period they averaged $56,000,000 annually, or a grand total expended by the trusts and foundations established by our wealthier class of the stupendous sum of $1,127,000,000.

The over-all purpose for which these bequests were made was to promote the well-being of mankind throughout the world. Particular emphasis in many instances was placed upon certain specific fields: medical sciences (psychiatry); natural sciences (experimental biology); public health (development of general public-health activities and study and control of certain diseases); social sciences (projects contributing to the understanding of important social problems and to the development of personnel and methods); the humanities (efforts to raise the general cultural level and to promote cultural interchange between countries).

Millions were annually donated for public health, to the support of other agencies, and for training, through post doctoral fellowship, of competent personnel in the various fields of medicine and surgery.

Instead of enjoying the benefits of similar bequests and gifts, we today see similar contributions restricted to drives, and popular appeal made for the bestowal of small contributions in order to fight polio, cancer, heart, tuberculosis, and other diseases.

It becomes more evident each day that the inroads made upon private initiative by Federal legislation and tax policies are drying up the past sources and subjecting the people to an even greater overburden of taxation than meets the eye.

The decline in the number and amounts of the philanthropies enjoyed by the medical and educational professions during these last 18 years, is in direct ratio with and clearly traceable to the confiscatory high rates of taxation imposed upon income by both the Federal and State Governments, whether that income is derived from gainful employment, capital gains, inheritance, gift, or other sources.

Is it any wonder, therefore, that with what seemed an inexhaustible supply of endowed capital cut off by our newly applied tax system, these "do-gooders" now propose to levy additional taxes upon those less able to pay them in order to replace the funds which used to flow as freely into medical channels as rivers flow to the sea.

There is no gainsaying the fact that there are certain areas, and even certain income groups in these United States, whose requirements are not now serviced with adequate medical, surgical, and nursing service.

I remember well a statement made by Mr. Harvey W. Brown, long-time president of the International Associaion of Machinists, a man well and favorably known to the people of Cleveland—a man of vision, of deep convictions—when he testified before the House Committee on Labor and Public Welfare June 2, 1949. This was just a few days before his voluntary retirement as president of the great International Association of Machinists, an organization with a membership of more than 600,000 workers. Mr. Brown told of the long researches conducted by his organization in the field of medical and nursing services. Let me quote him, because his words must be listened to.

"After careful study, and recognizing the needs of our 625,000 members and their families * * * our conviction is that we need Federal health insurance * * * Our conviction is not alone based on technical and scientific charts or figures. To a great extent it comes from the first-hand knowledge that our families live under a constant fear of costly medical expenses which they cannot at present guard against * * * The well-to-do and the charity patients are for the most part adequately cared for. Present voluntary plans at best can only supply part of the in-between group with partial financial assistance."

This is a statement made by a leader of organized labor * * * a labor statesman * * * one who after serving his people in our country for nearly 40 years, was chosen by our Government to serve abroad. He is at the moment doing an outstanding job as director of labor affairs in the office of John J. McCloy, United States High Commissioner for Germany.

One reason I have made such a supreme effort to be with you tonight is because I believe that in this great city where I was born and grew up, there is no group more able to address themselves to this whole broad question of adequate medical care for all our people * * * in the American way * * * than you of the Cleveland Medical Library Association.

As for me, I am not this evening speaking in behalf of any particular bill that has been introduced, either in the House or in the Senate.

I am well acquainted with the provisions of (S. 1679) the Health Act sponsored by Senators THOMAS of Utah, WAGNER, PEPPER, CHAVEZ, TAYLOR, HUMPHREY, and MURRAY.

I am cognizant of all the discussion there has been with respect to S. 1581, the National Health Act of 1949 as sponsored by Senators TAFT, DONNELL, and SMITH of New Jersey.

I have studied with deep interest the Voluntary Health Insurance Act (S. 1456) as sponsored by Senators HILL, O'CONOR, WITHERS, AIKEN, and MORSE.

I have likewise studied S. 1106, the Medical Aid Act of 1949 as proposed by Senator LODGE, together with H. R. 4918, cosponsored by my colleagues in the House, Representatives HERTER, AUCHINCLOSS, CASE, FULTON, HALE, JAVITS, MORTON, and NIXON; and by Senators FLANDERS and IVES in the Senate.

My desire is to emphasize the fundamentals that must be taken into consideration in whatever action results, if we are to retain our heritage of freedom.

Somewhere I once saw a little verse which, as I remember, read something like this:

"So many Gods, so many creeds,
So many roads that wind and wind,
When just the art of being kind,
Is all this old world needs."

I am reminded of that verse because when I had completed my study of these bills as they were introduced at both ends of the Capitol, and had read the long pages of testimony given by the endless number of witnesses who appeared before the respective committees of both the House and Senate, it became evident that all were aiming at the self-same goal; to insure the physical and mental well-being of all the people of this great country of ours.

I believe that we must find ways to insure sick care and a better chance for health to all of our people. That whatever method we decide upon, provision should be made that the Federal Government provide moneys with which to make a totally disinterested national survey to ascertain in exactly what geographical areas, income groups, and other criteria our people stand in need of additional medical services.

That survey should include the regional and local evaluation of all hospital facilities available, of the additional medical educational facilities needed to keep a flow of young, virile professional personnel in sufficient numbers to fill the existing deficiency.

In addition thereto, the plan should make provision that all aged and indigents shall be afforded the same high character of medical, surgical, nursing assistance that is afforded to the most fortunate among us.

We should also institute a general health-education program more intimately to inform our citizens on a Nation-wide scale of the benefits that would accrue to them by their voluntary association with one of the many hospitalization and surgical groups now existent, or the formation of new insurance groups in special areas.

But above all else, it is my studied conviction that what is to be done should be done on a basis of some form of medical insurance, not to be made compulsory by the legal collection of taxes to be taken out of the pay envelopes of the wage earners of these United States by their employers.

In other words, the over-all improvement in medical service throughout the country to be attained by some one of the programs advanced in both Houses of Congress to date, can be accomplished by the extension of the voluntary groups now common to our life in these United States.

In his appearance before the Senate Committee on Labor and Public Welfare on May 23 last, J. Donald Kingsley, Acting Federal Administrator, and speaking for Mr. Oscar Ewing, the Administrator, made this significant statement: "Health insurance has made gigantic strides and now affords protection to 52,000,000 Americans, or a third of the Nation."

It is true that Mr. Kingsley questions the amount of protection this health insurance affords, granted it covers as yet only one-third of our people. Well, if voluntary health insurance does not afford sufficient protection, let us extend the coverage so that it will afford what in Mr. Kingsley's and Mr. Ewing's opinion is a coverage needful and necessary to insure the health and comfort of our people.

"Most voluntary insurance policies," Mr. Kingsley continued, "are issued by Blue Cross hospitalization plans. * * * About 60 percent of these policies are held by citizens of six rich industrial States, which contain approximately 36 percent of the total people of the United States. * * * Only about 17 percent of the Blue Cross members," Mr. Kingsley went on, "live in Southern and Western States, representing 43 percent of our total population. Less than 3 percent," he said, "of the rural population now belong."

Therein lies a great deal of the confusion that gives rise to the demand for a compulsory national health plan.

These regional variations will readily be made known by point No. 1 of the program which I have outlined.

The above figures, indicate the need for an extensive educational program conducted on a Nation-wide basis to make the people who live in our rural areas aware of benefits that would accrue to them by affiliation with medical, surgical, and hospitalization groups such as Mr. Kingsley advises now serve the 52,000,000 people in the more affluent areas of the Nation.

More highly significant than the foregoing is the fact disclosed by Mr. Ewing that more than two-thirds of our people have not availed themselves of protection of any kind. Thus the more reason for the Federal Government to lend assistance to an educational program looking to the extension of the growing voluntary services.

Ladies and gentlemen, I have said that there is a particular need that the aged, the indigent, and others not able to afford adequate medical care should find it available to their requirement. I do not propose, however, that any program to which I shall lend assistance shall comprehend the so-called means test (ability to pay), if that test will result in any delay whatsoever in extending needed services.

If there is to be any one determination as to ability to pay, the means test should be applied only after the person has received the assistance requisite to their needs. I know full well from the nursing services which I rendered years ago, that I personally could never withhold food, coal, or wood from a needy mother and her brood until after I found out why she was needy. Rather, first we provided the necessities and then made our determinations as to why the needs arose.

In conclusion, friends, may I say that to me the strength of these United States lies fundamentally in the courage, the integrity, and the vision of each individual. This is a land where men and women have recognized their individual responsibility toward each other and toward the Nation whose formula for freedom has protected them from the domination of a centralized government. We feel we have the right to freedom, but if we are not to lose it we must assume the full responsibility for it. There is no country in the world where the people have enjoyed more opportunity, where they have more comfort and economic security, more chance for happiness than here in the United States.

The strength, the honor, and the integrity of our country must be maintained both at home and abroad. This cannot be done just on Capitol Hill. Every one of you, every citizen of this country, must carry a share of this responsibility.

So I would say to you in the immortal words of Abraham Lincoln: "With firmness in the right as God gives us to see the right, let us strive on to finish the work we are in."

The Housing Situation

EXTENSION OF REMARKS
OF
HON. ROBERT L. RAMSAY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. RAMSAY. Mr. Speaker, daily, Members of Congress are bombarded with propaganda from the real-estate lobby opposing further housing legislation and rent-control extension.

Briefly we are told that such measures constitute either the "welfare state" or "statism."

These things, according to the lobbyists and propagandists of special privileges, are threats to our American way of life.

Mr. Speaker a far greater threat to our American way of life is the undermining of the institution of marriage and the American home. Our housing situation is still sufficiently acute as to retard marriages by young people; so as to retard the establishment of homes and families. This, Mr. Speaker, is a far greater threat to our American way of life than all the phony issues the high-priced propagandists can think up in a hundred years.

To illustrate the acuteness of the housing situation, and to illustrate the problems faced by young people, I include as a part of my remarks a letter received by me from a constituent together with my reply thereto:

WASHINGTON, D. C., *January 31, 1950.*
Hon. ROBERT L. RAMSAY,
House of Representatives.

DEAR MR. RAMSAY: I am writing you with regard to a problem with which I am confronted—that of housing. It seems that here in the District of Columbia and vicinity, apartments are not to be had unless you happen to be a friend of the owner, resident manager, rental agent, etc. Also, the new apartments being built are so far out so that an automobile is an absolute necessity. Not only that, but a one-bedroom apartment rents on the average of $80 per month so that a Government clerk earning $2,650 per annum is not in a position to rent one of these apartments in view of the fact that his weekly earnings do not equal the monthly rental.

My fiancé, Mr. Darwin H. Lalk, of Hermann, Mo., and I plan to be married on June 13. Mr. Lalk is a veteran, employed with the Department of Defense with a salary of $2,650 per annum, and starting February 15, will begin a course in accounting at Benjamin Franklin School of Accountancy. I plan to continue working as long as possible.

My question is, what good earthly reason is there as to why apartments cannot be built and rent for prices we can afford? I am certain that there are hundreds upon hundreds of couples facing this same problem.

What do you suggest, Mr. Congressman?

An early reply will be deeply appreciated.

Very truly yours,

MISS ELENA C. FORMIS.

(Daughter of Mr. and Mrs. John Formis, 672 Virginia Avenue, Follansbee, W. Va.)

FEBRUARY 2, 1950.

Miss ELENA C. FORMIS,
Washington, D. C.

DEAR MISS FORMIS: Reference is made to your letter of January 31 advising of your forthcoming marriage and relating the problems you face in obtaining housing.

You have my every wish for a long life of happiness. Mr. Lalk is a very fortunate young man.

As far as housing is concerned, I can only suggest you have patience. Your personal problem merely highlights the need for continued rent control and additional housing legislation. If you have followed the papers, you know what a fight the real-estate lobby has made against rent control—and they have been successful to the extent of whittling away at safeguards to a great extent. You recall the very great difficulty we had passing the low-income housing measure, and the opposition, spearheaded again

by the real-estate lobby, to the present middle-income housing bill.

I firmly believe, however, we shall eventually get these programs in operation. Of course, in the meantime, young couples have pretty hard lines, and I venture to say many marriages are delayed and postponed. In time, I feel sure, we can convince the opposition that preventing the establishment of homes is a far greater danger to our American way of life than the phony danger of statism.

Sincerely,

ROBERT L. RAMSAY.

As the Twig Is Bent

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. H. CARL ANDERSEN. Mr. Speaker, Mr. Fay George Child, who is now editor of the Maynard News, Maynard, Minn., is well known to many Members of the House through his service as secretary to Hon. HAROLD HAGEN. Mr. Child has been crusading against infiltration of Communists into our Government service, and under leave previously granted, I wish to include in the RECORD an editorial he has written which is well worth the attention of every Member of Congress:

AS THE TWIG IS BENT

This editorial is being written after much deliberation, research, consultations with cooperative local school authorities and conferences with officials of the State department of education in St. Paul.

A copy will be sent to the superintendent of each public school in Minnesota.

The editorial will concern itself with what this writer considers to be subversive propaganda in publications widely used by the students in the public schools of Minnesota—and the Nation.

I am fully aware that the subject matter of the editorial is taboo with many of the intelligentsia, and to dare to write about it poses the possibility of being subjected to vituperative denunciation ranging from book burner to Red baiter.

Most schools in Minnesota have subscribed to the Public Affairs Pamphlet Series, published in New York City, and issued on the average of one a month for the nominal price of 10 cents apiece. These pamphlets, 143 in number, are intended for school libraries, to be used for research and supplemental reading by the students in connection with their various classes.

Many of the pamphlets are written by competent authorities, but in most cases the material is compiled by the editor of the series from many sources. In some instances, the pamphlets are written after consultation with reputable organizations such as the United States Chamber of Commerce, American Jewish Committee, the Boy Scouts, etc. In justice to schoolmen who order the series for their classrooms, we must state that it is almost impossible to detect the sly, subtle propaganda so carefully and sparingly injected into the pamphlets. Probably only 3 or 4 percent of the series can be identified as obnoxious propaganda, designed to give the students of the Nation a leftist slant in their thinking. Many of the pamphlets are excellent, and are not objectionable.

It was by sheer accident that this writer stumbled across one of the pamphlets that contained leftist propaganda, and because my curiosity was aroused, I contacted a friend in Washington, D. C., who at one time was an investigator for the Committee on Un-American Activities of the United States House of Representatives. This was his reply:

"Relative to the Public Affairs Pamphlet Series, published in New York. Please let me know who is behind the series. I think that Maxwell Stewart is one of the sponsors—if that is true it is strictly left-wing. Stewart is one of the foremost Communist-fronters in the United States."

The editor of the entire Public Affairs Pamphlet Series is Maxwell S. Stewart. He has editorial privileges as to selection of sources and material that go to make up the pamphlets. His is the guiding hand. He is the key man.

Further inquiries have resulted in a compilation of documented history about Editor Maxwell S. Stewart; and a strange history it is for a man who is working tirelessly to shape the thinking of our young people.

After I had accumulated and assayed the information which came to my desk about Mr. Stewart, I forwarded most of it to the commissioner of education of the State of Minnesota, with a letter requesting information as to whether or not the State department of education has any jurisdiction over books and pamphlets used in Minnesota public schools.

With Commissioner Dean Schweickhard's permission, I am quoting his reply:

"The series of pamphlets with which you are immediately concerned has been deposited here, but so far as can be ascertained has never been made a part of any traveling library or reading list in connection with any course of study issued by the department.

"Power to adopt or prescribe textbooks and other instructional materials is placed under the authority of local boards of education in Minnesota Statutes, section 125.06, subdivision 9."

On being informed that the Maynard News would publish an editorial on the pamphlet series and send a copy of the editorial to superintendents in Minnesota, Mr. Schweickhard commented as follows:

"I am sending you also a copy of the Minnesota Educational Directory. On page 28 there appears a list of all superintendents of graded elementary and secondary school systems. Any information which you can supply to these superintendents along the line of material you now have here under consideration or any other one of equal importance will assist them in their selection of instructional materials for use in their schools."

The following testimony will be of interest to school authorities and readers of the Maynard News.

State Senator Jack B. Tenney, chairman of the legislative committee in California investigating un-American activities, gave the following testimony before a congressional committee in Washington, D. C., March 26, 1947:

"We found a book in the public schools in California called Land of the Soviets. The book is prepared for the use of seventh- and eighth-grade children, and is written by Marguerite N. Stewart and edited by Maxwell Stewart. * * * Both Margureite Stewart and her husband, Maxwell, taught at that institute at Moscow (Russia). Mr. Stewart is a correspondent and has been correspondent for the Moscow News and is connected with practically every (Communist) front organization of any consequence on a national scale in the United States for the past 7 or 8 years." (Hearings and reports, vol. 1, p. 247.)

As long ago as November 22, 1938, Mr. Stuart Lillico of New York City, newspaper and magazine correspondent in the Orient for several years, testified before the Special Committee on Un-American Activities in Washington, as follows:

"Mr. LILLICO. Let us take up the case of the American Friends of the Chinese People. I have here a letterhead from this organization, including the names of the officers and members of the national advisory board.

"Maxwell S. Stewart, the chairman, appears also as a member of the editorial board of China Today, the official organ of the American Friends. He is widely known as either a secret member of the Communist Party or as what might be called a fellow-traveler. At one time he was an associate editor of the Moscow Daily News, and taught in the Moscow Institute. He is also connected with the organization known as the Friends of the Soviet Union, and is an associate editor of the Nation." (Public hearings, vol. 4, p. 2512.)

The organization, American Friends of the Chinese People, was cited as a Communist front by the Special Committee on Un-American Activities (U. S. Cong.) on March 29, 1944.

If this editorial serves to further alert schoolmen and school boards in Minnesota to the dangers that beset our democracy, I will be adequately compensated for the expenditure of my time, effort, and money, to say nothing of braving the inevitable repercussions from the "left" when this editorial hits home.

The fight to preserve true democracy and free enterprise in America will not be easily won. We cannot engage in battle at our own convenience. The welfare-state planners and the Socialists and Communists have set the pace.

We have been challenged.

We cannot afford the terrible consequences of not meeting this challenge head-on.

What do you intend to do about it?

Korea Is a Must

EXTENSION OF REMARKS
OF
HON. EARL T. WAGNER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I incude the following editorial from the Cincinnati Enquirer:

KOREA IS A MUST

When the House of Representatives voted by a margin of just one vote to withhold economic aid from South Korea, it was clear that a foolish and somewhat partisan action had been taken. Undeniably, there is always a risk in giving assistance to a country which is under Soviet pressure and might conceivably be taken over in the future. But there is even greater risk in suddenly cutting off aid to a country which our military forces liberated and then started on the road to self-government.

To abandon South Korea now is to sacrifice what we already have spent there in an honest and reasonably skillful attempt to build a bulwark and to establish democracy in a long-neglected country. Furthermore, abandonment of South Korea would be taken by other countries, even in Europe, as proof that the United States cannot be relied upon for consistent support.

Korea is far more important to our strategic position in the Far East than Formosa. It faces squarely up to Soviet-controlled territory. It is on the front line of Russian-Western rivalry. It juts out into the Pacific

in such a way as to command the flank of vital positions in south Manchuria. More important still, Korea in hostile hands would be a real threat to Japan, which is the northern anchor of our entire position in the Far East.

On this basis, we have every right to expect the House to reconsider its precipitate action on the $60,000,000 Korean aid bill. Everyone knows that we must draw the line somewhere. We cannot give assistance to every country under threat. But Korea surely is not the place at which to draw the line. We have too much already invested there. It is too vital to other positions we now hold and intend to keep. And there is a moral commitment to south Koreans that we cannot ignore without losing the confidence of many other peoples who have put their trust in us.

Letter from Hon. Hamilton Fish

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Hon. Hamilton Fish, of New York, to President Truman:

NEW YORK, N. Y., *January 23, 1950.*
Hon. HARRY S. TRUMAN,
White House, Washington, D. C.

DEAR MR. PRESIDENT: On December 23, 1948, more than a year ago I wrote you as follows: "You have persisted in attacking the un-American Activities Committee, duly appointed by the House of Representatives, and denouncing its recent startling exposures of spies and traitors in our midst as 'red herrings.' I sincerely respect you, Mr. President, because you were a tough combat officer in World War I, and on account of your Missouri mulishness, but there is such a thing as carrying stubbornness too far. You must know by this time that you were wrong in raising the 'red herring' issue."

Mr. President, I now repeat, who appointed Alger Hiss to the State Department, recently convicted virtually of spying for Soviet Russia?

Who appointed him as adviser to F. D. R. at the Yalta Conference?

Who appointed him as Executive Secretary at the Dumbarton Oaks Conference in 1944?

Who appointed him as Secretary-General of the San Francisco Conference for the Organization of the United Nations in 1945?

Mr. President, you wrote me on January 6, 1949, that: "I read your letter of December 23 with a lot of interest and sometime or other I shall explain just exactly the situation to which you refer."

In all fairness, I think you will agree that the time has come, and the American people are entitled to an answer to the forthright questions that I asked of you more than a year ago.

Mr. President, the American people are also entitled to know how many other spies may be lurking within the State Department, transmitting secret information and documents to the agents of Soviet Russia.

Why not dismiss Secretary of State Dean Acheson (the acknowledged and proclaimed friend of Alger Hiss) who has outlived his usefulness? Isn't he responsible for the continuation of the tragic and ghastly appeasement policy in China? This deplorable and cowardly policy has resulted in the seizure of that nation by the Communists, the most disastrous diplomatic defeat in our history, which will plague us and our children's children.

With high esteem,
Respectfully yours,
HAMILTON FISH,
Chairman of the House Committee To Investigate Communist Propaganda and Activities in the United States, 1930–31.

The Hydrogen Bomb

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. TAURIELLO. Mr. Speaker, a few days ago I indicated my approval of the President's order to the Atomic Energy Commission to develop the hydrogen bomb. I did this because I feel that in order to insure peace in the world, the United States must be ready to defend itself at any time against any aggressor and further, according to recent developments, it seems apparent that Soviet Russia will have the H-bomb available to it within a few years' time. Accordingly, I feel that the United States must keep pace with the rest of the world in scientific development, even though it be in such weapons of destruction as the H-bomb.

I have received the following letter and petition from a group of 84 Protestant clergymen from 12 denominations whose churches encompass greater Buffalo, which I have the honor to represent.

While my views with regard to development of the H-bomb do not coincide with theirs, I think this petition is important enough to bring to the attention of the United States Congress so that the Members may be given the benefit of the thoughts of this distinguished group on world peace.

While I do not agree with their position regarding development of the H-bomb, I do heartily subscribe to the suggestion contained in their resolution that a disarmament conference be called immediately under the auspices of the United Nations, at which should be discussed the control or abolition of such viciously destructive weapons of war as the H-bomb, the A-bomb, and bacterial warfare.

In order that all peoples may live in harmony with each other, we must solve the problems which imperil the peace of the world and the efforts of all nations must be directed unceasingly toward that goal.

RIVERSIDE SALEM CHURCH,
Buffalo, N. Y., February 4, 1950.
Hon. ANTHONY F. TAURIELLO,
House Office Building,
Washington, D. C.

DEAR MR. TAURIELLO: As the one designated to release it, I am enclosing a copy of a public statement on the "H" bomb signed by 84 Protestant clergymen from 12 denominations who serve churches in greater Buffalo.

You will, without doubt, be hearing from several of the men who reside in your district as they express their profound concern and distress over the course which the Nation is now following.

I am sure that all of those signing are anxious to see some change in American policy commensurate with the high moral principles which the Nation avows.

Sincerely yours,
ALAN B. PEABODY, *Pastor.*

PUBLIC STATEMENT ON H-BOMB BY CLERGY OF BUFFALO, N. Y., AND VICINITY

We, the undersigned ministers of the Niagara frontier, regret the decision of President Truman to proceed with the development of the H-bomb. As a nation, the United States is morally bound to use its position and power to promote peace in the world.

The period during which the United States was the sole possessor of the A-bomb was marked by the greatest expansion of communism throughout the world. Therefore, the H-bomb is no guaranty that communism can be contained by military power.

We are of the mind that use of money, natural resources, and human energy, intelligence, and ingenuity in development of destructive power cannot be morally justified in a world where millions of God's children are ill fed, ill clothed, and ill housed.

As citizens and as followers of the Prince of Peace, we repent for our share in the growing militarization of America and for our failure to bind up the wounds among the nations. The growing nationalism and militarism of the world make us mindful that it is "not by might, nor by power," but by the Spirit of God incarnate in human life which will bring fulfillment to the peaceful aspirations of all men.

The Christian faith affirms that war is not inevitable and that peace on earth will come through good will toward all men.

We would, therefore, urge the calling of a disarmament conference under the auspices of the United Nations. H-bombs, A-bombs, bacteria, gases, and poisons should be included in the list of weapons forever abolished.

Letter From a Constituent

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following excerpts from a letter from a constituent, whose name I am omitting for the reason that I did not ask her permission to mention it. Her letter, however, is of such timely interest that I feel it my duty to share it with others:

DEAR CONGRESSMAN RICH: Though Drew Pearson took occasion to call you a "broken record" I know many of us are so glad to have someone reiterate and reiterate certain things such as "Where are we going to get the money?"

As you know I come from a great farming district, I would like to tell Mr. Keyserling to learn how the Amish farmers get so prosperous without being subsidized. I believe it is against the religion and rules of the Amish to accept such checks and yet there are no better farmers anywhere, nor more prosperous ones.

Let Mr. Keyserling also take note when he says "We had to find ways to keep production and demand in balance." Does he not know that not one middle-aged woman and many younger ones would think of eating potatoes and bread at the same meal? In fact most of the women I know just do not eat potatoes more than two or three times a week, if that often. I do not.

We destroy millions of pounds of potatoes and lower the tariff and import millions of pounds. Sensible?

The Fair Deal bought up over $450,000,000 worth of wheat and at the same time imported over $3,000,000 worth. Sensible?

We imported $8,000,000 worth of barley and bought up $40,000,000 worth at the same time. Sensible?

We imported over $90,000,000 worth of wool and bought up $76,000,000 worth of domestic surplus. Sensible?

With as many pounds of dried eggs in a Kentucky cave as we have gold we import 2,500,000 dozen "fresh" eggs and hundreds of thousands of pounds of dried ones. Sensible?

Why are we paying 85 cents for butter with 100,000,000 pounds of surplus butter in storage?

And yet Mr. Keyserling talks about the necessity of keeping supply and demand balanced.

My grandma used to quote, "Put a beggar on horseback and he will ride to the devil." Haven't we done just that?

My objection to that is, that I have to pay for his horse.

Mr. Keyserling surprised me by even mentioning the word balanced. I was not aware it was in the New or Fair Deal dictionary.

Miss Sara Ann Stauffer, who heads our juniors, wrote a one-act play which I wish could be seen by all the women in this country; it might go far toward presenting a clearer picture of where our tax-dollar does go.

Please keep right after Mr. Keyserling and his ilk.

There just isn't enough money to make the American women eat more potatoes or bread, even with the present budget, so please try to persuade Mr. Brannan not to support them any longer.

May I be broken-record like and repeat—please keep after them.

The Columbia Basin

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I include the fourth and fifth in a series of articles on the Columbia River region by Mr. Leon Starmont.

LET'S EXPLORE THE BASIN

(Art. 4)

(By Leon Starmont)

Just to keep the record straight, let's fix another "first" from official records in connection with the Columbia Basin project and the comprehensive plan into which it has developed.

The Bureau of Reclamation demonstrates that the use of Grand Coulee as a reservoir was proposed by a Reclamation Service engineer in 1903. Files of the Quincy project, which became the Quincy-Columbia or West Columbia unit of the three-district project in central Washington, show that Grand Coulee Reservoir was coupled with a dam at the site as early as 1909. But before either of those dates there had been numerous suggestions for watering the Big Bend or for developing water power on the Columbia.

CANAL STARTED IN 1892

The unpublished history by E. K. Vande Vere, printing of which has been suggested at State expense, relates that wells were sunk in Douglas County at State expense in 1889, and that an irrigation canal was started in 1892 for 20 miles from Palouse River through Washtucna. This venture was stopped by the panic of 1893.

The Army's Corps of Engineers, according to records in its Seattle district office, conducted both power and navigation surveys along Columbia River, from the Canadian line to its mouth, as long ago as 1881. In one of them, Lt. Thomas W. Symons, chief engineer of the department of the Columbia, suggested a power dam at Priest Rapids or in that vicinity. Priest Rapids is now part of the comprehensive plan.

Who first suggested a power dam at the present site of Coulee Dam has not been determined, but Symons called attention both to this site and to Foster Creek, where Chief Joseph Dam is now being started. Other reports, all by congressional authority, were made by the Corps of Engineers in 1884, 1888, 1892, 1895, 1905, 1908, 1911, 1914, and 1917.

SERIES OF DAMS PROJECTED

Up to that time all plans for a dam at the head of Grand Coulee had assumed it would be a power dam with navigation locks. The next dam below would be at Foster Creek; the next dam above, at Kettle Falls. These and many others are discussed in the first 308 report of the Army engineers, ordered by Congress in 1927, and printed in 1934.

Before taking up later developments, and starting a tour of the projects now under construction, let's return to that survey made in 1903 of an irrigation canal from Spokane to the head of Grand Coulee, 130 miles.

Charles B. Cox, second in charge of the party, now on the USBR staff at Coulee Dam, tells about it thus:

"The cost of the project was estimated at around $100,000,000 and as the Reclamation Service could not hope to have more than $4,000,000 allotted to Washington from its limited funds, the Big Bend project was impracticable at that time. In fact, I never expected to live long enough to see it developed.

WOULD HAVE SAVED MILLIONS

"Today, the development of the entire project will probably cost close to $750,000,000. We would have saved a little money could we have built it in 1903.

"I recall that we worked a 60-hour week, slept four men in an 8 by 10 tent, ate prodigious meals, and helped ourselves to a gunnysack full of peaches every night—after dark, of course—while camped near the little town of Peach, now inundated by the waters of Roosevelt Reservoir.

"Rattlesnakes along the survey route were so numerous that hardly a day passed without encountering one or more.

"Time was the essence of our survey, and the hike to and from camp was made at the rate of 4½ to 5 miles per hour, with a similar pace maintained between stations during the day. After supper at night, we turned in promptly, and after a few tall tales were soon asleep. Once a month, however, our level man sat up all night relieving the cook of his $40 monthly pay check at poker. Both thought they were good players, but the level man had the advantage of being a good player—at least he always won the money.

TIP FOR WASHLADIES

"Surveys didn't cost much in those days. The entire monthly pay roll of seven men was less than $500, and we really turned out the work. I was paid $60 a month and "found." At a good restaurant today, my "found" would amount to well over $5 a day.

"Saturday nights we washed our own clothes by tying them firmly on the end of a rope and letting them swing back and forth in the swift current of Spokane River all night. I still maintain that this method has marked merit, and the results were surprisingly bright with absolutely no "Duz" whatever.

"Our musical education was not neglected on the survey. I had my violin along, and the chief of party wrestled many evenings with strictly classical music, horribly off the pitch. He was particularly pertinacious after a couple of slugs of whisky, which he kept in his tent and never passed to the crew.

"Our level man was a fiddler, and while not overly fussy about playing strictly in tune, his style and rhythm were marvelous. The cook was a steady singer of salacious songs, and always ready to oblige."

LET'S EXPLORE THE BASIN

(Art. 5)

(By Leon Starmont)

This is an "iffy" article, but no understanding of the Columbia Basin plan is possible without recognition of the numerous unrelated events that led to the present stage of accomplishment.

Jim Rowan, in 1917, would have gone goggle-eyed in amazement if anybody had told him a call for a general strike in Northwest

fields and lumber woods would result in construction of great multipurpose dams at Grand Coulee and Bonneville, Umatilla Rapids and Foster Creek, Hungry Horse, Priest Rapids and maybe Albeni Falls, Ice Harbor, and Hells Canyon.

Jim Rowan was regional secretary of the Industrial Workers of the World, a radical labor organization which had its head office in Cleveland and its Inland Empire headquarters in Spokane. His strike, called for August 20, 1917, was a flop.

BLAINE SEES PEND OREILLE

Ernest Lister was then governor. World War I was on. E. F. Blaine, a well-to-do irrigationist of Grandview, in Yakima Valley, had been named State railroad commissioner, but with the war he became Governor Lister's trouble-shooter, or as some others have put it, "the Colonel House of the Lister administration."

Violence had followed the efforts of IWW organizers for 10 years, and they had been arrested and tried in many localities on charges of impeding the war effort, or outright sabotage or treason. Spokane was a hotbed of radical agitation, and among the strike-threatened areas were Newport, Ione, and Metaline Falls, on Pend Oreille River.

Several Spokane businessmen wired Governor Lister asking for troops to quell expected outbreaks. The Governor sent E. F. Blaine to see how bad the situation really was.

"You can have martial law if you insist, but I don't think you'll like it," he told the businessmen. They did not insist. Federal and local authorities handled the situation. Blaine went on to Newport and the Pend Oreille.

BLAINE INTERESTS MILLER

Sight of that great river fascinated Blaine. He had earlier envisioned the Sunnyside project in his own Yakima Valley, and had seen the Yakima, Wenatchee, and Okanogan convert veritable deserts of sagebrush into bountiful gardens of Eden.

He knew that power projects were already scheduled for Z Canyon on the Pend Oreille, and for Kettle Falls, Priest Rapids, and other locations down the Columbia below the Pend Oreille's mouth. He knew that hundreds of dreamers and scores of engineers had worked on the problem of reclaiming the Big Bend, meaning roughly that portion of central Washington half encircled by Columbia River between the mouth of the Spokane and the mouth of the Snake.

A year later, on a Great Northern train east-bound, he expounded his theories to his friend, H. Lloyd Miller, of Sunnyside, and tried to get Miller to "front" as spokesman for the idea then forming.

"It's your baby," said Miller. "You spring it yourself. I'll help all I can."

Miller is now a member of the State Columbia Basin commission, doubtless the oldest member of that group in years of service to the project. Antecedents, make-up, and workings of that oddly formed State body will be discussed in a later article.

OTHER HAPPENSTANCES

There are half a dozen other points in Columbia Basin history where apparently unrelated occurrences had a hand in shaping destiny. One need not dwell too much on their relative importance.

If the Kansas Legislature in 1912 had not passed the first State blue-sky law there might not have been a panic in 1929, and in that case President Hoover would have been reelected in 1932.

If Senator Miles Poindexter had not depended too much on the longer life of a deal he made with a Washington correspondent in 1916, he would not have gone down to defeat by C. C. Dill in 1922.

If Dill had not been in the United States Senate in 1933, the chances are that President Franklin D. Roosevelt would not have started Grand Coulee Dam on the basis of the Army engineers' report made to Congress in 1932.

If Gordon C. Corbaley, a Seattle chamber of commerce employee, had not ridiculed the name "Big Bend" in 1919 it is unlikely that the name "Columbia Basin" would have been substituted. (Who actually suggested the name is still in doubt.)

STARTED REGIONAL THINKING

If the name "Columbia Basin" had not been attached to a comparatively small part of the Columbia Basin the chances are the possibilities of region-wide planning would not have occurred to Secretary of Commerce (later President) Herbert Hoover and his numerous advisers.

If several hundred engineers, officials, journalists, civic leaders, and politicians had made different choices at any of twoscore decision points between 1918 and 1932, history might be quite different. There is no necessity for going into events of those 14 years in these articles, except as they bear on the present situation at projects or in institutions not yet examined.

The story of how E. F. Blaine returned from Washington, after his trip with H. Lloyd Miller, and electrified the whole Northwest with his revival of the Big Bend's dream has been told too frequently of late to need repetition.

Americans All

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Chelsea Record, Chelsea, Mass., under date of January 10, 1950.

It is brief but timely. It high lights a fact which confounds those who hope to divide our unity by promoting racial and religious tensions.

It proves that our way of life opens the door of opportunity to all and will recognize merit regardless of race, color, or creed.

It illustrates the one great hope of humanity.

The United States would not be the great Nation of free men and free women that it is if it did not recognize, and welcome, the talent and the character implicit in those of our citizens who point with pride to their Polish heritage.

Sturdy, industrious, neighborly, and God-fearing; these, and their passionate faith in democracy, are virtues which we believe in, admire, and share. We are happy to note the increasing participation of our Polish friends in the public life of our United States because it brings strength to our common cause.

Here follows the editorial:

DESERVED RECOGNITION

The banquet tendered by the Polish residents of our community to Alderman Alexander W. Dzengelewski, the first citizen of Polish-American descent to be elected to a position on that board, was truly deserved.

The Polish people are rapidly becoming a more important factor in our community life than ever before. They deserve recognition in the events, in the civic life, and in our municipal government. Some of outstanding, most loyal, efficient and faithful employees in the various departments of the city are the Polish young men and women.

We extend a hearty welcome to them into the broader aspects of the American way of life and judging by their past records, they will make capable leaders and fine citizens.

How To Kill an Oilman

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. REES. Mr. Speaker, under unanimous permission granted me by the membership of the House, I am including an editorial that appeared in the Tulsa Tribune under date of January 24, 1950.

The article is entitled, "How To Kill an Oilman." This statement is particularly interesting at the present moment for the reason that the problem involved is presently under consideration by the Ways and Means Committee of the House.

The article follows:

HOW TO KILL AN OILMAN

If President Truman had set out deliberately to destroy the independent oil-producing industry in the United States, he could not have picked a better way than to urge elimination of the depletion clause of the Revenue Act, or a more opportune time, when producers are harassed by other serious problems.

Crude-oil production in the United States has been curtailed substantially because of increasing imports of foreign oil. A large part of the export market for American oils was lost through the British ban on imports of American-dollar oil into sterling areas. More will be lost, in fact, our oil export trade may be wiped out, when Europe completes its vast program of expansion of oil-refining facilities, partially financed by American taxpayers' dollars through contributions by the Economic Cooperation Administration.

Elimination of the depletion clause would wreck the independent producing business in the United States. It would prevent producers from getting back capital invested which is necessary if they are to continue in business. It would reduce exploratory work and the finding of new oil reserves to an extent which would menace the security of this Nation. It would make us, within a few years, dependent on foreign oil which might be shut off in case of war.

President Truman's references to the oil-depletion clause, in his tax message to Congress Monday, are most misleading. He evidently was given information on a few abnormal cases and based his statements on them rather than on actual conditions which obtain for the oil-producing industry as a whole.

No other industry is as hazardous as that of the oil producer. During last year 82 percent of all wildcat wells drilled in the United States were dry. Only 15 percent found oil and 3 percent were gas wells. Even in an area where oil already has been found, drilling is a big gamble. Of all such wells drilled last year, called development wells, 25 percent were dry, 66 percent produced oil, and 9 percent produced gas. Of the total number of wells drilled in the United States last year—wildcats and development wells—37 percent

UNIVERSITY OF MICHIGAN LIBRARIES

were dry, 56 percent produced oil, and 7 percent produced gas.

Congress realized this situation and the necessity, if exploratory work were to be continued, of returning to producers, tax-free, capital invested in finding and producing oil. Capital is not taxed. Only income from capital is taxable.

So Congress, in 1916, adopted the cost-depletion method of returning capital to producers. It was difficult to figure depletion on that basis and in 1918, Congress passed the recovery-depletion method. This involved endless engineering, legal, and accounting work so Government made a survey of oil production operation for the years from 1918 to 1925 to determine a fair and simple depletion law.

That survey by Government showed that during those years the annual average depletion of capital invested by producers in finding oil and producing it was between 32 and 33 percent of the gross income of producers. So the House of Representatives in 1926 passed a bill providing for a percentage-depletion allowance on gross income from a producing property of 30 percent in figuring taxes. The Senate passed a bill permitting a depletion allowance of 25 percent. In conference, the present percentage-depletion allowance of 27½ percent of gross income from a property (but in no event more than 50 percent of the net income from the property) was adopted and enacted into law.

When oil or gas is produced from a property, there is a reduction in the capital represented by that oil or gas in place. The depletion allowance is designed not only to permit the producer a return of that amount of capital, tax-free, but also a return of capital invested in finding that oil or gas.

That is a point Mr. Truman failed to mention. He stated, "In the case of oil * * * the depletion exemption goes on and on, year after year, even though the original capital investment in the property has already been recovered tax-free, not once, but many times over."

Each individual producing property, or lease, is considered separately in figuring the depletion allowance. Some producers have drilled 20 wells before finding oil. Their capital investment in finding oil is far greater than the capital invested in that twenty-first well.

So, while the depletion allowance for one producing property may, over a period of years, total more than the investment in that one property, it still falls short, in most instances, of returning to the producer all the capital he has invested in various properties in search for production. As the Government survey showed, the depletion allowance for the producing industry as a whole should be 32½ percent instead of the present 27½ percent.

Independent oil producers constitute only a part of the number of persons who would be harmed by elimination of the depletion clause. In 1948, the oil industry paid out $1,200,000,000 in oil royalties and lease bonuses and rentals. This money was expended in 37 States, 28 of which are oil-producing. Farmers, merchants, and others in all lines of business benefited from these payments. More than 200,000,000 acres, or 10 percent of the area of the United States, is under lease for oil and gas exploration and development by oil and gas companies.

Government says this Nation is running out of oil. The Department of the Interior is urging the oil industry to construct costly plants to manufacture synthetic fuels from oil shale, gas, and coal. Producers are investing vast sums in exploratory and development work in an effort to find new oil reserves. The discovery well in the Elk City field of Oklahoma cost $750,000 to drill and that cost did not include $750,000 to $1,000,000 spent previously in exploration and preliminary development work.

Does anyone believe Shell Oil Co. would have spent that amount of money, and many millions more in developing the field, if it had not felt it would get back at least part of its capital investment through the depletion allowance?

A policy which would eliminate the depletion clause in the revenue act and still permit large imports of foreign oil would be more than the domestic oil industry in the United States could bear.

If Congress wishes to hasten the end of this great industry, so vital to the welfare of the Nation, to business, and the American standard of living, let it go ahead and adopt this twin policy of destruction. If it wants to foster this vital industry, it will continue the present depletion clause in the revenue act, and restrict imports to a figure which would supplement, not supplant, domestically produced crude oil.

Ernest Lynn Kurth—Man of the South

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. DAVIS of Georgia. Mr. Speaker, on December 14, 1949, Mr. Ernest Lynn Kurth was honored in Lufkin, Tex., by two awards presented to him on that date. One was a certificate from Dixie Business Magazine, published at Atlanta, Ga., certifying that he was chosen as the South's man of the year for 1949 in a poll of editors, industrialists, bankers, and other leaders of the South. This award was delivered by Col. Hubert Lee, editor and publisher of Dixie Business magazine.

The Houston Post in its issue of December 14, 1949, carried an interesting article regarding the exercises at which the awards were made. Under leave previously granted, I am inserting this article herewith:

HIGH TRIBUTE PAID TO KURTH AS "MAN OF THE SOUTH"

(By Brian Spinks)

LUFKIN, December 14.—Ernest Lynn Kurth, a 64-year-old industrial giant of the East Texas piney woods, a native son hailed as a living example of what free enterprise can accomplish, officially became the "man of the South for 1949" Wednesday night.

He was formally notified of his selection for the honor at a testimonial dinner here as the culminating event of what had been planned as an all-day program in which a grateful community, State, and region accorded him an impressive accolade. It was a tribute such as few men receive in their lifetime.

High governmental officials, headed by Gov. Allan Shivers and United States Senator TOM CONNALLY, joined with leaders of business, industry, and finance, and with residents of Angelina County in showing their appreciation for what he has done to bring industrial progress and prosperity to Texas, the South, and his part of the State in particular.

Two awards were presented Mr. Kurth at the dinner. One was a certificate from Dixie Business magazine, published at Atlanta, Ga., certifying that he was chosen as the South's man of the year for 1949 in a poll of editors, industrialists, bankers, and other leaders of the South. He received it from the hands of Hubert Lee, editor and publisher of the magazine.

The other was a certificate from the Texas Manufacturers Association naming him the industrialist of the year. It was presented by Ed C. Burris, vice president of TMA.

At the dinner in the Lufkin High School gymnasium, attended by hundreds of visitors from over the State, including a large group from Houston, Mr. Kurth heard himself lauded for his vision, for his business courage, for his humanitarianism for what he has done to open new vistas of opportunity for the entire South, for his sense of civic responsibility, and for his contribution to the economic growth of the State.

A cold rain which fell throughout the day interfered with what had been planned as a full day's program of activity. The bitter, unpleasant weather cut down substantially the number of visitors expected for the event.

A parade of Angelina County industry scheduled for the afternoon was called off, although some of the floats drove through the streets in the rain. It had been planned for Governor Shivers to lead the procession, but he was delayed in arriving from Austin.

The 200-piece band of Texas A. & M. College showed up despite the weather, but there was no parade for it to march in.

A reception for the notable visitors was held late in the afternoon at the Lufkin Country Club, just preceding the dinner.

A. E. Cudlipp, Sr., chairman of the local committee for the observance and vice president of the Lufkin Foundry, presided as master of ceremonies for the banquet, which was high lighted by the two presentations to Mr. Kurth.

The keynote address was given by Senator CONNALLY. The other speakers were Governor Shivers, former Governor W. P. Hobby, president of the Houston Post; Judge Ireland Graves, of Austin, Mr. Kurth's roommate at Southwestern University; Dr. C. C. Cody of Houston, Mr. Kurth's physician; Morris Frank, of Houston, and Don G. Mitchell, of New York, president of Sylvania Electric Products Co.

Miss Mona Paulee, mezzo-soprano star of the Metropolitan Opera Co., who flew here for the event, sang, accompanied by Dr. Leonard Grimmett of Houston. Doctor Grimmett is with the M. D. Anderson Foundation and formerly was a concert pianist in England. There also was music by a string quartet.

Melvin Kurth, of Houston, brother of the honored industrialist, responded to the presentation of the Dixie Business Award by Editor Lee, while Mr. Kurth himself accepted the TMA certificate.

Cal C. Chambers, president of Texas Foundries, Inc., gave a eulogy of Mr. Kurth in behalf of the citizens of Angelina County. The invocation was by Dr. William F. Finch, trustee of Southwestern University, Georgetown.

Jesse H. Jones, of Houston, was scheduled to introduce Senator CONNALLY, but was unable to attend. The Reverend James Savoy, Episcopal rector of Lufkin, gave the invocation.

Mr. Kurth, in his acceptance speech, said: "In our community we have a partnership, no so-called leaders, but a partnership of people with honest regard for one another * * * a partnership of people with an eye to progress and the well-being of their neighbors.

"To me, this partnership reflects the highest ideals and traditions upon which our country was founded. It graphically represents, with all its glistening qualities, the ability of men working, dreaming, envisioning new horizons together to accomplish good and lasting things."

That is why, he said, he accepted the honor also for the men and women of Angelina County, for his friends, and for the future generations who will chart new paths to progress.

Governor Hobby, in his tribute to Mr. Kurth, described him as a country boy who

went to town in a big way and took his town along with him.

"God never made a better man, and the eyes of the South never looked upon a nobler son," he said.

He had begun his speech by saying that although Mr. Kurth was being called the Man of the South for 1949, people in Texas know that he is the man of the South for all time.

"Mr. Kurth is more than the pioneer of the newsprint paper industry in the South," Governor Hobby went on to say. "When we say 'free enterprise' we think of him as the kingfish," he said. He pointed out that Mr. Kurth, who heads 16 east Texas firms and advises dozens more, is the son of one of the earliest lumber men in the State, and was one of the first to advocate and practice forest conservation.

Nor has Mr. Kurth overlooked the humanitarian side of human needs, Governor Hobby said. He pointed to the fact that Mr. Kurth is president of the first and only hospital in the United States built by an employer expressly for the use of his workers.

After reviewing Mr. Kurth's youth and early business career, Governor Hobby remarked:

"It has always been a policy of the Kurths to share their good fortune with the community that has made their prosperity possible."

He mentioned that Mr. Kurth's mother, Mrs. Hattie Martin Kurth, built the first church home for the Keltys Methodist Church, and that his father, Joseph H. Kurth, Sr., gave Lufkin its beautiful Kurth Memorial Library in her memory and endowed the Kurth student loan fund.

It was only natural for Mr. Kurth to put a large part of his profits as a businessman back into Angelina County and the South.

The way he chose to do this, Governor Hobby said, was to help young enterprises to get started, to lead the South in saving its forests and to open a whole new industry—"one that has meant more to the South than any development of this decade."

Mr. Hobby called the testimonial to Mr. Kurth an epochal expression of esteem for a great citizen.

Earlier, Governor Shivers, in paying his tribute to Mr. Kurth, saluted him as "Mister East Texas." Wednesday was, the Governor said, not only a great day for Lufkin, Angelina County, and east Texas, but also for the entire State. He commended Mr. Kurth as a man interested in seeing that freedom is cherished in the future as in the past.

United States Senator LYNDON B. JOHNSON, who was added to the program to introduce Senator CONNALLY, because of the inability of Mr. Jones to attend, told the large audience that filled the gymnasium that Mr. Kurth's career offered a lesson.

Recalling how Mr. Kurth helped his employees to help themselves during the depression years, Senator JOHNSON said:

"If all businessmen had been what Ernest Kurth sincerely tried to be, there would have been no WPA for the jobless. There would have been no NYA for the youths who needed help so badly, and there would have been no soup kitchens in our metropolitan areas.

"Through all his years of leadership, Ernest Kurth has never permitted any government to take over the duties of his conscience and his heart," the Senator said. "He has not allowed the state to be a better neighbor than he is."

Harry M. Seaman of Houston, president of the Southern Pine Association, a position which Mr. Kurth once held, presented Mr. Kurth with a token of appreciation from the lumber industry. It was a Swiss clock cased in pine.

Mr. Mitchell, whose subject was "Let Us Not Sell Our Birthright Short," pointed to the basic conflict between security and freedom and held out the trend toward industrial decentralization as offering an opportunity for young men and women of the South to find opportunity close to home.

Senator CONNALLY, in his keynote address at the dinner, praised Mr. Kurth as a businessman, as a citizen, as a civic leader and above all as a great pioneer in the American tradition.

He said that he took a personal interest in the Southland Paper Mills project and assisted Mr. Kurth in getting favorable action on his plans by the War Production Board and the Reconstruction Finance Corporation.

Senator CONNALLY said that Texans do not want a State that is wholly industrialized.

"We want a State balanced in its economy. We want industry and we want agriculture and ranching and the other enterprises which we have had in the past," he said. "We do not, however, want to pay unnecessary tribute to the manufacturing industries of other sections. We want to utilize our own resources and contribute to the economy of our own people."

In his praise of Mr. Kurth as a pioneer, the Senator said that he is the type that built America and Texas.

"He pushed out into untried and unknown industrial development, in which there was hazard; in which there was risk; in which it took courage to achieve," the Senator said. "He went into new fields and has reaped rich rewards."

Despite all of his achievements, the Senator went on to say, Mr. Kurth has remained democratic in his attitude and devoted to the well-being of all people.

The certificate presented to Mr. Kurth by the Texas Manufacturers Association designating him as "industrialist of the year" was signed by Mr. Burris and Robert E. Clements of Amarillo, president of TMA.

Mr. Lee, in presenting the certificate for Dixie Business magazine, said that although many publishers have dreamed of developing an American newsprint supply, Mr. Kurth was the first to do it.

Mr. Lee explained the manner in which Mr. Kurth was selected for the honor. His nomination, incidentally, was seconded by Oveta Culp Hobby, executive vice president of the Houston Post, he said.

Mr. Kurth received 5,000 votes out of more than 50,000 cost. Many of those who voted were not readers of his magazine, Mr. Lee said, and some are in foreign countries. The selection of Mr. Kurth was made from a list of 50 of the South's foremost business leaders.

Scores of congratulatory telegrams were received by Mr. Kurth, some of which were read at the dinner. One was from Mr. Jones.

Mrs. Connally, wife of the Senator, and Mrs. Hobby were among the women who were introduced at the dinner.

Ruhr Authority Farce—I. G. Farben Still the Boss

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include two editorials that appeared in a recent issue of the magazine Prevent World War III issue of November-December 1949. published by the Society for the Prevention of World War III, Inc. These editorials are entitled "Ruhr Authority Farce" and "I. G. Farben Still the Boss:"

RUHR AUTHORITY FARCE

With front-page headlines in the press and pompous speeches by top officials, the Allies announced to the world last year that Germany's war arsenal, the Ruhr, would be a thing of the past. In accordance with the deepest desire of all peoples, so these announcements read, the Allied powers had set up an International Control Authority for the Ruhr. This so-called international authority was supposed to be the last word in the development of super safeguards that would prevent the Ruhr from being employed again as an aggressive instrument. In addition, the Allied representatives in Germany boasted that this international authority would take all steps to insure that the Ruhr would work for all of Europe.

Most people reading the contents of this agreement applauded the decision as evidence of the good faith and intentions of the occupying powers. Those of us, however, who read between the lines of the agreement, found little comfort.

In its press release of January 1949, the Society for the Prevention of World War III called a spade a spade. We said that those who were responsible for the new plan to "internationalize" Germany's war arsenal, the Ruhr, achieved a notable victory in public relations. Though the agreement served to placate those who feared a resurgent Germany, in reality it was mere window dressing, hiding the fact that the control of the Ruhr was not international, nor did it meet the security and economic requirements of Germany's victims.

The reemergence of the Ruhr magnates who served Hitler with enthusiasm should have been a broad enough hint to all peoples concerned that the international control authority for the Ruhr could only be nominal, because it lacked the power to truly prevent the Ruhr from becoming a new base for German aggression and economic domination. Yet there were many sincere people who, while in accord with our analysis of the agreement, suggested that we give it a chance before making a final judgment. Well, almost a year has passed, and as the saying goes, "By their fruits ye shall judge them."

We challenge anyone to tell us just what this International Ruhr Authority has accomplished since its inception. As recently as September of this year the press reported that members of the International Ruhr Authority complained that they received no authority to implement the powers allegedly granted to them. They made a further revelation. It was disclosed that the German coal and steel trustees "were in a position to receive more information and to carry out more authority than the International Ruhr Board itself."

The Ruhr Authority has not only been twiddling its thumbs all these months, but it has been grossly understaffed and many of its top officials are either glorified office boys or men who have not the slightest understanding of the Ruhr and its role in German history.

Matters have recently reached such a point that the French representative on the Authority, Ambassador Maurice de Jean, threw up his hands in disgust and despair at a meeting, realizing that it is just a paper organization which acts as a front for the real control which is vested in the Germans themselves.

In spite of all its shortcomings, the International Ruhr Authority could have played a significant part in controlling the resources of the Ruhr with a view toward facilitating economic recovery and independence of Germany's neighbors. This could have been

UNIVERSITY OF MICHIGAN LIBRARIES

achieved providing that there was a genuine desire on the part of the Allied authorities in Germany to infuse the Ruhr Authority with real powers. But nothing of the sort has occurred as yet. On the contrary, there seems to be a deliberate plan to discredit the International Ruhr Authority, to limit its scope of activities, and thus paralyze its usefulness. This is the German hope and was expressed in a speech made in January 1949 by one of the top politicians of Chancellor Adenauer's party, Dr. Walter Strauss. He told his fellow Germans that the powers of the International Ruhr Authority must be abolished for "it should be appreciated that the German claim is for priority to be given to the requirements of the German economy * * *."

Strauss was not talking through his hat when he said that the International Ruhr Authority must be subordinated to the interests of the new Germany. This became clear when the French recently urged that the International Ruhr Authority investigate Germany's deliberate price discrimination on the export of Ruhr coal. It is a decisive issue in the economic recovery of Europe today.

The general practice of the Germans is to sell Ruhr coal abroad at a higher price than that which it obtains in Germany itself, which means that it is far more expensive, for example, for the French to produce a ton of steel than for the Germans. This, in turn, enables the German steel industry to keep down the steel industries of other nations and rise again to its former power when German steel dictated the politics of the Continent.

In reply to the French request that the International Ruhr Authority investigate this situation, the New York Times reported that United States officials opposed "this use of the organization." Here was a concrete instance where the Ruhr Authority could have made an invaluable contribution toward making a more equitable economic relationship among the nations of western Europe, but the United States representatives vetoed the suggestion. Which leads us to the question: What is the International Ruhr Authority supposed to do? If it cannot exercise prerogatives which, according to the agreement, were given to it, why should the taxpayers of this country and our allies support it?

It would have been far more helpful if the United States officials, who are protecting the interests of Hitler's industrial warlords, announced to the world that in reality their aim is to curtail the powers of the International Ruhr Authority. Such an admission, at least, would dispel the illusions which have confused the people as to the character of this organization. On the other hand, the continuation of this farce can only serve the purposes of the Germans and their American Charlie McCarthys. This, of course, is precisely what the Germans want.

It should be remembered that when the International Ruhr Authority was organized, the Allies assured the world that it would never become an instrument of German interests. It was supposed to work for all of western Europe and was intended to be recognized as an independent power whose recommendations and activities were to be respected by all those who joined in establishing it.

The refusal of the United States and British representatives to allow the International Ruhr Authority a semblance of its potential powers exposes another of the postwar tragic comedies to which the people have been subjected since the end of the war.

I. G. FARBEN STILL THE BOSS

In the last issue of Prevent World War III we published a short editorial in which the notorious record of Herr Herman Buecher, I. G. Farben "trust buster" was disclosed.

We pointed out that Buecher is the chairman of the I. G. Farben Dispersal Panel (Fardip) which is charged with the administration of the Farben assets. This organization is supposed to play a key role in "breaking up" the Farben empire. We indicated, however, that Buecher was one of Hitler's staunch supporters, a friend of the German banker, Von Schroeder, who was the midwife of nazism. Buecher was also a director of Hermann Goering's 12-man Armament Council.

Taking advantage of these powers, Herr Buecher was able to expedite the delivery of efficient electrical devices to the Siemens Trust which were used in the gas chambers of Auschwitz and Buchenwald. On the basis of our findings concerning Herr Buecher, intuition told us that with a little research we could uncover similar facts with regard to some of his associates on Fardip. We were right! There was ample documentation published by the United States Government and its agencies which reveal the character of some of his German cronies in the Farben Dispersal Panel.

For example, take the case of Gustav Brecht, a member of Fardip. Brecht was a key director of the Deutsche Bank which, in cooperation with the Nazis, played a decisive part in the looting of Europe. Furthermore, Brecht had long been associated with the German coal cartel. He was an active operator in many of Germany's war industries and participated in the aryanization of companies which did not conform to Hitler's racial theories. Because of his "selfless sacrifices" for the Nazi cause, Brecht was rewarded by Hitler and received the title of "Wehrwirtschaftsfuehrer" (war economy leader).

According to a report on the Deutsche Bank made by members of the American Military Government, "the phenomenal upswing in Brecht's career after March 1933, shows that he was a participant and beneficiary in the nazification of Germany." Though he denied direct affiliation with the Nazi Party, the report discloses that Baron Von Schroeder "has repeatedly characterized Herman Brecht as a Nazi." If anyone was in the position to know who was a Nazi among Germany's industrialists—Baron Von Schroeder was certainly the man.

One of Brecht's companies, "Rheinbraun," and its sister companies and subsidiaries, were notorious employers of slave labor. It has been estimated that up to 30 percent of their working forces consisted of peoples from all parts of Europe who were thrown into the Nazi slave pens. Like a hungry vulture, Brecht followed the Nazi machine in Europe, despoiling property and stealing it from its legitimate owners, under the protection of Nazi bayonets.

The American investigators of Brecht's activities characterized him as "a reluctant, inconsistent, and evasive prisoner." (Who freed him and why?) They concluded that within the meaning of Paragraph 1A of Article II of the Control Council Law No. X dealing with the prosecution of German war criminals, Brecht had committed "a crime against the peace." So much for the war criminal Brecht.

Another Hitler supporter on Fardip is Dr. Eugene von Ritter. Von Ritter is a partner in the German bank Merck Fink & Co. American investigators in Germany reveal that his bank participated with the Deutsche Bank in the creation of a special German bank for Japan that would facilitate the opening of a "new and potentially important channel for expansion in the Far East." This new bank underwrote the alliance between German and Japanese imperialism in the Far East and was guided by Hellmuth Pollems, the right-hand man of Herman Abs, one of Hitler's most dependable henchmen.

The War Department in its study of Germany's industrial war lords, classified Von Ritter as one "who in an outstanding way thrived under National Socialism, who welcomed it in the beginning, aided the Nazis to obtain power, supported them in office, shared the spoils of expropriation and conquest or otherwise markedly benefited in their careers or fortunes under the Nazis."

The Farben rogues gallery, however, is by no means complete. True, there was a trial which had as its ostensible purpose the prosecution of some of Farben's top officials. But this trial now turns out to be a mere formality, for it is now clear to those who have closely followed the Farben story that most of the old gang is back in power again.

This is especially true in the British zone where a flock of Farben officials have returned to power. At Leverkusen, for example, one of Farben's chief officials, Ulrich Haberland, is the general director. He was involved in the slave labor traffic up to his neck. When American prosecutors tried to take him into custody for interrogation, the British refused to let him go.

Another gentleman who has returned to the scene of his crime at Leverkusen is Wilhelm Mann. Mann is in charge of pharmaceutical sales. This is his specialty, for he ran the Bayer agency of I. G. Farben abroad prior to the war. He was a faithful servant of the Nazi program. As early as 1933, he directed a purge of his organization to insure that "only those representing the National Socialist point of view and acceptable to the Nazis" would be employed in the Farben outlets throughout the world. His pro-Nazi activities were so clear-cut that he was actually placed on the docket at Nuremberg, but he escaped punishment.

Gajewski, another Farben criminal and former defendant at the Nuremberg trial, is also free and is running the Elberfeld plant in the British zone. To a lesser extent, the same situation is found in the French zone of occupation.

The characters mentioned above are only a sampling of the many Farben empire builders who are back at their jobs.

Here is a tragic picture which hardly needs comment, for it clearly reveals the degree of moral bankruptcy which is undermining the original aims of the occupation of Germany.

How can one explain the growth of this nest of Farben war criminals and their accomplices, when all the facts about their crimes have been documented by the occupation authorities themselves? How can one dare to justify the retention of the three German war criminals, members of Fardip, who have been entrusted to break up I. G. Farben?

The Garland-Ferguson Committee which made an admirable report on the deliberate failure of American officials to decartelize Germany, declared that Farben was an exception. We believe that they would have never reached that conclusion had they been presented with the above-mentioned facts and additional material which is kept under lock and key. General Clay, as Military Governor, was in the position to know the facts which we have cited. If he was unaware of them then he was indeed a poor representative of the people's interests in Germany. On the assumption that he knew the character of these men and that they were entrenching themselves again in the Farben set-up, why did he fail to act?

The facts must also be known to his successor, Mr. John J. McCloy. But apparently he is too busy these days discrediting the dismantling program.

It is true that these disgraceful conditions are, to a large extent, the immediate responsibility of the British. They have always been reluctant to upset the sacred status quo in their zone of Germany. Their record is black indeed as far as decartelization and the prosecution of German war criminals is concerned.

There was a time when the United States could do little about the goings-on in the British zone, because it was solely British responsibility. But that day has passed.

When Germany-firsters, in and out of the military government, wanted to curtail the delivery of reparations, they found the means to make the British comply.

It is obvious that if Mr. McCloy had the desire to clean up the Farben scandal, he could very easily do so.

In the first place, the American set-up to control Farben in the United States zone is grossly overworked and understaffed. There are hard-working Americans in the organization, but how can a few watch over a vast empire which stretches from Berlin to Buenos Aires? McCloy is fully conversant with this situation but has failed to take remedial action thus far.

In the second place, Mr. McCloy's past connections with the Farben empire should also be taken into consideration. In our judgment, Mr. McCloy will move only when the pressure of public opinion can no longer be ignored.

No Emergency

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "No Emergency," from the Altoona (Pa.) Tribune of Wednesday, January 18, 1950:

NO EMERGENCY

It must stand as a very dark blot indeed on President Truman's record that he has insisted upon playing politics with the coal situation and Mr. Lewis.

Mr. Truman has placed politics ahead of his country's welfare.

A certain bigness of character is expected of the President of the United States. It is not to be expected that the President would permit an economic weak spot to endure in the country if he had the power to do something about it.

The miners have not worked full time since last June. That is fair neither to the miners, who need the work, nor to the Nation, which needs the coal they could produce.

The miners were granted good wages and certain other demands by their employers last year, but they have not had the opportunity to enjoy what they have been given. They have not had a full year's work in a long time because of Mr. Lewis and his desire to display his power once a year.

There are generally two sides to every question. Yet, the plain facts appear to be that the chief of the United Mine Workers will not let his men work a full year or a full week.

It is not to his credit that he has stalled for months in his demands nor that he has adopted the attitude of "I'll win this fight if it breaks every coal miner in America."

In neighboring Pennsylvania communities to our west, miners are facing difficult times. Some company stores have ceased to extend credit. Miners' bills have been mounting. Their families and their children are beginning, even, to want for food.

Over in Pittsburgh, a steel company has cut production and laid off 1,000 men. The city's biggest electric utility company warns that it must shut off industrial electric power Friday for want of coal. If that occurs, many industries will be forced to close, many will be out of work.

Coal dealers have wired the President that "the emergency in coal has become a crisis."

If cold weather seizes the district many persons may suffer, the dealers warn.

Generally those who suffer most in such instances are the poor, who cannot lay in sufficient reserves of coal to see them through the winter.

We do not know, of course, how Mr. Truman views an emergency.

He and the New Deal have developed one emergency after the other in this country in the last 15 years or so. Perhaps the coal crisis does not now threaten the very fabric of our Nation, if that is what Mr. Truman now means by "emergency."

But certainly an emergency exists in the lives of many thousands of Americans due to Mr. Lewis and his enforced coal shortage.

There is one means at hand provided for just such an occasion as this long coal crisis. It is the Taft-Hartley Act.

Mr. Truman has used it several times. But he campaigned on a prominent plank calling for repeal of the Taft-Hartley Act. It would weaken his political ammunition if he were forced to use the Taft-Hartley Act now even if it would solve the problem, as it is generally believed would be the case.

The miners themselves are rebelling. Mr. Lewis' suggestion that they go back to their 3-day week Monday was refused by some 81,000 up until Tuesday night. They said they are disgusted, sick of the 3-day week. They need the work. It is "5 days or nothing" they are saying.

Union officials deny it is a revolt. But, put it how you will, the men are not doing as John L. says this time.

Despite this pressure from the public, Mr. Truman said Tuesday again, for the third or fourth time, that he plans to do nothing, since no national emergency exists. "The time has not yet arrived," Mr. Truman told Senator Brewster.

Is Mr. Truman waiting for national catastrophe? For economic collapse, for riots, joblessness, stalled industry, cold and hungry people?

Is that an emergency? Or does an emergency exist when such dire things are threatened.

It seems ridiculous, tragic, even, to quibble thus in the face of such an important national need, a need to which the President consistently has refused to rise.

It is time Mr. Truman stops playing politics, and acts for the real welfare of the people instead of talking vaguely about a welfare state, which would mean only their ultimate ruin.

Mr. Speaker, events have transpired, and the President is now invoking the Taft-Hartley Act. It is a good, workable piece of legislation, for the best interest of labor, management, and the country. But the Taft-Hartley Act will not work unless the President of the United States, whose duty and responsibility it is to see that it is executed, is sincere in his desire that it work. Remember the old saying: "You can drive a horse to water, but you cannot make him drink." You can force the coal miners into the pits but you cannot make them work.

It seems to me we as a Nation are getting in pretty bad shape when arrogant, radical labor leaders are able to tie this country up to the point of strangulation. When we reach such a point, watch out labor; watch out capital; watch out, Mr. President, that Joe Stalin does not take us over. History proves this is the way he operates.

This warning is meant as much for the President of the United States as it is for the worker, the Member of Congress, or any good sound-thinking American citizen.

A Parable on Communism

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I bring to your attention the following parable by Mr. Karl Baarslag, the able and energetic research expert of the Americanism division of the American Legion, which I present for the enlightenment of the American people. It should be read carefully and the proper moral should be drawn from it:

THE PARABLE OF THE VANISHED VILLAGE

Once upon a time, long, long ago, there was a peaceful and contented village hard by a rocky and desolate ravine. In a cave in the ravine lived a wild and ferocious beast. For many years the villagers ignored the existence of the animal because village elders and wise men had decided that it would speedily succumb to its own suicidal tendencies and lack of common sense. When the beast began to raid the flocks of the village grazing in the upper stretches of the ravine, the herdsmen prudently withdrew their animals to an area closer to the village where they could be better guarded. Nevertheless, the emboldened beast ranged farther and farther in its nocturnal depredations, finally destroying and running off with cattle and sheep close to the village limits. It also had killed a hunter returning from the forest and had seized and devoured a small child which had strayed from the safety of the village confines.

Badly alarmed and deeply concerned, some of the villagers now began to hold numerous emergency meetings on what to do about the beast. Debates raged far into the night but they found themselves badly divided in opinion. Some argued that the beast was really not carnivorous or destructive but had become so accidentally and that it would undoubtedly return to a vegetarian diet later when it found meat unavailable. Learned men and philosophers, none of whom had ever seen the beast or studied its ways, speculated at great length and with profound wisdom on its nature, origin, and destiny. Others, obviously the victims of hysteria, described it as a most frightful monster which bore no resemblance to any other form of animal either they or their ancestors had ever encountered. Some of the more practical and solid citizens argued sagely that the beast had already received too much hysterical publicity and that it should be ignored out of existence. One of the most respected of the village elders even thought that it should be laughed out of existence.

That night two more children were horribly killed by the prowling beast. Several fine beef cattle also were destroyed, substantially cutting down the village's food supply. This led some of the village witch doctors and medicine men to the belief that only positive means should be adopted and that they should breed cattle and sheep able to outrun the beast and with improved breeding methods they might be able to develop herds whose flesh and hides would be practically resistant to the wild animal's fangs and claws. That night 16 sheep and several more beef cattle were destroyed.

The villagers thereupon tried every conceivable countermeasure advised by their medicine men and witch doctors. A stockade was built across the upper ravine. The beast simply outflanked this by coming over the mountain and descending on the village from

another direction. It ran off with a small boy after killing a woman gathering berries. After this berry picking was banned and all children were confined to their huts. The infuriated and apparently mad beast trampled down their crops and harried a number of sheep and cattle to death, apparently for the sheer lust of senseless destruction. Fires were built and tom-toms beaten all night long to frighten it away. The village's best orators held forth in long declamations against the animal which had now become the scourge of their existence. Medicine men and witch doctors exhausted their ancient arts by brewing every known form of magical potion and casting every known and secret form of incantation and spell. The beast fell upon several of these tom-tom drummers and mumbo-jumbo men at the edge of the forest, harrying them to death. That night the destruction of their stock was the heaviest in years, with the already drastically curbed food supply dwindling day by day.

It was now plain that the beast or monster, whatever it was, had whelped, as there were smaller-size tracks in evidence after this most disastrous foray. The village debates now became embittered and furious. Everyone agreed that something must and should be done but they were unable to agree upon any recourse or remedy. The local chapter of the Society of the Prevention of Cruelty to Anmals, for example, argued that the beast and its young had to eat in order to live, and that it had, under their basic law and constitution, the very selfsame rights to life, liberty, and the pursuit of its own admittedly peculiar form of happiness as they claimed for themselves. Destroying the beast would be but a step to destroying their own cherished freedoms. This humane principle won wide support among the more intelligent and liberal element of the villagers. And those who had no children and no cattle to lose and who lived safely near the center of the village and who had never seen even the track of the animal seemed to be full of far more advice and knowledge on what not to do than the direct victims of the beast's marauding.

By this time the villagers were panic-stricken. All normal village pursuits and means of making a living had become impossible, as the emboldened beast and its whelps ranged far and wide, raiding and destroying by day as well as by night. The village elders were in practically continuous session trying to find ways and means of ending this frightful incubus which was poisoning their very existence.

At this point a few of the village's hunters came forward with an altogether unique and revolutionary proposal. They had tracked and studied the beast from hiding places in the trees near its cave. They reported that while the animal was of enormous size and far better equipped with saber-like teeth and destructive claws than any other animal previously encountered in their past, it definitely was not supernatural or invincible. Why not simply organize a mass hunting party of the most fearless and trained fighters of the village, proceed to the cave and destroy the evil animal and its young thus ending for all time the horrible nightmare. This extraordinary proposal was promptly rejected by the village elders and wise men as entirely impractical and "a purely negative approach to the problem." It was further intimated that these "beast-baiters" as they came to be known really suffered from hallucinations and that they probably thought they saw the beast under every bed. That night three of the medicine men engaged in casting spells in the direction of the cave were pounced upon at the outskirts of the village and horribly mangled to pieces. Their few remaining cattle were also nearly decimated.

The villagers now sat frightened and huddled in their huts never knowing where the dread animal would strike next. They no longer dared to forage abroad for food for their hungry children many of whom died of malnutrition. With time on their hands the village wise men and elders debated endlessly and futilely on the nature of the beast and what, if anything, they should attempt to do about it. They were never able to reach any agreement, each villager having different ideas and suggestions. The beast-baiters had been locked up in a strong hut set aside for the feeble-minded. It was perfectly plain to the rest of the more level-headed villagers that their perfectly idiotic idea of proceeding to the cave and destroying the beast and its young was not worthy of serious consideration as it was entirely negative and impractical and dangerous besides. Strongly worded resolutions and fiery denunciatory speeches were deemed far more efficacious. Others insisted that emphasizing the undeniable benefits of their communal life and their cultural advances as compared with the horrible, dank lair of the monster were the only correct and positive approaches to the problem.

Centuries later archaeologists stumbled upon the ruins of the village. The few remaining inhabitants had apparently died of starvation while debating on the village green despite the fact that their valley was a particularly fertile and sheltered one. The scattered skeletons of other villagers indicated that they had been destroyed by some extremely ferocious and powerful animals. No other trace of their culture or cause of their extinction was apparent. They appeared to have been a people with a high order of intelligence, well equipped with weapons and otherwise perfectly capable of defending themselves.

United States Withdrawal Policy in Asia Encourages Reds on All Fronts

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. JUDD. Mr. Speaker, the following article by the distinguished foreign-policy analyst, Edgar Ansel Mowrer, is the first public statement I have seen that the Truman administration is prepared, if necessary, not only to let the mainland of Asia go to the Reds, but also to abandon Japan and the Philippines, too, if the Communists make a determined move in their direction. This has actually been the policy for a long time. The dust for whose settling the State Department is waiting was thrown in the air by itself to keep our people from seeing the stark bankruptcy of American foreign policy in Asia. Many people have known the truth for months but I for one had hoped that before it became public knowledge, to the Kremlin as well as to us and its victims, the administration would come to its senses, forget about its face, and start thinking about our security enough to change the policy—adopting for Asia the policy of helping free peoples resist Communist subjugation which it has followed successfully thus far in Europe.

However, the President's fateful announcement on January 5, 1950, that the United States would not give any assistance in the form of military advisers and supplies or even moral support or encouragement to our beleaguered ally, the free Republic of China with headquarters on Formosa, has tossed the fat into the fire. The Kremlin now knows it has practically a green light on the Asiatic mainland as far as we are concerned, and its prompt stepping up of aggressive pressures in both Asia and Europe is the inevitable result. The peoples of Asia know that without strong American support they are almost certainly doomed. The American people are the only ones who do not know the score. I can see nothing to gain by trying to keep them longer in ignorance of what the rest of the world already understands fairly clearly. Hence, under permission to extend my remarks, I include the article.

The only statement in it with which I disagree is in the first sentence. It is not quite accurate to say that the Truman doctrine has been abandoned as far as Asia is concerned; the stark fact is that it never was extended to Asia. What has happened is that that fact is now admitted and its ominous implications—including its probable failure now in Europe—ought to be recognized by all.

UNITED STATES WITHDRAWAL POLICY IN ASIA ENCOURAGES REDS ON ALL FRONTS

(By Edgar Ansel Mowrer)

The United States has abandoned the Truman doctrine so far as Asia is concerned. As a result, not only Formosa but Japan, the Philippines and the entire Pacific area as far back as Hawaii and Alaska are considered by the American armed forces as expendable.

This is not the fault of the armed forces. Our generals and admirals would have liked nothing better than to save China and to stop Soviet expansion everywhere. It is the fault of the administration when it discovered that the cost of implementing the Truman doctrine everywhere in the world would have limited the social gains promised to the American people.

The natural trend of any democracy to put butter ahead of cannon was strengthened by the claims of the American Air Force to win any war by intercontinental bombing. It was further strengthened by the State Department's acceptance of the theory that to use American force anywhere in Asia to stop communism would mean to drive the awakening Asiatic masses into the arms of the Kremlin.

The result was that the United States is retreating—has perhaps already retreated—from those areas which we conquered from the Japs by years of bloody fighting.

ATLANTIC PRIORITY

At a certain time, as can be ascertained by reading between the lines of statements by the Secretary of Defense and the badly embarrassed chiefs of staff, the administration decided that the cost of world-wide containment of a communism was prohibitive. The military chiefs had to draw up a priority list of areas. Those in the Atlantic, perhaps quite properly, came first.

Therefore, we signed the Atlantic Security Pact with the west-European countries. We are sending them arms though not enough. We would presumably fight to defend a bridgehead in Europe, the Atlantic islands of Iceland and Greenland, the Caribbean, the coast of Central and South America and the northern border of Canada.

The military leaders would be ready to do the same in the Pacific. They are forced to tailor their suit to their cloth. The administration is not asking for, and Congress is

not voting, enough money to contain communism in Europe, the Middle East, and Asia. Therefore, American forces may not defend badly threatened, Indochina or Hainan Island or Formosa. If these places hold, so much the better. If not, as matters now stand, they will have to go.

DEFENSES MEAGER

Just as before Pearl Harbor, the American forces available to defend Japan and the Philippines are small. If seriously attacked, these places may well be abandoned. So with the Pacific islands for a long way west. There is also talk of withdrawing from the Mediterranean those American naval forces that have for the last 4 years stopped Soviet expansion in that area by their mere presence.

So long as this policy of restricting the Truman doctrine was not public, its harmfulness was limited. Now, however, that the debate over holding or not holding Formosa has revealed the limited nature of American strategic intentions, the Communist world is becoming increasingly bold. Chinese and Soviet radios are already announcing the coming liberation, meaning conquest, of Tibet and of Indochina. Pressure on India is increasing.

For if these regions can expect no military help from the United States, why should the Soviet Empire cease expanding? Once Senator TOM CONNALLY had told the world that the United States would not risk getting into a war to defend Formosa, why stop anywhere in Asia?

GO-AHEAD SIGNAL

The American policy of disavowing Chiang Kai-shek and of withdrawal from Asia has, of course, been an invitation to the Soviets to take those countries over. Now that Moscow knows that the United States will not fight for Formosa, it will quite obviously push forward into other areas. Perhaps the partial revival of the Berlin blockade was an attempt to test out our will to fight for that city. Certainly, the hasty withdrawal of American forces from the Railway Administration building in our zone which we had legitimately occupied would seem to confirm the Soviet suspicion that the United States was bluffing.

Quite obviously, should such a suspicion become general, it would cost us our already none too confident European allies just as it is already costing us the confidence of our friends in the Pacific. It could be that the public decision not to defend Formosa marked the end of a successful policy that had lasted since we saved the Dardanelles and Iran in 1946.

Whittaker Chambers Spikes Malicious Rumors

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I include in my remarks the following transcript of a Nation-wide radio broadcast by Bert Andrews, of the Washington bureau of the New York Herald Tribune, in an interview with Whittaker Chambers, Saturday, January 28, 1950:

Good evening, this is Bert Andrews, reporting from Washington. With me tonight is one of the most controversial figures in America. He is Whittaker Chambers, the former Communist courier, whose disclosures led to the perjury conviction of Alger Hiss, former State Department official. Mr. Hiss' conviction and his sentence to 5 years in prison is being appealed. Meanwhile, it has stirred intense interest and widely contrasting reactions in Washington and throughout the country. Secretary of State Acheson, as you know, has stated that he will not turn his back on Alger Hiss even if the highest Court in the land upholds the verdict of the trial jury. Mrs. Franklin D. Roosevelt has said that she thinks it was "rather horrible" of the jury to condemn someone on the word of someone else who admits to guilt. The Mississippi State Legislature has passed a resolution assailing Secretary Acheson for his defense of Mr. Hiss. Because of the continuing conflict in the minds of so many people, I am going to ask Whittaker Chambers some of the questions I believe our listeners would like to ask him. First, Mr. Chambers, what do you think of Mrs. Roosevelt's recent comments on the outcome of the trial?

Mr. CHAMBERS. I think that Mrs. Roosevelt, like some other people, is too inclined to consider this as a contest between Alger Hiss and Whittaker Chambers. This is a line which the defense has been urging to distract attention from the bigger conflict. She overlooks the fact that the jury did not reach its verdict merely on the basis of the stories of two men. She overlooks the fact that the jury decided there was corroboration from many witnesses and from other forms of evidence of the charges against Mr. Hiss. I believe the American people still accept the verdicts of their duly selected juries rather than the personal opinion of any well-meaning individual, no matter how highly placed that individual may be.

Mr. ANDREWS. Now, Mr. Chambers, since you agreed to answer tough questions as well as easy ones, I'd like to ask this: What about all the stories that have attained national circulation in scuttlebutt fashion? I mean the rumors that you were once in a mental institution, that you were a heavy drinker, that there was something in your relationship with Hiss that has not come to light?

Mr. CHAMBERS. These stories were assiduously spread by Mr. Hiss's sympathizers. I have never been in a sanitarium of any sort. Period. I almost never touch hard liquor. I may have five or six glasses of wine a year. The whole truth about my friendship with Alger Hiss was placed before the jury. Right here I'd like to ask a question of you: Do you imagine that the defense would have failed to bring out evidence relating to all those rumors if they had been able to find an iota of evidence about them?

Mr. ANDREWS. I can't answer for the defense in the case, Mr. Chambers, although I must admit it would be logical to think they produced all the evidence they could on all points. Now how about another rumor—that you acted from a motive of revenge. I might tell you that I received a letter only yesterday containing that rumor in a new form. It said that a man who claimed to know the lowdown argued that you were and still are a Communist. He argued that Alger Hiss was once a Communist but broke with the party. And that the Kremlin ordered you to become an apparent renegade so that you could set out and get Hiss.

Mr. CHAMBERS. I know all of those stories, Mr. Andrews. Usually they say that I am working out some old grudge or some old hatred. I do not hate Mr. Hiss. We were close friends but we are caught in a tragedy of history. Mr. Hiss represents the concealed enemy against which we are all fighting. If I had been trying to destroy him personally, why would I have waited 10 or 11 years? I tried to persuade him to change his mind when I abandoned the Communist movement.

Mr. ANDREWS. Another question that bothers many people is this, Mr. Chambers. I'll quote from the language of one of the Congressmen who heard you testify before the House Committee on Un-American Activities. He raised this point: Why should an American who has prospered under the American system and who is assured of security and a worth-while future—why should such a man join the Communist Party in this country and try to overthrow the American system?

Mr. CHAMBERS. To answer that question, it is necessary to think for a moment about the world in which Mr. Hiss and I came of age. It was a world racked by global wars and social struggle. Like me, Mr. Hiss came of age from a proud but impoverished middle-class family. As a young man—a thoughtful young man—he must have asked himself what caused the world's wars, what caused the global depression, and what should he do about it. Like me, he thought he had found the answer. Like me, I believe he saw in the decline of his family the image of a society in decline.

Mr. ANDREWS. That's not quite responsive, Mr. Chambers. Mr. Hiss's personal financial future seemed assured. Why should he or anyone else want to kick such a future aside, or endanger it?

Mr. CHAMBERS. That mere fact that a man is making a good living does not necessarily blind him to the troubles of others and the world. They find the world full of moral confusion. Some of them think that Marxism and Leninism offer a simple explanation of the causes and a program for action. The very vigor of the project appeals to some of the sheltered middle-class intellectuals who feel a sense of guilt because others do not have as much as they have. And so some of them turn to communism without realizing that communism destroys the very rights they would like to see granted to the underprivileged.

Mr. ANDREWS. Mr. Chambers, most of the reporters who attended the second trial agreed that a witness who may have been the one witness to sway the jury in the direction of a guilty verdict was Mrs. Edith Murray, who once worked as a maid in your home. She did not testify at the first trial. She appeared at the second trial and identified Mr. and Mrs. Hiss as persons who had called on you and Mrs. Chambers at your home. Can you tell me why she didn't testify in the first trial?

Mr. CHAMBERS. The FBI had not been able to find her for the first trial. My wife and I remembered her only as Edith. We gave the FBI that name but they could not trace her. Between the first trial and the second trial my wife found an oil painting she had done of Edith back at the time in question. She turned it over to the FBI. It was a good likeness. They took it through various neighborhoods in Baltimore.

Mr. ANDREWS. And someone recognized it?

Mr. CHAMBERS. Yes. Finally they found a woman who said, "Why, that looks like Edith Murray." Once the FBI had the last name they were able to find Mrs. Murray without difficulty. She appeared as a surprise witness. She corroborated another phase of the story.

Mr. ANDREWS. Another thing that has puzzled many Americans is this, Mr. Chambers: How could people know each other only by so-called cover names—or first names?

Mr. CHAMBERS. Unlike Europeans, Americans do not have a long history of conspiracy. Therefore, they find it difficult to understand the true nature of a conspiracy. But history teaches that just such methods have been used by conspirators since time immemorial.

Mr. ANDREWS. As I told you at the outset, Mr. Chambers, I have some tough questions. You know that you have been assailed by

many as a self-confessed Communist agent, a self-confessed traitor, and a self-confessed perjurer. You know that many people have argued and still argue that nothing you have said should be believed because of your past. What is your answer to that?

Mr. CHAMBERS. I am particularly glad that you asked that question. It goes to the heart of what I have tried to do. In exposing the conspiracy, the problem was to find a man who had first-hand knowledge of the facts—who was willing to testify to them publicly. This had to be an ex-Communist who was willing to tell all the facts about his own activities as a Communist as well as the activities of others. In short a man who would sit in the witness chair and accept all of the criticism that could be thrown at him. But again, Mr. Andrews, let me say that it was not merely a matter of my word against another's word. There was other evidence. If there had been no other evidence, it is possible that my word alone would not have satisfied a single juror. But there was other evidence. And it was accepted as sufficient by 8 out of 12 jurors at the first trial—and by all 12 jurors at the second trial.

Mr. ANDREWS. But I was talking about your past, Mr. Chambers. You were a Communist courier. What made you change?

Mr. CHAMBERS. My own experience and the record of events made me change. They taught me that communism is a form of totalitarianism—that its triumph means slavery to men wherever they fall under its sway, and spiritual night to the human mind and soul. I think we have only to look at the situation in countries behind the iron curtain to realize that that is true. I realized it back in 1937 and I broke with the party.

Mr. ANDREWS. A great many people ask just why did you wait until August 1948 to volunteer your information to the House committee?

Mr. CHAMBERS. I did not wait—and I did not volunteer it to the committee, Mr. Andrews. I gave the information to Government officials in 1939, 2 days after the Hitler-Stalin pact was signed. Nobody gave it any credence, and nothing was done about it. When the House committee took up the case in 1948, I was subpenaed without any advance notice.

Mr. ANDREWS. On another phase, Mr. Chambers, I remember that the House committee once asked you if you would be willing to take a lie-detector test. You said you would. They did not ask you to take such a test because Mr. Hiss, in writing, had declined to take one on the advice of friends who informed him the test was not reliable. Now that the trial is over, are you still willing to take such a test?

Mr. CHAMBERS. I am not only willing to take one, Mr. Andrews, I am eager to do so. I am eager to take this test under the proper auspices.

Mr. ANDREWS. What do you mean by proper auspices, Mr. Chambers?

Mr. CHAMBERS. I mean that the person or persons administering the test must be free of any suspicion of complicity with Communists or close ties with Alger Hiss and his sympathizers.

Mr. ANDREWS. Do you mean that you alone, Mr. Chambers, would want to decide who would give the test and assess it?

Mr. CHAMBERS. Not at all, Mr. Andrews. I would stipulate that the Federal Bureau of Investigation be satisfied as to the character of the person or persons giving the test.

Mr. ANDREWS. Would you demand that you be furnished in advance with the list of questions?

Mr. CHAMBERS. Certainly not. I should merely insist that one question be included—was there ever anything peculiar in your relationship with Alger Hiss or any member of his family?

Mr. ANDREWS. I take it that that goes back to some of the scuttlebutt rumors I asked you about before?

Mr. CHAMBERS. It does. I particularly want to spike the rumor that Alger Hiss is shielding someone. He is shielding nobody but himself.

Mr. ANDREWS. Let's go back to another phase we were discussing, Mr. Chambers. I'd like to get a more definite answer on it. A lot of people find it hard to understand why you testified against Mr. Hiss, on the one hand, while, on the other, you insist you have no personal resentment against him. Can you explain it a little more fully?

Mr. CHAMBERS. Point 1, Alger Hiss was, of course, only one of a numerous group against whom I testified. Point 2, I assume that Alger Hiss is a man of intense convictions—convictions which I once shared. I believe that I also am a man of intense convictions. Due to the social struggle which is the dominant theme of our age, Hiss' faith and mine are now diametrically opposed. But I cannot fail to respect even an enemy who shares with me the feeling that only that life is worth living for which a man is prepared to dare all and die at any moment.

Kuomintang May Be Disbanded To Bring Liberals to the Fore

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the February 6 issue of the Washington Daily News relative to the possible disbandment of the Kuomintang:

KUOMINTANG MAY BE DISBANDED TO BRING LIBERALS TO THE FORE

(By Clyde Farnsworth)

TAIPEH, FORMOSA, February 6.—Formal disbandment of the Kuomintang (Government party) and its rebirth as the Democratic Revolutionary Party—Minchukemintang—under the leadership of Chiang Kai-shek is reliably reported to be in the planning stage.

And a separate organization of Nationalist liberals under the leadership of Dr. Hu Shih, one of China's prominent scholars, is expected to emerge under the name of the League of Liberal China—Chungkuotzeyutungmen.

Dr. Hu, now in the United States, is expected either to return and give the league its official send-off or remain there and in collaboration with such learned Chinese as T. F. Tsiang seek to advance its recognition as the main repository of Kuomintang liberalism.

It is understood Generalissimo Chiang has given his blessing both to the projected League of Liberal China and the reorganization of the Kuomintang into the Democratic Revolutionary Party. For years he has generally refrained from taking sides in intra-Kuomintang politics.

Much of the support for the league is said to originate among the Generalissimo's own advisers. It appears that the two reformative ideas are closely linked through overlapping sponsorship.

TO CONVINCE UNITED STATES

The principal objective of the two moves, though it may never be enunciated in so many words, would be to convince the United States Government that the Kuomintang contains elements of sound liberal and democratic thinking and is capable of its own reform.

Kuomintang liberals believe that if the Chinese are to show any middle-of-the-road tendencies which the United States State Department has said it is looking for in China they must come from the anti-Communist side.

If there are any liberals with the Communists, they must be a hamstrung lot, it is reasoned here, and reform of the Kuomintang and the emergence of the League of Liberal China might offer attractive rally points for them—if they can ever get out from under the Reds.

It is reported from Peiping that the so-called "democratic personages" are not even permitted to leave the Red capital.

SEVERAL NAME CHANGES

The Kuomintang has gone through several name changes since Dr. Sun Yat-sen organized the Hsing Chung-hui (Regenerate China Society) in Macao in 1892. The Hsing Chung-hui was the Kuomintang in its earliest form.

Dr. Sun's Three Principles of the People—nationalism, democracy, and the people's livelihood—would continue as the central and historic inspiration of the Democratic Revolutionary Party, but the League of Liberal China would embody most liberal Chinese thought on how to insure their fulfilment.

WEEDING OUT LIKELY

It is likely the party would weed out much of the old Kuomintang membership and subordinate leadership—especially that which, right or wrong, has given the party a reactionary reputation. The time for that was never more pressing.

The bulk of membership has always lain with Government employees. The Kuomintang reached its peak membership of 400,000 mostly civil servants, at the end of 1939. Now, Nationalist civil servants number only a few hundred and active leadership has been pared to a core.

But this core contains conservatives and liberals. It seems the League of Liberal China would include liberal elements within the larger framework of the Democratic Revolutionary Party. Whether the league would function independently as a party is doubtful.

No. 1 Issue

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. KEATING. Mr. Speaker, the Brighton-Pittsford Post is not a paper of wide circulation. It serves, primarily, two suburban communities on the edge of the great city of Rochester, N. Y. But from the pen of the editor of this paper, Mr. Leroy Percy, comes some of the clearest thinking and most convincing common sense brought to my attention. Under leave to extend my remarks, I include the following recent editorial on Government spending, which is very much to the point:

NO. 1 ISSUE

As the second session of this Congress got under way, news reports emphasized that the domestic issue of the greatest concern to many Senators and Representatives of both parties was the cost of the Federal Government, taxes, and deficits.

The news reports said further that congressional leaders, on either side of the aisle which divides Republicans and Democrats, were determined to do everything possible to cut appropriations, to abstain from raising

taxes, and to make the next budget show a surplus instead of a deficit at the end of the fiscal year.

These are splendid aims but it must be recorded that they are usually honored more in the breach than in the observance. Practically everyone is for rigorous economy—for the other fellow, and for ample spending when the money will benefit him.

That is why enormous pressure is exerted on Congress by groups of all kinds for bigger and better appropriations. And that is why Congress must have the courage to resist this pressure if the Nation is to avoid financial disaster. Government, like individuals, can spend beyond their incomes and dissipate their resources only so long. The only difference is that Government can stave off the day of reckoning longer. But when that day does come, the repercussions are felt everywhere.

The Hoover Commission, for one, has shown us how we can heavily cut the cost of Government without undermining any necessary function. Let this Congress do it—and if it does, let it be given the thanks of a grateful union.

Is Joint Chiefs of Staff Tour in Asia Merely Smoke Screen?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington News of December 31, 1949. When I read it almost 6 weeks ago it was hard to believe our Joint Chiefs of Staff would go all the way to Asia supposedly on a survey tour and not go near the most critical area there—Formosa. Apparently, the editorial's predictions were correct. If so, it can only confirm the fear that this Government makes its diagnosis and prescribes treatment—or no treatment—first, and then makes its examination—but not of the patient, only the patient's neighbors. Are we or are we not concerned about Communist-expansion in Asia?

SMOKE SCREEN

The Joint Chiefs of Staff will make a personal tour of inspection to Hawaii and Japan early in February for a first-hand check of the critical situation in China, it has been announced.

Formosa, the immediate trouble spot in the Pacific, will not be visited.

This is akin to going to London and Paris for a first-hand check on Marshal Tito and the Balkan situation.

Why don't the Joint Chiefs dispense with air travel altogether and conduct their survey from Palm Springs? The California climate yields nothing to Hawaii's at this season.

The explanation that the Joint Chiefs are going to Japan to discuss the Chinese crisis with Gen. Douglas MacArthur makes little sense. General MacArthur's views with respect to the Chinese situation are known to the Department of Defense, and if his recommendations need to be brought up to date that could be accomplished by an exchange of cables within 24 hours.

President Truman's meeting with the Security Council on the Formosa problem, the sending of an aircraft carrier and two destroyers to reinforce our Pacific Fleet, and now this projected tour of the Joint Chiefs of Staff all seem to be parts of one pattern. But the whole pattern has little relation to reality, and as a smoke screen it won't cover the State Department's colossal blundering in the Pacific.

The President faces a storm in Congress on this issue, for Congress has been hearing from the people. But something more than face-saving gestures will be needed to convince the public that a sincere effort is being made to protect American interests in the Pacific.

Maintaining Our National Security

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. DONOHUE. Mr. Speaker, in the light of the most recent developments concerning the American watch manufacturing industry in general, and the Waltham Watch Co. in particular, I am again urging the Members of this House to take action to preserve an essential contribution to our national defense system.

It is indisputable that the watchmaking industry involves the preservation of irreplaceable skilled craftsmanship in the manufacturing of precision instruments that are vital to the sound defense of this entire Nation. Great Britain recognized the terrible mistake they made in permitting the disintegration of their watchmaking industry and are today, through direct government action, taking corrective steps. In time of emergency they are wise enough not to be left again, as they were in the recent war, without a domestic source for supply of the timing devices which are of paramount importance in modern atomic warfare.

Although, in the past, I have repeatedly presented the testimony of qualified experts on the essentiality of protecting the people of this country through the preservation of our domestic watch-manufacturing industry, I regret to say that no substantial effort toward this objective has been demonstrated. Today I, and our distinguished majority leader, have formally requested the chairman of the House Armed Services Committee to appoint a subcommittee to make a survey or inquiry as to the contributions of the American watch business during World War II and its importance as a part of our national defense in the event of any future emergency.

We are doing that with the intense conviction that an official committee report will show the desperate urgency and obligation of this House and this Government to take immediate action for insurance of the lives and safety of the American people. I earnestly hope that the chairman of the Armed Services Committee and the committee members, despite their pressing burdens, will promptly act so that full information and details on this vital subject will be available to you at the earliest possible moment.

We have been and we are now generously concerned with helping and protecting the citizens of almost every country in the world. Let us not forget our own people. Our first obligation, under our Constitution, is to the citizens of the United States.

The agencies of our Government have been created for the purpose, primarily, of serving and aiding the citizens of this country. We must make certain that our people do not lose their faith, trust and confidence in the institutions and divisions of Government whose only reason for being in existence is to assist them. It appears, in some communities, that this is exactly what is happening and I deeply feel the Members of this House will appreciate knowing it. I am, therefore, calling to your attention a pertinent editorial, titled "Untimely Desertion" which appeared on the front page of the Waltham, Mass., News Tribune in its daily issue of February 4, 1950. I earnestly ask that each and every Member of this Congress read it.

The editorial follows:

UNTIMELY DESERTION

Just at a time when the Waltham Watch Co. appears to have its finest opportunity in years to reestablish itself, the stopper is pulled from the drain. The Reconstruction Finance Corporation is both short-sighted and lacking in faith when it refuses to make available the working capital so vitally needed.

The fate of the 100-year-old industry hinged upon RFC willingness to set aside an original restriction of $2,000,000 of its $6,000,000 loan to machinery and research. RFC, in denying the company's request, automatically condemns it to receivership and liquidation.

The Government's lending agency is being pound wise and penny foolish. The firm couldn't possibly place itself in a position to utilize new machinery until the ambitious sales program just launched had a chance to prove its worth. This chance has been spiked.

On the initial grant of $4,000,000, the RFC wasn't doing the Waltham Watch Co. much of a favor. Three-quarters of the sum was designated to wipe out debts owed Boston banks, leaving less than a million dollars for working capital. So small was this amount, in relation to the total problem, that circumstances dictated the half-price inventory sale which stirred a controversy in many places.

It looks to us as though the Waltham Watch Co. is being made the scapegoat by the RFC to cover up its embarrassment over the sorry Lustron affair. Under congressional fire for its advancing of money to the metal housing pioneer outfit, RFC turns a hard-fisted policy on a firm which has proved itself a vital link in national defense. It may well be sounding the death knell to a concern it provided only token assistance to in the first place.

The original watch-factory need was established at $9,000,000. If granted, the allocation to banks and reserve for machinery could have been set up and a reasonable amount of working capital made available.

If the RFC really believed Waltham Watch was essential to national defense and endowed with long-range value as a going concern—as the Government officials stated in their approving statement—it was supporting the belief with a trivial gesture.

The domestic watch industry is being dealt a crippling blow. Once there were nearly 60 American manufacturers. Until yesterday only three existed. The number may well be reduced to two, and the strangling process is condoned by President Truman and the State

Department because of failure to do something about the import situation.

Attorney Lyne, one of the original reorganization trustees, phrased it aptly when he said the firm is being sold down the river.

Nobody is quitting on the Waltham Watch Co. hereabouts. Walter W. Cenerazzo, union president, who has been in the forefront of the struggle all the way, intends to carry the fight on. We feel that at the very least it can be readily established that the RFC's policy of too little help has been a tragic delusion to thousands of employees.

How Harmful Are Cigarettes?

EXTENSION OF REMARKS
OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks, I am inserting in the Appendix of the RECORD a reprint of an article appearing in the January 1950 Reader's Digest entitled "How Harmful Are Cigarettes?" The increase in the use of cigarettes by the American people is phenomenal, and the ill effects from the use of tobacco are alarming, as this author so ably points out.

The article follows:

HOW HARMFUL ARE CIGARETTES?

(By Roger William Riis)

In all the history of human habit, there have been few changes so remarkable as the tidal-wave increase of cigarette smoking in the United States. Within a single generation, a new habit has laid hold upon an entire people to an extent which we do not begin to realize, and with effects which we certainly do not understand.

Last year 60,000,000 Americans consumed 400,000,000,000 cigarettes. Every year, some 800,000 nonsmokers join smoking ranks. Two out of every three men, two out of every five women, one out of every seven boys of 14 smoke cigarettes. The average consumption is 19 a day. We spend some $4,000,000,000 a year on tobacco products and supplies—twice as much as we pay all the public-school teachers in the United States.

Up and up runs the graph at a towering angle, with no sign of leveling off. We are, at a lively pace, engulfing ourselves in one giant Nation-wide cloud of cigarette smoke.

What is this substance which we breathe into our mouths and lungs in such stupendous clouds? It contains a number of ominous-sounding chemicals.

Two of the chemicals are under grave suspicion: benzopyrene, which chiefly affects the respiratory tract, and nicotine.

Nicotine is the essential ingredient of tobacco. It is what makes tobacco tobacco and not just another weed.

When one smokes, most of the nicotine escapes into the air. About a third gets into the mouth, where a little is absorbed. Of what goes into the lungs, perhaps a fifth is absorbed. The effect of smoking a cigar is equal to that of four or five cigarettes. A pipe gives one a trifle more nicotine than does a cigar.

The hotter the burning surface, the more nicotine is taken into the system. Thus, the faster one smokes, the more nicotine one gets; smoking twice as fast results in 10 times as much nicotine. And the closer to the end of a cigarette one smokes, the more nicotine also, because the butt, having filtered the first part of the cigarette, has more than its share of nicotine.

In pure form nicotine is a violent poison. One drop on a rabbit's skin throws the rabbit into instant shock. The nicotine content of a trifle more than two cigarettes, if injected into the blood stream, would kill a smoker swiftly. If you smoke a pack a day, you inhale 400 milligrams of nicotine a week, which, in a single injection, would kill you quick as a bullet.

In factories which make nicotine insecticides, cases of acute poisoning occur now and then. One worker sat on a stool the concave seat of which held a little spilled nicotine. In less than 2 minutes he fell to the floor, blue in the face, apparently dead. Rushed to the hospital, he recovered quickly, as one does from light nicotine poisoning. But when he returned to the shop and put on those nicotine-soaked trousers again, again he fell headlong on the ground, and had to be revived a second time.

Aware that nicotine is a killer, men have tried for years to keep it out of their systems while still enjoying the smoke. All types of artificial filters take out some nicotine. The kind which uses another cigarette as a filter is said to remove 70 percent; the kind which uses a silica-gel cartridge removes 60 percent, according to claims of the manufacturers confirmed by the American Medical Association. But with a filter one is likely to smoke a cigarette until it is shorter than if a filter had not been used—usually 20 percent shorter—and that extra length is the nicotine-filled butt.

Tests of various popular brands show that the average nicotine content of Virginia-blend cigarettes is around 6 percent; of Turkish cigarettes, 1½ percent; of the so-called denicotinized cigarettes, just over 1 percent; and, strangely enough, of the strong-looking West Indian cigarettes, least of all—.86 percent.

In the 400,000,000,000 cigarettes we smoke each year there are nearly 23,000,000 gallons of nicotine. Administered with precision, this is enough to kill a thousand times the population of the United States—a wild idea, of course, but nevertheless suggestive of nicotine's lethal power.

If nicotine is such a poison then why doesn't smoking kill us? Partly because the remarkably adjustable human body can gradually build up a tolerance for larger and larger doses of poison; partly because, in smoke, it is not accumulated in sufficient quantities. Just what the harmful effects of smoking are the reader will judge for himself from the following evidence.

Do cigarettes irritate the throat? Yes, say some physicians. But other physicians say they don't. This conflict of expert opinion matters a great deal to smokers. Let us weigh various opinions and the factual experience back of them.

First, no doctor claims that smoking soothes the throat. The argument, as an editorial in the Journal of the American Medical Association puts it, hinges on "the extent to which cigarettes irritate the throat."

If you smoke a pack a day you take in 640 cubic centimeters of tobacco tar in a year. That means that you have drenched your throat and lungs with 27 fluid ounces, or 15 full cocktail glasses, of tobacco tar containing benzopyrene.

The brown stain in filters or on your handkerchiefs when you blow smoke through it is not nicotine, for nicotine is colorless, it is incompletely burned tar products, like the soot in a chimney. Many physicians suspect that its main constituent, benzopyrene, though an irritant rather than a poison, is a greater threat to heavy smokers than nicotine.

In 100 smokers who average 28 cigarettes a day, Dr. Frederick B. Flinn, of New York, found 73 with congestion of the throat, 66 with coughs, 7 with irritation of the tongue. In the AMA Journal Dr. Emil Bogen reported on 100 smokers; 80 complained of mouth irritation, and 30—not necessarily the same—complained of coughing. Said Dr. J. L. Myers, of Kansas City, "Nicotine irritates the mucous membranes of the respiratory tract. Tobacco tar injures those membranes."

It matters far more how you smoke than what you smoke, stated Dr. Arthur W. Proetz, nose and throat specialist of Washington University and editor of The Annals of Otology, Rhinology, and Laryngology: whether you puff briskly or gently, how far down the butt you smoke, how long you hold the smoke in the mouth and lungs. Rapid smoking, reports Maj. C. W. Crampton in the Military Surgeon, "greatly increases the irritation" because it brings the smoke into the mouth at temperatures up to 135° Fahrenheit.

There is probably no steady smoker who is not convinced that smoking does irritate his throat. Doctors familiar with this field comment on the persistent way smokers have of changing brands every so often in an incessant search for a less irritating cigarette.

Do cigarettes affect the stomach and digestion? Every smoker has noticed that a cigarette seems able to still the pangs of hunger for a while. This is not a delusion. The sensation of hunger is caused by contractions of the stomach walls and smoking can suppress these contractions.

By the same process, smoking interferes with the appetite and thereby with good nutrition. "We all have friends who have quit smoking and have promptly gained in weight and look like new persons," says Dr. Walter C. Alvarez, editor of Gastroenterology and specialist at the Mayo Clinic. "When a man smokes excessively he is not likely to eat well."

Excessive smoking may cause gastritis. By favoring an accumulation of acid secretions, it brings about heartburn. Relief comes in a matter of hours after the smoking stops.

Excess acidity of the stomach provides the kind of climate ulcers like. The most recent work in this field, done by New York University, showed that patients who continued to smoke during treatment for their peptic ulcers had more relapses than those who did not, or those who had never smoked at all.

At the great American clinics ulcer patients are told not to smoke. The Ochsner Clinic in New Orleans refuses to treat an individual unless he totally abstains from smoking. In Boston doctors had an interesting case some years ago, a man who had all the symptoms of duodenal ulcer. Even the X-ray showed it. But an operation found no ulcer at all. The patient stopped smoking, under orders, and his "ulcer" left him. Three months later, feeling quite well, he took up smoking again, and back came the "ulcer." This time, however, the doctors ordered him off cigarettes completely. Since he stopped smoking, he has had no more "ulcers."

Nonsmokers, in 4 years at Yale and at Amherst, grew more in height and weight and lung capacity than did their smoking colleagues. At Yale the increase in chest development of the abstainers was 77 percent better, their increase in height 24 percent greater.

At Wisconsin students were asked to hold a small metal point in a small hole, trying not to let it touch the sides. Electrical connections registered the number of times it did touch. Regular smokers were 60 percent more unsteady than nonsmokers.

Coaches are almost unanimous in saying that muscular power is lowered and fatigue begins earlier in smokers. Knute Rockne was definite: "Tobacco slows the reflexes, and any advertising which says it helps an athlete is falsehood and fraud."

Which raises the question of change in the sugar content of the blood, due to smoking—that famous "lift" which cigarettes are supposed to give the weary mortal.

Like many other claims of cigarette advertising, this one was destroyed by research. Studies at the Harvard Fatigue Laboratory concluded that there was no significant change in blood sugar in connection with smoking, hence there was no lift.

Nowhere is there any medical evidence—despite the advertisements—that smoking improves an athlete's abilities.

What does tobacco do to the heart? As to the long-run effects, medical opinions differ. As to the immediate effects of cigarette smoking upon the mechanism of the heart and upon the arteries and veins, there is no difference of opinion, for these effects are easy to observe and measure.

Smoking speeds the pulse by as much as 28 beats per minute. In this respect individuals vary, and the same individual varies at different times. The average increase in pulse due to smoking is 10 beats.

Smoking can produce arrhythmia, an irregular stop and jump of the heart which often thoroughly frightens its owner. The pulse of an unborn baby is raised when the mother smokes. Habitual smokers have a 50 percent higher incidence of palpitation of the heart than nonsmokers.

Smoking raises the blood pressure, markedly and quickly. The higher your blood pressure is, the more sharply does tobacco lift it. Apparently the blood pressure does not develop any tolerance for tobacco, as does the digestive system. Nevertheless, smoking does not cause permanent high blood pressure. When the smoking stops, the pressure falls slowly to normal.

Smoking constricts the blood vessels, especially those of the feet and hands. The smaller the blood vessel the tighter is it constricted, and often smoking closes the tiny vessels under the fingernails entirely. As soon as one starts a cigarette, the rate of blood flow in the hands decreases to less than half normal, and it stays down for about an hour.

The effect of this constriction is curious. The temperature of hands and feet drops. "Practically all the subjects who inhale show a definite drop in surface temperature at the fingertips," reported Drs. Irving Wright and Dean Moffat at New York Post Graduate Hospital. The drop averaged 5.3 degrees, was frequently more than 10 degrees, and occasionally as much as 15.5.

Nicotine constricts the veins; alcohol dilates them. When we drink and smoke at the same time, we are in effect prodding ourselves with a pitchfork to get a lift and beating ourselves on the head with a club to offset it. Hence the popular belief that taking a highball offsets the effect of taking a cigarette. Drs. Roth and Sheard at Rochester, Minn., went into this interesting possibility, making 121 tests on 65 persons. The winner was nicotine; it was more potent than alcohol; "the constricting effects of smoking cannot be prevented by alcohol."

Buerger's disease—fortunately rather uncommon—is characterized by loss of circulation in hands and feet, sometimes so serious that gangrene may form and amputation be necessary. Doctors are cautious souls and do not say that smoking causes Buerger's disease. But in a study of 1,000 sufferers from Buerger's disease 1,000 turned out to to be smokers; and of another 1,400 cases checked at Mount Sinai Hospital, New York, 1,400 were smokers. A group of 100 cases were studied for more than 10 years; in all of them the disease was arrested when smoking stopped. Dr. Irving Wright reports that in 100 consecutive cases amputation was avoided in 97 cases, but was necessary in 3—the only 3 who would not stop smoking. Only a few isolated cases have ever been reported among nonsmokers.

No more vivid and dismaying comment on the strength of habit could be imagined than the reaction of one Buerger's patient, who was told repeatedly that he must choose between smoking and progressive amputation of feet and hands. Some years later one of the doctors was hailed on the streets of Chicago by an armless, legless beggar on a little wheeled platform.

"Hey, Doc, remember me? Say, be a good scout, light a cigarette for me and stick it in my mouth; will you?"

There is no proof that smoking causes heart disease. But there is evidence that heart disease is more prevalent among smokers than among nonsmokers, and that smoking may intensify existing heart disease.

Doctors selected 1,000 men over 40 who smoked and 1,000 who did not smoke. Of the nonsmokers under 50, 1 percent had coronary disease, of the smokers 4.8 percent. Of the nonsmokers in age group 50–60, 2.6 percent had coronary disease, of the smokers 6.2 percent.

Virginia doctors, in an article on angina pectoris, point out that "coronary disease develops before the seventh decade significantly more often in smokers than in nonsmokers."

It would be difficult to select a better-qualified group of heart specialists than Dr. Paul D. White, of Boston, Dr. Robert Levy of New York, Dr. Edwin P. Maynard, of Brooklyn, and Dr. Samuel Levine, of Harvard. In brief, these four men testify as follows:

Dr. White: "Tobacco causes no actual heart disease, but may produce irregular pulse, precipitate or aggravate the angina pectoris of coronary heart disease."

Dr. Levy: "Smoking does not increase significantly the work of the heart. The more important cardiac conditions for which smoking should be prohibited are congestive heart failure, acute stages of cardiac infraction, active rheumatic carditis, and peripheral vascular disorders (disorders of the blood supply of hands and feet)."

Dr. Maynard: "In certain individuals smoking is harmful to the heart. We do not know how to tell which patient should smoke and which should not."

Dr. Levine: "In former years I used to tell patients with angina pectoris or coronary artery disease to smoke not more than two cigars or eight cigarettes a day. Now I am more inclined to urge them to omit smoking entirely."

What does all this add up to? The chief difference of opinion is as to how much damage smoking does to the heart. All doctors agree it can damage sick hearts. It is, in short, never a help and often a menace.

This probably refers to the most extensive and reliable research yet made in this field, which is now being completed by Dr. Evarts Graham and Ernest Wynder, one of his senior medical students at Washington University, St. Louis. Dr. Graham's studies will cover close to 2,000 persons in St. Louis, New York, Chicago, and Salt Lake City—the last because orthodox mormons do not smoke and therefore offer an excellent control. It is expected to show that over 95 percent of patients with lung cancer smoke a pack of cigarettes a day or more, and have done so for many years.

"Will you be able to say clearly that smoking causes lung cancer?" I asked. Dr. Graham shook his head.

"No," he replied, "but we will say that it is curious how very few nonsmokers develop lung cancer."

"Very few" is one-half of 1 percent of the victims of this disease. This contrasts with the 95 percent who are steady smokers.

Cancer of the lung, Dr. Graham stresses, has shown a shocking increase in the last 35 years. "As a possible cause," he says, "we must look for some factor in our civilization which has shown a similar increase. We eliminated carbon monoxide after examining traffic policemen who breathe it in large quantities."

While all other types of cancer were declining in frequency, the age-adjusted death rate for respiratory cancer rose steadily from 3.7 per 100,000 in 1930 to three times that in 1947. In Georgia mortality from this cause rose from 23 per 100,000 to 200 in 10 years. Dr. Alton Ochsner of the Ochsner Clinic in New Orleans says: "25 years ago I saw only one cancer of the lung in 4 years. In the last 15 years I have seen thousands. I am convinced that there is a definite relationship between smoking and cancer of the lung."

It is generally agreed that cancer of the mouth, tongue, and lips is unduly prevalent among smokers. Researchers in Michigan, Illinois, and Pennsylvania have come independently to the same conclusion: that the majority of victims of cancer of the tongue are excessive users of tobacco, that pipe smokers who develop lip cancer get it at the spot where the pipe has always rested, and that tobacco chewers, if they develop cancer, develop it at the place where the tobacco has been held.

Can smoking shorten your life? Some 10 years ago the late Dr. Raymond Pearl of Johns Hopkins studied the life span and smoking habits of 6,813 white American males. His carefully tabulated statistics tell us that if you take 300 people at the age of 30—100 of them nonsmokers, 100 light smokers and 100 heavy smokers—

Of the 100 nonsmokers, 66 will reach 60 years.

Of the 100 light smokers, 61 will reach 60.

Of the 100 heavy smokers, 46 will reach 60.

"The conclusion is clear," said Pearl, "that smoking was statistically associated with impairment of life duration. The amount of impairment increased as the amount of smoking increased."

If tobacco is so deadly, ask the doubters, why don't insurance companies consider this in their rates? Perhaps they will before long, for they have been thinking about it. Harry Dingman, in the book Risk Appraisal, published by the National Underwriter Co., says: "Use of tobacco entails extra mortality. In assessment of risk, why ignore it?" And a company medical director at an insurance meeting said, "We don't give standard insurance to excessive drinkers. I think we shouldn't give it to excessive smokers."

Higher mortality among smokers was noted in a study made by Dr. Robert A. Godell of the Phoenix Mutual Life Insurance Co. This covered 5,000 smokers and 5,000 nonsmokers.

To sum up, we can do no better than quote other figures in Mr. Dingman's insurance book: Habitual smokers have 62 percent higher incidence of gas on the stomach, 65 percent higher incidence of colds, 76 percent higher incidence of nervousness, 100 percent higher incidence of heartburn, 140 percent higher incidence of labored breathing after exertion, 167 percent higher incidence of nose and throat irritation, and 300 percent higher incidence of cough.

What does it all come down to? Think over the many theoretical and actual kinds of damage which smoking causes. Discount them all you want. Then look in vain for any evidence of any measurable good effect. Then speculate with incredulity as to why we go right on smoking.

Every day, of course, people stop smoking, and stay stopped. Given a good enough reason, almost every confirmed smoker will stop. The trouble is that the good reason usually only comes when (and because) it is too late for the smoker's health.

All this being so, why do not physicians warn their patients more helpfully about smoking? Because doctors are human, too, and many of them smoke, because many of them therefore hesitate to believe the worst

about the cigarette; and, as one physician noted sadly, "because forbidding tobacco makes the doctor unpopular."

The physicians most concerned about the dangerous effects of smoking are those who have had greatest personal experience with research into those effects.

America's Expanding Economy

EXTENSION OF REMARKS
OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address which the able senior Senator from West Virginia [Mr. KILGORE] delivered before the congressional district meeting of the West Virginia Petroleum Association in Charleston, W. Va., on Thursday, February 2, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA'S EXPANDING ECONOMY

Mr. Toastmaster, distinguished guests, it is a great pleasure to attend this meeting and talk with you leaders in the oil industry and the truck and bus associations in this congressional district. I feel a great kinship for everyone engaged in the oil industry. As many of you know, I grew up in the oil fields of northern West Virginia. My father was a wildcatter, and I spent a great deal of my boyhood with him in the oil fields. The days were long and the work was tough, but I enjoyed it very much. Most of the old-timers I knew as a boy are gone, but one sturdy soul—Mike Benedum—still carries on in Pittsburgh. He is a grand old man—old in years, but young in spirit.

The oil industry has come a long way since those days when I worked as a boy around my father's rigs. I think it has achieved its present-day greatness because it has combined a competitive spirit of hard work and vision. The history of the oil industry is a story of great progress, a story of Americans at work eager to find new sources of oil and to develop more and better products to make our living easier and more comfortable. It is the story of an industry that has grown with the times.

When I received your kind invitation to attend this dinner, I thought I would confine my remarks to the growth of the oil industry and its role in America's present-day economy. But sitting in my office late one night last week reading a huge stack of letters from constituents I changed my mind. I decided to tackle a more difficult subject—the Nation's budget for the new fiscal year and its relationship to America's economy.

It is customary for many Americans, especially businessmen, to speak of the economy of the country in terms of how many tax dollars they give the Government. But actually that is not a true yardstick. The economy of the country can only be measured in terms of the economic status of all the people of the Nation.

The true measure of prosperity is the amount of goods and services produced by our country and the distribution of these among all the people. It is important for us to remember that our production of goods and services today is just double the level it was in 1935. Our national income today is just about 4 times the 1935 level.

This is the only true yardstick for measuring the national economy. We must examine Federal spending not in terms of some oversimplified bookkeeping approach but in terms of our basic objective of keeping our industrial plant going at full blast, keeping it growing and producing the maximum of goods and services for all our people.

If we measured our national budget on the same basis as many private businesses measure theirs, we would carry a good part of our expenses as investment. A good portion of the budget represents investment in physical facilities like roads, improvement of rivers and harbors, public works, and such physical assets—all of which contribute directly to the expansion of our productive capacity. The improvement of the Nation's health and educational opportunities directly increases the productivity of our citizens and this increased productivity means, of course, greater prosperity for the Nation as a whole. The development of our natural resources is an expense that can only be viewed as an investment.

Any fair-minded person will have to agree that conditions are better today for the great majority of Americans than at any other period of our history. Nevertheless, we still have many parents who do not earn enough money to properly care for their families. We still have too many people who live in slums, whose diet is poor. We still have too many children attending overcrowded schools with inadequate teaching facilities. We still have too many people unable to pay their doctor bills or unable to find adequate medical facilities in their community even if they can pay.

The charge is often made that many of these people are shiftless, that they are unwilling to exert the effort required to earn a better life for themselves. This may be true in a few cases, but it is not true of a large majority of that group aptly described as underprivileged. There are numerous examples of the great strides made by these so-called shiftless people when they received the opportunity to improve their living conditions and become more productive members of our society.

We have not yet achieved our goal of a decent life for all Americans, but tremendous progress has been made as we continue a program that considers the welfare of the human being and no some economic statistic as the real measure of our success.

The charge is often made that the Government, by helping its citizens, is bringing on a welfare state. The charge is also made that the Government, by helping its citizens, is threatening their liberties. I believe these charges are sheer nonsense. Such charges have been made thousands of times since 1933 and yet not one thoughtful person can show that the Government has deprived any person of any essential freedom. We have not and we shall not sacrifice any essential freedom by continuing to raise our economic goals. On the contrary, we are adding two new freedoms to those cherished by all Americans—freedom from fear and freedom from want. These are essential, almost as essential as freedom of religion and freedom of speech, if we are to preserve our democratic form of government and our system of free enterprise.

Many people say that social security is good, that Federal aid to education, slum clearance, and low-cost housing are good, that it would be a fine thing to have more medical schools and more doctors and nurses, but they also say: "We cannot afford them."

I believe that no community, no state or nation can realize its full potential if it follows an attitude of "We just cannot afford it." No nation could have become as wealthy and powerful as ours if it had not set its goals high and then encouraged the people to achieve them.

America has never been a country that was penny-wise and pound-foolish. We have always been capable of great thoughts and great actions. Any man who claims that America cannot afford to wipe out its slums, to eliminate malnutrition, to educate its children properly, and to take care of its aged or disabled citizens who cannot take care of themselves—I believe any man who claims this lacks the faith that has made our country great.

We have seen in wartime how gigantic is our ability to produce material wealth. We must continue to devote our great productive capacity to the maintenance of peace, to the elimination of unnecessary social evils, and to a more abundant life for ourselves and our children. Actually, this is the only way we can assure the survival of free enterprise. We know that in the last analysis our prosperity depends on the ability of the people to purchase the goods produced. Free enterprise can survive only if a great majority of Americans are prosperous.

I have mentioned the importance of programs like social security, improving the Nation's health, providing better educational opportunities, and substituting decent homes for slums. These are the basic programs for improving the national welfare. And yet it is interesting to note what a very small part of the Federal budget goes for these purposes. In the 1951 budget, only 6 percent of the total budget is proposed for all our social welfare, health, and security programs—and barely 4 percent for slum clearance, housing, and education.

Those who claim that welfare is the reason for our budget deficit should take a close look at the budget dollar and how it is allocated. Thirty-two cents of that dollar is going to national defense; 15 cents to veterans, 11 cents for international items, and 13 cents for interest on the debt. In other words, defense, foreign aid, veterans' programs, and debt interest account for almost $30,000,000,000 out of a total estimated expenditure for 1950–51 of $42,500,000,000. This accounts for 71 percent of the budget.

The rest of the proposed budget, about $12,500,000,000, goes for all other Government functions. This includes Federal aid to education, housing, agriculture, health; for the development of communications, power, and natural resources; for the promotion and regulation of trade and industry, and for the hundreds of other activities which the people have indicated they wanted and needed over the years.

This is the picture—and it ha to be viewed in its entirety to be seen in true perspective. I am not any more enthusiastic than anybody else about deficit financing in a period of full employment. But the point to remember is that if we try to achieve a balanced budget by the meat-ax method, we could very easily bring about a downturn in our whole economy which would cause a severe drop in employment and the production of goods.

It has been estimated that the last brief and not-too-severe downturn in 1949 cost us $13,000,000,000, which represents the difference between what we could have produced and what we actually did produce in 1949.

A drastic cut in our budget right now could have disastrous results not just for our own economy but for the world-wide effort toward peace and economic security. That is the danger the administration had uppermost in mind in formulating the budget.

The administration has pointed out that we are moving toward a balanced budget within the next few years. Decreases in foreign aid, in our commitments to veterans, and perhaps in our military needs will make this possible. Our program of an expanding economy will bring us to that desired goal of a balanced budget in a much shorter time than many of the critics are prophesying today.

The administration hopes through the implementation of the Hoover Commission recommendations to bring about better administrative policies, eliminating duplication, and thus saving on administrative expenses. Through such Government reorganization, through an expanding economy, and through the eventual decrease in foreign aid and the cost of our military establishment, we can look forward to both a balanced budget and healthy prosperity as well.

We must keep uppermost in our minds that an expanding economy is necessary not only to maintain domestic prosperity but in order that we can carry out our commitments in the struggle for world peace. I do not believe President Truman was overstating the case when, in his economic report to the Congress, he said: ". . . our programs for national security and international peace . . . are the defense of the world against disaster. Upon them, our whole future depends."

Our foreign-assistance program is one that has been given the most careful study by various executive agencies, by the President, and by the Congress. The funds that have been allocated to the European economic-recovery program and the funds which have been allocated to the military-assistance program, as well as every other sum loaned or given for foreign aid, have all been studied in the light of American interests, as well as the wider interests that indirectly affect us.

Our primary objective is a peaceful and prosperous world, because peace and prosperity for America alone cannot be insured in a vacuum. We cannot afford to lull ourselves into the complacent theory that our only concern is our own immediate welfare. The twentieth century has turned the word "welfare" into an international concept instead of an individual concept. If 150,000,000 Americans fare well, this cannot fail to influence the economy of other nations. By the same token, if the other peoples of the world fare badly, their political and economic despair cannot fail to affect our own economy. In the words of a famous poet, "There are no islands any more." There is no escape from the impact of external events on our own affairs.

That will be the dominating thought in my mind when I am called upon, as a member of the Appropriations Committee, to go over foreign-assistance appropriations. As a member of that committee, I can assure you that every item, both domestic and foreign, in the budget will be carefully scrutinized. Wherever possible, items will be cut. I think it may be possible to make some reductions in foreign-assistance items, but, at the same time, speaking for myself, I am going to look at each proposed cut from two carefully balanced viewpoints: What will it mean to the budget now, and what will it mean in terms of prosperity and world peace tomorrow?

This country has been struggling toward big goals and big ideals for many years now—in fact, ever since this Nation was formed. Would anybody have believed 170 years ago that we would become the richest and most powerful country in the world? With the same courage and common sense that brought us this far, we can achieve the goal we are presently striving for—peace and security for ourselves and for the whole closely knit world. We can do it by keeping our own economy expanding and healthy and by giving other countries the opportunity to find peace and security for themselves.

Award of Poor Richard Medal of Achievement to Paul G. Hoffman

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, on January 17, 1950, Mr. Paul G. Hoffman, our very able ECA administrator, was awarded the Poor Richard Medal of Achievement at the annual Franklin Day celebration held in Philadelphia under the auspices of the Poor Richard Club of Philadelphia. I believe that no one could more richly deserve an award that is given with the ideals of Benjamin Franklin in mind. In Paul Hoffman can once again be seen the imagination, optimism, and faith of Ben Franklin. And in him we see a man who, like Ben Franklin, is ever ready to meet the challenge of the times in a courageous and confident manner. Mr. Hoffman, an American businessman, is, in his role as Chief Administrator of the ECA, handling a job that embodies every American principle of integrity, a job that is worldwide in its scope, a job that is of the utmost importance if we are to gain world peace and security.

At the Franklin Day celebration Mr. Hoffman delivered a speech which I think should be of interest to all of us. That speech not only explained what ECA has done and is continuing to do but it also paid high tribute to the American spirit—a spirit of freedom and integrity—which has played a tremendous role in the shaping of world affairs and which must and will continue to do so.

At the same celebration I was also given the privilege of addressing the audience. However, my duties here in the Senate prevented me from arriving in time to deliver the address myself. The speech was delivered on my behalf by Mr. William Berry, past president of the Poor Richard Club.

I ask unanimous consent to have both Mr. Hoffman's address and mine at the Franklin Day celebration printed in the Appendix to the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. FRANCIS J. MYERS, OF PENNSYLVANIA, BENJAMIN FRANKLIN MEMORIAL BUILDING

(This speech was delivered by William Berry, past president of Poor Richard Club, in behalf of Senator MYERS, who was unable to attend)

We are paying tribute today to a distinguished American whose interests, like Franklin's, are not confined to one field.

We are honoring a man who has proved that he is not afraid of new ideas; who has shown that he is capable, as Franklin was, of adapting himself to change. A man who has something of Franklin's bold imagination and optimism and faith, who like Franklin courageously and confidently has met the challenge of hi

Paul Gray Hoffman fits the description of world statesman in the finest meaning of the words. For the job that he has done in a difficult assignment and at a critical period in our history, he has earned the gratitude of his countrymen and has carved for himself a place of prominence and importance in the annals of this century.

I think it is most fitting at this particular moment in world history that the Poor Richard Club should award its gold medal of achievement to a businessman. Business has a tremendous role to play in the rehabilitation and development of the world economy, in the securing of human freedom and dignity to all people who desire it, and are willing to pay the price for it. Particularly will this be true when someday, in the not far distant future, our Government's large-scale aid to nations, now struggling for their living against Communist aggression, must be reduced or ended. Not this year or next year—because, as Paul Hoffman will tell you, the weak are not yet strong, the fires are not all out. But when the day does come, when ECA has completed its unprecedented and supremely essential mission, then will American business assume a role of heroic proportions as it is called upon to revitalize and expand the world's economy.

Many Americans and people of other countries are coming to realize that there is an economic base which supports political and religious freedom. Religious and political liberty walk hand in hand with a free economy and with the free exchange of goods and ideas. We have seen in totalitarian countries a pattern which tragically demonstrates this truth. Where private enterprise has been destroyed, political and religious freedom have fallen too.

That is why, at this time, I feel your choice of a business leader as your gold medal recipient for 1950 is a singularly appropriate one. Paul Hoffman represents a new kind of businessman, a type of businessman who has developed out of the needs of our times. He deserves to be called an enlightened businessman, if you please, an industrial statesman. He has none of the provincialism that has characterized so many American businessmen in the past. He has a wider vision, a truly global outlook. An acute realization of the necessity for American business to recognize its social and world responsibilities, and particularly its obligation to provide industrial and financial leadership and "know how" for the world, a leadership that only it can provide.

You know, there is no reason why a businessman should be provincial or concerned only with business affairs. Benjamin Franklin demonstrated that. Perhaps we don't often think of Franklin as a businessman, but he was one of the most successful businessmen of his day. He made a great deal of money, so much that he once offered to pay for the tea that some hot-headed patriots dumped into Boston Harbor, although it would have cost him $75,000. He was the most successful newspaper and magazine publisher of his generation. He built so well that one of his publications, the Pennsylvania Gazette, still is being published under the name of our own city's Saturday Evening Post. Another, Poor Richard's Almanack, was born again as the official publication of the Poor Richard Club.

The catalog of Franklin's amazing accomplishments is a familiar one. Writer, publisher, inventor, educator, scientist, diplomat—one of the two or three most versatile geniuses the world has ever known. Yet despite all this enormous activity, he found time—as Paul Hoffman has—to serve his country—and how brilliantly, every school child knows.

But Franklin was a great businessman. He bargained with his neighbors and with nations. He believed devoutly in the im-

portance of trade. He took the lead in helping to develop new enterprises and profitable investments in the then undeveloped colonies which became with the passage of years the great industrial heart of these United States. Franklin was willing to invest his capital, to take the risk, of backing new enterprises throughout the American Colonies and even in the West Indies in the establishment of their own businesses, taking for himself a return from earnings.

I call your attention to this phase of Franklin's business activities because I feel the times demand the same kind of faith and enterprise from American businessmen and investors on a world-wide scale.

In his inaugural address in January of 1949, President Truman listed as point four of his program for world peace and prosperity the investment of American dollars and "know how" in the development of the still undeveloped areas of the earth in order to raise standards of living for the people of other nations and to make it possible for them to enjoy some of the material benefits which we in America enjoy. Such a program would be in our own self interest, as well, because only in a world where other peoples can enjoy prosperity can we in America live in prosperity and peace.

It seems to me that the only logical and eventual successor or substitute for the European recovery program and for aid to the Far East, which is, after all, a temporary expedient, is the development of the underdeveloped areas of the earth, the building of new businesses and industries and customers, on a really gigantic scale by American private enterprise. This is the challenge which faces American business and the American investor today.

To meet this challenge will require the daring imagination, the faith, and confidence which Franklin so well exemplified. With American businessmen of the caliber of Paul Hoffman to lead us, I am confident that it is a challenge that will be met successfully.

I know of no one who so richly deserves the honor you are about to bestow upon him. Paul Hoffman, by his achievements, has reflected credit upon his country and upon the whole of American business.

Thank you.

ADDRESS BY PAUL G. HOFFMAN, ECONOMIC COOPERATION ADMINISTRATOR

It was with some initial misgiving that I heard I was to receive the Poor Richard Award. I wondered what Poor Richard himself would have thought of any award being made to me in his name. Here I am, a man administering a program involving billions of dollars, the greater part being distributed as gifts. True, I think those billions will bring us great returns, but even in the case of the loans I cannot point to excellent security or a high-interest rate. The returns on both the loans and gifts must be measured largely in terms of intangibles. But those intangibles are such that, as I have studied the life of Benjamin Franklin, I felt much easier in my mind and I decided I could accept the award with a reasonably clear conscience.

Benjamin Franklin was many sorts of a man. He was a scientist, inventor, statesman, philosopher, editor, and, may I proundly add, a businessman. Now he wasn't all of these things separatively, he was all of them at once and together. One of the reasons, I think, for his notable serenity was the fact that the many parts of his life were brought together into an integrated whole. Perhaps that integration also accounts for the fact that, though a businessman, he lived to enjoy an ulcer-free old age. At any rate, it was this breadth of integrated interest that gave soundness to Franklin's life and soundness to his contributions.

Benjamin Franklin's first reaction to this $15,000,000,000 program of ECA's would undoubtedly be one of great shock. But after that initial shock, he would, I am sure, in order to get perspective, want to look around and see how this project would fit into the current world scene. And then, from the vantage point of that knowledge, he would direct his inquiring and penetrating mind toward the objectives of ECA, and the manner in which we were going about achieving them.

The initial shock of a $15,000,000,000 figure on Franklin would undoubtedly be softened once he learned that our annual gross income today had reached the astounding figure of $250,000,000,000. He might be distressed, but would unquestionably be impressed, by the cost of the wars we have fought. You can guess for yourself what he would think when told that the out-of-pocket cost of World War II to the United States of America alone was between three hundred and forty and three hundred and eighty billion dollars, and that the ultimate cost, according to Mr. Gordon Gray, Secretary of the Army, will be in the neighborhood of $1,400,000,000,000. If you want my guess, Franklin would think, in view of these costs, that a way must be found to insure future peace. He would, of course, marvel at the telephone, radio, television, the steamships, automobiles, airplanes, and the atomic bomb. He would be astounded by, but understand, some of the great developments in the field of electronics far better than most of us here understand them. I rather think the modern development which would impress him most is the speed of travel, and the manner in which that has shrunk the world. With his quick mind, he would not need to be told that a shattered European economy is a liability to the United States, to every family in this vast and once isolated land of ours; and the further fact that a prosperous and thriving European economy is a vital asset to the United States and to every American. He would, I am sure, approve what we are doing to help get Europe back on its feet. To him, that would make economic sense. It would appeal to his common sense too, because he knew that the most useful charity is that charity which raises people above the need of charity.

Benjamin Franklin would also, I believe, agree that the job we are trying to do in Europe makes political sense. We are trying to help the Europeans to create those conditions under which free institutions can flourish and free men live in decency and dignity. The Europeans, with our help, are going about that job in a hard and practical way. They have devoted themselves to increasing production in the plants and on the farms, to freeing markets, and to facilitating convertibility, one with the other, of the various national currencies.

Yes, I believe that Benjamin Franklin would heartily approve of the economic and political objectives of ECA. But that doesn't necessarily mean that he would approve the very large expenditures called for by the program, some of which have been made, some only planned for. He would have to be shown and it would be up to us to show him.

In seeking his approval, we would, first of all, want to impress him with the scope of the undertaking and the conditions under which we were laboring.

The first broad principles which led to ECA were laid down by General Marshall, then Secretary of State, in his historic speech at Harvard University on June 5, 1947. In that speech, General Marshall called upon the nations of Europe to join in a vast, cooperative effort to repair their shattered economic health as the only means whereby political stability could be restored, progress resumed, and freedom once more set firmly on its feet. For our part in that undertaking General Marshall declared that the Government of the United States stood ready to "do whatever it is able to do to assist." There were no ideological strings attached to that offer. It was an offer made in good faith. It was backed by good will. Its sole objective was a more prosperous world in which peace and freedom would be more secure. And when that offer was made, we believed—or at least we hoped—that that was an objective which every government shared, and that that was a task in which every government would be not merely willing but eager to join.

The nations of Europe quickly accepted our challenge. In Paris, hardly a week after General Marshall's speech, the representatives of most European nations—east and west—met to accept our offer and begin to turn that challenge into practical achievement. That meeting was attended by the representative of the Soviet Union in the person of Mr. Molotov, its foreign minister. It looked for the moment as though, on this technical and desperately urgent level of economic recovery, something close to joint cooperative action for the common good was about to be achieved. For 3 days, Molotov attended that Paris meeting and for those 3 days the hopes of freedom-loving, peace-seeking nations ran high. Then on the third day, Molotov, with his entourage of satellites in tow, walked out of the meeting and enplaned for Moscow.

That departure, as we now know, was not merely another uncouth Communist gesture. We know now as Walter Lippmann so trenchantly said, that it was a declaration of a "cold war.." It was a declaration of war by world communism against recovery in the free world. And the issues brought into conflict by that declaration were no less momentous for us because the tactics employed were those of a cold war rather than a hot war.

Thus it appears that ECA today is not what it started out to be. It is much more than that. It is true that through ECA America's dollars are being used for foreign aid; but it is not true—in fact, it is dangerously untrue—to describe ECA any longer merely as foreign aid or to regard it any longer as merely a foreign-aid program. The truth is that ECA has become not only a first line of defense for western civilization, but an instrumentality for advancing the cause of freedom—not only America's freedoms and America's free institutions, but freedoms and free institutions everywhere. To regard ECA as any less than that is to reveal a perilous lack of knowledge about the menacing facts of our world. It is to reveal a perilous lack of understanding of what is required of us if we are to help establish a world in which the children of free men can live in peace.

Once Benjamin Franklin knew the scope of ECA's activities, and the conditions under which it has been endeavoring to carry out its mandate to help the Europeans get Europe back on its feet, he would be all the more eager to know how the battle was going. Instead of reporting myself, I would call his attention to the report of a fellow Philadelphian, because he had infinite faith in his neighbors. The Philadelphian is Moreley Cassidy of the Philadelphia Bulletin, and here is what he wrote after a tour of the Marshall-plan countries:

"With American help, Europe has suddenly come alive. The stumbling, bewildered, sickly Europe that cringed with fear at every Communist frown is gone.

"In its place is a Europe that feels blood in its veins again.

"Its people are better fed and better dressed. Their houses are warmer. They

are working hard, with better tools, and producing more of everything from electric power and coal to wheat, butter, and baby buggies.

"Because they are stronger, they get angry instead of cringing when Communists try to smash their efforts to rebuild. They have begun to fight back."

If that report of Mr. Cassidy's did not persuade Benjamin Franklin that we are getting on with our task, nothing could. Unlike a few of his fellow Americans, I don't believe that Franklin would need any persuading that this program of ours should be carried through for its full 4 years. In all his long life he never quit a job half done. He would not only approve our finishing it, but I feel certain we would have his enthusiastic support. That certainty of mine stems from my belief that there is a further aspect to soundness—the kind of soundness Franklin believed in. When I was thinking about this talk someone very thoughtfully brought in a copy of Poor Richard's Almanac. When I opened it, I saw—somewhat to my surprise—that the first maxim was this: "The noblest question in the world is this: What good may I do in it?" That, I like to think, would still be Franklin's first maxim; just as, I believe it is America's first maxim. After we have judged the economic and the political soundness of the enterprise we are engaged in, there is still a more basic test to pass. That is the test of moral soundness. The test of finding out—not merely whether it is economically or politically sound—but whether it is right.

That is a test that has always been—and still is—soundly American. For America is more than the sum total of all its resources. It is more than the accumulation of all its political experiences and institutions. America, basically, is a moral achievement. As a Nation, we are what we are because of what we believe, and because—with all our failings—of our success in living up to our beliefs. As Americans, we have had a way, in our history, of doing the right thing for no other reason than that it was the right thing.

And this desire on our part has been above selfishness and above self-interest. From the very beginning Americans had a sense of mission about America. They believed that the great and good society which they were founding here was not for their own good, only, but for the good of all mankind.

Let me quote you a few sentences from Abraham Lincoln. This was in February 1861. Lincoln was on his way from Springfield to Washington for his first inaugural. Secession had already begun. The Union was torn. America was passing under an ominous cloud. On the way to Washington Lincoln stopped here in Philadelphia. A crowd gathered at Independence Hall to hear him. There, speaking informally, Lincoln said: "I have never had a feeling politically that did not spring from the Declaration of Independence * * * I have often inquired of myself what great principle it was that kept this confederacy so long together. It was something in that declaration giving liberty, not alone to the people of this country, but hope for the world for all future time. It was that which gave promise that in due time the weights would be lifted from the shoulders of all men, and that all should have an equal chance. This is the sentiment embodied in the Declaration of Independence * * * I would rather be assassinated on this spot than surrender."

That was the authentic voice of America—of an America, conscious and proud that its mission involved a better life for all men everywhere. And because of that high concept of what America was, because of the fires of hope which America lighted in men's hearts, millions of people came here and found what they had dreamed of, but scarcely dared to hope for. America has been what its founding fathers deeply believed it could be.

Perhaps—as some people sometimes say—there is very little political sex appeal in idealism. But I don't believe it. I am proud of the fact—and every American should be proud of it—that this great enterprise, the Marshall plan, is economically and politically sound. But I am even prouder—and every American will share that pride—that it is morally sound. I believe that ECA is America being American, as Benjamin Franklin intended America to be.

Fifty Million Bushels of Potatoes

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. FLANDERS. Mr. President, I have in my hand a letter from a constituent, Mr. Harold K. Burt, and signed by a considerable number of fellow constituents, in which they call attention to the fact that as citizens they have bought 50,000,000 bushels of potatoes. They humbly petition that each of them may receive his proportionate share of the potatoes which they have bought. I ask unanimous consent that this letter be printed in the Appendix of the RECORD.

Mr. BREWSTER. Mr. President, I should like to point out to the Senator from Vermont [Mr. FLANDERS] that 50,000,000 bushels of potatoes amount to 200,000,000 pecks, which would entitle each citizen to 1 peck.

Mr. FLANDERS. To a peck and a third.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WINDSOR, VT., *February 3, 1950.*

Hon. RALPH E. FLANDERS,
United States Senate,
Washington, D. C.

DEAR SENATOR FLANDERS: It is currently reported in the newspapers that the Secretary of Agriculture has 50,000,000 bushels of potatoes that he does not have the business ability to dispose of at anywhere near cost price to the Government, and that he threatens to sell these at a loss or to destroy them.

We understand there is a population of approximately 150,000,000 people. By arithmetic, my share of this surplus of potatoes would be one-third of a bushel. Having been unable to purchase anything but second-grade potatoes during the past winter because the Department bought up all of the good potatoes, will you kindly transmit this request to the Secretary of Agriculture, and ask him to send me, parcel post forthwith, my one-third bushel share of the potatoes which the collector of internal revenue can certify that I have paid for through my tax bills. My wife is also entitled to her one-third bushel. Please have them sent at the same time.

I believe, sir, that it would be a crime against this country and its taxpayers, and an everlasting insult to God Almighty if this portion of our food should be wantonly destroyed to satisfy some political whim or ulterior motive on the part of the Secretary of Agriculture.

I am joined in these sentiments, and in this request, by certain other fellow citizens who are likewise married people and entitled to potatoes for themselves and their wives, and their names and addresses appear below.

You will understand, of course, that I am not holding you personally responsible for this outrageous situation, and I trust that you are doing everything possible to bring back a little sanity into the operation of our Government in Washington.

Very truly yours,

HAROLD K. BURT.

We, the undersigned, join in the foregoing request to have our share of the surplus potatoes sent to us for our own use.

John E. Rockstrom, H. H. Weld, G. H. Pratt, C. P. Audette, W. H. Washburn, C. E. Miller, Windsor, Vt.; Leon Cleveland, Ascutney, Vt.; Wm. Fierne, Windsor, Vt.; George Northrop, Plainfield, N. H.; R. S. Lombard, N. L. Nichols, Gordon F. Cushing, Wm. C. Farrell, Windsor, Vt.

National Security Resources Board

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. CAIN. Mr. President, I ask unanimous consent that the column entitled "Washington Scene," by George Dixon, which appeared in the Times-Herald this morning, be printed in the Appendix of the RECORD. Mr. Dixon is a difficult person to either startle or shock. What has caused him concern may arouse a similar interest in others.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON SCENE

(By George Dixon)

Eleven months ago the Senate turned down Mon Wallgren for Chairman of the National Security Resources Board, one of the four most important positions in the world, on the ground that the job was too big for him.

Wallgren, in addition to being a renowned poker player, had been a Member of the House of Representatives, Governor of the State of Washington, and a United States Senator. Yet his former colleagues decided the National Security Resources Board required a man of wider economic and industrial experience and competency as Chairman.

Wallgren was handed the final thumbs down on March 15, 1949. The job hasn't been filled with a permanent Chairman yet.

Ho! ho! and haw! haw! Who do you think has been doing the actual work of running one of the four most important positions in the world since the former Representative-Governor-Senator was rejected as not having the stature?

Wallgren's former clerk.

To top the irony—pardon me a moment while I giggle some more in unholy glee—President Truman has since nominated Wallgren to the Federal Power Commission,

UNIVERSITY OF MICHIGAN LIBRARIES

and the Senators agreed he was competent enough for a job like that.

But the work that was considered far beyond his capabilities has been handled by the man he brought with him to Washington to run his errands.

The disclosure that Wallgren's former minion, Jack O. Gorrie, is running the works came about at a hearing before the House Subcommittee on Appropriations for the Armed Services and caused not a ripple. The committee members heard it without apparently recognizing its significance.

But the appropriations come over to the Senate in a couple of weeks and you can look for squawks that will shake the Chamber. Senator HARRY P. CAIN, of Washington, who led the fight to bar Wallgren, will probably give vent to conniptions.

CAIN, who made the battle almost a personal one (he abhors Wallgren with devoted abhoration), will cry for blood when he gets the full pitch on Gorrie.

In theory, and on paper, Assistant to the President, John R. Steelman is Acting Chairman of the National Resources Security Board, but he can't give much of his time to it. The redoubtable Dr. Steelman has too many other things to do.

The House subcommittee did not crowd Gorrie on who is running Security Resources, but the Senate will. In the report of the House hearings the testimony as to the time devoted to the Board by the Acting Chairman was confined to three short paragraphs.

Representative GEORGE H. MAHON, of Texas, chairman, asked Gorrie: "How much time does Dr. Steelman, the Acting Chairman, give to the work of the Board?"

Gorrie: "He is in the office almost every day. He comes over to the office and spends from an hour to sometimes almost a full day. Most of the time I would say he was there on an average of possibly 2 to 2½ or 3 hours. Usually it is in the afternoon of each day.

"We are in contact with him on the telephone, of course, on questions which arise when he is not there physically."

Don't you love that "almost every day"; "sometimes almost a full day"; "an average of possibly," etc., etc.?

How many of you, my gentle readers, have jobs that take up an average of possibly, approximately, almost, well nigh, pretty near, some of almost, approximately, possibly, every day on an average?

Roosevelt Day Dinner Address by Hon. Hubert H. Humphrey, of Minnesota

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Roosevelt Day dinner address by the junior Senator from Minnesota [Mr. HUMPHREY], national chairman of Americans for Democratic Action, at Pittsburgh, Pa., on January 24, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Throughout the land, speakers at ADA-sponsored dinners in memory of Franklin D. Roosevelt are discussing freedom of inquiry in a democratic society. In this age of anxiety, of tensions, and of great changes, few subjects are more worthy of discussion. Franklin Roosevelt, with his great insight, knew this well. "Freedom to learn," he said, "is the first necessity of guaranteeing that man himself shall be self-reliant enough to be free."

Why is it necessary to stress freedom of inquiry today? Does not everyone agree with Thomas Jefferson's observation that inquiry leads to truth? Certainly no one who ever went to second-year high-school science class can dispute it. When we wanted to see what a microbe looked like, we put it under a miscroscope. We inquired, and we found the truth.

No, you can't deny that inquiry leads to truth. But there are many who regret that it does, because they don't want the truth to be known.

This, I think, is why it is important that we discuss freedom of inquiry tonight. In this country and in the world there are powerful forces who would close the channels of inquiry, require a strict conformity from all the people, and keep our society right and unchanging. Regardless of the specific names they are known by in their own land, they all stand for the unquestioning acceptance of things as they are. They equate inquiry with subversion and conformity with patriotism.

But this has never been the way the American people have wanted it. From the early days of the New England town meetings our country has always stood for free discussion—freedom to question, freedom to examine, freedom to inquire. If I may quote President Roosevelt again, in one of those perceptive remarks we learned to expect from him: "You will never have a completely stable world without freedom of knowledge."

There are two ways of reporting history. The first is in terms of battles won and lost and the fall and rise of government; the other is in terms of the discoveries of the mind. In every generation the mind of man reaches out to new length and never shrinks back to its former dimensions. Fortunately, though man is mortal, his thoughts and ideas are immortal. Each generation salvages the immortality of the preceding ones to create a steady progression of civilization.

The creative ideas of man have developed fast in recent years. It was only 300 years ago that man began to seriously question himself about the nature of the physical world in which he lived.

The seventeenth century was characterized by the great intellectual revolution, the age of science. Men became possessed with the idea that the physical universe was their concern—that they could ask questions about natural phenomena without incurring the wrath of God. They became possessed with the idea that there were physical laws they could fathom. Here, indeed, was the triumph of Copernicus, Galileo, Newton—men of ideas, men fearlessly inquiring into the unknown.

The eighteenth and nineteenth centuries were characterized by new inquiries, by new ideas that possessed men—the idea that if there were physical laws of the universe that men could fathom and ask questions about, then why not inquire about the nature of man-made society.

With this inquiring, the ideology of democracy came into being.

Until the First World War this ideology of democracy was on the offensive. The action against it was rear guard, defensive, and uncertain. Democracy was the concept of today and tomorrow. Men everywhere heard of it and spoke of it and acted to achieve it.

But, in this generation democracy has been challenged by another ideology. In Italy, Germany, and Russia the leaders talked of what they said was a "new order"—something new and streamlined.

But what did we see when we examined this "new order"? We have found it wasn't new at all. It was the old, old doctrine of authoritarianism, pushed with the force of guns and marching feet—yes, nothing more than the ancient curse of "divine right" of the strong to rule the weak.

Democracy met and conquered this old concept years ago in nearly every civilized nation of the world. Today, if we fully understand the power of inquiry, the power of our idea and its full meaning, we can easily maintain the eminence of the democratic faith that only yesterday spread from mind to mind and heart to heart throughout the world.

Of all people who should understand the strength of freedom of inquiry, the power of democracy, the American people should be the first. Our idea of democracy was embodied in the Preamble to the Declaration of Independence, and in the words of our Constitution. It has as its philosophers Samuel Adams, Thomas Jefferson, James Madison, Tom Paine, Abraham Lincoln, Woodrow Wilson, Franklin Roosevelt. These men all spoke of the same ideology; all were possessed of the same idea. They sought to free men from fear; to free them from poverty; to free them from social and economic injustice, and from insecurity, they sought freedom of inquiry.

Strange as it may seem, America has let loose upon this world the most powerful and dynamic political and social force in the history of man. It has its roots deep in the spiritual substance of Judeo-Christianity. It receives its political inspiration from the logic of the stoics, the compassion of the martyrs, the faith of the philosophers of natural law. We are of the first to present to the modern world a coherent political faith based upon the dignity of the individual, the equality and fraternity of mankind. We are of the first to pattern a structure of government and a form of society in which the liberties of a people were guaranteed and opportunity was to be assured.

This was an idea—or better to say—an ideology more powerful than the armies of the conquerors. History proves this fact. It was our call to freedom in 1776 and our realization of a government of the people, by the people, and for the people that let loose in this world a social and political revolution. This revolution upset the thrones of Europe and convulsed the continent. It put into the hearts and breasts of the colonial people, the under-privileged, and the subjected, the consuming desire of individual liberty, a desire which today is manifested by such rebellions as we see in Indochina, in Indonesia, and in the fact of India's freedom. We never moved a battalion or a regiment on the continent of Europe in the 1800's, yet the idea of the Declaration of Independence produced the doctrine of the rights of man and broke the back of oppression and the power of kings.

Today, too, the vital force in the world is the search for freedom. We see many manifestations of it: the rise of nationalism of the colonial peoples; the oppressed and the poverty stricken following the leadership of those who use the symbols of freedom, even though their purpose may be otherwise. We find economists and political philosophers talking in terms of abundance within the framework of individual freedom. Men are no longer just content to talk of their security. They want security and liberty. The humanitarian of this generation is one who understands the interdependence of these two principles—freedom and security.

There are those who today feel we have moved away from this idea, when in fact it is but maturing. It is growing strong in its own sense of competence and rich in its experience. The great political and social experiments taking place in Europe—in the free countries of Europe—are but another expression of this idea of democracy. Our groping and experimentation in the hall of

Congress, evolving such programs as the new freedom and the New Deal are but further expressions of a people with the desire to emancipate themselves from fear, from insecurity, and from oppression.

No better example of our maturing democracy can be found than the ever-growing demand that all people, regardless of race, color, or creed, be guaranteed full and equal civil rights. The morality of our democratic faith compels us to cleanse our body politic of the guilt that arises from our distortion of democratic principles through discrimination and bigotry. The American people are acting to redeem their honor. In city after city—in State after State—human rights are being reaffirmed and protected by law. The democratic spirit of the people now calls upon our National Government to destroy the last vestige of intolerance.

Our maturing democracy calls for the recognition that all must be free from insecurity. All must be privileged to enjoy the opportunity of good health, of productive work, of education, of adequate housing, and of decent living conditions.

This is democracy's answer to the challenge of totalitarianism.

One of the finest examples of the spirit of freedom and free inquiry in a democratic society was the investigation and report 2 years ago of President Truman's Commission on Civil Rights. Its report added immeasurably to America's store of knowledge about itself: 44 lynchings in 11 years, with not a single person given the death penalty for these crimes. The poll tax and other ballot restrictions, denying the vote to literally millions of Americans. Newspaper help-wanted ads offering jobs for which only whites or gentiles need apply, and job seekers required to list their religion on application blanks. The demonstrable fraud of separate but equal schools for whites and Negroes. Job discrimination keeping minority groups in relative poverty.

On the basis of these findings, President Truman formulated his civil-rights program and sent it to Congress. These proposals have languished there for 2 years, kept in the shadows of inaction by the combined power of Republicans and Dixiecrats. But the test is approaching. I'm sure many of you heard about the national emergency civil rights mobilization which took place in Washington earlier this month. Fifty-three national organizations took part in it, including ADA. The 4,000 people who attended the mobilization were earnest, devoted, non-Communist liberals. They buttonholed practically every Member of the Senate and talked frankly to them on the civil-rights bills, and particularly FEPC. Many of my colleagues were deeply impressed. Given this kind of encouragement, we who are committed to the civil-rights proposals can make a much better fight when the issue comes up. It will come up shortly, and I promise you that the fight for fundamental decency in human relations will be made.

The reactionaries, the racists, the monopolists—all of them are loudly protesting their love of freedom these days. They profess to see danger to freedom in the minimum standards of security which the people are seeking to set up through their Government. But the conservatives' devotion to freedom hardly ever embraces protection of basic civil liberties against the peril of contemporary hysterias and the intolerant demand for unquestioning acquiescense in things as they are.

That is why this country so desperately needed a Franklin D. Roosevelt. That is why it needs today the vigor of the liberal movement that honors him on this day. That is why America needs an ADA.

Today we are a country incomparably the strongest, the richest, the best protected in the globe. Our Nation and our Constitution have withstood the vicissitudes of 160 years. Our people are intelligent and they are moral, they are devoted to freedom.

The real danger we face is that a fear of free inquiry will produce an atmosphere of suspicion and timidity that will discourage independence of thought, original investigation, and association. The real danger we face is that a program of suppression will seriously endanger effective operation of our democracy.

The real danger we face is that a spirit of hysteria will endanger the morale of American science by putting a premium on mediocrity in a field requiring independence, originality and full freedom of inquiry and communication.

The real danger we face is that a society gripped by fear strengthens the hand of the military in areas traditionally and wisely entrusted to civilian control.

The real danger we face is that freedom of teaching will be imperiled by requiring conformity to standards, by introducing the grave peril of censorship in textbooks and ideas and drive away from the teaching profession men and women of independent minds. We must guard lest it create an atmosphere in which teachers find safety not in orthodox ideas, for they will never know fully which ideas are orthodox, but safety in no ideas.

Yes, the real danger we face is that the right and necessity of criticism is threatened. No government can operate successfully without criticism and no government which censors its critics can get the criticism that it needs.

Finally, the real danger we face is that the hysteria we are confronted with, strikes at one of the most precious of all rights, one essential to the effective operation of democracy, the right of association. As Professor Commager recently pointed out, the practice of voluntary association is a peculiarly English and American practice. The Pilgrim Fathers associated themselves into a compact and since that time Americans have customarily operated around hundreds of voluntary associations: Political parties, parent-teacher, Federal, business, fraternity, philanthropic, recreational, learned and others. It is in these associations that the average American has found the training for government and real democracy to take the place of the town meeting. Any policy which discourages or crushes voluntary associations will totally dry up the very roots of American democracy.

Our security lies not in secrecy but in the preservation of peace and in the encouragement of free inquiry; our real long-term security lies in perfecting our own democracy. Even as our society now exists, it is the freest in the world and confers the most benefits on the humblest of citizens. We must make sure that it is kept free and flexible.

National Youth Rehabilitation Center of Jerusalem Hebron Yeshivah

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a dedication to the National Youth Rehabilitation Center of Jerusalem Hebron Yeshivah. The statement is a foreword to the journal of this organization which will be published in connection with its benefit dinner on March 19, 1950. The journal will depict 50 centuries of Jewish history and will be dedicated to the common brotherhood of all men of good will.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Yeshivah Hebron is a landmark in the Eternal City where every site is a pageant, featuring centuries of awe-inspiring history; where every cave is a labyrinth and her every alley reflecting the immortality of her heroes and prophets, rebels and saints, kings and princes shrouded in timeless majesty.

Her harness, studded with Biblical jewels, Jerusalem discovered in Yeshivah Hebron, yet another shield. Though soft and pilpulistic, the voices that emanate from the great yeshivah set the music to Jerusalem's ornamental lyrics and open the vaults to her Torah treasures.

The voice of the melodious shepherd sounds yet in prophetic rhapsody—"from Zion shall come forth Torah and the word of God from Jerusalem."

Yeshivah Hebron cannot be estimated as the exclusive property of any one region or populace, because of her territorial periphery she is a panoramic to which every Jew may lay claim. Nothing circumvallates her edifice; her influence and authority is not restricted to her seat in Jerusalem. On the contrary, her very structure and concept makes Yeshivah Hebron the common responsibility of all Jews as is, indeed, the Eternal City.

To understand fully the function of Yeshivah Hebron it is imperative that we give here the origin of yeshivahs and a brief but concise history of their relation to world Jewry.

The term "yeshivah" and the Aramaic equivalent, "mesivtah," both found in the Talmud, originally meant a session, a council, or a meeting of scholars, over which presided the elder. The patriarchs were all elders of a yeshivah (Yuma 28b).

During the Talmudic period, the principal Eretz Yisrael Yeshivahs were at Sephoris, Tiberias, and Caesarea, while those of Babylon were at Mahuza, Nehavdea, Sura, and Pumbedisa.

In Babylon and Levant during the fourth century, the yeshivahs assumed the functions of rabbinical colleges, where young men were prepared for the rabbinate. Until the beginning of the ninth century, the Jews in European countries and elsewhere depended entirely on, and abided by, the decisions of the authorities in the yeshivahs of Babylon which they supported liberally. It was largely due to the encouragement of Charlemagne—who jointly with his brother Carloman, ruled over France, Germany, Spain, and Italy—that the learned men of Babylon emigrated and established yeshivahs in France and Germany.

With the beginning of the eleventh century, the seat of the yeshivahs was firmly established in France, Spain, Germany, Italy, Holland, and Poland.

Not until the sixteenth century did yeshivahs again begin to flourish in Eretz Yisrael—in Safed under Berab; in Caro—and in Jerusalem under Levi ibn Haviv.

During the rise of the Hasidic and Reform movements, which the yeshivahs regarded as a threat to the method and style of study augmented by Reb Elijah, the Gaon of Wilna, Reb Hayyim of Volozhin, a pupil of the Gaon, organized in 1803 the celebrated Yeshivah of Volozhin, a small town in the state of Wilna, and his own birthplace.

When God decreed the death of Moses, the prophet's primary request was "Let the Lord, the God of the spirits of all flesh, set a man * * * that the congregation of the Lord be not as sheep which have no shepherd." Reb Hayyam Volozhin lived to see the new shepherds whose destinies were shaped by their very tenacity to uphold the yeshivah traditions. They were Reb Moshe Mordechai Epstein and Reb Noson Zvi Finkel.

In 1883 these renowned Talmudists founded a yeshivah in Slabodka (Lithuania) which was inconspicuously transferred in 1924 to Hebron, Palestine, and thence became known as the Hebron Yeshivah. Following the Arab riots of 1929, the yeshivah moved to Jerusalem.

Now, that great edifice stands as a tribute to the sainted memory of its founders, engendering a steadfast faith, unabated by sorrow, and a loyalty unmitigated by serfdom.

The students of the yeshivah have, for more than a half a century, withstood the challenge of anti-Semitism in Russia, and outlived the Nazi holocaust in Europe. These men of every generation and decade treasure neither gold nor silver; they favor neither steel nor blade; they are dedicated to the justice of their divine principles—ancient and hollow. They feed on faith uncorrupted and, like the cedars of Lebanon, stand undaunted against the stridulous and subrosa evils of the secular world.

"And the sun stood still and the moon stayed, until the people had avenged themselves upon their enemies" (Joshua 10:13). Indeed, time stands still for these men who observe the ancient traditions and rituals as on the day God commanded their ancestors to do. Such is the caliber of the man who aspires to leadership in the great yeshivah; such is the caliber of the yeshivah-ordained rabbi who tutors and guides Jews throughout the world; teachers who are the link between God and the Jew at large in a bond unbroken by the cavalcade of disaster.

Hundreds of rabbis who serve the spiritual needs of Jews all over the world received their training and ordination at the great Yeshivah Hebron. Two-thirds of Israel's rabbis were graduated from this, the greatest institution of learning.

In addition, the Yeshivah Hebron inspired and sponsored the growth of yeshivahs throughout Israel. Six such institutions are drawing on the renaissance of Yeshivah Hebron.

With the independence of Israel, Yeshivah Hebron expanded and received her share of the new influx of immigrants. The yeshivah's new dormitory, which will be known as the national youth rehabilitation center, equipped to house and care for thousands of young men, is now nearing completion—making your contribution a pillar upon which this edifice will stand and endure.

Why the Difference?

EXTENSION OF REMARKS

OF

HON. WALTER E. BREHM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1950

Mr. BREHM. Mr. Speaker, the widow of a veteran who had been declared totally and permanently disabled has asked me the following question: "Why does the widow of a veteran who died as a direct result of his service-connected disability receive more pension than the widow of a veteran who was adjudged totally and permanently disabled, service-connected, but whose death could not be directly attributed to his service-connected disability?"

Mr. Speaker, I can readily understand why a veteran with a service-connected disability should receive a greater degree of compensation than one with a nonservice-connected disability. However, I cannot understand why any widow of a veteran should receive a greater degree of compensation simply because the husband of one died as the direct result of his service-connected disability while the other one did not—remember, both veterans' disability being service-connected.

The price of all necessities of life cost the same for the widow in either case and it seems to me, in all fairness, that if a veteran has been declared totally and permanently disabled, service-connected, that all widows of veterans with this type of disability should be compensated equally, regardless of the cause of death.

Jackson-Jefferson Day Dinner Address by Hon. Oscar L. Chapman

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Jackson-Jefferson Day dinner address by Hon. Oscar L. Chapman, Secretary of the Interior, in Los Angeles, Calif., January 23, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

JEFFERSON-JACKSON IDEALS STILL LIVE

I am happy to be among you tonight to pay a tribute, at once humble and proud, to those two great protectors of the general welfare of the people, President Thomas Jefferson and President Andrew Jackson. The Democratic Party is reinvigorated on occasions like this when the liberal Jefferson and the rugged and popular Jackson can walk again in spirit among their friends.

We of the Democratic Party are the heirs to their great tradition, and it is we who stand among the people as the guardian of their democratic ideals.

Thomas Jefferson was the philosopher of our democratic state, and he played a masterful part in its creation. It was his hand that so often guided his contemporaries from the paths of error and unwise compromise. It was his voice that appealed repeatedly to the people and to their Congress for undivided support of the Constitution for which he had, in his own words, "a zealous attachment."

His insistence on the inclusion of a Bill of Rights in the Constitution is a matter of history well known to us all. To him, this was a guarantee against the invasion of men's lives by habits accepted in an old world grown weary from congestion and conflict.

But Jefferson's legacy to us is far more dynamic than this. In a world where those about him were subject to the will of monarchs and masters, he recognized in men themselves an essential dignity, and a power to determine their own destinies and make them free.

This belief in the common man—an abiding faith in man's ability to govern himself—was the eternal spring of Jefferson's philosophy. In his first inaugural address, he stated it simply: "Sometimes it is said that man cannot be trusted with the government of himself. Can he, then, be trusted with the government of others? Or have we found angels in the form of kings to govern him? Let history answer this question."

For President Jefferson, we can say that while tyranny still lives in the world, his question has been answered. The Government of this Nation has been kept, as he hoped, "close to the people."

We of the Democratic Party are proud to state that we have followed his admonition for "the preservation of the general government in its whole constitutional vigor, as the sheet anchor of our peace at home and safety abroad." We as a people can affirm his own claims for us as "the strongest Government on earth." We still believe, with Jefferson, that our Constitution is unquestionably the wisest ever presented to men.

To Andrew Jackson we pay tribute for the renewed application of practical democratic principles to a national life growing ever more complex as our frontiers pushed onward to the West. The movement toward the West had all begun by Jackson's time, and the spirit of the West was beginning to be felt.

These pioneers were the people whose voices were heard in the White House, asking from Andrew Jackson, of Tennessee, a square deal in national administration. This Jackson proceeded to give them, and the Nation assumed new vigor and new hope. He was the leader of the rising democracy of our Nation, and like the Democrats of today, a firm believer in our Constitution.

We who are joined here tonight do not have to be told how the Democratic Party has carried out the ideals of Jefferson and Jackson. It is proper, however, to review the progress we have made, for in the review we dedicate ourselves again to the principle of government for all the people. It is right that we examine what the Democratic Party has done for their welfare.

The people have always benefited during Democratic administration. This has been particularly true since 1932. In that year, the people of the Nation took back unto themselves the control of their Government, and handed the legacy of Jefferson and Jackson to Franklin Delano Roosevelt.

In 1948, the people knew with certainty all of the things they wanted done for their own welfare. This was the year when they handed their Government to a man who possessed an unfaltering faith in the people of this Nation to choose what was best for their own welfare, to the man whom nobody wanted but the people, Harry S. Truman.

Franklin D. Roosevelt knew and understood, and Harry Truman knows and understands the meaning of the West to this Nation.

This is the territory that Jefferson felt would serve the needs of the Nation's people for a thousand generations, not only to make the Nation great, but also to strengthen the Democratic ideals to which he devoted his life.

It is also, I am proud to say, the land which has claimed rightly a great share of attention from the Government department over which the people now permit me to preside.

The national income during the year 1849, when the Department of Interior was established, and when our population was about 23,000,000, amounted to little over $2,000,000,000. In 1948, this income reached a high of $226,000,000,000.

The role now played by your Government in the development of the West during those hundred years is recorded for all to see. I think we can be justly proud of that role. With you, we have looked with wonder at your vast, fertile, and productive land. We have seen your growing industry. We have joined you in exploring for the wealthy minerals hidden in your mountains and valleys.

We have imagined with you the possibility of watering your dry acres. We have come with you as you made plans to give your electric power to your Nation, to provide water for your people, and to grant to all the people of this Nation an opportunity to recreate themselves in your forests and your parks. And, then, under Democratic leadership, we have moved ahead with you.

The vast resources which the West has held in custody for the Nation are far richer than Jefferson or Jackson could have imagined. The social pattern for the protection of this precious possession of all the people was set long ago. In his plans for the government of the Louisiana Territory, Jefferson made certain that monopoly in land could never be established.

Andrew Jackson, in his successful fight against the Bank of the United States, settled the question as to whether the Government could protect its citizens against a small minority who had achieved wealth and power through the monopoly of a vital instrument of the Nation's economy.

The Democratic Party has continued to follow the ideals of Jefferson and Jackson in holding the interests of all the people of this country as paramount to the desires of special interests or particular groups. We are unlike many people who speak of our great Abraham Lincoln loudly and in awed tones while privately serving the interest of those who oppose most strongly the liberal ideals for which Lincoln lived and died.

We believe that the vast resources of the West—water, land, and minerals—constitute a national wealth which should be used for the enrichment of life for all our people. In the last 17 years, we have made greater strides in the use and control of these national resources than have been made in all the years of our history.

You know well the value of your water. The world wars have brought to the Western States a new industrial economy and people to swell your population. The demands on your water supply, for irrigation, for power, and for your civic needs, have been increased. The way in which these demands are met will determine the soundness of your new economic foundation.

Only too recently, you have seen shortages in electric power for lighting your homes and for operating the utility and industrial requirements of your cities, your factories, and your farms.

You know now that problems involved in maintaining adequate water supplies are too large and too complex for individuals and groups to handle without help. They transcend State lines, and they affect the welfare of the entire Nation. You have asked your Government for help in planning. Under Democratic leadeship, it has provided that help, and it intends to continue to do so.

The Grand Coulee, Bonneville, Central Valley, Boulder Canyon, and smaller projects, multipurpose in design, are now mighty servants of the people. It is important to your lives and to the Nation that public projects like these be multiplied.

Our Bureau of Reclamation has been able to report that water has now been made available to 90,000 farms, totaling 4,600,000 acres. Crops on reclamation land alone were valued last year at about $500,000,000. Installed capacity on western Federal power projects alone totaled 3,000,000 kilowatts by 1949.

This is the way in which the Democratic Party has planned with you for your own control over your water and your power and for your own right to build your mighty power plants and your transmission lines. These are your heritage in the West, and they must remain yours, never to become the instrument of profit and special privilege to some few among you.

Yes; under Democratic leadership your Government has led the way in stopping "water, the destroyer," as it flooded your valleys, eroded your soils, and poured wasting into the sea. It has redirected "water, the builder" into activity which promotes life, provides it with leisure, and lights its way.

If this kind of Government service to the people is the welfare state, I am for it, and I think you are for it.

The conservation of mineral resources is of the highest importance to the West and to the Nation. In the face of rapid depletion of some of these resources, the Government under Democratic leadership is moving steadily to find out exactly what your mineral resources are, and to develop methods of lower-cost extraction and processing. The maintenance of a sound mining and mineral industry is of vital importance to the Truman administration.

The land of the West has always been its richest physical resource. We now know that our resources in forest and grazing land must be protected to serve all of our people. This the Democratic Party is doing.

I believe that you want these rich resources to be conserved for your children and their children. I believe you want to use them to make a better life for our people as well as in the future. If you do, and if this is the welfare state, I am for it, and I think you are for it.

Now look with me at yourselves, as the reason for all of these things. Resources and their development are not ends in themselves.

You, the people of this Nation, are its greatest natural resource. In your example of democratic living and government, you are one of the rich resources of the world.

You knew your power as a people when you placed your faith in one of the noblest of our citizens, Woodrow Wilson, and enthusiastically welcomed his "new freedom." It was not of your making that a handful of shortsighted and willful men thwarted your wishes and his ideals for an America assuming its place in the councils of the world to secure a lasting peace.

You knew your power in 1932 when you asked Franklin D. Roosevelt to make your voices heard in the land, in your factories, your homes, and your schools.

You knew your strength as a people when you told Harry S. Truman to guard again your rights to a Fair Deal.

The Democratic Party has been your voice, and your general welfare has never ceased to be its goal. Let us look at what has happened to us under its leadership:

The people are secure in employment and income. Our factories are busy. Our commerce is moving. We are educating our children, and we continue to maintain the highest standard of living in the world. We are helping our neighbors who bore the brunt of war, and we are sharing the responsibilities of nations for maintaining the peace.

Vast numbers of our people can look forward to old-age assistance under our social-security program. Workers are protected against want during periods of forced unemployment.

There has been progress in many directions under the Democratic administration, and most of it has touched your lives. Cash income of farmers in 1932 was less than $2,000,000,000. In 1948 it reached more than $30,000,000,000. Here in California your farmers' income rose from about $404,000,000 in 1932 to over $2,000,000,000 in 1948.

Nearly 95 percent of California's farmers had electricity at the end of June 1949. When REA was established in 1935 only 50 percent of these farms had electric lights.

This, however, is the almost unbelievable accomplishment. Only 11 percent of the Nation's farms had electric lights in 1935. Under these years of the Democratic administration, over 78 percent of all farms are electrified.

Like the people of the rest of our Nation, you have needed houses, and you have asked for help to get them. Here is what has been happening, and the State of California has been typical. At the end of 1948 the Federal Housing Administration had outstanding in this State over 908,000 insured loans on small homes for property improvement, with insurance totaling over $342,000,000. It had underwritten the construction of over 13,000 units in large apartment projects, and had insured 342,000 mortgages on 1 to 4-family homes.

The Home Owners' Loan Corporation had aided over 57,000 families by refinancing home loans totaling over $148,000,000. By June 30, 1949, all but about $5,000,000 of these loans had been repaid.

If all of these things are the welfare state, the Democratic Party is for the welfare state, and it proclaims it to the people proudly.

The Republican Eightieth Congress set out to destroy many of the progressive benefits which you as a people had chosen for yourselves. You are all too familiar with the way in which special interests made inroads into your rights under the Constitution.

The Democratic Eighty-First Congress reversed this trend, and many things have already been done to serve the people of the Nation. Funds for continuing important reclamation and power projects have been restored. Provision has been made for a Nation-wide program of low-cost housing and slum clearance. Rural electrification has been strengthened and extended. Minimum wages for working people are higher than ever before.

The Economic Cooperation Administration has been authorized to carry on for us its great work in resisting the advances of communism by strengthening the democracies of Europe.

We cannot be content, of course, with these accomplishments. The dynamic philosophy of Jefferson and Jackson which took them through new frontiers of thinking and planning still means for us a never-ending crusade to better the life of our Nation and the lives of its people.

President Truman has told us that we can soon achieve a national income of $300,000,000,000 annually. He has predicted that the average family can receive, by the year 2000, a real income about three times what they receive today.

To do these things, we must maintain a stable economy, avoiding the economic boom and bust cycles too frequent in our past history.

Under Democratic leadership, your Government intends to stimulate increasing returns of capital into new productive investment. It will curb monopoly and provide incentives to new and independent enterprise.

It will take all steps necessary to see to it that the benefits of economic growth extend to all groups.

Farmers will be protected against economic and physical forces over which they have no control. The products of their land and their work must be made available to consumers in increasing quantities and at reasonable prices. Farmers themselves must be guaranteed a fair return for their services to the Nation.

Labor must have lifted from its back the weight of one-sided labor legislation which now stifles its efforts to express its needs in the democratic way.

UNIVERSITY OF MICHIGAN LIBRARIES

The social-security laws must be extended until almost all of our people are covered by their benefits.

The health of our people is the well-being of our Nation. With a vast segment of the population lacking medical care, some form of national insurance must be enacted to provide this care. Our doctors must increase in number, and the number of our hospitals must be multiplied greatly.

Thomas Jefferson held as a fundamental tenet of democracy, equal and exact justice to all men, of whatever state or persuasion, religious, or political. In our time, our concept of democratic rights has extended with the development of our Nation. The recognition of the civil rights of all men and women has been long since accepted as a tenet of the Democratic Party.

All citizens have equal rights to gainful employment and economic advancement; to security of their persons; and to the right of franchise. We intend to support legislation which will establish these rights within the law of our land forever for all our citizens.

We shall continue, under Democratic leadership, to work actively in the council of nations to maintain peace in the world. More than this—your Government intends to give example to the world in the use of resources for the people's welfare. The President's point 4 program will be accelerated, that less advanced nations may come to know the vast benefits of their resources, just as the west has done. We shall help these nations to direct their resources to lift the standard of living for their citizens.

You know that, if these things are to be done—and you have to count on Democrats to do them—the President needs a Congress overwhelmingly Democratic.

The elections in 1950 will return a Democratic Congress, but there must be even greater numbers to support the President as he moves on to the goals I have mentioned.

Here is a challenge to you who join me here tonight. Your administration and your party need you, and they count on your help in this election that is coming. The people must be told the story of what we are trying to do, and they must come to the polls. California helped to elect Harry Truman. Now it must strengthen his hand as he works for the interests of its people.

We are the people of a great Nation. We stand as a symbol to the world of man's faith in himself, and in the thoughts, abilities, and motives of those around him. This, my friends, is the philosophy of Jefferson and Jackson. The magnificent determination of President Harry S. Truman and Vice President ALBEN W. BARKLEY to rest upon the decision of the people in 1948 proved that this was their philosophy. It is your land and my land. We have kept it secure under our Constitution, and the Democratic Party proposes to keep it secure for us, the people of America. Yes, Jefferson's questions have been answered. This Government is "close to the people." If this be the welfare state, I am joined by the millions of our people in seeking to maintain it for our children and our children's children.

What Is a Reactionary?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the CONGRESSIONAL RECORD an interesting article by former President Herbert Hoover, which appeared in the February issue of Coronet:

WHAT IS A REACTIONARY?

(By Herbert Hoover)

The new era of today seems united in the notion that they have just discovered real liberalism and that all previous eras are reactionary. Well, there is something to be said for the old reactionary notions which held to basic freedoms of mind and spirit.

In the years since the founding fathers, a God-fearing people under these reactionary blessings have built quite a plant and equipment on this continent. It teems with millions of comfortable farms and homes, cattle, and hogs. It is well equipped with railroads, power plants, factories, highways, automobiles, and death warnings. It is studded with magnificent cities and traffic jams.

The terrible reactionaries have filled the land with legislatures, town councils, free presses, orchestras, bands, radios, juke boxes, and other noises. It has a full complement of stadiums, ball players, and college yells.

Furthermore they have sprinkled the country with churches and laboratories, have built 10,000 schools and 1,000 institutions of higher learning. And somehow these reactionary minded taxpayers are squeezing out the resources to maintain 1,000,000 devoted teachers and 100,000 able professors, and to keep more than 2,000,000 students in colleges and universities.

Possibly another ideology could do better in the next 174 years. But I suggest that we continue to suffer certain evils of free men and the ideal of equal opportunity rather than die of nostalgia.

Increased Sugar Production in United States Areas in 1950

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1950

Mr. AUGUST H. ANDRESEN. Mr. Speaker, between thirty and thirty-five million acres of good farm land in the United States will be taken out of customary production of corn, wheat, cotton, peanuts, and tobacco in the crop year of 1950. Approximately one-half of this acreage is taken from wheat and corn areas. The farmers in the wheat and corn section are looking around for other crops to plant on the idle acres. But they find it exceedingly difficult to locate another farm crop for large-scale planting without adding to existing surpluses.

Sugar is a deficiency crop in the United States. Sugar beets can be grown in most wheat and corn sections, and sugarcane production can be increased in Louisiana, Florida, Hawaii, and Puerto Rico. We annually import 2,504,000 short tons of sugar from Cuba. A very substantial portion of this sugar could be raised in United States areas.

While the economy of Cuba is largely dependent on the production of sugar for consumption in the United States, certain developments have taken place in Cuba, which I feel warrant a reexamination of our sugar policy by Congress.

For the past 50 years Cuba has purchased most of its wheat flour from United States flour mills. In fact, Cuba has been our best foreign customer for flour. Flour imports by Cuba from United States mills for five calendar years—in hundredweights—are shown as follows:

1945	4,611,000
1946	3,453,000
1947	3,701,000
1948	2,583,000
1949 (estimated)	3,064,000

American wheat farmers and flour mills are about to lose the Cuban market for wheat flour to a newly established flour-mill company in Havana, which is known as Molinos de Harina Burrus, S. A. The new flour-mill company, which eventually expects to produce all of the flour required for Cuba, is being constructed and financed by a Mr. Jack Burrus, a prominent American miller from Texas, under the most extraordinary concessions from the Cuban Government. Under the concessions, which I will outline, it is anticipated that the Burrus Cuban flour mill will import most of its wheat for flour production from Canada, Argentina, and other foreign countries, instead of the United States, because of the lower prices for wheat in those countries. The wheat farmers and flour mills in Texas, Oklahoma, Missouri, Minnesota, Indiana, New York, and other sections will be the losers. Eventually, when the Burrus mill gets into full production to fill all Cuban requirements, the outlet for wheat produced on 530,000 acres in the United States will be gone.

Amongst the concessions given by the Cuban Government to Mr. Burrus are:

First. Import of wheat into Cuba for the mill, cancellation of import duty and tax.

Second. Complete exemption from all taxes on machinery and materials imported for construction of the mill.

Third. Complete exemption from all taxes on the export of currency necessary to pay for imported construction material and machinery.

Fourth. Exemption from all taxes on the export of currency necessary to pay for wheat and other raw materials imported for the operation of the mill.

Fifth. Exemption from taxes on capital and capital stock.

Sixth. Exemption on all tariffs, consular fees and other types of excises and supercharges now being levied for the importation of raw materials necessary to the operation of industries located in Cuba.

Seventh. Exemption from general Cuban utilities taxes.

I understand that the State Department has given its approval to the concessions awarded to Mr. Burrus in his Cuban venture. Possibly it was done to advance President Truman's dynamic point 4 program to assist undeveloped countries to become self-sustaining. It is difficult to understand the reasons for the action taken by the Cuban Government against the interest of its neighbor country and its best customer for sugar and other commodities.

In view of the fact that the Cuban Government has undertaken a policy to

curtail and finally stop imports of American wheat flour, and since United States areas are curtailing production of sugar in order to provide a market in this country for Cuban sugar, I will ask the Committee on Agriculture to review the sugar quota law. There will be at least 10,000,000 idle acres of corn and wheat land upon which sugar beets can be grown, and I am positive that sugarcane production can also be increased in Florida, Louisiana, Hawaii, and Puerto Rico. This matter should be promptly investigated so additional production of sugar can be made available from the 1950 crop.

Freedom Through the Marshall Plan and the Truman Doctrine

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, on January 26, 1950, it was my pleasure and privilege to address the mass meeting of the Ahepa chapters at the Pythian Temple in the city of New York. These people know only too well how important it is that we never, for one moment, relax in our efforts to gain freedom for all peoples of the world. They have seen their Greek countrymen continually threatened by oppression during recent years. They have seen the peoples of neighboring countries suffer under the stranglehold of oppression for centuries, with the flame and hope of freedom flaring forth time and time again, only to be smothered by some new enemy. They know what a very real fight the fight for freedom must be.

The Marshall plan and the Truman doctrine, Mr. President, have been our weapons in recent years in the fight for freedom for all peoples. They have been effective weapons. We have seen the tide turn again and again in countries which feared the oppression of communism. We have seen the Greek people succeed in their efforts to retain their ideals of freedom. We have seen Europe once again on the road to freedom and security. The Marshall plan and the Truman doctrine have done a tremendous job, but their job is not completed. America must continue to strive for the freedom of all peoples by every means possible, for only through freedom can the world obtain peace.

I ask unanimous consent that my address before the Ahepa chapters be printed in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For millions of people, the ideals of freedom for which the world fought the bitterest war in history are ideals which have not yet become realities.

It was, I believe, Winston Churchill who gave the world a suitable name for what has happened in eastern Europe in the years which have followed the end of World War II. In a speech given in the spring of 1946, Mr. Churchill remarked that an iron curtain had been drawn across the continent of Europe. He went on to say that behind that curtain lay the ancient, great capitals of eastern Europe: Berlin and Warsaw, Prague and Budapest, Belgrade and Bucharest, and Sofia.

For centuries the people of eastern Europe have seen their homelands turned into bloody battlegrounds. For centuries, the efforts of the eastern European peoples to achieve peace with their neighbors, and freedom from oppression by their rulers, have been efforts thwarted by the countless and merciless forces of history. Great states with free governments, with free elections, and with free people, have risen only to fall when some new vanguard of oppression overwhelmed them.

The people of eastern Europe have lived with tragedy for centuries. They have seen fortune turn against them again and again. To me, however, the most hopeful note of all lies in the fact that the desire for freedom has survived in the hearts of these people despite the tragic history of their efforts to obtain liberty.

While I realize that in the minds of most of us the events of recent years are remembered with a painful clarity, I would like tonight to look back briefly over some of the things which have happened since the close of World War II; I would like to review for you some of the things which have been done constructively to rekindle the hope for peace and freedom in the future; and, in short, to sum up for you where I think matters stand now, and to outline for you, as I see them, some of the steps which remain to be taken.

I think it is fitting to illustrate this unhappy period for the people of eastern Europe by directing our attention to what has taken place in Greece since 1946. I say this for several reasons. Perhaps the most important is the fact that the Greek people have shared with the Estonians, the Latvians, the Lithuanians, the Poles, the Czechs, the Slavs, the Ukrainians, the Hungarians, the Rumanians, the Bulgars, the Serbs, the Croats, and the Albanians, the threat of oppression by a single philosophy of totalitarian control. Another reason, obviously, is the fact that this control has been imposed upon all these peoples from without—imposed upon them by a system which seeks the domination of the entire world—imposed upon them with such an overwhelming threat of force that they have been reduced to pawns in the gigantic game for mastery of the planet.

Let us look at Greece by the end of World War II. Her people were starving. Her agricultural economy was so badly broken that it could not conceivably undertake the job of feeding her people. What industry had existed in Greece prior to World War II was so badly crippled that only 40 percent of it was in operation.

Yet, in 1946 there were two free elections held in Greece. On the last day of March in that year, general elections were held to select representatives to the Greek Parliament. In September of the same year, a majority of the Greek people decided, again in a free election, that it wished to see the restoration of its monarchy. Both of these elections were held under the watchful eyes of international observers, whose duty it was to assure the Greek people of an opportunity to vote as they wished to vote—to vote without fear of retaliation for speaking their minds.

Trouble followed. Defeated at the polls, a handful of hardened Communist revolutionaries, backed with assistance furnished them across the borders of Albania, Bulgaria, and Yugoslavia, sought to achieve through violence what they had failed to accomplish through democratic processes. They sought to destroy every vestige of democracy in Greece, and they were backed in these efforts by the Cominform, a body I scarcely need identify for you.

The Greek Government was in a poor position to ward off an organized, systematic attack upon it—an attack made possible through arms furnished by the Soviet Government. As I have already said, the Greek economy was close to collapse, thanks to the merciless treatment it had received in the hands of the occupying Nazi forces during World War II.

The Greek Government appealed to the Security Council of the United Nations, and as a result of that appeal, a special commission was appointed to investigate the charges alleged by the Greek Government. That commission reported back to the Security Council, saying in effect, that the charges alleged were, in fact, true. Efforts were made immediately by the American and British delegates of the Security Council to act in Greece and put an end to this threat. The Russian veto killed off any hope that the Security Council might act.

It was in this setting that the Truman doctrine was born. In March of 1947, President Truman urged the Congress to undertake a vast obligation in southeastern Europe. He did so because certain facts were absolutely clear. First, it was clear that without help the Government of Greece would fall, and the country would become a Soviet satellite. Turkey needed help. It was also clear that the Russian veto would stop any effective action by the Security Council of the UN.

We had a fight, of course, in the Congress, as you might have expected, for there is still a noisy handful of Senators and Representatives who believe that America is round—of those who still believed that America could be kept strong and free even if we let the rest of the world go hang. I think all of you know that this group does not truly reflect the sentiments of an overwhelming number of American people, and thus it was that the Congress endorsed President Truman's proposal a short time after it was made.

The flow of American assistance into Greece and Turkey gave birth to a new hope that the fate of Communist oppression could be avoided. I think we must be realistic, however, in admitting that the year which passed between the spring of 1947 and the spring of 1948 was a year of fear for those who believed in democracy and freedom. It was in this period that the outcome of Communist efforts in Greece and Turkey was gravely uncertain. It was in this same year that the economy of all of Europe staggered so badly that it seemed virtually impossible to avoid a complete collapse, and it was in this same year that the Communists secured their positions in eastern Germany, in Poland, in Czechoslovakia, in Hungary, and in the Balkan countries to the south. The winter of 1947 and 1948, as all of us recall, was the winter the veterans cast anxious eyes at the uniforms they had laid aside, wondering whether, in a matter of weeks, they would be called on once more to save democracy through the merciless and inhuman mechanism of war. A Communist-inspired general strike threatened calamity in France. The general elections due in Italy in the spring of 1948 gave rise to the real fear that the Communists would gain control of the Italian Government. This was, in truth, a year of paralyzing terror for millions of the world's people.

I have a deep and humble pride, however, in the fact that the American people rose to the challenge of the cold war. We were not paralyzed; we were thinking, and we were thinking constructively. In June of 1947 our great soldier-statesman, George C. Marshall, had thrown out the suggestion of the plan which later was to bear his name. It is true, of course, that 10 months passed between the birth of the Marshall plan idea and the day that the Congress of the United States created the European recovery pro-

gram. While we did not hear much about it at the time, a tremendous amount of planning and blueprinting was accomplished in the dark months which followed General Marshall's statement at Harvard in June of 1947. The blueprints for the Marshall plan were drawn up, not by Americans alone, but by the true believers in democracy that were still to be found in the free countries of Europe. Without that planning there never could have been a European recovery program, and, despite the fact that it took us 10 long months to complete the blueprints, the job was done in time.

I have often felt that one phase of the Marshall plan has not been clearly understood. In General Marshall's original outline of his program he invited every government of Europe to participate in the joint and necessary enterprise of rebuilding the European economy. He added, however, one proviso. He made it equally clear that American assistance would not be given to foster antidemocratic developments. There had been initial requests made by representatives of many governments behind the iron curtain to participate in Marshall plan assistance. Pressure from Moscow forced these countries to withdraw their requests. I can scarcely tell you what a bitter disappointment it was to all of us that the countries behind the iron curtain were powerless to participate in the Marshall plan.

Less than 2 years have passed since the ECA was born. We, of course, continued throughout this period to furnish military assistance to the governments of Greece and Turkey, in order to make the Truman doctrine effective. In these 2 years we have passed the turning point in the cold war. The combination of the Truman doctrine and the Marshall plan is paying off.

By the 1st of September 1949 the Government of Greece was able to announce that the Communist guerrillas had been driven past their borders, and that civil order had been restored. Turkey was secure. In country after country that had participated in the Marshall plan, the Communist group had been resoundingly turned down at the polls, and there was new life and new hope in all of the free countries of Europe.

The job isn't done. I think, however, we can say, without being smug or complacent, that tremendous progress has been made in these 2 years—progress which I am confident will lead us ultimately to a free and democratic world which will live in peace.

We have a great deal of work yet to do. For example, the Marshall plan was drawn up on the assumption that economic recovery in Europe could be achieved by 1952. Thus we are at the half-way point in that program. Those who know most about Europe and its problems are united in their belief that we must continue the recovery program until its job is done. These same experts agree that all our good work in Europe would be undone in a matter of months if we were to discontinue the recovery program before its task is completed.

Returning for a moment to Greece, her troubles are not yet over. Civil order has, as I've said, been restored. American assistance in the economic recovery of Greece has brought back her agricultural production to a level which is now higher than prewar. Industrial production in Greece has been doubled since the end of the war. These accomplishments are not enough. We can be deeply grateful that there is no longer famine in Greece, that there is enough to eat now. The road ahead for the Greek people, however, must lead them in the direction of far greater industrial development, in order to be self-sufficient and independent of foreign charity, and that is the problem which the Greek Government and Marshall-plan representatives are devoting most of their attention to at the present time.

There is a further problem for the Greek people. During the guerrilla warfare, during the days that arms and food and support for the guerrillas flowed across the borders of Albania, Bulgaria, and Yugoslavia, there was another kind of traffic moving in the opposite direction. Thousands and thousands of Greek children crossed those borders and are, today, held captive in these surrounding countries. The disappearance of those children poses a problem which is above politics. In appealing for the return of those children to their families, we must appeal in the name of humanity. There is no deeper human emotion than the emotion with which we regard the ties of family and the importance of home in the development of our children into responsible, sensitive, and peace-loving citizens. World public opinion decries the retention of these children in foreign lands, away from their families and away from their homes. On two separate occasions the General Assembly of the United Nations has endorsed strongly worded resolutions in protest of this. In addition, I can assure you that President Truman, the State Department, and the Congress are fully informed of these facts. I am sure all of you here know of the recent exchange of messages between President Truman and His Grace, Michael, orthodox archbishop of North and South America.

President Truman assured Archbishop Michael that this Government intended to continue to give the utmost support to the efforts of the United Nations and the international Red Cross organizations in seeing to it that the children removed from Greece during the guerrilla warfare will be returned to their homes and families.

Then, a week ago today, Senator CLAUDE PEPPER, of Florida, introduced what is now known as Senate Resolution 212. This is a short resolution that, I think you will agree with me, is effective in what it says, and I shall read it to you now.

"*Resolved*, That the Senate profoundly condemns the action of the Communist guerrilla forces in Greece in abducting thousands of Greek children and carrying them off into servitude in countries of eastern Europe during the course of the recent Communist guerrilla warfare in Greece, and request the President to exert all of his powers, acting through the United Nations and other international organizations and directly with the governments of the countries where these children are confined, to the end that these thousands of children shall be speedily returned to their homes and homeland."

This resolution is now before the Senate Foreign Relations Committee, and I give you my pledge that I shall support it with every effort when it is brought before the Senate for a vote.

I have tried in a brief way to summarize in general terms a great deal of history, but I do not believe this summary could be complete without some brief discussion of the displaced-persons program. The DP law which was passed by the Congress in 1948, despite the fact that it has been of material assistance to thousands and thousands of refugees driven from their countries as a consequence of World War II, is, as it now stands, an inadequate law. I firmly believe that within a matter of weeks we will have cured most of the defects of the present act. I have fought for a decent DP law in every way possible, and I am now absolutely certain that my efforts and the efforts of those who have also fought for a good law will be successful. One of the major things that we intend to do in amending the 1948 act is to change a date. Let we explain what this means. Under the existing law, no person is eligible for admission to America under that program unless he was driven from his own country prior to December 22, 1945. We intend to advance this date to January 1949. This means that thousands and thousands who, because they opposed the Communist regimes of eastern Europe, were forced to flee, will soon find it possible to enter America where they may live in freedom. Just as I left Washington today, I learned that the Displaced Persons Commission has recommended that the Senate alter the DP bill which has already passed the House of Representatives to provide for a total of 10,000 people of Greek descent who had been forced into exile from their homeland between 1940 and January 1, 1949, as a result either of the Nazi occupation or of the Communist guerrilla warfare. I intend to give this amendment my full support.

Ahead of us, as I have already indicated, lie grave responsibilities if we are to achieve the desired peace and freedom in the world which is so deeply hoped for everywhere. I can tell you that I sincerely believe we are headed in the right direction. Our efforts to contain the spread of communism are unquestionably proving successful. What remains to be done is to peel back the borders which now represent the extent to which communism has spread. We in the democracies are armed with the truth; our institutions, because they exist in an atmosphere of liberty, are enduring institutions, and the truth about them is penetrating the "iron curtain" every day. We in the democracies are tremendously assisted by the longing for freedom that is in the souls of all the people who today exist under the ruthless totalitarian dictatorships which the Communists have thrust upon the countries of eastern Europe. This longing for liberty in the hearts of the people behind the "iron curtain" has not been killed, and it will not be killed by any efforts the Communists may attempt. A faith in freedom is an abiding faith that no amount of empty promises can do away with.

The Communists have charged that America has world-wide aims. I will accept that charge. We do have a world-wide aim, and it is this: It is our goal that all peoples in the world shall have the opportunity to choose their own Government through democratic processes. It is our goal that the people shall be masters of their governments, and not that the governments shall master the people. It is our goal that every man shall achieve for himself the right to worship as he chooses to worship, the right to speak as he wishes to speak, the right to think as he wishes to think, and the right to live secure in a job of his own choosing in a world of peace. This is America's world-wide aim, and if we work hard enough at the job, as I believe we intend to, I am sure that we will succeed.

Taxes Set to Verse

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a poem on taxes by C. H. Foster, Fairbanks Morse & Co., Beloit, Wis. I commend it to all Members of the House.

If we want to know how England
Will continue to exist,
If we're worried 'bout the Germans
And their late financial twists.

If we wonder just how China
Could endure another war,
And we feel that money matters
Cause the Japs to feel quite sore.

We can pack away our troubles
In that little old kit bag,
And just settle down to working
Day and night without a lag.

For the politicians, many
Feeling sorry for the Axis,
Will eliminate their troubles
Just by boosting all our taxes.

And as soon as they have gathered
All the money that's in sight,
They will pose as peace defenders
And our sons will have to fight.

There is only one more action
That remains to rate a tax,
And we feel that soon 'twill happen
If we get the least bit lax.

For a small machine could easily
Be made for installation,
On those of us who labor hard
To keep away starvation.

'Twould let us breathe quite freely
For a given length of time,
After which, 'twould shut our breath off
'Til we plugged it with a dime.

But there is a way to settle
And avoid a lot of trouble,
If the country will stop spending
Foolish dough on paltry rubble.

For respect from other nations
That is bought with U. S. dough,
Will not last a minute longer
When donations cease to go.

The Victim of the New Deal Character-Assassination Program

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend, heretofore granted, I am inserting in the CONGRESSIONAL RECORD an editorial entitled "Dr. Wirt, of Gary, and the Hiss Liberals," which appeared in the Washington Times-Herald of February 3, 1950:

DR. WIRT, OF GARY, AND THE HISS LIBERALS

The evidence proving Alger Hiss a Communist spy proved also that Dr. Wirt, the Gary schoolmaster, knew what he was talking about back in March 1934, only a year after the New Deal came to power.

The substance of Dr. Wirt's testimony was that many young Communists had found influential places in the New Deal administration and were promoting revolution from the inside.

Dr. Wirt's charges were explosive because he was the first to state publicly what many had come to suspect but couldn't prove. The accusation came out almost by accident. James H. Rand, testifying before the House Committee on Interstate Commerce at the end of February 1934 gave Dr. Wirt as authority for the allegation of treachery within the administration.

The Roosevelt idolators were outraged at this attack on their hero and demanded vengeance on the schoolman.

Dr. Wirt had been present at a dinner party attended, as he said, by some of the brain trusters. They had told him that by retarding recovery and by the use of propaganda to undermine the people's confidence in the free economy and representative government, they could gain their end. Among the words Dr. Wirt quoted were these which he attributed to Laurence Todd, correspondent in Washington of the Soviets' Tass news agency:

"We believe that we have Mr. Roosevelt in the middle of a swift stream and that the current is so strong that he cannot turn back or escape from it. We believe that we can keep Mr. Roosevelt there until we are ready to supplant him with a Stalin. We all think that Mr. Roosevelt is only the Kerensky of this revolution."

THE DIRTY ART OF MUD SLINGING

Dr. Wirt was summoned to appear before a congressional inquiry. He became one of the first Americans to receive the smear treatment. Representative BULWINKLE, the chairman of the investigating committee, said in a speech in Congress that Dr. Wirt had served a term in jail during the First World War for pro-German activities.

This was wholly false, as Mr. BULWINKLE later confessed. He said that the information had come to him from what anyone would consider reliable sources. He did not name them but acknowledged that "the report is not true and therefore as a man and as a Member of this House, I tender my apologies to Dr. Wirt."

A few days later, however, Mr. BULWINKLE said that, though his committee itself did not intend to press charges of perjury against Dr. Wirt, "there is no reason why the district attorney and the grand jury shouldn't be able to take notice of the case."

Fifteen years later another grand jury did take notice of the case, but with a very different purpose and result.

Harold Ickes was another of the mud slingers. Mr. Ickes said that Dr. Wirt had sought unsuccessfully to obtain Public Works Administration funds to develop a section of beach along the Indiana dunes. Dr. Wirt had paid several visits to PWA headquarters, said Mr. Ickes, and was quite willing to use communistic money for his private enrichment.

Dr. Wirt replied as promptly as he could that "I have not been interested and no one else connected with Dune Acres, Inc., referred to by Secretary Ickes, has been interested in securing any money from any Federal, State, or local government for any sort of project."

Dr. Wirt supplied a quantity of detail in support of his assertion, but Mr. Ickes had the louder voice and it may be doubted that the denial ever caught up with the accusation.

A pretty good measure of a citizen's political sagacity is the credence he gave at the time to Dr. Wirt's accusation. Those who believed the man from Gary was telling the truth were politically intelligent.

Several other touchstones to political acumen and integrity at that period are available. Those self-styled liberals who didn't recognize the Republic Steel massacre in South Chicago for what it was—a Communist promotion—were not very bright. The same must be said of those who wasted sympathy on the bonus marchers, another Communist promotion.

TESTS OF INTEGRITY

The most serviceable index of all, of course, is the attitude of an individual toward the House Committee on Un-American Activities. The best that can be said of anyone who at any time sought to disband the committee is that he is a jackass. The worst is that he is a traitor.

To the everlasting credit of the Members of successive Houses of Representatives is the fact that the great majority of them never yielded to the propaganda, the smears, and the threats of the jackasses and traitors, but kept the committee in being to perform its great service in the defense of the American Republic against the traitors in the New Deal administration.

Sponsoring Farmers All Praise DP's—Virginia's DP's Fast Taking Root

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1950

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Dushnyck, from the Washington Post of February 5, 1950:

SPONSORING FARMERS ALL PRAISE DP'S—VIRGINIA'S DP'S FAST TAKING ROOT

(By Walter Dushnyck)

The great majority of Virginia's new Americans—as displaced persons are affectionately called—are well on the road to readjustment and resettlement, according to a survey in Orange and Madison Counties.

More than 1,000 DP's have been resettled in Virginia. Of these, some 880 came to this country under the auspices of War Relief Services-National Catholic Welfare Conference, while the remainder had the help of other American volunteer agencies. These include the National Lutheran Council, the Hebrew Immigrant Aid Society and the United Ukrainian American Relief Committee of Philadelphia.

The national backgrounds of the Virginia displaced persons are chiefly Polish, Ukrainian, Lithuanian and Latvian (in that order). There are smaller groups of Estonians, Hungarians, Czechs, and Jews.

The overwhelming majority of Virginia's new Americans work on dairy and beef cattle farms.

In the course of our survey, we talked to both farmers and DP's, to representatives of religious organizations and social-welfare groups, and to State farm authorities. What we heard is encouraging. American farmers and European DP's are endeavoring to help each other with the least friction possible.

GOD-FEARING PEOPLE

The Reverend Andrew Taillieu, I. H. M., a Belgian missionary priest who serves two Roman Catholic parishes in Orange and Culpeper, Va., spent one evening and an entire day taking us to various farms where his DP families are working.

"All the farmers I know who accepted European displaced persons are well pleased with them. With the spring they might take some more," said Father Taillieu. "As a general rule, these DP's are God-fearing and law-abiding people, and they are worthy of any help Americans can give them."

Father Taillieu added that if the DP is a genuine farmer, there is usually only the initial difficulty that comes from lack of English and unfamiliarity with American farm machinery. When the European is also a carpenter, his additional aptitude comes in handy on any farm.

"One encouraging thing," said Father Taillieu, "is that farmers who have DP families often send for the DP's farmer relatives or neighbors."

There are 13 DP families in Orange County and 12 in Culpeper County. All 25 families are Catholic, and the largest number is Polish. There are 8 Ukrainian, 3 Lithuanian, 3 Latvian, and 2 Hungarian families.

"Only one family left our neighborhood," said Father Taillieu, "and we think they were not farmers, although they worked hard and in every respect seemed to be decent people. When the opportunity arose, the family, with two boys of 21 and 22 years of age, took off for Youngstown, Ohio, where they had some distant relatives."

THE LANGUAGE BARRIER

What sometimes causes misunderstanding between farmers and DP's is the lack of a common tongue. It takes time before the sponsor and the DP can understand each other even in sign language.

"There are psychological reasons that add to the initial misunderstanding," said Father Taillieu. "For instance, the DP's despite their harsh treatment in Nazi or Russian concentration or slave-labor camps, are terribly disappointed when the houses in which they have to live here are quite dilapidated. After these are repaired, they take their initial difficulties with a light heart."

The DP's on farms usually work 10 hours a day, 6 days a week, with every other Sunday free except for the regular chores. Their wage is usually $60 to $80 a month, plus some groceries, meat, milk, butter, wood for fuel and, of course, a free tenant house.

The Rev. T. A. Graves, minister of the Hebron Lutheran Church at Madison, Va., has helped Luthern DP's, mainly Latvians and Estonians, to settle in his county.

"In my experience with the DP's, I have found nothing but complete satisfaction," he said.

"They are gradually overcoming the language and custom difficulties, and so are being slowly integrated into American life. Of course, we had one or two cases that 'did not work,' but these were exceptions."

FARM LABOR NEEDED

"There is plenty of room here for honest people willing to work," said John C. Estes, county agent of Orange County. "Sponsors in our area are generally well satisfied with their DP families. The demand for farm workers is above normal.

"Any dissatisfaction with the DP's can be attributed to a variety of causes. Among them are the following:

"1. Some sponsors who need DP's most badly are those who have always had trouble with local help and cannot keep any help very long.

"2. It has been proved that placement of persons on a farm who had better conditons in their home countries before the war is not the best way of helping them or of giving satisfaction to the sponsor. When these people have not been farmers, even if they try their best, a feeling remains that they are not making any progress.

"3. Finally, in cases where the DP-sponsor combination does not work, it may be that the DP's are getting unfair treatment."

Estes was full of praise for the Lutheran and Catholic organizations which work to resettle DP's on farms.

"We county agents," he said, "could place our applications directly through the United States Displaced Persons Commission in Washington, but in my county we prefer that any application for DP's be approved also by the pastor or the priest of the church to which the applicant belongs. It works much better."

Estes said that the DP's were quickly adapting themselves to the American way of life. The men and children are doing this more rapidly than the DP women, because of their everyday contacts with American people.

ALWAYS DOING GOOD

Estes spoke of his own Lithuanian DP family, named Paleckis:

"The man is an excellent worker and a good human being, always wanting to do something beneficial.

"I don't pamper my DP family," Estes said. "I treat them just as I would treat any American family, and the same way I would like to be treated if I were in their place."

Asked about the behavior of the DP's, Estes said:

"The DP's in Orange County have had no tangles with the law. There is no indication whatsoever that they might be engaged in any subversive activities.

"If you hear occasional complaints about DP's by American sponsors, you should not be surprised. The good cases as a rule don't make the news, and in our country the DP cases are overwhelmingly successful in every respect."

Estes said complaints that DP's are slower workers than Americans, and that they are not used to American farm machinery, are to be expected, but that these things do not prevent successful resettlement.

YOUNG TEACHERS

Douglas Hill owns a large dairy farm at Orange, Va. He has accepted the Marian Dudzik family, a Polish couple and five children. The family had worked on a farm in Poland, and Hill said that he could not wish for any better family to work on his farm.

While the 18-year-old son, Czeslaw, helps his father, three other children, Joseph, 15; Genevieve, 13; and Tadeusz, 12, attend public school at Radiant, Va. These children come home from school and teach their parents English, thus helping them to overcome the language barrier.

Robert Sisk, manager of Mayhurst Farm, Orange, owned by Frank E. Daniel, said there is an excellent relationship between him and his wife on one hand and the Polish DP farmer, Roman Wajler, on the other. The Sisks often visit the DP family, which lives in a good tenant house a few hundred yards from the manager's home.

Here we found something rather unusual. Daniel, the owner, is building a new house for Wajler's parents and sister, who are still in Europe. That is something concrete to demonstrate the usefulness of DP's to American farmers.

PRAISED BY ANOTHER

Hartzell Spence, the writer (One Foot in Heaven; Happily Ever After), and his wife have a Latvian family on their place at Somerset, Va. They were warm in their praise of Philip and Antonino Skapars, but Spence added:

"I made my position clear at the beginning of their stay with me. I told them that I do not expect them to stay with me forever. As soon as they get on their feet, they may leave for something better. I would never hold them back if they could do better somewhere else."

Spence, however, would like to have them remain and eventually become coowners of the farm.

Skapars is running the farm, with some supervision, and is repairing and painting all the outbuildings on his own volition. He also has proved to be an experienced veterinarian; he saved Spence's horse while Spence was away.

"My DP's certainly are not bashful about asking questions," said Spence. "At the beginning, it was sign language and pantomine. Then the children became a great help. When we are tired of gesticulating at one another, we wait until Antonina comes home from school. She translates our conversation.

"The children are doing very well in school. They have already been advanced one grade."

J. T. Walker, principal of the pubic school at Orange, said that the 16 DP children in his classes are fully accepted by the other children.

"After the first day in class," he recalled, "a DP boy was invited to a drug store by some of the older boys for a chocolate soda.

"On the whole, the DP children are extremely diligent workers. The only difficulty is that of the language and that, too, is overcome rapidly."

SOME "CASUALTIES"

We discussed the over-all DP picture with the Rev. F. Harold Nott, vice chairman of the Richmond Diocesan Resettlement Committee for Displaced Persons. He pronounced the program a success and said that, in the case of Catholic DPs, the success was due mainly to the work of the local parish priests.

He, too, spoke of the inevitable "casualties," i. e., DPs who could not stay on farms. But those casualties are rather insignificant in comparison with the overwhelming successes in Virginia.

From the moral viewpoint, the DP's in Virginia are excellent people. There has not been one crime committed by a DP.

These people also remember what happened when their homelands were taken over by the Russians. They are overwhelmingly anti-Communist and do not hide their feelings about Russia.

Father Nott believes that for continued successful resettlement of DP's in Virginia, the following points should be stressed:

1. The DP's who are going to farms should be genuine farmers—a first condition of success.

2. Nationalities should not be mixed on one farm, for not all of them get along well together. It is always better when two or more DP families of the same nationality are put together.

3. The sponsor and the DP's should not live in the same house, for several reasons. One is the difference in language; another, the difference in customs and habits.

4. The sponsor should see that the DP's have the opportunity to attend mass on Sunday. This is generally observed, and here interreligious cooperation has met all difficulties. The Lutheran sponsor takes his Catholic DP's to the nearest Catholic church.

LAW NEEDS TEETH

When asked about the possibility of further settlement of DP's in Virginia, Father Nott said there is still a need for genuine farmers and domestics. He believes that some sort of State board should be set up to intervene in difficulties arising between sponsors and DP's.

He also believes that the DP law should have "teeth" in it; that DP farmers who sign an agreement to work on farms should be obligated to stay there a certain time, to give the sponsor a chance to get back the money he invested in rebuilding the tenant house or in paying the DP's overland transportation.

This survey of the DP situation in Virginia was made possible through the cooperation this writer received from Father Nott; Miss Joan Midkiff, secretary of the Richmond Diocesan resettlement committee; Jack McGann, of Washington, area director of war relief services-NCWC, and the sponsors and DP's who provided information.

Our Irresponsible Budget

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Mr. Henry Hazlitt which appeared in Newsweek for February 6. This is a timely editorial and should be read by all members of this House, as we shall soon be considering the new budget.

Whatever may be thought of the President's tax message to Congress as a 1950 campaign document, there is only one possible

judgment of it as a statement of fiscal policy. It is irresponsible.

In his budget message, for peacetime, for a year expected to record one of the three highest national incomes of our history, Mr. Truman planned a deficit of $5,100,000,000. He now joins the popular clamor for reducing excise taxes. He asks Congress to impose compensating taxes, most of which would be even more harmful than the taxes he asks it to reduce. In order to reduce taxes which burden consumption he proposes to increase taxes which burden production. But even if all his proposals were carried out, and if the resulting yields came up to his expectations, he would still be recommending a deficit of more than $4,500,000,000.

If there is any fiscal responsibility in Congress itself, its course is clear. It should return his proposed 1951 budget to Mr. Truman without approval, and request him to submit a responsible, balanced budget, with provision for a minimum debt reduction of $600,000,000.

If it agrees that it is desirable to cut excise taxes by, say, $700,000,000, and to allow not less than $600,000,000 for debt reduction, and if it agrees that other taxes are already at if not far beyond the highest levels that our economy can tolerate, Congress should become even more explicit. It should point out to the President that his present proposed expenditures of $42,440,000,000 for 1951 must be slashed by a minimum of $6,440,000,000 to make a responsible, balanced budget possible. The total expenditures under such a responsible budget, in other words, could not exceed $36,000,000,000.

A responsible Congress would further inform the President that he ought not to place upon it the impossible burden of trying to find where all the wastes, inefficiencies, and nonessential items in his budget are; and that if he wishes to avoid what he calls "foolish budget slashes" it is his job to make the cuts himself. Congress should tell the President, in other words, that he will have to learn to get along on a mere $36,000,000,000 in the next fiscal year, even if this is only four or five times the rate at which the Roosevelt administration spent in peacetime and nine times the rate of spending under the Hoover administration.

A responsible Congress would go on to demand executive responsibility. The proposals in the President's tax message are extremely vague. Congress should insist that the administration spell these out in detail; tell exactly what excise rates it wants on what; exactly what new corporate rates it wants; and exactly what new provisions for oil and mine depletion. Congress should ask the administration, in brief, to draft and submit the complete text of its proposed tax-law changes. Congress is under no obligation to adopt these administration proposals; but Congress and the country should insist on knowing precisely what they are. That is the only way to get executive responsibility.

Mr. Truman's tax message is honeycombed with contradictions. He persists in declaring, for instance, that the deficit of more than $4,000,000,000 which he plans for the fiscal year 1951 "will be due largely to the short-sighted tax reduction enacted by the Eightieth Congress." If Mr. Truman really believes what he says, his only consistent course is to recommend immediate restoration of the higher tax rates prevailing before the cut. He actually declares, on the contrary, that "nothing could be more foolhardy than to attempt to bring about a balanced budget in 1951" by "drastic increases in tax rates" or "drastic cuts in essential expenditures." So he denounces the Eightieth Congress for bringing about a deficit that he insists upon maintaining.

The country is in grave financial peril unless the administration can be brought to end this political double-talk and recognize its responsibilities.

Middle-Income Housing

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, one of the important measures that will be considered shortly by the Senate is the so-called middle-income housing bill. The passage of this bill will mean that thousands of people who have hitherto been unable to finance new homes will be able to do so. In a recent news letter to the people of Pennsylvania, I have explained various provisions of the bill, and I ask unanimous consent to have this news letter printed in the Appendix of the RECORD.

There being no objection, the news letter was ordered to be printed in the RECORD, as follows:

JANUARY 26, 1950.

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

Even if you aren't planning to build a new home, you may be affected by the middle-income housing bill due for consideration shortly by the Senate, having passed the House—because our home-building industry is a cornerstone of our whole economic life.

Our economy prospers when home-building flourishes, and we head for a slump when building falls off.

One-fifth of our domestic private investment goes into residential construction.

Our mines, farms, and thousands of businesses depend on a steady flow of their products into home construction in order to stay profitable.

And new homes provide markets for thousands more producers, distributors, and retailers of household furnishings and materials for home maintenance.

So, whatever your plans, you should be familiar with the new housing proposals, because the well-being of our economy affects you.

Increased production of privately owned homes is a major purpose of the pending bill. The Housing Act of 1949, as you recall, provides for publicly owned, low-rent housing for those in the bottom-income brackets who simply could not otherwise afford decent shelter. The new bill is designed to assist those who could afford to buy a home, but are unable to find adequate financing arrangements under today's prices.

Homes costing less than $10,000 will be encouraged, because the need is greatest among families who can afford to buy in that price range; the market for higher-priced homes is starting to dry up—either because those who can pay above $10,000 have bought recently, or are satisfied where they are; home construction will drop, and the industry sicken, unless new markets develop.

Smaller down payments will be required on FHA-approved loans—and FHA mortgage insurance will be easier to obtain for soundly constructed homes costing up to $9,000. By liberalizing mortgage insurance provisions, private investment in smaller homes will be encouraged—and such investment will be encouraged still further by enlarging the secondary mortgage market.

Cooperative housing will be developed under title III of the proposed bill. Co-op housing is a development of this century in America, but it has a long history in many other countries. Members of the Senate Banking and Currency Committee has made glowing reports on the co-op developments they saw during their European visit last fall.

Co-ops work thus: A group of families buys some land together, forms a cooperative to purchase materials, to hire a building contractor, and to maintain the homes after their completion. The bill proposes a new Government service to furnish technical advice to those who wish to form cooperatives—and provides short-term planning loans to assist in getting things started. The co-op would be financed by private investment in debentures that are Government-insured. A 2½ percent down payment in the co-op is proposed, and the interest rate is expected to be about 3 percent—much lower than in ordinary home financing. Nonprofit rental housing projects will be aided in the same fashion.

Veterans will find home loans easier to obtain. The bill proposes to do away with the confusion of separate FHA and GI loans by combining them into a single loan running up to $10,000 at an interest rate of 4 percent. The GI home loan hasn't worked out as expected 5 years ago. The bill will make the GI loan work by permitting veterans unable to obtain a loan through private sources to borrow direct from the Government. And, as a result of the Myers-McMahon amendment I introduced, widows of veterans who died from service-connected injuries will also be able to obtain GI home loans.

I support the middle-income housing bill. It will be a big help in ending the housing shortage, and thus ultimately ending the need for rent control. It will encourage private ownership of homes. And by increasing the output of new homes, it will keep one of the basic industries in our free-enterprise system expanding and healthy.

FRANCIS J. MYERS.

Harmony in the Armed Services

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Harmony in the Armed Services—An Exclusive Interview With General Eisenhower," from United States News and World Report. I am informed by the Public Printer that the article is estimated to make two and a half pages in the RECORD, at a cost of $205.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

HARMONY IN THE ARMED SERVICES—AN EXCLUSIVE INTERVIEW WITH GENERAL EISENHOWER

(EDITOR'S NOTE.—No man in the world today can speak with such authority as Gen. Dwight D. Eisenhower on the value of coordination where different military services are concerned. His experience covers not only the coordination of Army, Navy, and Air Force of our own in Europe but also the bringing together of the forces of Allied countries. The general responded to an invitation to come to the conference rooms of United States News and World Report and answer the questions of its editors on some

of the basic principles of interservice harmony.

(In accordance with our usual practice, the full text of this interview is being released this week to the press and radio.)

Question. The popular conception, General Eisenhower, is that in Europe you had a more effective coordination of the three armed services than existed in other theaters. What lesson can be derived from that experience?

Answer. There were not present with us some of the causes that might have led to friction in other places. For example: The second the soldier went ashore in Europe a general started commanding. There is another system under which the Navy stays in charge of men going ashore until, as it is said, the Army can take feasible command. This difference grows out of differences in experience, and, under some circumstances, the second arrangement is good. But because it introduces a determination by two men to be based upon judgment as to feasibility, friction can easily develop.

BASIS FOR COOPERATION IN EUROPE

Also, in other theaters, operating forces often were a long, long way from their top commander. I, on the other hand, could always be right next to my command. There was no chance for an argument to build up—they could call over to me and say: "What do you want us to do now?" And hence there were absent, I think, some of the causes of friction.

Also, from the beginning in the Pacific there were two separate theaters of operation—one from Australia and one from Hawaii. We did not have that to contend with in Europe. So I should certainly be the last to maintain that there was any special qualification or any special genius in directing this problem in Europe. We probably did not have as difficult a situation.

Question. Did the Navy cooperate freely with you?

Answer. At the beginning of the war, when I was designated as the European commander, Admiral [Ernest J.] King [Chief of Naval Operations, 1942–45] called me in. We sat in his office and he said, "Now, look—this is the first attempt in American history to operate combined forces under the principle of single command. We have talked about some meaningless words called paramount interest. He said, "I want you to understand, General, as far as the United States Navy is concerned, you're in command as long as you're in command."

It was then that he invited me to wire him directly if I ever saw any trouble with any part of the Navy. Once, I think it was just a slip of a pen somewhere, we were suddenly to lose all of our naval staff officers except three. I wired Admiral King and the order was countermanded in 20 minutes.

Our operations, except for landings, were chiefly ground and air. Naval losses and day-by-day functioning were not an intimate part of our activities. But the naval role was clear and vital, and naval failure would have meant failure for all.

BUILDING A WORKABLE COMMAND

Question. Doesn't the real difficulty arise in understanding of the word "unification"? Isn't "coordination" of the armed forces what really happened in your operation?

Answer. Except, of course, if you have people working together as partners and in the proper atmosphere, there are a few questions that have to be referred elsewhere for decision.

I think there is one principle that applies with any combined command. I am sure it applies with an allied command. The principle is that you really must build your way into command. When you start in you've got to do a lot of urging and cajoling. But finally there comes a time when everybody suddenly realizes that this machine is working pretty well.

There is built gradually for the allied team that same kind of loyalty that you have for your own division or your own battalion. Governments get confidence in the headquarters and its personnel, and once that confidence is built up, your recognized right to issue orders, which you could not possibly have issued a few months before, becomes quite clear.

For example, the highest British officials told me several times in the early days of our plan to invade Normandy: "General, please remember that any officer of the British forces serving under you is there because you want him. Any expression of dissatisfaction on your part will be instant cause for his removal."

You could not have imagined such a statement being made to any Allied commander on the first day we started off to war. At the beginning we are all imbued with the thought: "My duty is to protect my country against this ally here and that ally there." Since I saw that attitude disappear in war, I think that finally there is going to disappear a man's belief that his primary duty is to protect his service against the decisions of the whole security establishment.

STEPS TOWARD EFFICIENCY

Question. Would that be helped if we made the three services divisions of one service?

Answer. I do not think so. I think that in arguing these details of organization we are just setting up straw men to whip. It is not for me to preach, but I say this: Anyone who is really interested in our country's security can help a lot by beginning to express confidence in the theory and say: "We've had all sorts of trouble and we do not for a minute believe that any single person has been to blame. We take back nothing we've urged in the past, but the time has come to hammer on the constructive side for the future."

That is what I believe, and I believe it so thoroughly that I did not want to go before the House Armed Services Committee last autumn. The authorities insisted, so I came down. I said, "I won't talk about this quarrel. There has been enough name calling and I think this committee as well as everybody else has got to start looking toward the future."

For that is all we're really concerned about. Why are we spending this defense money? It is for the future. It is not to make applicable somebody's concept of how I should have used the Navy at Salerno, or how someone else should have used the Army at Okinawa, or somewhere else.

We ought to be turning our eyes to the future with an approach that will help our service staffs to get together. Because, like the rest of us, they are all human. They have their little prejudices, their stumbling blocks. But I have tremendous confidence in their capacity to do work together.

Question. Isn't it true that the feeling within the services is that they get along better outside of Washington than they do in Washington?

Answer. Yes. Several times I have observed that efficiency in unification grows in proportion to the distance you get away from Washington. Of course, there is a reason—because here in the National Capital is that one great basic problem—the division of the dollar. Once you get away from that problem, there is less friction.

LAWS OF STRATEGY AND LIFE

Question. A great many laymen have advanced the idea of a single service in one uniform. What do you think about that?

Answer. I have often said how nice it would be if we were all in the same uniform with just differing tabs to distinguish us. I was only trying, in somewhat exaggerated form, to illustrate the spirit that we ought to have. I certainly believe in the benefits of competition—the benefits of specialization. But what we must do is never carry those things too far and not be arbitrary about them. So we should keep our traditional uniforms.

Remember this: When you get high enough up in command, you cannot have a mind that is technically trained in all the specialties you must employ. For example, the highest command in this last war consisted of Mr. Roosevelt and Mr. Churchill. Mr. Roosevelt may have read some naval history and Mr. Churchill was once a young cavalry officer, but that was the extent of their professional military training. Yet in the final analysis they made the highest military decisions.

As long as your viewpoint is broad enough you do not have to worry too much about professional or technical training in top commands—such as theater of operation. It did not make any difference, for example, that I didn't know how to shoot the latest artillery piece in order to be able to use artillery.

The broad laws of strategy are roughly the broad laws of life, you might say. When you begin to talk about cooperation and surprise, concentration, and maneuver, really you are talking about the way you handle the affairs of your life. You merely are following certain common-sense rules that somebody who called himself a scholar codified and called "principles of war." They sometimes make me chuckle—because you break at least one of those principles every time you fight a battle.

Question. Do you think the public is conscious of the enormous increase in costs of everything the armed services have to have?

Answer. No. When we begin to compare costs these days with those of the past, we make the mistake of just comparing moneybags. I sometimes wonder whether we shouldn't stop calling them dollars and call them dollarettes—so as to convey the idea we are not talking about the same thing we did in 1939.

But I do believe that something could be done toward educating the public by just carrying the price tag of some things. When we talk about a great big B-36 or a P-85 or 86, or whatever it is, or an aircraft carrier, or anything else, or the cost of keeping a regiment through a year, we should just put the price tag on what it now costs compared with a comparable thing in prewar.

Question. There are only so many dollars to spend in any event, and those dollars must be divided between three services, must they not?

Answer. That's right. I feel that in our services we have today the best-educated group of military people that this world has seen. There is something a little bit haywire that makes it difficult for them to work together. I am quite sure that they themselves, in the end, are going to discover that they are not quite doing their very best to work together. When they do it will be fine.

I think that all argument must retreat from the extremes if it is to be valid. A way will finally be found down the big, broad middle of common-sense, logic and conciliation that will be effective. I do not mean to say we are ever going to end all arguments.

Question. You mean arguments within the services?

Answer. Oh, yes; within each of them. We are always going to be dealing in deficits.

Question. What do you mean by deficits?

Answer. Deficits under a professionally calculated force or strength. I am not speaking of strength to assure absolute safety, because all of us are smart enough to realize that there is no such thing as absolute safety in weapons. But there is a very definite relative security that you can calculate.

Professional calculation as to the total that prudence requires for relative security will never be matched in its aggregate total, by

the dollars that we can reasonably make available in time of peace, year after year. Therefore, you have to do the best you can. There must be a compromise between endurable cost and what you would really like to have.

Question. How much weight has ever been given in councils of that sort to the principle of a nucleus from which you can expand in wartime, and how much has been given to the idea that you must be ready at all times?

Answer. The more nearly that the unit about which you are speaking becomes a machine, merely operated by men, instead of men carrying the battle directly to the enemy—in that ratio you become committed to the force in being. You cannot build a warship in a month, and you can't build an airplane in a month.

For example, there wasn't a single airplane used by the American forces in combat in World War II that had not been designed before the war started. The design was on the drawing board before the war started. Therefore, both navies and air forces stress very much this business of force in being—because of the danger of a sudden, paralyzing shock by the initial blows of an enemy.

The skeleton force has always been uppermost in the Army's calculations. Get a small nucleus that can multiply itself—like the amoeba, you know. They go in for that more in the Army than they do in the other two services, for the reason that the other fellows' services have more ready at the moment of attack.

Question. In recent discussions of military organization hasn't there been rather a lack of interest in tactical air for support of ground troops?

Answer. In public discussions there may have been, but it is a matter that has been important to all of us, certainly since 1941, at which time we thought there was a very grave lack of concern.

You realize that in Europe the Army with its supporting Air Force became the predominating factor in victory. Indispensable as was the naval role, the campaign was a continental one, and the chief battle assets were ground forces, air forces, and supply. So we were peculiarly sensitive to this business of tactical air support.

During the war and since the war I've heard no lack of discussion about this vital matter. But again, there is this matter of compromise. In the measure that you believe a paralyzing shock delivered, let's say, against the industrial centers of a potential enemy may be a really grave deterrent and hold him up while you're doing some other thing, you may finally have to curtail construction of a smaller, fighting kind of aircraft in favor of the big ones. So, you are always struggling to get what you think you will need on D-day and with the least possible damage to things that, though necessary, will not be vital.

NEED FOR SPECIAL PLANES

Question. We have been told that aircraft were not interchangeable as between strategic and tactical air—that is, special types would have to be developed for tactical air. Is that true?

Answer. I think that is true only within limits. I know that we found the very finest ship you could put on the front lines was the pursuit ship especially equipped for support. You could put a bomb under each wing and turn 51's and 47's into attack ships. I do think as they go more and more to terrific speeds in jet-powered fighter planes that probably we are going to have to have special planes for ground support—which would be too bad, but there it is.

Question. Special planes for the use of ground operations?

Answer. Yes; unless they find some way of developing a flexibility in speeds and maneuverability needed in ground operations.

Question. Some people feel that your book did not deal adequately with the work of the Navy in Europe. How do you feel about that?

Answer. If that is true, it is something I regret, but it was certainly never meant. I have looked up people who had been present at a number of my press conferences during the war and I think there was not a single press conference in which I did not go out of my way to stress that we were a triumvirate. I emphasized the three services all the way through—and I meant to do it in the book.

Question. What do you think was the importance of naval power in your ground operations?

Answer. When we started planning what turned out later to be the invasion of Europe, it was in January, February, and early March of 1942. I would like you to remember how we then were looking at the world situation. We were losing ships by the score every week coming up from South America. We had graveyards of ships along the Florida coast and all across the Atlantic, so all of the plans were up against the utter necessity, first, of gaining control of those Atlantic lanes. The first thing that entered into our calculations was naval power and the assurance that it would be adequate in strength.

When you start an operation of the kind we were calculating—which eventually was going to consume some millions of men—you cannot have interrupted sea lanes, with convoys being chased and scattered as they were being chased and scattered in the spring of 1942.

There was a very, very great belief that the Atlantic wall the Germans were supposed to be constructing could not be breached tactically, so at the same time that we were counting on the Navy to control the Atlantic we also had to count on smashing of the areas back of the beachheads by means of air. This became a basic thought or idea of the plan. Yet the airplanes to do the job did not exist. A start was just being made to build them.

So the plan had to be constructed with complete faith in two things: The certainty that the United States would have great naval power and the certainty of great air power.

Question. In the North African landing was naval power essential?

Answer. Absolutely.

Question. To make sure there was no opposition from an enemy fleet?

Answer. Not only that. I think that the feat of the Navy in bringing the African operating forces ashore with the loss only of one ship was one of the most amazing things in naval annals—almost a miracle. The German submarines at that time were everywhere. The Allied navies brought this force of General [George S.] Patton's all the way from the United States. They brought the others from England and took these forces through that bottleneck in the Mediterranean, most of them through Gibraltar, the others down to Casablanca. Yet before landing we lost only one ship. We lost a lot afterwards because the enemy could gang up around the entrances to these ports.

DEPENDENCE ON NAVAL GUNFIRE

Question. You used naval forces in the landings in the south of France, of course?

Answer. Everywhere.

Question. When you went up to the Normandy landing you had several battleships, didn't you?

Answer. Oh, yes, both United States and British.

Question. What function did they perform?

Answer. One, of course, was bombardment. We knew we weren't going to be able to search out and break up all of the coastal batteries by air-bombing attacks alone. The Navy, all the way through the war, had been gaining for itself an increased respect for its gunfire. With spotter planes they can do a lot—at Gela, in Sicily, for instance, they broke up a tank attack with their gunfire. They're good—they're very good. So we had come, by the time of Normandy, to depend very seriously upon naval gunfire in getting ashore, so much so that I was asking all the time for more than they could give.

Question. Were those naval long-range guns helpful?

Answer. Oh, indeed, yes. As a matter of fact, I was just reading a report made by two German commanders in Cherbourg. Along about the 23d or 24th of June 1944, they wanted to surrender. They were really taking punishment because we were dumping everything we had on them and pushing them very hard on the ground, and in the air. Finally, about the morning of the 24th, these two admirals sent a radio begging permission to surrender because they said, "The Navy's opened up on us too." So it was coming from everywhere.

RISKS OF AMPHIBIOUS WARFARE

Question. All through the operation in Europe we controlled the sea. Was this vital?

Answer. Yes, and the Navy supported the landings. You know an amphibious landing is not a particularly difficult thing, but it's a touchy and delicate thing, and anything can go wrong. In some ways, from the land fellow's viewpoint, it is one of the simplest operations. You put your men in boats and as long as you get well-trained crews to take the boats in, it is the simplest deployment in the world—the men can go nowhere else except to the beach. But, nevertheless, it is a very, very delicate thing and you need all the gun power you can get. We faced a number of enemy batteries along the Normandy beaches that annoyed us for several days after the landings and the Navy kept pounding on them until we captured them.

Question. Was the Navy in charge?

Answer. It was in charge of putting men ashore. Admiral [Chester W.] Nimitz [Commander in Chief, Pacific Fleet, 1941–45] and I used to talk about this point of "changing command." The Navy's experience in the Pacific was hopping from island to island. You knew what was there—you could, in other words, calculate your battle plan down to a more minute detail than you can in a continental land mass, where a landing is nothing but a prelude to a campaign. You know that if you can get ashore firmly on an island you can stay there, because you know approximately what is ashore, how much you've got and what you can do.

In Normandy when we got ashore we didn't know what was going to happen; no one did. And the Navy had to stay right there and do its part all the way through—Admiral [Alan G.] Kirk [commanding United States naval task forces, invasion of Normandy, 1944] was just as much a part of my planning staff as was my chief of staff. He allotted his gunfire down to include particular batteries—and the Navy even helped to break up counterattacks.

What I constantly try to make people see is that there are all kinds of warfare. No one ought to draw arbitrary lessons from the European campaigns alone, because always, except where we went into Africa—where we were invading a neutral country to make an ally—we always had air bases that were close by.

Now, of course, this has its disadvantages. That's the reason the Germans could figure we would land at Salerno. We had one British aircraft carrier in the Mediterranean but we depended upon the fighters that were based in eastern Sicily. The reason we had to pick Salerno was that it was within effective range of our fighter craft. The Germans knew we weren't going to land out of fire range, so Salerno was indicated clearly.

Question. What if we had been able to develop large air-borne forces that could be landed inland?

Answer. There are all sorts of difficulties yet in the way of air landings, unless you can do so undisturbed and have pretty good airfields; you need them for true mobility on the land. An air-borne force is a very immobile thing because it doesn't have the trucks and tanks and self-propelled guns and all the other heavy equipment that a mobile force needs.

What it really amounts to is that with an air landing you establish a blocking force, under present conditions. We will get better and we will develop better and lighter equipment; we will progress. We are not yet at the point, in my opinion, where you can establish an inland air head and then from that, as a base, start a real campaign that would be in the nature of the one on the Normandy beaches where we brought boxcars ashore.

Some genius thought of putting rails on the bottom of an LST (landing ship, tank) and of bringing across boxcars and running them across a makeshift connection up to the French railroads. We would have a boxcar out of England and operating in France in 24 hours. Now you cannot do that with an airplane—not yet. I don't know what we will do if they some day put wings on the *Queen Mary*, but that's where we are now.

ADVANTAGES OF CARRIER FORCE

Question. Do you feel that amphibious warfare will be a part of warfare for a long time to come?

Answer. My first remark is that I hope there will be no more warfare. But I could not give an unqualified answer, for the simple reason that it is very hard to figure where any war is going to be fought and under what conditions it is going to be fought.

I would say this: We would be foolish today to allow to die in our services the very great knowledge we have of that type of operation. We are ahead of everybody in amphibious operations. We are certainly equal with the British in doctrine and we've got more and better equipment. We are better equipped to produce that equipment. It would be foolish for us to drop back. We should keep pushing ahead. I would be very much against letting that type of warfare be neglected.

It's the same way with aircraft carriers—in the peacetime calculations. One great thing about war is that, if and when such a tragedy visits us again, it is always going to happen under circumstances, at places and under conditions different from those you expect or plan for.

The one great thing about a sizable aircraft-carrier task force is its great flexibility. Suppose a war should start in the Mediterranean. Suppose it should start on the west coast of Africa, or Siberia, or the Persian Gulf. Aircraft carriers can operate in those areas. I cannot tell what are going to be the scientific discoveries of the future and therefore what is going to be the increasing vulnerability and the increasing efficiency of these weapons. But I do know that you can calculate in detail only with what you can see with some certainty for today and tomorrow. We establish staffs which are thinking in hazier future terms. But now we are speaking of current plans. A flexible carrier task force has a high place in my own personal priorities. This same observation applies also to a sizable bombing fleet.

To revert for just a moment to the question concerning the Navy and its part in the European war—when we were preparing for the final assault across the Rhine, we brought the Navy into it. We had had wonderful experience with the Navy in going ashore. We just said to the Navy, "Come on, take us across the Rhine." We had these LCVP's (landing craft, vehicle, personnel)—they were maybe 40 feet long—mounted on truck trailers. They were taken right across France, dumped in the water and the Navy took us over.

HOW THREE SERVICES WORKED TOGETHER

Question. That certainly was a unified operation, wasn't it?

Answer. Yes. One of the things—one of the reasons that I've shied so definitely away from any public participation in the arguments between services was my complete respect for the three services and the way they operated with and for me. I have no complaint whatsoever, I assure you. The two or three times when I thought, for example, that the Navy didn't understand, I sent direct cables to Admiral King and he just answered, "Yes." I couldn't have been supported in the field more definitely or completely by anyone than by Admiral King. Admiral King was not of the back-slapping type. I never had anything but the utmost respect and liking for him.

All this applies also to the Army; I have merely mentioned the naval support because, after all, I wore the OD uniform and therefore expected perfect Army support.

It's a difficult business, you know, planning the forces you need for relative security. You make a generalization and say, "We must have a given number of tanks." This might be first priority, but when you get those tanks, what then is the priority on the next hundred tanks as compared with something of another kind? That is the job that has to be done each year, and it's one of those things that create heat because each fellow in this business will become very, very confident of his own forces. He has had experience with them.

Take a paratrooper, with his very, very high morale. A paratrooper really thinks that if you give him two bazookas and a jeep, he'll go anywhere and whip the world. Of course, it's a fine spirit. But the fact is that each service gets this almost cocky confidence in its own forces and then the heat of argument starts as all come to realize that there is not enough money for everything.

PROBLEMS IN COMBINED COMMAND

Question. Is the idea of a combined command still accepted by other countries?

Answer. I think at least to this extent—when (Viscount) Montgomery was over we had a long talk, and certainly with him single field command is completely accepted as a must. Now I think that all of the people with whom I've talked—people like (Baron) Tedder of the Royal Air Force and most of my naval friends are going out of the picture over there—they all believe in it.

But I don't think that countries other than ours will ever use it in time of peace because for them it introduces new problems of a kind that are not encountered so much in our service. In Britain their chiefs of staff are almost part of the cabinet. They fit in with the defense cabinet, which is part of the big cabinet. Professional commanders are always present when military decisions are rendered. Military problems are not neglected and allowed to pile up. One of the reasons I have always believed we needed a Defense Department over here was so that these questions, when they could not be settled by strictly professional cooperation, would have some civilian part of Government instantly familiar with them and solving them. Whether or not it's always done perfectly is sometimes not quite as important as the fact that it's done satisfactorily.

The British are not likely to accept, in peacetime, a unified method for the control of British forces along with the forces of other countries. But they have accepted it, I am sure, as a necessary type of command in war.

Question. Of course, some people have been hoping that we would get an international police force—if we ever got the principle of combined command——

A. Well, yes—but that is a question of highest international policy.

National Security and Individual Freedom

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix a summary of a penetrating statement on national policy issued by the Research and Policy Committee of the Committee for Economic Development, on December 14, 1949, entitled "National Security and Our Individual Freedom."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NATIONAL SECURITY AND OUR INDIVIDUAL FREEDOM

1. THE THREATS TO OUR NATIONAL SECURITY AND INDIVIDUAL FREEDOM

We live in a world of insecurity, in a critical period which may last a generation. We are now faced with entirely new problems. Changes in the world distribution of power, added to revolutionary developments in military weapons, have fundamentally changed the character of our security problem. For the first time in our history, we, in effect, share a common border with powerful potential enemies.

Today's conditions make a major security program necessary. In this new situation we Americans are painfully learning that our security program cannot be kept to a minor budget nor to an incidental effect on our peacetime lives. While we continuously exert every effort to prevent war, at the same time we must be prepared to fight at a moment's notice.

Our security program is only partly a matter of rearmament. The European recovery program, atomic energy, our foreign broadcasts, and the conduct of our diplomacy and incoming intelligence are also in large part security measures.

During the next few years, the annual cost of rearmament and other forms of security expenditure, at home and abroad, is expected to amount to $20,000,000,000 or more as an annual minimum. This is nearly a tenth of our national production. It is truly a tremendous expenditure of national resources.

The security program is a necessary and, at the same time, a dangerous force in our society.

Our security program threatens our individual freedoms. Under it there has been a great increase in the role of the military in our Government, a great increase in bureaucracy, an expanding dominance of government over industry and in increasing interference with individual freedoms. When we increase the share of our resources devoted to security, we unavoidably enlarge the scope of government in every sphere of life.

Security measures, uncurbed by the requirements of freedom, can undermine our free institutions. Public apathy and the pressure for security can lead us down the road that ends in the garrison-police state.

We must seek both national security and individual freedom. Some measures can serve both objectives. But other measures

to increase one can operate to decrease the other. Where there is such conflict, the problem is to work out an acceptable balance. In time of war, security takes temporary precedence over individual freedom. At the present time, the balance must be weighed in the direction of freedom.

Freedom itself, and the self-discipline necessary to true freedom, contribute to security. The maintenance of individual freedoms creates the greatest bulwark of our security—the energy and intelligence of freemen working together to build and to save their own and their country's freedom. Even more important, freedom and the dignity of the individual are the very foundation of our society, and the ends for which we are striving. Without them security loses its purpose.

II. ON WHAT DOES OUR FREEDOM DEPEND?

The security program threatens two major institutions on which our freedom depends: the traditional supremacy of the civilian over the military and our system of individual liberties. At the same time, freedom depends on an adequate security program. Herein lies the dilemma.

Civilian supremacy is essential to freedom: The men who drafted our Constitution provided that a civilian, the President, should be commander in chief of the armed forces. They also insisted on the civilian control represented by the authority of Congress, and, beyond this, by the power of citizens to elect the Congress and the President. Appointment of civilian secretaries of the defense departments, civilian control of the War Production Board in World War II, and civilian control of the Atomic Energy Commission have also advanced this principle.

The purpose of civilian control of the military is clear: (1) To protect free institutions; (2) to insure that military measures fit into the larger programs of national security and national policy of which the military is only a part; and (3) to promote efficiency in the Military Establishment itself.

There is today no direct challenge to the principle of civilian supremacy nor to the legal chain through which it can be exercised. But the magnitude and character of our security program make the effective exercise of civilian supremacy increasingly difficult and all the more necessary.

The President faces difficulties in exercising civilian supremacy. He is the constitutional manager of our security system. In the discharge of his responsibilities, he must work through many agencies. To assist in coordinating the work of these agencies, the President relies on his Cabinet, upon a few immediate advisers, and upon several staff agencies.

The complexity of our security organization suggests the magnitude of the burdens placed upon the President. He urgently needs an effective staff to provide him with a comprehensive and balanced review of the security program. For such a review the President requires the efficient operation of the two top-level Cabinet committees created in 1947: the National Security Council and the National Security Resources Board.

The National Security Council was established to advise the President on the integration of domestic, foreign, and military policy. Its members are the President, the Vice President, the Secretaries of State and Defense, and the Chairman of the National Security Resources Board. The President may add additional members. So far the National Security Council has not fully lived up to its high potential, though it has made important recent progress. It does not appear that it has yet drawn up a comprehensive set of current and long-range security policies. As a result, the President is handicapped in carrying out his responsibility to recommend a balanced security program to the Congress and to the people.

The National Security Resources Board consists of a civilian chairman and the Secretaries of State, Treasury, Defense, Agriculture, Commerce, Interior, and Labor. It was created to advise the President on the coordination of military, industrial, and civilian mobilization. It, too, has not fully lived up to its potential. Despite recent progress, it has been characterized by a lack of clarity of purpose and by inability to establish satisfactory working relationships with other security agencies. This handicaps the National Security Council and further weakens the hands of the President.

The Congress, like the President, faces difficulties in exercising civilian supremacy. At least two-thirds of the committees of both Houses are concerned in one way or another with security policy. Problems come before Congress in piecemeal fashion. Neither House has a committee structure designed to secure a balanced, comprehensive view of security policy as a whole. Congress is not yet organized to deal with security problems on a broad and balanced basis.

The citizen also faces difficulties in exercising civilian supremacy. He suffers in carrying out his responsibilities from the faults in the present organization of the legislative and executive branches of Government. The citizen also needs much basic information he now lacks. While certain specific information must be withheld in order to keep it from potential enemies, our Government is now leaning more heavily toward secrecy than in any previous peacetime period.

Great danger is inherent in a poorly informed public. Even more important is the public apathy toward security policies due to lack of adequate and reliable information necessary for responsible discussion and judgment. An alert and well-informed citizenry is essential to the effective working of civilian supremacy on which our democratic processes depend.

Maintenance of our system of individual liberties is essential to freedom. The requirements of security and the fear and hysteria generated by the threats to our security require constant vigilance to preserve our individual liberties.

One threat to individual liberties comes when the loyalty of individual citizens is called into question. Loyalty investigations can degenerate into witch hunts.

A more indirect threat comes when the security program endangers the free economy which underlies so much of our individual freedom. A security program of the present size threatens the free economy in three major ways: (1) by the burden of taxes on economic incentives; (2) by the control of business activity through Government contracts; and (3) by the likelihood of recurrent proposals to impose direct controls over economic activity in the name of security.

Security bought at the cost of destroying our system of individual liberties of our free economy would be self-defeating.

An adequate and balanced security program is essential to freedom. Though our freedom is threatened by our security program it would be threatened even more gravely without it. Freedom cannot survive in today's world without reasonably adequate security. An adequate security program obviously requires a large military establishment. But it must also include such nonmilitary weapons as diplomacy, world information, economic aid and an effective intelligence service.

At the present time, there is reason to believe that our security program is neither efficient nor in balance. There are serious instances of disregard of civilian authority. There are evidences of low efficiency in the Nation's defense forces. A balance must be kept between the various parts of the security program and programs serving other objectives of national policy.

Proposals need to be made by the executive branch after balanced consideration of all aspects of national policy. Our lawmakers must keep America solvent as to both ideals and resources. An informed public needs to remain alert to the dangers to both security and freedom.

III. RECOMMENDATIONS TOWARD IMPROVING OUR NATIONAL SECURITY AND PRESERVING OUR INDIVIDUAL FREEDOM

There can be no simple solution to the problems of security and freedom. We must look to time and the wisdom of public discussion to find the answers. But public wisdom cannot be brought to bear if the chain of civilian control is ineffective, if the basis for informed judgment is lacking, or if policy is approached in a piecemeal fashion.

The recommendations which follow are only a step toward bringing public discussion to bear on these continuing problems. They are not the only possible steps. They are concerned almost entirely with organization and procedure. Their aim is to strengthen the machinery by which adequate and balanced discussion of security policy and its relation to freedom can be carried out at all levels. It is our belief that these recommendations, if put into effect, will lead to a powerful strengthening of both freedom and security.

Toward more effective exercise of civilian supremacy

The strengthening of civilian control requires action at each level to aid the President, the Congress, and the individual citizen in the exercise of their respective responsibilities.

At the executive level: To aid the President in developing a balanced policy with respect to security and freedom, we recommend:

1. That the National Security Council be developed as the principal executive agency on which the President relies for formulating and reviewing comprehensive and balanced security policies.

2. That there be added to the Council three full-time civilian members without other governmental responsibilities.

3. That the role of the National Security Resources Board be further clarified and developed.

4. That a full-time chairman of the Board be promptly appointed.

5. That within the Department of Defense there be a strong civilian staff independent of control by the military services to aid in developng and evaluating defense policy.

At the congressional level: To strengthen the hand of Congress in achieving a proper balance of security and freedom the Congress should take positive steps to coordinate the various aspects of security policy. To this end we recommend:

1. That a Committee on National Security be established in each House of Congress, representing all committees of each House whose jurisdiction covers a significant part of the field.

2. That as far as possible these Committees on National Security act together in the manner of a joint committee.

At the public level: To encourage and assist the citizen in exercising his responsibility for security policy we recommend:

1. That one full-time member of the National Security Council be made responsible for a more effective flow to the public of information relating to national security.

2. That the President devote a part of his annual message to the Congress and to the public on the state of the Union to a discussion of the problems involved in the national security program and their relation to freedom.

3. That vigorous effort be made to stimulate discussion throughout the Nation on the problems of national security and their relation to freedom.

UNPRINTED OF PUBLIC LIBRARIES

Toward preserving our system of individual liberties

To strengthen the forces which operate to preserve our individual liberties we recommend:

1. That one full-time member of the National Security Council be made responsible for reviewing the effect of security measures on individual liberties and advising the President thereon.

2. That the section of the President's annual state of the Union message devoted to the national security program (recommended above) include a review of the relation of the security program to individual liberties.

3. That the National Security Council, in reviewing the security program, give particular attention to the danger of undermining the free economy.

Toward a more balanced and efficient security program

The recommendations made for preserving our freedom will also help to produce better balance and reduce waste in the security program. In addition we recommend that both the executive and legislative branches of the Government conduct a continuing review of the security program to see:

1. That waste and inefficiency in security expenditure is kept at a minimum.

2. That the security program itself is kept in internal balance, both as among the various types of military expenditure and as between military and other forms of security expenditures.

3. That measures to further the security objective and measures to further other important objectives of national policy are kept in balance. An over-all review of all national policies, their timing and their economic cost is needed to appraise their effects on both security and freedom.

Vigilance is the price of freedom

In the last analysis, the economic strength and the freedom and security of this country rest on the moral and spiritual vigor of its people. A free society can be preserved only by responsible citizenship. The new requirements of national security threaten our freedom. Only an alert and responsible citizenry can insure that adequate security is obtained without the loss of essential freedoms. We are confident that the American people can and will solve this problem.

Beware of German Propaganda

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the CONGRESSIONAL RECORD an editorial from the January–February issue, No. 33, of Prevent World War III, the official publication of the Society for the Prevention of World War III, Inc., of 515 Madison Avenue, New York 22, called "Auction for Germany."

I am including a second article from the same source headed "Revealing documents."

Needless to say, I fully endorse the position taken in each editorial; America, and the civilized world, must be on constant guard against the ruthless, cynical, and effective propaganda of Germany, in strength or in weakness, if civilization is to survive.

AUCTION FOR GERMANY

The confusion of the German situation, which has been growing steadily in the past year, recently reached a new peak. It is almost unbelievable that the situation should have touched the point where even the question of German remilitarization and of a German army is strongly advocated by certain powerful circles.

Tempora mutantur—times change—but the naivete, if not the stupidity of the period following the First World War prevails again. Or are we witnessing the unfolding of a well-calculated plan preferred by the powers that be? It is true that there are other factors in the German problem today which were not present after the First World War. But the hysterical arguments in favor of a strong, rearmed Germany, as advocated at present by wishful thinkers and political opportunists, so soon after the end of hostilities, are fantastic and outrageous.

It is no secret, and the fact has been stated in these pages many times previously, that both Soviet Russia and the Western Powers are frantically bidding for Germany. The London Economist recently called this bidding an auction for Germany. The imbecility of this auction, unfortunately, has not been fully realized by those responsible for shaping German policy. Every intelligent political observer knows that Soviet policy in Germany, to quote the Economist, "has been one of long-sighted and realistic conspiracy for power," while American policy—we still quote the Economist—"had gone through 180-degree revolution since 1945." It should have been clear for a long time that in a continuous bidding for Germany's favor, Moscow definitely has more advantages to offer. It also should have been made clear for a long time that in an open bidding the Western Powers, for very obvious reasons, could only be the losers. It is mathematically certain that the Western Powers, being democracies, would never be able to outbid totalitarian Soviet Russia for the good will, friendship, and alliance of totalitarian-minded Germany.

There is still time, perhaps, for those of our policy makers who are under the delusion that we can win Germany to our side against Soviet Russia to awake from their wishful dream.

An editorial in a recent issue of the New York Post—a paper which consistently opposes Soviet policy of expansion—has given an excellent analysis of this situation.

"Have we finally been deluded into the belief," the editorial states, "that we can compete effectively with Soviet expansionism only by embracing the old Nazi cabal?"

And it adds:

"Unquestionably, the Russians are holding hands with their former Nazi adversaries. There is powerful evidence that the Nazi come-back is just as swift or even more phenomenal in the Soviet zone than in the western realm. This is no justification for American policy or lack of policy. It proves nothing about the nature of the problem concerning us in Germany. It proves only that the old Nazi contingent is doing quite well on both sides of the German fence. The Nazis were always remarkably flexible fellows; they will play 'footsie' with anyone who takes care of their immediate needs. They can love or hate Bolsheviks, as they proved in August 1939, and June 1941. But they can never make real peace with democracy."

The editorial furthermore emphasizes that it is nonsense to think that a strong Germany would prove an efficient bulwark against communism. It should not be forgotten that it was a strong Germany that signed the Nazi-Soviet pact.

Needless to say, we most heartily endorse the viewpoints expressed in this editorial, especially the following:

"(The Germans) will sing anti-Soviet songs in the western zone even while their counterparts in the Soviet-ruled territory dream of a grand new alliance with the Soviets. They will profess their devotion to 'free enterprise'—even as they endeavor to rebuild the cartel system. They will bring neither peace nor security to the world."

Many times in the past we have pointed out in these pages that it would be criminal for the western powers to rely on the Germans. To think seriously that if we were to remilitarize and build up western Germany—even if we were to recreate the German Army—the Germans would become our partners and friends and not those of Soviet Russia, is plain nonsense. In this connection it should be pointed out that even extreme conservatives, to say nothing of right-wing elements in western Germany, openly play with the idea of a new Russo-German alliance.

It is true that some of their colleagues occasionally show a strong anti-Communist attitude. But is this not done to fool us and to throw sand in our eyes? We need only to mention the strange activities of people like ex-Ambassador Rudolf Nadolny, university Prof. Ulrich Noack, etc., men who despite their conservative backgrounds are strong protagonists of a German deal with Soviet Russia.

Even a man like Pastor Martin Niemoeller recently tore off his mask of nationalistic double-talk and openly stated that if unification is not granted he would rather see Germany become Communist than continue to live in its present divided condition.

The question put to Niemoeller after his return from a 3-month visit to Australia was, "Do you think that, in order to reunify east and west Germany, most Germans would be prepared to pay the price of having a Communist regime?"

"Yes," Niemoeller answered without hesitation. "Given the alternative of a continual split in Germany or the prospect of reuniting the country under a fallen dictatorship—that of Russia—the Germans would prefer to take the risks of communism."

Such a statement, coming from the mouth of a man generally considered one of the most outspoken of the conservative German nationalists, speaks for itself. No comment is necessary. But we think this significant statement of Pastor Niemoeller should help clarify the situation.

It is our firm belief that Niemoeller's pro-Soviet pronouncement should destroy, once and for all, the myth that if we give them everything they want, the Germans will be a bulwark against communism.

They never will be a bulwark against communism because the totalitarian and autocratic features of communism are much dearer to the hearts of the Germans than the features of democracy. It should be kept in mind—and history will undoubtedly confirm it—that far from being a bulwark against communism, it was Adolf Hitler and his Nazi Germans who opened the door of central and western Europe to communism.

REVEALING DOCUMENTS

The politics of war is a subject which received the closest attention of the German General Staff. During the crucial period of World War II, the General Staff sought to influence the outcome of the military struggle by every possible political means. This explains the secret instructions of Admiral Walter Wilhelm Canaris, chief of the secret service of the German High Command to his agents which were found in the files of the German Foreign Office.

In this connection, it is interesting to note that Allen Welsh Dulles, former head of the OSS in Switzerland, makes frequent mention

of Canaris in his book about Germany's so-called underground. He tells about negotiations he conducted with some of Canaris' agents in Switzerland who were supposed to be anti-Nazi. Whether these agents were anti-Nazis or not is a moot question. But we do know that Admiral Canaris was the "brain" of the German espionage service and a ruthless agent of the German General Staff. He fully understood the importance of the political factor in warfare.

As disclosed in the Canaris documents, the Germans knew that they could not win the war unless they succeeded in dividing their enemies by heightening political tensions and suspicions among them.

If this were merely wartime strategy on the part of the Germans, these documents would only serve as an historical curiosity. But we know that the Germans today have a vested interest in holding tensions between East and West at war pitch. As in war, so the Germans today are fanning the flames of mutual suspicions among their former adversaries. By intensifying the divisions among the victorious powers and pitting East against West, the Germans were evading the responsibilities of their crimes and aggressions. Thus, the Canaris strategy, which was frustrated during the war itself, has reemerged with greater success in this period of peace. It is the context of present day developments that the Canaris documents assume a sinister significance.

Following is the verbatim translation of two of these documents containing Admiral Canaris' instructions for top German agents abroad.

"OKW—ABWEHR, SECRET STATE MATTER, MARCH 15, 1944

"At a meeting of the representatives of the A. S., S. D. and the department of defense, the following resolutions were adopted for unified action of all the leaders in foreign countries:

"1. Utilize to the fullest extent all available possibilities in neutral and enemy countries, in order to strengthen our military effort with political and propaganda campaigns.

"2. Our goal is to crush the enemy's plan whose object it is to destroy forever Germany militarily, economically, and culturally.

"3. The new regulations put into effect by the political leaders for the dissolution and disintegration of the enemy bloc should be carried out more intensively. We must do our utmost to create a state of confusion among our enemies. Such a state of disunity would enable us to sue for a quick separate peace with either side. While it is true that the efforts made in that direction have failed so far due to the implacable hate policy of Roosevelt and Churchill, it does not mean that someday under different conditions, the unnatural front of our enemies could not be broken. Roosevelt's electoral defeat this year could have immeasurable political consequences.

"The political and military leaders are of the opinion that Germany has nothing to expect from the Russians; on the contrary, should the war take a turn for the worse, the Slavs may retaliate the harsh treatment we inflicted upon them. Nevertheless, every alley should be explored in order to create a political state of mind which will induce the Russians to negotiate a separate peace with us.

"In the event of a negotiated peace, or should we be defeated—on a long-range plan Germany has everything to gain by cooperating with the east.

"Right now, the chances for a separate peace with the west are a little better, especially if we succeed, through our propaganda campaign and our 'confidential' channels, to convince the enemy that Roosevelt's policy of unconditional surrender drives the German people toward communism.

"The opposition against Roosevelt's alliance with Stalin grows constantly. Our chances for success are good, if we succeed, to stir up influential circles against Roosevelt's policy. This can be done through clever pieces of information, or by references to unsuspicious neutral ecclesiastical contact men.

"We have at our command in the United States efficient contacts, which have been carefully kept up during the war. The campaign of hatred stirred up by Roosevelt and the Jews against everything German has temporarily silenced the pro-German bloc in the United States of America. However, there is every hope that this situation will be completely changed in a few months.

"If the Republicans succeed in defeating Roosevelt in the coming Presidential election, it would greatly influence the American war policy toward us.

"The KO-leaders abroad and their staff have innumerable opportunities of constantly referring to Roosevelt's hate policy.

"They can at the same time hint to the danger that Germany may thereby be forced to cooperate with Russia. The greatest caution has to be observed in all conversations and meetings by those who as 'anti-Nazis' maintain contact with the enemy. When fulfilling missions, they have to comply strictly with instructions.

"CANARIS."

"BERLIN, *June 28, 1943.*

"Strictly confidential.

"To KO-DIRECTOR, Bern (Switzerland).

"We informed the chief of the Swiss Espionage Defense, in a friendly way, not to disturb the connections between certain enemy posts in Switzerland, and our agents, who are camouflaged as anti-Nazis. If there should be any difficulties please inform OKW and SD at once.

"CANARIS.

"Copy to Foreign Office, Commissioner for Defense, and SD."

This statement was published in our magazine, Prevent World War III, in April 1946, long before there was any apparent sign that the Germans were climbing back to positions where they could embroil the world in a new war.

We refused to live in Mr. Chamberlain's dream world of the 1930's, because we were already aware of the violation of common agreements made by the Allies to eliminate Germany's war potential. Thus all the talk and noise today about new German armies in the east and in the west is not surprising to us.

It must be said that German armies will inevitably be created again if the present policies which are repeating the same blunders made by the Allies after World War I, are continued.

The neutralization of Germany can be a major step toward the prevention of new conflicts. Such a neutralization requires the following steps:

A. The establishment of a four-power disarmament committee to prevent the remilitarization of any of the zones in Germany.

B. Four-power agreement to hold the level of German steel production to peacetime needs—not exceeding present permitted levels.

C. Prompt fulfillment of the original reparations program under four-power control.

D. Four-power agreement on the elimination from key positions of former Nazis and Hitler supporters.

E. Four-power action to break up the German cartel empire.

F. Genuine international control of the Ruhr to prevent the reestablishment of German economic domination of her neighbors, and, at the same time, give Germany a viable economy for peace.

The carrying out of these measures and subsidiary steps would take Germany out of the international arena as a major bone of contention between east and west.

The hour is late, but it is up to us, the living, to make our final decision. We must bear in mind that a German army is inevitable if the people consent to policies which preserve a dangerous war potential in her heavy industries. It would be wishful thinking to believe that the creation of German armies, east or west, would be a boon to either side or to mankind in general.

President Heuss has told the truth: An east German army will not fight a west German army or vice versa. They will unite and when they unite, the betrayal of the peace and the security of the United States and her friends abroad will be complete.

War on Russia's Side

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. GILLETTE. Mr. President, I ask that an exceptionally newsworthy and revealing article published in the December 1949 edition of the United Nations World, entitled "New German Blueprint: War on Russia's Side," written by T. H. Tetens, be printed in the Appendix of the RECORD.

Mr. Tetens is an authority on pan-Germanism and geopolitics. In this article he has put his finger on the greatest single danger facing America in Europe: the danger that a rebuilt, rearmed supernationalist Germany will unite in totalitarian brotherhood with the Soviet Union in a third attempt in this century to conquer the world.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW GERMAN BLUEPRINT: WAR ON RUSSIA'S SIDE

(By T. H. Tetens)

From a secure base in Argentina, a group of top German political and intellectual leaders, all brought up on Prof. Karl Haushofer's geopolitical bible, are engaged in shaping a German policy which could threaten the safety of the United States even more than Hitler's drive for world dominion.

Although still lacking authority or official position, these men are the potential leaders of an unreconstructed Germany, rather than Presidents Heuss or Pieck. They are on the way to laying the foundations of the German political thinking of tomorrow. But already their influence upon their fellow Germans has assumed an importance difficult for Americans to understand.

What makes the activities of this clandestine political general staff so dangerous to the basic interests of the United States and the whole free world is their decision that, in the event of a Third World War, the German people must side with Soviet Russia.

The organ of the group is a monthly called Der Weg (The Way). It is the new testament of Realpolitik. It is the bible of nationalist Germans everywhere. It is also the progeny of Dr. Karl Haushofer's famous Zeitschrift fuer Geopolitik—Journal of Geopoli-

UNIVERSITY OF MICHIGAN LIBRARIES

tics, source book for the Nazi drive toward world dominion.

* * * * *

Der Weg is printed in Buenos Aires in the Duerer House at Sarmiento 532. An attractive monthly on coated stock, its 80 pages contain many columns of advertising. Its editors are Eberhardt Fritsch and Gustav Friedl. The magazine attracts a galaxy of significant writers and thinkers of strong nationalistic convictions, whether residing abroad, or in Germany and Austria. Der Weg was started in July 1947, and became an immediate success among embittered Germans to whom it held out hope for a better—even a grandiose future. Although occupation authorities banned the publication from the American zones of Germany and Austria, it is smuggled into the fatherland by the thousands.

The chief editorial writer of Der Weg hides under the pseudonym "Observator." His articles sum up and express with forceful logic the political decisions which Der Weg accepts and promotes. Among the visible pundits of the Buenos Aires group are such stalwarts of German nationalism and aggressive expansionism as the notorious Dr. Colin Ross, one-time head of the Nazi propaganda machinery in the United States, Dr. Anton Zischka, Hans Grimm, Dr. Walter Pahl, Prof. Dr. Ferdinand Fried, and others. These intellectuals, however, are far from being an isolated assortment of thinkers. In their mansions, hotel suites, and clubs, in Buenos Aires, a large and influential clique of South American Germans are engaged in financing and developing the activities of the planners. Among them are the great financiers and industrialists of German extraction who are the big wheels of Argentina's economic life; theoretical economists like Ludwig Freude, Peron's personal adviser; former high ranking Wehrmacht officers now occuying important positions in the Argentine Army; scientists like Prof. Dr. Wilhelm Westphal, outstanding German authority on atomic energy; or ex-Luftwaffe flyers who had escaped from the allied armies. Prominent among the latter are General Baumbach, who used to be a top man in the Luftwaffe's training division; Gen. Adolph Galland, a fighter-pilot with 102 planes to his credit; Col. Thieben and Col. Hans U. Rudel.

* * * * *

When Der Weg started in 1947, its program called for collecting data on the comparative strength and weakness of the Western allies on the one hand, and of the Eastern bloc on the other. The group took the position that Germany must remain free from definite commitments to either side, and reserve its allegiance until such time as the distribution of power in the postwar world is clearly revealed. Through their emissaries, the planners warned political leaders active in Germany that it was their duty to follow the same line.

The reversal of that policy came in the summer of 1948. It was at that time that Haushofer's heirs in Argentina, on the basis of their carefully collected evidence, deduced that from a show-down between East-West Russia would emerge as the undisputed victor. On this premise they saw only one possible course of action: Germany must throw her lot in with Russia.

The exiles are convinced that as soon as the military occupation of Germany is ended, they will be able to return to the fatherland and transplant their organization. They are sure that they will be able to take over the signs and seals of power and put their plans into official operation with popular consent. Meantime, over and above the visible activity of Der Weg, Argentina is also the conspiratorial cellar where from the Rio de la Plata to Patagonia even more extreme groups hatch plots for the come-back of a more successful nazism.

Lest the confidence of Der Weg's circle be dismissed as an exercise in collective megalomania, it should be recalled that Lenin and a similar band of exiles prepared the blueprints for the Bolshevik administration far from their homeland, and then transformed their plans into world-shaking reality.

The background for this latest historic conspiracy centered in Argentina is furnished by the ardent wooing of Germany by Washington and Moscow.

The long-term occupation of Germany agreed on at Potsdam has been abandoned by both east and west. Neither fears Germany longer—except as an ally of the other. On both sides the men who make the policy are apparently convinced that the trend has turned in their favor.

An objective appraisal of the facts unhappily discloses that on this score the Russians are right and the Americans are wrong. Russia is right because its economy has already profited from the Soviet occupation, and because it has gained German military allegiance of the first magnitude.

America is wrong because its military men and financiers are both sponsors and victims of what Walter Lippmann has called the official mythology of the United States. Briefly, their credo runs something like this:

"Germany is the heart of Europe. To prevent Europe from going Communist, we must restore Germany's industry in the west, acquaint her with our democratic way of life, and slowly change German mass thinking, aggressiveness and authoritarian behavior to resemble our individualistic, friendly and democratic behavior. Meanwhile, the increased output of the gigantic Ruhr industries will help to bring the other nations of Europe back onto a sound basis and enable Europe as a whole to resist communism."

In line with this view, America's economic policy in Germany has been to restore "peaceful" industries, providing management guidance and other incentives where necessary.

On the other hand, Russia's economic policy has been to take as reparations, in the form of either goods or transplanted factories, all the German industrial production its soldiers and diplomats could lay hands on.

Russia has already benefited measurably by its control of eastern Germany and by obtaining goods and machinery from western Germany.

If the United States has failed to forge for itself a dependable German allegiance, and there is nothing to prove that it has, it follows that Russia will eventually benefit by every American dollar, every American machine, every Germany factory restored or saved from dismantling by American aid. For the chances are that those dollars, machines, and factories would be turned against the west in any third world war.

United States military men have been no more successful in Germany than their financial counterparts. It is no secret that their primary concern has been the establishment of a body of hard-fighting German troops, armed and equipped by America to stand between the aggressive Russians and the Rhine.

But the vision of a German army that will fight Russia out of German fondness for America is one of the saddest illusions fostered by the official myth. To date no group of staff officers, no army of German fighting men have gone over to the United States. Contrast this with the roster of German military personnel who have lined up with the Russians.

Among the Soviet's outstanding converts are such military notables as Field Marshal Friedrich Paulus, the defeated hero of Stalingrad; Gen. Walter von Seydlitz, who organized the Committee of German Officers in Moscow; Gen. Vincenz Muller, commander of the east German police force of some 100,000 former Nazi soldiers and officers; Colonel Markgraf, chief of the force in Russian Berlin. Another former colonel, Walter Lehwess-Litzman, who served on Goering's General Staff, is a Communist lecturer and editorial writer, while Dr. Otto Korfes, a former major general, today is the chief of the central archives in the Soviet zone. Where among the friendly Germans of the west can one match this evidence of Germans who have chosen sides so unequivocally?

Walter Lippmann has not been alone in seeing through the flimsy, wishful mythology of United States administrators in Germany. Ex-Secretary of State Sumner Welles, ex-Secretary of the Treasury Henry Morgenthau, Jr., William Shirer, Edgar Mowrer, Delbert Clark, Drew Middleton have also understood clearly that Germany can still exploit a potential alliance with Russia as a potent diplomatic weapon.

After the Allies had won Germany's unconditional surrender, a new and violent rephrasing of prophecies on eventual Russo-German accord appeared in the United States. Heinrich Hauser, a German newspaperman and refugee anti-Nazi, wrote and Henry Holt published an angry book, The German Talks Back.

The book, which became a best seller in the German neighborhoods of New York, Chicago, Cleveland, and St. Paul, explained at length why Hauser and other Germans had only contempt for western democracy and scorn for capitalism—particularly as both were exemplified in the United States.

* * * * *

Hauser's explanation is that the Germans "must be provided with a dream powerful enough to justify the sacrifice of eight or ten million lives," and he adds:

"There is only one great ideology left which as a nation we have not yet tried, which therefore has not yet failed—communism. If the Germans accept communism for their new dream and ideology and do it quickly, they will be lifted almost overnight from the status of outcast lepers to the status of allies of the biggest land power on earth. * * * If one has to embrace communism in order to get lebensraum, what of it?"

This is the voice of German Realpolitik speaking through the lips of an anti-Nazi German, and is by no means an isolated case. The temptation of playing both ends against the middle induced even such a stanch anti-Communist as Friedrich Stampfer into using the threat of German-Russian rapprochement. In December 1944 he published an article in the Neue Volkszeitung, New York. He severely criticized the western Allies for planning a long-term occupation, demilitarization of Germany, and eradication of its war potential.

Stampfer warned the west that, unless leniency was shown, the Germans would turn to the east. He wrote:

"There is a way out for Germany from total defeat and—we have to say it openly—the Western Powers are pushing Germany systematically toward that way. Germany can change this situation (of defeat) decisively and at once by lining up with the only real power on the Eurasian Continent, with Russia. * * *

"Germany (even in defeat) can give many things to Russia—the open way to Hamburg and the Rhine, trained general staff officers, technicians, skilled workers, soldiers, warships, tanks, bombers, and the most modern weapons of destruction. * * * [It can] bring about the final destruction of the French-British barrier, the liquidation of the British Empire, and the end of west European colonial rule. This would mean the establishment of German domination over Africa."

* * * * *

Today the proponents of partnership with the east have on their side the German, or

Prussian, national memories that go back through two recent world wars and the Napoleonic conquests to the Seven Years' War. In every case these memories summon forth success for German arms when allied with Russia, but defeat and failure when fighting against Russia.

* * * * *

As a consequence, therefore, the group of Haushofer geopoliticians operating in Argentina represents, in German eyes, a source of irrefutable logic and guidance. Dr. Colin Ross, Professor Fried, Messrs. Grimm, Mahler, Zischka, and the others are accepted throughout Germany as a body of policy shapers who are weighing the evidence of the past and present with scientific objectivity, and are building up a fool-proof national action program for the triumphant Fourth Reich of the future.

Long before the war in Europe ended, military intelligence knew that the brains of Germany was in flight—by air or submarine—often by way of Spain, to South America. There, in Argentina, and to a lesser extent in Brazil, the Haushofer School now flourishes, well-financed with funds shipped out of Germany before VE-day, and also getting generous donations from the pan-Germans who have prospered under General Peron.

The plan evolved by Haushofer's heirs and assigns in geopolitics features elaborate courses of action in case of both peace and war. For peacetime, the basic policy is economic cooperation with Russia. For wartime, the prescription is full-fledged military alliance with Russia.

Germany's cartel-minded industrialists see their western markets taken over by the Atlantic states, chiefly by the United States.

They therefore endorse the aim of the Argentine geopoliticians to end the occupation by whatever means, then to restore a united Cermany and throw in their lot with Russia. Since they prospered under the totalitarian regime of Hitler, they think they can prosper under the totalitarian regime of Stalin. Their immediate goal in peace is to capture the vast, hungry markets that lie between Riga and Vladivostok—and southward now to Canton.

Every move made by Hitler's former Ambassador to Moscow, Rudolf Nadolny, all the unpublicized conversations he conducted with political, military, and industrial figures in both west and east Germany, have had as their purpose not merely restoration of a united Germany but, even more, the restoration of a strong Germany which will be able to deal with Russia on a basis of comparative equality.

Thus there is developing in Germany an unbelievable national front. The Communists in the east and the ultranationalists in the west are jointly orienting the dynamic militaristic instincts of the German people toward an alliance with Russia against the west.

The men who are blueprinting Germany's economic future, based on business with Russia and her communist neighbor states, know that their program appeals as much to conservative manufacturers anxious about profits as to beaten militarists yearning for revenge.

* * * * *

Again and again in their blueprints, the German planners make clear that, once freedom of action is assured, Germany will begin a furious drive to funnel the necessary goods eastward and to siphon back the grains and metals, the timber, furs, oil, and other raw materials from Russia.

* * * * *

They are convinced that Russia can gain full command over Europe and the Middle East within a few weeks after the outbreak of hostilities. In any such event, they point out, the eastern allies would acquire a tremendous advantage in the war potential of resources and manpower. They stress the point that Russia is not inferior in modern weapons—about which they may well know much more than any non-Russian general staff. Readers of Der Weg were told that Russia had an atom bomb long before President Truman reported it to the world.

Der Weg's editors also know a great deal about Russia's bacteriological warfare, because German scientists collaborated in designing the laboratories in the secret-understanding days of the Black Reichswher and the Rapallo Treaty. They refer guardedly to other, new unproved weapons which the Russians are developing with the aid of German scientists. There are references to submarines, rockets, and even rays, as well as to atom bombs. The final conclusion of the German planners is that the free west is riding for a fall.

* * * * *

Meanwhile the planners—and the German people—await Der Tag. If it comes soon, only the paramilitary police force of the East will be equipped and trained to fight side by side with the U. S. S. R. The thin lines of Allied occupation troops can only retreat—in good order, if possible.

* * * * *

If Der Tag is delayed long enough for the "sovereign" western state of Germany to acquire an Allied-approved, trained, and equipped Panzer force, the planners foresee that it will not long continue to fight on the side of the west. Where, how, and when it will surrender to the Russians and turn on the fleeing American, British, and French is a tactical question. The answers will remain military secrets—only the strategy is discussed openly.

There is no doubt that the blueprint has been sold to the German people, pro-Communist and anti-Communist, neo-Nazi and Roman Catholic. This, of course, is not a question of Communist sympathies. Rather, many conservative leaders are fully convinced that Russia's need for Germany will persuade the men in the Kremlin to leave Germans as masters of their destiny as far as their internal political and economic system is concerned.

* * * * *

Franklin Roosevelt's nightmare of a Russian-American split over Germany, followed by a German-Russian combination against the United States, has all but come true. The blueprint has been drawn, the plans are set. On the evidence, whatever America does, Germany will become a partner of Russia. And if it comes to war, Germany will fight on Russia's side.

Policy Statement of New York Young Republican Club

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8 (legislative day of Wednesday, January 4), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the sections on rent control, agriculture, wasteful big government, private enterprise, public regulation of business, taxation, and the citizen and politics—from a policy statement entitled "Blueprint for a Better America" by the New York Young Republican Club.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

RENT CONTROL

Problem: Rent controls are still necessary and desirable in many areas where there is a shortage of low and medium cost housing to prevent landlords from exploiting tenants who have nowhere else to live. On the other hand, the evils which accompany rent controls must not be disregarded. They create an artificial demand by holding prices too low. They discourage new building. They discourage proper maintenance and repairs. They deprive the landlord of a fair return on his investment. They add another unit to the vast Federal bureaucracy.

Rent controls began as a wartime measure. They are the only important wartime controls still remaining and should be removed just as soon as the war-created housing shortage is over. It would be tragic if, for purely political reasons, they were allowed to continue indefinitely, and if, as in France, they were permitted to throttle construction of new housing units.

The problem, therefore, is to provide adequate rent controls wherever and whenever there is a shortage of housing, and at the same time to set up machinery that will remove rent controls as soon as the shortage is over in any area.

The present Federal rent-control law became effective April 1, 1949, and expires June 30, 1950. It represents an improvement over earlier legislation in at least two important respects: (1) A State legislature, with the approval of the governor, is given the power to remove the State from Federal rent control, or to substitute State control, and (2) landlords are allowed rentals sufficient to provide a fair net operating income.

Seventeen million housing units were under rent control at the peak in April 1947; 14,500,000 units were under control when the present act went into effect in April 1949; and 12,000,000 units were under control in January 1950.

Proposals: 1. Rent-control legislation in substantially its present form should be renewed when it expires on June 30, 1950.

2. More rapid decontrol in areas where a housing shortage does not exist should be provided for under the new legislation. If controls are removed in some areas and rents rise too sharply, controls may be reimposed.

3. High-rental residential units should be decontrolled. There is much less of a shortage in this price range than in low-rental housing, and the tenants are usually not hardship cases.

AGRICULTURE

Problem: The problem of farm income is primarily a problem of farm prices. The instability of farm prices results chiefly from general business fluctuations over which the farmer has little control. Thus, the basic causes for the farm problem do not lie within agriculture; rather they lie in the economic and political relations between agriculture and the rest of the economy.

The problem of surpluses is parallel to the problem of price and 1950 finds American agriculture with dangerous surpluses mounting in virtually all of the grains and cotton. Surpluses give rise to proposals for crop quotas, acreage restrictions, and other forms of governmental control. The farmer, as America's most rugged individualist, intensely opposes such measures since he, more than anyone else, believes that personal prosperity springs from one's own production. Because of this basic philosophy of the farmer, agricultural production remains fairly constant despite the effects of business

fluctuations, area weather conditions, or governmental efforts to curtail production.

The farm population comprises one-fifth of our total population.

During the two decades of 1920–39, the net migration from farms was 10,000,000 persons; yet the supply of food produced increased.

Under the AAA, wheat acreage was reduced 13 percent; yet production increased 21 percent—acreage allotments not proving satisfactory for regulating production.

Ten cotton States have 43 percent of the United States farm population, but only 25 percent of the farm income (due in part to smaller farms, lack of fertile soil, smaller capital investment, inadequate farm management, risk from weather and insects, and dependence on exports).

For the individual, parity prices have meant higher taxes and high consumer prices and, for the Nation, a collision between our domestic and foreign policies. The Government subsidizes to produce, stores the excess, then subsidizes to get rid of it as exports. At present, the Government has over $3,000,000,000 tied up in farm commodities and is faced by a declining export market. In addition high subsidies tend to encourage an artificial diversion of capital resources into agriculture, thereby increasing production and ultimately causing surpluses. They keep the inefficient high-cost producer in business.

Chronic overproduction, whether caused by inability or unwillingness of producers to adjust output to demand, by price supports or by controls, indicates that we are not making the best alternative use of our human and land resources. Nobody gains if everybody is subsidized equally—yet no single group can or should expect to gain at the expense of the rest of the population.

The Brannan plan is a political rather than a grassroots program. It leaves the farmer dependent upon annual appropriations by Congress. As one farmer put it at the Sioux City conference:

"The Brannan plan reminds me of a friend of mine in Shiawassee County, who went fishing in a leaky rowboat. He couldn't bail fast enough, so he rowed it back to shore and instead of patching the leak, he merely got a bigger pail to bail with."

Proposals:

1. We favor continuing the present price-support program during 1950. A sudden end to these supports would substantially impair the farmers' financial stability. Moreover, the present state of international relations demands that we carry moderate surpluses.

2. We propose, on the other hand, that serious consideration be given to reducing gradually the support-price levels in 1951 and to substituting a price floor below which farm prices will not be allowed to fall. Such a floor price should be low and should be announced a year in advance so that farmers can make their plans accordingly. Since a low floor price would result in taking some marginal land out of production, those leaving unproductive lands should be assisted in securing jobs elsewhere.

3. Curtailment of production is inconsistent with the incentive system of an opportunity society and, moreover, ignores the fact that many people throughout the world are hungry. Accordingly, we favor a stock of emergency remedies to meet critical surplus situations and long-range measures to stimulate consumption as follows:

(a) Temporary food-stamp plans to meet specific surplus problems.

(b) Cooperation with community efforts to improve the diet of children through dietary education and school-lunch programs.

(c) Greater exports to needy areas to meet specific surplus problems.

(d) Increased on-the-spot industrialization of farm products and expansion of industrial and byproduct use.

(e) Encouraging production of livestock and livestock products to utilize grain surpluses.

(f) Further streamlining of the processing and distributive systems for farm products.

(g) Charitable and community feeding of underprivileged families.

(h) Better on-the-farm storage facilities.

4. We favor an amalgamation of the flood control, navigation, reclamation, and irrigation functions of the Army Corps of Engineers and the Bureau of Reclamation as proposed by the Commission on Organization of the Executive Branch. Hundreds of thousands of dollars have been wasted in the Columbia and Missouri Valleys and Central Valley of California due to the competition in water resource development between these agencies.

WASTEFUL BIG GOVERNMENT

Problem: The Federal Government is today the biggest single organization in the free world. Some 2,000,000 people are employed in 9 departments, 104 bureaus, 12 sections, 108 services, 51 branches, 460 offices, 631 divisions, 19 administrations, 6 agencies, 16 areas, 40 boards, 6 commands, 20 commissions, 19 corporations, 5 groups, 10 headquarters, 20 units, 3 authorities, and 263 miscellaneous and functionally designed parts. Without reducing essential services, $3,000,000,000 a year might be saved by introducing efficient management into the Federal Government.

Veterans' Administration insurance death claims take four times as long to be paid as private insurance claims; yet the Veterans' Administration employs four times as many insurance workers per policy as do private companies.

There are 30 agencies in the Federal Government actively engaged in lending, guaranteeing, and insuring loans.

There are 390,000 Indians under the jurisdiction of the Bureau of Indian Affairs. The Bureau employs over 12,000 persons to administer its work—one employee for every 32 Indians.

Many Government business agencies invest their idle Government surplus funds in Government securities. Result: the Government pays interest on its own money.

Construction cost of Government hospitals runs from $20,000 to $51,000 per bed, compared with an estimated $16,000 per bed for voluntary hospitals.

About half of the 3,000,000 Government purchase orders issued each year are for $10 or less. The average cost of paper work involved in each order exceeds $10.

Proposal: We propose adoption of the remaining suggestions for economy contained in the report of the Hoover Commission, a bipartisan task force created by the Eightieth Congress in 1947 to examine and report on the Federal Government. Adoption of these suggestions would be a long step toward helping the Federal Government balance its budget without reducing essential services.

PRIVATE ENTERPRISE

Problem: Private enterprise has given this country the highest standard of living ever known in the world and enables the United States to stand today as the great bulwark of freedom-loving people against the forces of oppression and totalitarianism.

The United States possesses more than half of the world's telephones, telegraph and radio networks, more than a third of the railways, more than three-quarters of the world's automobiles, almost all of the world's radios, and consumes more than half the world's coffee and rubber, two-thirds of the silk, a quarter of the coal, and nearly two-thirds of the crude oil.

But today the vigor, flexibility, and capacity of our private-enterprise society are seriously threatened by constant and haphazard governmental interference and control.

Proposals: Recognition and support by the Republican Party of the following basic principles:

1. That insistence on preservation of private enterprise clearly distinguishes the Republican from the Democratic Party.

2. That under our economic system there is today, as in the past, the opportunity to rise from the humblest beginning to the top of one's calling; and that the drift to socialism in many countries of Europe has resulted from the old stratification of society and the inability to make such a rise except over many generations.

3. That private competitive enterprise offers the only incentives for production that are consistent with individual freedom.

4. That a plentiful supply of venture capital is indispensable to the ample production of goods and the creation of job opportunities. Encouragement of private investment should be emphasized in the formulation of future legislation and in the administration of existing laws.

5. That continued deficit spending creates inflation, progressively reduces real income and destroys the savings of the thrifty. Deficit spending is justified, therefore, only in time of war or major depression.

6. That an unchecked "laissez-faire" economy, as opposed to responsible private enterprise, is no longer compatible with the general welfare of our people.

PUBLIC REGULATION OF BUSINESS

Problem: During the past few years, the antitrust laws, through judicial review and administrative interpretation, have become a source of utter confusion to businessmen, both large and small. This confusion has spread to the Justice Department, the Federal Trade Commission, and even the Federal courts. Consequently, the antitrust laws require immediate reexamination, revision, and amendment. In addition, too many unlawful trade practices, which are extremely harmful to small-business men and consumers, escape prosecution.

Proposals: 1. The antitrust laws should be reexamined by Congress and should be redrafted or amended to make them more definite and consistent. If Congress, after its investigation, considers it feasible, it should enact legislation which specifically sets forth those practices which are lawful and those which are unlawful. In any case, the standards to be applied should be clarified by comprehensive regulations.

2. Serious consideration should be given to the economic utility and social desirability of the giant corporation in our competitive economy. For the curse of bigness, in business as well as in government, is the regimentation of the individual and the curtailment of his freedom.

TAXATION

Problem: Taxation imposed by the Federal, State, and local governments during the past year will take from private individuals and businesses over $50,000,000,000 or almost one-quarter of the national income. Just 10 years ago the take in taxes of these three governments was under $13,000,000,000 or less than one-fifth of the national income. The Federal Government's share of these taxes has increased during that period from under 40 percent to over 70 percent of the total.

During the same period the general Federal tax structure has remained approximately what it was in 1939—a haphazard system of taxes falling unequally on persons and businesses in like circumstances, unnecessarily restricting the expansion of production and employment, and raising insufficient revenue to pay for Government expenditures. Furthermore, the existing laws fail to offer sufficient incentive for foreign investment.

Proposals:

1. While an over-all reduction in taxes represents a desirable objective, any substantial reduction must be geared to a corresponding reduction in Federal expenditures.

2. The present Federal tax structure should be completely overhauled for the purpose of stimulating the flow of risk capital into new enterprises and thereby creating additional job opportunities.

3. Pending an over-all revision of the Federal-tax structure, the following inequities of the existing law should be remedied immediately:

(a) More liberal provision should be made for the averaging of income by individuals over a period of years and for the offsetting over a period of years of losses in prior or subsequent years. The present Federal income tax based primarily on an annual accounting period discriminates unfairly against individuals with fluctuating incomes such as wage earners subject to irregular employment, actors, authors, and small-business proprietors.

(b) The sale of residential property occupied by the taxpayer as a home should be treated as a tax-free exchange if the proceeds are used to purchase another residence for occupancy by the taxpayer.

(c) The provisions imposing high surtax rates on corporate income between $25,000 and $50,000, which discriminate unfairly against small corporations, should be modified.

(d) The provisions restricting the deductibility of nonbusiness bad debts by personal lenders tend to discourage investment in speculative enterprises and should be eliminated.

(e) Since most new businesses operate initially at a loss, business operating loss carry-overs should be extended to 4 years in the case of new businesses.

(f) Wartime Federal excise taxes, such as those on cosmetics, telephone service, transportation, and baby products, should be eliminated.

4. Those provisions in the Federal tax laws which affect income received from foreign sources should be thoroughly integrated with a negotiation of new treaties with foreign countries where investment is to be stimulated. Subject to modification by an over-all revision of the Federal tax structure and to the terms of treaties negotiated with foreign government, the following specific changes should be made:

(a) Expand the provisions in the Federal income-tax law granting exemption from surtaxes in the case of Western Hemisphere trade corporations to corporations doing business in other parts of the world.

(b) Remove the present requirement that a domestic corporation must own a majority of the stock of a foreign corporation to be eligible for a tax credit based on foreign taxes paid.

THE CITIZEN AND POLITICS

Problem: The ill health of American politics was strikingly revealed in the 1948 presidential election when almost one-half of those eligible to vote failed to cast their ballots. This indifference and apathy to participation in elections constitutes a real threat to effective representative government. It is also a serious indictment of the major political parties which have the responsibility for providing the link between the citizen and his government.

Too many Americans feel that the individual ballot does not have any real importance, that politicians and political parties are basically dishonest, and that all politicians make promises which they never intend to keep. This explains in part why so many Americans refuse to interest themselves in the practical workings of democracy.

As our Government has become more impersonal and centralized, the individual citizen has felt increasingly unable to participate in the making of important public decisions. The Government no longer is Councilman Jones up the street, but rather a vast and disturbing hierarchy of nameless Federal officials.

Proposals:

1. More careful selection of able Republican candidates who will support sound programs reflecting economic, social, and political realities.

2. Bold and sincere efforts by Republicans at all levels of party organization to broaden the base of party support among all economic, racial, and religious groups.

3. Weeding out of political deadwood and paper organizations at all levels and supplanting them with younger and more aggressive party workers.

Social Security Act Amendments

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1950

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks I would like to include comments on the statement of George H. McLain, chairman, National Pension Committee, and chairman, board of trustees of the California Institute of Social Welfare, Los Angeles, Calif., presented to the Senate Finance Committee in the course of hearings on H. R. 6000, Saturday, January 28, 1950, as prepared by Mr. Nelson H. Cruikshank, director of social insurance activities, American Federation of Labor:

I

Mr. McLain's statement reveals that he completely fails to grasp the concept of social insurance. The working people of America have repeatedly demonstrated that what they want is to be able to insure their wage incomes against the hazards that are a part of our modern economy. They do not want an economy that is static and limited in opportunity. They want an economy that is free both for the employer and the worker. They realize that such freedom entails certain risks. Among these risks are unemployment, sickness, and dependent old age. They want to insure their incomes against these risks just as businessmen want to insure their capital investments and farmers want to insure their crops.

The wage earner in unions affiliated with the American Federation of Labor have expressed again and again through resolutions by local unions, State federations, national and international unions and in conventions of the American Federation of Labor that they are perfectly willing to pay through regular pay-roll contributions their share of the cost of such insurance.

The Advisory Council on Social Security to the Senate Finance Committee, which consisted of 17 members, wrote on page 1 of their report their views in regard to the principle of social insurance. This statement of policy was adopted unanimously by the council, which included not only representatives of labor, but also some of the leading economists of our outstanding universities as well as business leaders. Included in the last group is Mr. Adrien J. Falk of California, president of the S & W Fine Foods, Inc.

"THE METHOD OF SOCIAL INSURANCE

"The council favors as the foundation of the social-security system the method of contributory social insurance with benefits related to prior earnings and awarded without a needs test. Differential benefits based on a work record are a reward for productive effort and are consistent with general economic incentives, while the knowledge that benefits will be paid—irrespective of whether the individual is in need—supports and stimulates his drive to add his personal savings to the basic security he has acquired through the insurance system. Under such a social-insurance system, the individual earns a right to a benefit that is related to his contribution to production. This earned right is his best guaranty that he will receive the benefits promised and that they will not be conditioned on his accepting either scrutiny of his personal affairs or restrictions from which others are free."

The workers of America are in wholehearted agreement with that position. They regard this approach to the problem of security in old age as the one which is most sound and practical. They want benefits as a right—a right which derives from their having made regular contributions from their wages. They want this right established in a manner to remove the question of their old-age security from the uncertainties of political fortunes. They are aware that there can be no genuine security which rests only on a vague promise that their future will be taken care of if need should arise. They remember too well the uncertainties of the relief handed out from month to month during the depression. Workers want benefits as a right because they want not only security, but they want security with dignity. Too many of them know too well the indignity of the means test.

There is no indication anywhere in Mr. McLain's statement that he understands the nature of the American worker's desire for security or that he understands the principles upon which our program of social insurance was established.

II

In his statement, Mr. McLain speaks of the groups who are presently under one of the social insurance programs as "special privilege" group. We agree that the coverage today is far from adequate; that there are entirely too many people deprived of this protection, but to use the term "special privilege" is completely inaccurate. This is proven by an analysis of the groups which for the last 10 years have been asking for a broadening of the coverage, as opposed to those groups which wanted to limit and restrict it. The very groups which have enjoyed what Mr. McLain calls special privileges have pressed hardest for the broadening of the program. When was it ever known that a special privilege group sought to extend that privilege to others? The industrial wage earners of America have constantly sought to extend the protection of social insurance to those outside the system, while certain segments of business (but certainly not all business leaders) have been responsible for keeping the coverage limited. It is easy to point to the deficiencies of the present social-security system and Mr. McLain has correctly pointed out some of its major limitations. The American Federation of Labor wants to correct these deficiencies. We want to correct them constructively, not by wiping out the entire system as Mr. McLain proposes.

When Mr. McLain speaks of special privilege groups, he includes those under the civil service retirement system and the railroad employees who are under the Railroad Retirement Act. Does he mean to wipe out the civil service retirement system and the railroad retirement system? While he does not say so in so many words, clearly the plan

UNIVERSITY OF MICHIGAN LIBRARIES

which he suggests would supersede these programs. Mr. McLain should say in so many words whether he means to destroy or supplant these two outstanding social-insurance programs which have proven their acceptability to millions of workers in these fields and in which billions of dollars of their own contributions are now invested. The proposals contained in H. R. 6000 would leave these plans intact.

The general position taken by Mr. McLain is in harmony with the new line which is now being taken up by the conservatives on all sides, including Senator TAFT and Congressman CURTIS. The current confusion in the pension and retirement field could have been avoided if the Eightieth Congress had undertaken its responsibilities constructively, rather than approaching the problems with a meat ax. The time to have made the basic changes in the social-security program was from 1946 to 1948. They could not have been made earlier, as the program was just getting started when this country went into a war economy. The need for constructive change was clearly brought out in the report of the House Ways and Means Committee prepared in 1945 and 1946, but men like TAFT and CURTIS who, during the time they were in control of Congress did nothing to repair the deficiencies of the program, now point to its admitted inadequacies as a reason for discarding the entire system. The workers of America are too well acquainted with the intentions of such men to trust their future security to any schemes that they propose. Mr. McLain's testimony indicates that he has joined their ranks.

III

The failure to grasp or understand the basic needs and desires of working people revealed in Mr. McLain's statement leads to some glaring inconsistencies:

1. In the opening paragraph he describes his plan as a "pension." In the same paragraph he states that payments should be made only in case of need. What is it that he proposes? Is it a pension or a dole? The two are radically different and if Mr. McLain is aware of the difference, his statement fails to resolve it;

2. Mr. McLain proposes that the payments are to be made in case of need, but he fails to indicate at any point as to how this need is to be determined. No one has ever found a way to provide a public relief or Government charity without some kind of a means test.

At one point he states that a flat $75 per month should be paid to "those who can prove they need it," and at another point indicates that an additional $30 a month should be paid to those who need medical care or service. The suggested flat payments are in contradiction to his proposal to pay in cases of proven need. If payments are to be made to meet need, some will need less than $75, and some will need more. Certainly most elderly people will need more than the $30 which he suggests for medical aid if they need medical aid at all.

3. It is interesting to note that with regard to financing, Mr. McLain states frankly that he has no idea what his plan would cost. He is clear on one point: he wants to relieve the employer of any direct cost, suggesting that Government contributions take the place of the present employer contributions. However, he thinks employees should continue their contributions. Under his proposal, the employee would pay twice: once through direct pay-roll contributions and again as taxpayers—unless, of course, Mr. McLain is among those who believe that workers don't pay taxes. In fact, Senator MILLIKEN pointed out this weakness in the plan and asked Mr. McLain directly if that presented any difficulty to him. Mr. McLain replied that it did not, that it only seemed to him that his proposal spread the tax base—a nice phrase for asking the employee to pay double.

4. Mr. McLain refers to "the keen observer" of the problem of security and apparently means to identify himself as such. When he states his belief, however, that the administrative costs of the program that he proposes would be less than that of the present plan, it is quite plain that his observations have not been very keen. For the Federal Government to undertake to make payments to all elderly persons on the basis of proved need, an army of investigators and snoopers the like of which has never been seen would have to be employed. To say that that kind of program could be operated as efficiently and as economically as a social-insurance program is fantastic. The present old-age and survivors program has 80,000,000 current wage accounts, and the entire cost of administration is only 3 percent of the contributions. This is the largest insurance system in the world, and it operates at the lowest per capita cost.

We in the American Federation of Labor believe that our system of contributory social insurance has proved its worth, even on the limited basis on which the reactionaries in Congress have forced it to operate over the last 10 years. It should be broadened and brought up to date and not destroyed, as Mr. McLain proposes. We have no fear that the workers will be deceived by any such impractical and uncertain promise of security as that which Mr. McLain offered in his statement to the Senate Finance Committee last Saturday.

Undermining the Republic

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, if the Hearst papers had never published any other constructive thought nor advocated any other patriotic action, the editorial which they carried Tuesday, February 7, 1950, more than justifies their publication.

That editorial calls attention to the several proposals now pending before the Senate to surrender our sovereignty, commit our youth to fight in every war anywhere in the world which the representatives of contentious, ambitious, quarrelsome, bankrupt nations may decide will advance their collective or individual interests.

The editorial is as follows:

THE NEW BOOTLEGGER

(By Burris Jenkins, Jr.)

UNDERMINING THE REPUBLIC

Do the American people want to betray the founders and the defenders of the Republic?

Do they want to renounce the principles confided to them by their patriots?

Do they want to defile the civilization instituted by their worthy ancestors?

Do they want to desert the noble flag for which their sons and brothers have shed devoted blood and enroll themselves as a fragment of a nondescript horde under an ensign of universal subjection?

Do they want to repeal their Declaration of Independence?

Do they want to annul the Constitution of the United States?

Do they want to submerge their nationality in a welter of world government which will have steadily encroaching power to dictate their laws, to alter their currency, to tax their incomes and property, to adulterate their citizenship, to decree their wages, to confiscate their goods, to expropriate their savings, to control their industries and agriculture, to punish them for vague and undefined crimes, and to establish over them for all these purposes an alien police?

Do the American people realize that all this may be—and in fact is being—inflicted upon them through the servile agency of their own State legislatures, which they themselves elected?

On January 19 of this year a resolution was introduced in the New York Legislature requiring Congress to assemble a national convention—"for the sole purpose of proposing amendment of the Constitution to expedite and insure the participation of the United States in a world federal government."

This extraordinary proposal in the legislature of one of the Thirteen Original States was not devised there.

It came from one of the several visionary internationalist groups which are promoting world government in America.

And, while the public at large has been uninformed and indifferent, similar resolutions have been adopted by the lethargic legislatures of 23 States—and recently recanted by one, the State of Georgia.

New York, with its commanding wealth and prestige, would thus be the twenty-third State on record.

An additional 9 States—32 in all—would compel the Congress to act affirmatively.

The movement has been astutely and covertly conducted.

The world-government propagandists have disclosed to their own followers, in their own restricted literature, their design as summarized in this editorial.

Yet in no State has any decent public notice been given of legislative intentions.

In no State have representative committee hearings been held, nor have any adequate inquiries or reports been made.

The world-government project is being bootlegged through the State houses and into the Capitol at Washington.

Once again, since they cannot rely upon their trusted lawmakers, it looks as if the American people must depend upon themselves to defend their institutions, their national integrity, and their freedom.

In legislatures where the world-government proposal has not been approved, it must be defeated.

In legislatures where the un-American resolution has been adopted, it must be repealed.

Well do I recall that, when, in January of 1942, I made two speeches on the floor of the House condemning the proposal to haul down the Stars and Stripes, I was hailed before a grand jury which the Washington Post and the administration was then attempting to use through its henchman, William Power Maloney.

Apparently I was summoned to appear before that grand jury because the Washington Post and its stooge, William Power Maloney—who was characterized in more polite language by the United States Suprem Court as a shyster and who was later convicted of a drunken assault on a representative of the Chinese Government—wanted to learn by whom and in what quantities copies of my speeches had been circulated.

If more publications had the conviction and the courage of the Hearst publications, the danger to the Republic would not be so great. The people, once aware of the present attempts of some well-meaning but misguided citizens to overthrow our Government by the creation of one world or whatever they call it, would receive less support.

If our youth must continue to fight in world wars, let them at least fight under our own flag, our own officers—not as mercenary or puppet soldiers of an international group of ambitious, power-hungry world politicians.

What Should the United States Policy in China Be?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me in Constitution Hall, Washington, D. C., January 30, 1950:

The time is rapidly approaching when it will no longer be of much use to discuss United States policy in China. If the last stronghold of the Chinese Government, Formosa, is overwhelmed by the Communists, it will not make much difference whether we get a China policy or not. Should the Nationalist Government finally be overcome by the blows rained upon it both by its Communist enemies and its supposed friend and ally, the Government of the United States, then the followers of the Kremlin will have power in China that cannot be challenged in any foreseeable future, no matter how unhappy or angry the Chinese people may be. American influence in that vast area will be almost a thing of the past. We will have suffered the greatest defeat in our history.

But as long as Formosa stands as the final bastion of the free Chinese, there is still a chance for the United States to play a decisive role in preventing such a catastrophe to our own security and interests. It should be our policy to help the free Chinese maintain on Formosa the legitimate government of the Republic of China—first, to maintain a symbol of hope and encouragement to the hundreds of millions of our wartime allies now rapidly disappearing behind the Asian iron curtain; second, to strengthen resistance to Communist seizure of Formosa which would give Russia use of a perfect air and submarine base in the heart of our western Pacific security system; and third, to encourage Chinese to work toward eventually removing China from the Soviet side of the balance and returning her to the side of free nations in the gigantic cold war in which we are engaged throughout the world.

The first requirement of a policy is that we wake up to the real nature of the Communist movement in China and to the fact that its real target is ourselves. The State Department and many writers on China for years followed the line that there was some hope in the Communists in China, and none in the Chinese Government. On the other hand, many of us maintained that there was some hope in the Chinese Government, and none in the Communists, because they are committed to dictatorship and to world conquest. The policy of supporting the Chinese Government and those who are resisting Communist subjugation will not require a large expenditure of effort, money, or materials on the part of the American Government and people. It will, however, require positive action and a genuine determination really to help the free Chinese resist those who would enslave them. Until there is such a will on our part, there can, of course, be no way.

Second, we should not grant diplomatic recognition to the Communist regime at Peking. Such recognition would bring us no benefits, and would greatly weaken the will-to-resist of the Chinese already under the Communists on the mainland, the free Chinese in Formosa, and the strong communities of Chinese in all the countries of southeast Asia. It would shake the confidence in us of the peoples in Asia still on the fence. Our greatest immediate stake in Asia is to keep them on our side. If they were to witness official abandonment by the powerful United States of an ally which stood by us during the nightmare period following Pearl Harbor, could they then be expected to have any faith in our present declaration that we will resist the spread of Communist aggression beyond China and help them against Communist threats to their own independence? Would not they rather decide that in view of our debacle in China, it would be foolish to put their faith in us? Would not it be the part of wisdom for them to seek the best terms they could get from the Communists, rather than depend on American support with no assurance it would ever come?

Furthermore, to recognize the Communist regime would put an avowed enemy instead of a proved friend in the Chinese seat on the United Nations Security Council. We would have enemies instead of friends in all Chinese embassies, legations, and consulates all over the world, carrying on espionage conspiracy and propaganda against ourselves in the very midst of the countries which we hope to keep out of their control. Surely that would not be in our interest.

Third, we should make a forthright statement of support to the Chinese Government and all other anti-Communist forces, in their struggle to remain free. More than anything else the Chinese—exhausted from 12 years of war and invasion, discouraged because of betrayals and abandonment by their allies—need moral support, the same sort of support we have given to the Greeks, Italians, Turks, and others in Europe engaged in exactly similar fights to prevent being taken over by Communists and made Soviet satellites. The governments of some of them do not come up to our standards either.

Fourth, we should extend effective military aid to the defenders of Formosa. By effective military aid I mean the same sort of military-assistance program we have carried out successfully in Greece, but have not tried in China since the recall of General Wedemeyer in early 1946.

Effective military aid includes first of all, putting in charge of America's security in that part of the world, the most experienced and successful man we have in dealing with East Asia. That man, of course, is General MacArthur.

It includes some top-flight American military sparkplugs, like General Wedemeyer, Admiral Cooke, or Admiral Badger, with adequate American staffs to train and advise the Chinese armed forces at all levels—and in strategy, tactics, and operations—which our previous mission in China was not permitted by our Government to do.

It includes a relatively small amount of munitions, equipment and supplies carefully planned for the particular type of operation needed. It includes spare parts and fuel for the Chinese air force and navy. It might include about 50,000 World War I type rifles and ammunition therefor, in addition to the 130,000 rifles we have sent under the program the Congress voted in 1948.

A military aid program does not include American combat troops. I do not know anyone who has ever suggested that we should send American combat troops to Formosa, or that we should occupy it with American forces, even though the State Department is busily engaged in shooting down that straw man set up by itself. Such a policy is unnecessary and would be most ill-advised. It would be neither justifiable nor advantageous for the United States to occupy or seize Formosa for herself; it is extremely important to our security that it be denied to our enemies. The way to accomplish that end, and at the same time to strengthen the spirit of resistance among all Chinese and other free peoples in Asia, is to help the Chinese and Formosans hold their island, as many of our best military students of the problem believe they can do with such aid, and with the natural advantages Formosa has as a result of the hundred-mile barrier of water between it and the mainland, and the fact the Communists do not have either a substantial navy or air force.

In short, what China has most needed all along and most needs now is not more aid but proper aid, which is what we have not given since 1945. Munitions without American advice and assistance in their use cannot succeed any more than advice without munitions could succeed.

If we had tried in China the sort of policy we have followed in Greece, or if we had followed the recommendations made by General Wedemeyer 2½ years ago, and still failed, then neither I nor any other person could say a word of criticism. But we have not tried. How does anyone know whether we can succeed or not, until we do try?

Fifth, we should continue to give economic assistance to the Chinese Government on Formosa. One of the reasons the economy of the island is sorely strained is because it is having to export materials needed for home consumption, in order to get foreign exchange to buy commodities like cotton and oil which must be obtained from abroad. If we help with such commodities, exactly as we are helping Korea and Japan and helping western Europe, under the European recovery program, and in Korea and Japan, the economy of Formosa can be made reasonably stable. Ordinarily it has a favorable balance of trade, in sharp contrast to that of England, for example, which we are helping even though it almost certainly can never again become self-supporting.

Sixth, we should give every possible assistance and even leadership in encouraging the free peoples of Southeast Asia to get together in a mutual assistance defense pact, such as we have sponsored in the North Atlantic. Without some such cooperative effort to defend the whole area, there is every reason to expect that the Communists will be able to pick the countries off, one by one. Without access to the resources and markets of Southeast Asia on a mutually beneficial basis, what chance is there for England, France, Holland, and western Europe to become self-supporting? If we are compelled to continue beyond 1952 the heavy burden of supporting these free countries of western Europe, how long can we ourselves remain solvent and safe?

That brings me to the compelling reason why I believe we should adopt some such positive policy in place of the pro-Communist wait-and-see do-nothing-effective policy our Government has followed with such disastrous results these last 4 years. That reason is the basic instinct of self-preservation.

I am not and never have been interested in any persons, groups, or parties in China. I am interested in the security of the United States of America, and in freedom, world order, and peace. It is the job of responsible American officials to find means of achieving those goals; not reasons for not achieving them. If they think nothing effective can be done in China, then they should step aside or be removed to make way for those who believe something effective can be done and must be done.

The primary objective of an intelligent nation's foreign policy must always be one thing—the nation's security. How can we attain that objective? There are two main methods. We must seek by all legitimate means to prevent the development or expansion of any power or powers hostile to ourselves to the point where they might be able to attack us with chance of success;

UNIVERSITY OF MICHIGAN LIBRARIES

we must seek by all legitimate means to keep as many nations as possible free and strong and on our side.

In a jungle world such as ours, survival depends to no small degree on the capacity to distinguish friend from enemy. Whatever the weaknesses and shortcomings of the Chinese Government, it is a friend whose loyalty to us, even in the darkest days after Pearl Harbor, has never been questioned. Whatever the strengths or alleged virtues of the Communists, they are our avowed enemy.

In such a situation it has always seemed to me the decision as to what we ought to do should be extremely simple: We should oppose whatever assists our mortal enemy; we should assist whatever opposes that mortal enemy. However great the risks and difficulties of such a positive policy may be, the risks of a policy of doing nothing effective are even greater.

It is not enough just to recite the weaknesses of China—the five adjectives which the apologists of our Government's negative policies always use as their excuse for not giving effective aid, namely, that the Government of China is "inept, incompetent, inefficient, undemocratic, and corrupt." Those conditions exist in China, just as they do in every Asian country and everywhere else in greater or less degree, especially after long exhausting wars. They are the problems it is the business of responsible statesmanship to solve; not the alibi for failure to solve them.

I am fully aware of all the myths which have been so successfully propagated regarding the Communists in China: for example, that they are not really Communists but just agrarian reformers, patriotic peasants leading spontaneous revolutionary forces against warlordism, landlordism, and feudalism; that they are not connected with or subservient to the Soviet Union; that they won't be able to organize and administer a government in China without our help, which will make them susceptible to our influence; that they will not be able to convert the Chinese to communism; that they will not be able to solve China's economic problems; that they will probably develop Titoism; that they will have to cooperate with the West. All of these myths have proved or are being proved cruel hoaxes. They were designed to lull us to sleep while the Communists were getting control of China. They have been exceedingly successful.

If we cannot decide what is best in China, because we think neither side, Nationalist or Communist, is good, then let us decide what is worst, as a physician does when confronted with no good alternatives. What is the worst thing that can happen to China? There can be no question about that. The worst thing from the standpoint of our own interests, those of the Chinese people, and of world peace is for China to come wholly under the Communists and become another satellite of Russia. Therefore, that is the thing which we must, if possible, prevent.

The first requirement of our security in the Pacific is not a democratic Chinese Government or even a better Chinese Government; but an independent Chinese Government. The present disaster began when we abandoned in 1945, starting at Yalta, our historic policy of supporting resolutely "the sovereignty, the independence, the territorial and administrative integrity of China."

We got off the track because some officials high in our Government failed for some unexplained reason to realize the nature of the Communist movement in China as an instrument of Soviet aggression, and allowed themselves to be beguiled into thinking or hoping that it was just one faction in an internal conflict that was none of our business. Now it is plain to all that the Communists have all of Asia and ourselves, not just China, as their aim.

Unless immediately—and I have warned for 2 years it may already be too late—there is a drastic reversal of our policy in Asia similar to that we executed 3 years ago in Europe, namely, a shift from appease Communist aggression to oppose Communist aggression—then history can only record that we defeated Japan but Russia won the war in the Pacific. We and the free world lost it.

However late it is today, it will be still later tomorrow. However much it will cost—about $26,000,000—to make the effort now, our choice is not between that and something less; it is between that and something more. Which do we want?

There are two lessons we could still learn from our experience in Europe if we would. The first is that when Communist expansion is stopped, it begins to fall apart, because it cannot deliver on its fancy promises. The second is that it cannot be stopped except by resistance all along the line of its advance. That requires assistance to all in its path, even though some of the governments involved do not meet with our full approval. If we will apply those lessons with imagination and resolution in Asia, the situation may still be retrieved. There is hope if we try; there is none if we don't try.

We have learned that to keep western Europe free there must be a regional effort—assistance to all in the given area. If we would keep Asia free, there must be a program of regional defense there also.

Ultimately, and soon, there must be global defense against the strong, cruel enemy we and the free peoples of the world face; or all of us, not just weakened and exhausted China, will fall before its ruthless and skillful onslaughts from within and without. Must we once more dawdle and daydream until after the blow actually falls, and then have to fight for our own survival under the most difficult circumstances possible?

A Fruit Grower's Views

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, from Les Boyd, an outstanding citizen of southwestern Berrien County, in the State of Michigan, comes the following article, as published in the January 7, 1950, edition of the Herald-Press of St. Joseph, Mich.:

POLITICS ARE FELT IN FRUIT DEAL, TOO, BOYD DECLARES

(By L. A. Boyd)

Politicians receive a lot of criticism, but did you ever stop to think that this American democracy was founded on politics?

A group of early settlers objected to King George's rule, and the American Revolution started us on our freedom.

As I see it, our elected officials for the most part are a fine class of men. There are some who fall by the wayside, but the majority try to do the right thing for the masses of people.

Our main trouble is with the appointive officers who get jobs because they helped elect someone to office.

They get into Federal and State offices, Department of Agriculture, Secretary of State's office and colleges and schools. Some of them who are supposed to help the growers with better packing think more of the convictions they can get.

We have some good men who try to do a good job, and then we have some who forget the people who furnish the tax dollar that pays them.

These appointed officials are all well paid, and hold their jobs through civil service and pensions.

Then comes the politics played by different departments from the USDA down through the State of Michigan.

One of the main items is the lobbying to get all the funds possible for their promotions, whether good or bad. It's a merry scramble.

Then comes the commissions appointed by the different groups, generally five men, and, with a change of governors, it is a "party man," whether he is fitted or not.

The different departments work to get their man on the commission. If there is a group known as radicals, those that do not agree with them, they may concede appointment of two from the radical group to satisfy them, but there is always "three ag'in them."

Take with agriculture. It is always a fight and lots of hard feelings. The growers have nothing to do with it; they take what they get.

This does not help the growers much. Seventy-five percent of the money spent goes to stir the "political pot." Time and effort is wasted that should have been spent on the advancement of the growers' interests.

If anything comes up about trucking, grades, or things close to the Benton Harbor fruit market, these boys want a delegation to come to Lansing for a hearing.

Generally, things are all settled before the hearing, and the growers' time, money, and effort is wasted just to appease the psychology of your officials.

They have an expense account. They are supposed to be your servants. Why not have meetings with the growers and save this needless waste of time and energy? Who gets the benefits?

Then there is the jealousy among departments. If one group does an outstanding job in which another does not have a part, they are in the dog house.

Our county politics are in good shape, and one receives courteous treatment from our elected officials. You know them.

Sheriff Erwin Kubath and his deputies have done a good job in protecting farmers' crops and in handling labor trouble that always comes up with "floating labor."

Our board of supervisors and township boards give us better service for less money than any branch of Government. We can always vote them out. We know them, and the majority of them help their people.

What are we heading for?

There is a movement under way to centralize your county and township governments. This means that your assessor and treasurer will come from St. Joseph. You will pay your taxes there, and I know that a lot of farmers do not have the time nor means of transportation to go to the county seat for all the little things that come up.

This all ends for a bigger political machine, and I am sure that we have had all the rationing, reports to Government agencies, plus rent controls, that we want. Let's remember this deal.

Times have changed in Michigan.

There have been a lot of people from the large cities, workers in steel mills, and other factories, who have bought 5, 10, and 20 acres of land to insure their future security with a farm. That's their dream.

They build a home. They plant grapes, peaches, plums, and apples on low ground when they should be on high ground. They plant blueberries on sweet soil when they should be on sour soil. They plant berries anywhere.

We have had some outstanding county agents in the past, notably Frank Simanton and Harry Lurkins. They spent their days calling on the larger growers, and at night held meetings in the school houses and in the homes in the various communities.

These new growers, as a class, knew nothing about soil testing, fertilizers, elevation, and air drainage, or spraying.

When the crops came in they knew nothing about packing.

They had roadside stands, and still have them, and these, with the other roadside stands, are a problem.

We had three men in this country—Bill Esslinger, Sid Smith, and Al Hastings—who used to spend some time with any grower and show him how to put up an honest pack, and that helped a lot. They always had a smile.

Things have changed a lot in a great many ways, and in our mad rush through the war years we forgot the roadside stands and the grocery stores. They all handle locally grown produce; the farmer is their customer.

How about the tourists who flock to Michigan each summer, stop at the roadside stands, and buy some fruit that is swell on the top of the basket, with marbles and inferior fruit on the bottom?

The grocery stores have the advantage. They weigh it out and know where they bought it, but they still have their losses.

This tourist customer will not have a nice taste left in his mouth for more Michigan fruit.

Here are some of the things which our farmers cannot understand, and which show the national trend and what happens.

Quote: "Apple growers hold meeting at Quincy, Ill., and decide to pull out their apple trees." This means the famous Senator Scarborough orchards. How do they feel?

Quoting from a recent newspaper: "United States Gives Spuds Away"—17,800,000 bushels, bought through the Commodity Credit Corporation; part went to schools; the balance was offered for sale at 1 cent a bushel. They cost an average of $2.10 per bushel.

The next items mentioned to go the same way are dried eggs, dried milk, cheese, and butter.

Now they want to remove the tax from oleo, just to help the solid South. We have been helping them since the Civil War.

To top it off, with floods throughout the Middle West, and cold weather, they quibble in Washington over the coal strike. Just why is it necessary to play politics with the things that are so vital to our American way of life?

These things are vital to the factory worker, the farmer, the manufacturer. Why pick on the people who produce your very existence?

It will be well to let our politicians know that America comes first; that internationalists are a thorn in our side; they want to police the world.

I don't think we can properly police ourselves, much more try to police the world.

The Columbia Basin

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I include articles 6, 7, and 8 in the series on the Columbia River region written by Mr. Leon Starmont. Since these articles contain much information about the history of Columbia water-resource development not generally known to Members of Congress who today are considering important legislation affecting that river, I commend them to all. It should be remembered, however, that all statements in them are Mr. Starmont's own and that many of the actions taken over a period of the last 50 years are subject to varying interpretation.

[From the Spokane (Wash.) Spokesman-Review of January 27, 1950]

LET'S EXPLORE THE BASIN

(Art. 6)

(By Leon Starmont)

Early Spokane papers, including the rival Spokesman and Review, the original Times and the Chronicle, campaign for irrigation of the Yakima, Wenatchee, and Okanogan Valleys and the Big Ben country long before the railroad reached the present sites of Yakima, Ellensburg, Ephrata, Wenatchee, and Kennewick, and before Pasco became a city.

Numerous laymen, too, had elaborate schemes for developing the Columbia and for putting water on the Columbia plains, which is a title long used for the area now generally called the Big Bend. The name Big Bend at one time was confined to the area around Deirio, Mansfield, and Waterville, west of Grand Coulee, and in some instances even west of Moses Coulee.

LAUGHLIN M'LEAN'S IDEA

Nobody can now say with certainty who first thought of diverting Columbia River into its ice-age channel, Grand Coulee, or what paper first publicized the idea.

One proposal that attracted wide attention was made in 1892 by Laughlin McLean, a dealer in farm land in the Big Bend and Grand Coulee areas.

Yellowed clippings from the Spokane Daily Spokesman indicate that his vision included a dam so high it would back the Columbia well up the valleys of the San Poil, Spokane, Colville, Pend Oreille, and Kootenay.

It would also bare the present course of the Columbia for gold mining at some seasons of the year, and would provide a supplementary channel capable of carrying barges through Grand Coulee from the upper Columbia to the lower end of the locks, somewhere around Priest Rapids.

Many newspaper articles in Spokane and other cities played with the idea of running river steamers to Spokane, of connecting mid-Columbia navigation with the busy lines on the Arrow Lakes, and even of connecting the Spokane and Pend Oreille by means of a canal at Newport, Wash., where the Little Spokane rises within a few hundred feet of the Pend Oreille.

"BILLY" CLAPP'S IDEA

Laughlin McLean's plan was revived in the summer of 1917 by William E. (Billy) Clapp, an Ephrata attorney, now counsel for the Quincy-Columbia irrigation district. He took it up with three friends, W. Gale Matthews, head of the Grant County Abstract Co.; Paul D. Donaldson, also of Ephrata, still active in basin planning; and A. A. Goldsmith, who then lived at Soap Lake but later moved to Grandview. They discussed the idea several times and mulled over it for a year.

Then, in July 1918, Rufus Woods, editor of the Wenatchee World, stopped in Ephrata and called on Matthews. Matthews took him to see Clapp, and the resulting story of Clapp's revival of the McLean River diversion plan was carried, as an entertaining feature, on an inside page of the Wenatchee World.

"Billy" Clapp, much to his own embarrassment, has been labeled "father of Grand Coulee Dam," an honor he smilingly and modestly disclaims. For, as Clapp and his friends explain, Grand Coulee had then been long considered both as a reservoir and a dam site, and the scheme of diverting the river into the coulee has little resemblance to the plan finally agreed upon by the Army engineers and the Bureau of Reclamation some 13 years later.

SOUTHARD PLAN, TOO

Another Ephrata resident, W. E. Southard, followed Clapp shortly with a modified idea. He would build a Columbia River dam only high enough to divert water by tunnel into lower Grand Coulee, below Dry Falls, at what is now Sun Lakes State Park. Southard got quite a bit of front-page display in Spokane and other newspapers, and his plan was later mentioned seriously in official documents, as the McLean and Clapp projects never were.

There was some official notice of the Clapp proposal, however, after E. F. Blaine had revived interest in the Big Bend development after visiting Washington in its behalf and delivering his now famous address to the Spokane Chamber of Commerce.

On November 27, 1918, C. W. Duncan, then county engineer at Ephrata, wrote the county commissioners that he had scouted the area looking for a possible dam site for the river diversion plan and recommended "exploring the valley of Columbia River in the vicinity of the head of Grand Coulee and Box Canyon * * * to bring the river to the level of the floor of Grand Coulee."

Hugh Cooper, who had a dam site at Z Canyon on Pend Oreille River, told members of the Spokane Columbia Basin group late in 1919 that the best way to irrigate was by a low dam at Grand Coulee, which could supply power to pump irrigation water into the bed of the coulee. They discounted his ideas, believing he was motivated by fear that diverting part of the Pend Oreille at Albeni Falls would endanger his Z Canyon project.

Cooper later expounded in Spokane, Wenatchee, and elsewhere his ideas he had picked up from reading the Noble, McGinnis, and Jacobs reports and from examination of the site.

James O'Sullivan, whose name is now preserved in the dam at the south end of the projected Potholes Reservoir, became interested about this time, and wrote a number of articles about the Army engineers' proposals for dams at Priest Rapids, Rock Island, Box Canyon, Grand Coulee, Hell Gate, and Kettle Falls.

Late in 1920 O'Sullivan wrote in the Wenatchee World a proposal that 500,000 acres be irrigated by a 100-foot dam at Grand Coulee and the rest of the project, then 1,850,000 acres, by gravity from Albeni Falls on the Pend Oreille.

The 1920's brought construction of Rock Island Dam on Columbia River below Wenatchee. Rufus Woods first opposed the Rock Island project, maintaining the site should be preserved for the city of Wenatchee and neighboring irrigation districts. His opposition was later withdrawn.

These matters are significant now only because Woods is a member of the State Columbia Basin commission.

Private capital then had plans for dams at Priest Rapids and Kettle Falls, and Army engineers had plans for several localities, including Grand Coulee and Hell Gate, which lies between Grand Coulee and the mouth of Spokane River. The Army also had started to improve a navigation channel through Rickey Rapids, permitting boats to run up the Columbia to the international boundary.

While engineering studies were still going on, Woods undertook a campaign for a high dam at Grand Coulee, which was to eliminate two upper dam sites, wipe out all possibility of continuous navigation, and reduce the irrigable land of the Columbia Basin project by nearly 45 percent.

[From the Spokane (Wash.) Spokesman-Review of January 28, 1950]

LET'S EXPLORE THE BASIN

(Art. 7)

(By Leon Starmont)

Eastern Washington now faces the sobering fact that the great Big Bend irrigation

UNIVERSITY OF MICHIGAN LIBRARIES

project, renamed the Columbia Basin project, on which thousands of earnest citizens expended much time and money and great effort beginning in 1918, has been reduced from its original 1,850,000 acres, in round figures, to a scant half million.

Three principal factors in this shrinkage are substitution of the dam-and-pumping plan for the gravity plan of irrigation, withdrawal of wheat land that was to be watered from the East High canal, and removal of most of the rich Wahluke slope, taken over for security by the Atomic Energy Commission in connection with the Hanford plutonium plants.

SOME CAN BE RECOVERED

Some of this loss can be recovered.

Spokesman for the Columbia Basin Commission at Ephrata, and the Bureau of Reclamation at Coulee Dam, still speak of a "million-acre project." They assume the Wahluke slope will ultimately be released by the AEC, and the East High canal, which takes off above the new Long Lake Dam north of Stratford, will eventually be built.

They are not so optimistic about the acres that would have been irrigated under the gravity plan, but are too high to be reached with water from Grand Coulee Reservoir.

Ralph D. Nichols, a former Seattle State senator, has an elaborate plan, however, for using Kootenay, Pend Oreille, Spokane, and Palouse River water in a great high interconnecting reservoir that would inundate several townships in eastern Washington and northern Idaho, and let water out down either the Pend Oreille, the Kootenay, the Spokane or Little Spokane, the Palouse, Hangman Creek, or Rock Creek, wherever it might be needed or required.

ENGINEERS IGNORED PLAN

Army engineers, during last year's public hearings on the revised 308 report, listened to Nichols' explanation of his scheme, but gave it little or no serious consideration.

Many of the areas to be inundated had already made their protests known at hearings on the Springston and Boundary Dam projects and the three-dam plan once considered for a greatly expanded Pend Oreille lake.

Nichols, one of the original municipal ownership advocates in Seattle, has been plugging for the seven-valley dam since 1946, and has made numerous attempts to interest members of the legislature.

ACRES VERSUS KILOWATTS

The Nichols proposals are physically possible, from an engineering point of view. There are several other spots in the upper Columbia Basin where exchange of waters between tributaries is possible. One of them now being studied would create a high lake from which water could be directed down either the Columbia or Kootenay from Canal Flat, British Columbia.

Balancing the gains and losses caused by the gravity-to-pumping switch is a task that makes experienced engineers quail. A layman should therefore attempt it with extreme caution.

Stated simply, perhaps oversimply, for every acre lost a kilowatt was gained.

One engineer indicated that 400,000 acres may have been irrevocably lost to irrigation by abandonment of the gravity canal. To compensate for this, he said, the river would have lost enough water at Albeni Falls to reduce by 400,000 kilowatts the possible power output at Z Canyon, Kettle Falls, Grand Coulee, Chief Joseph, and the other dams down the Columbia.

This reporter lets it go at that.

You can drive out past Cheney and see the 400,000 acres, representing some of the best land tributary to Ritzville, Lind, Connell, Washtucna, Kahlotus, and Pasco.

At no place can you see the kilowatts.

The ultimate basin-wide goal is 8,500,000 acres and 30,000,000,000 kilowatts.

The rate of exchange, therefore, was 4¾ percent of the acreage for 1¼ percent of the kilowatts.

NAVIGATION ADVOCATED

Early in the 1920's, it now appears, the Army engineers gave up their idea of developing the upper Columbia and the middle Snake for navigation.

Bargemen on the lower river still insist a mistake was made. This came out during hearings on the 308 revised report in connection with Hell's Canyon Dam on Snake River.

"Let's not repeat at Hell's Canyon the mistake made at Grand Coulee," cried Capt. Arvid Leppaluoto. "Let's make it possible to run barges up to Boise."

Idaho Power Co. spokesmen also protested Hell's Canyon, saying power could be delivered much earlier by a series of low dams, including the company's Oxbow and other sites, which could include navigation locks.

Nevertheless, the revised "308" plan includes Hell's canyon, with its bar to upriver navigation and its much delayed power development.

Most residents are inclined to concede that abandonment of the international navigation channel on the Columbia, and delay of several years in power delivery, are more than outweighed by the advantages the high dam brought.

IRRIGATION SUBSIDY

There is another consideration, also, which induces all but a few of the original irrigation group to accept the pumping plan and its lower acreage.

That is the subsidy paid by power users to water users.

In some cases, of course, this is the same as moving pennies from one pocket to the other. Most users of irrigation water also use power.

But many power users and prospective power users do not use irrigation water, and question a policy that makes them pay part of the bills of those who do.

True, all power users buy groceries, and if the lower water rates are reflected in lower grocery bills they haven't much to kick about—except the principle of the thing.

It may become a definite part of western or national policy to have farming subsidized by industry. There have been no loud protests so far.

But a number of people in high official circles have indicated some concern as to how far this policy can or should be carried.

[From the Spokane (Wash.) Spokesman-Review of January 29, 1950]

LET'S EXPLORE THE BASIN

(Art. 8)

(By Leon Starmont)

It may be news to many that the original 308 report, on which the present comprehensive Columbia Basin program is based, did not recommend Bonneville or McNary Dam and did not recommend immediate construction of Grand Coulee.

It was, however, the deciding factor in abandonment of the gravity plan for irrigating 1,850,000 acres and substitution of the pumping plan, with its subsidy feature, for a much smaller acreage.

Maj. John S. Butler was district engineer at Seattle when the study was made. This is what he said in his summary about Grand Coulee Dam in 1932:

"Under proper conditions it would be capable of returning the investment with interest. * * * It doesn't necessarily follow that the proper conditions exist at the present time."

WARRENDALE ADVOCATED

District engineer for the Army at Portland was Maj. Oscar O. Kuentz. His report covered the Columbia below the mouth of the Snake. It listed 17 possible dam sites, but eliminated 12 of them "because of not economically fitting into the general scheme of developing power * * * or on account of foundation difficulties."

Five received closer study "in order to determine the best plan of development." These were, reading down river, Umatilla, Arlington, John Day, The Dalles, and Warrendale.

The final recommendation was: "A power dam at The Dalles with its pool at elevation 330, a power dam at Warrendale with its pool at elevation 54, the navigation features for passing craft through these dams, and the irrigation, at such time in the future when it may become economically justified, of 378,000 acres by pumping from the pool created by The Dalles power dam."

Warrendale is 3 miles below Bonneville. The dam recommended in the first 308 report would have had its north abutment against Beacon Rock, now a State park.

ROOSEVELT TO THE RESCUE

This is what the original "308" report did recommend for the upper Columbia:

1. That the comprehensive plan be adopted as Federal policy.

2. That future dams require provision for navigation locks.

3. That permits be denied for power dams at Kettle Falls on the Columbia and the Narrows and Fishhawk sites on Spokane River below Little Falls.

4. That priority of irrigation over power be established.

Senator C. C. Dill, realizing there was little chance of getting money from Congress in a depression year on the strength of the Butler report, went directly to President Roosevelt. A. S. Goss, master of the National Grange, went along. They sold Roosevelt on the idea of using $60,000,000 PWA funds to start a low dam at the head of Grand Coulee, with the understanding it might later be built to the level indicated by Butler.

But Senator Charles L. McNary insisted Oregon share in the program, so the President ordered another dam built down the river first. The site was changed in the early 1930's from Warrendale to Bonneville.

LOCAL PRESSURES COUNT

It is interesting to watch the play of local pressures as the comprehensive plan takes tangible form and its units come into existence.

Cities in the center of their States, such as Wenatchee, Bend, Butte, and Bailey, tend to emphasize the "rights" of these States as opposed to their neighboring States. Seattle has much the same attitude, although it is outside the Columbia Basin.

Cities close to State lines, like Portland, Pasco, Walla Walla, Lewiston, Spokane, and to some extent Boise, seem to see more clearly, through their spokesmen, the necessity for interstate cooperation and a common front.

McNary Dam was substituted for The Dalles as the second project on the lower Columbia. This reporter does not attempt to say whether local pressures had a part.

Efforts were made to have Foster Creek (Chief Joseph) placed ahead of McNary, and similar efforts succeeded in getting it started ahead of either Ice Harbor or Albeni Falls—the latter not yet authorized. These efforts make the southern directors of the State Columbia Basin commission, who come from the Pasco area, unhappy.

They also create antagonisms in the Walla Walla country, in Whitman County, and in the sovereign State of Idaho.

DWORSHAK VOICES OBJECTION

Idaho's Senator HENRY C. DWORSHAK, former publisher of the Burley Bulletin, expressed it in a recent letter to Marshall Dana, an editor of the Portland (Oreg.) Journal, one of the early directors of the Columbia Basin Irrigation League, and former president of National Reclamation Association. Wrote DWORSHAK to Dana:

"Idaho makes a valuable contribution to our basin resources with the Snake, Salmon,

Clearwater, and other tributaries, providing valuable water for the Columbia River. In exchange for this cooperation * * * Portland should give our State realistic cooperation in addition to the verbal greetings of good will. They should, likewise, enlist the active support of their congressional representatives.

"During the last year obstacles have sidetracked essential upper basin projects.

"Two years ago the Army Engineer Corps recommended the construction of Ice Harbor Dam, one of the important elements of developing navigation on lower Snake River. Funds were requested to initiate this project, but during the recent session of Congress appropriations were diverted from this project to the Chief Joseph Dam, which has recently been given priority over the Snake River dams.

" 'ONE REGION' SIDETRACKED

"This means that once more preference has been given to the detriment of dams which for many years have been approved as essential, in providing not only navigation, but flood control and electric power.

"If we are to have 'one region,' it is time to equalize the benefits of Northwestern development. Idaho does not want more than its share, but it wants equity.

"There are powerful political influences which have militated against Idaho's full development. I appeal for a realistic approach with genuine cooperation in preventing further delay and to insure Idaho's place in this regional development."

Address by Hon. Frances P. Bolton, of Ohio, Before the Women's Club of Richmond, Va.

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 9 (legislative day of Wednesday, January 4), 1950

Mr. ROBERTSON. Mr. President, during my service in the House of Representatives it was my privilege to enjoy a warm friendship with two able and outstanding Representatives of the Twenty-second District of the great State of Ohio—the late Honorable Chester C. Bolton and his public-spirited and talented wife, Hon. FRANCES P. BOLTON, who succeeded him in the House. The Commonwealth of Virginia, our capital city, and the members of the Women's Club were signally honored on the night of January 9, 1950, when Representative BOLTON was the guest speaker at the Club's annual dinner meeting.

I ask unanimous consent to have printed in the Appendix of the RECORD the news item of January 5 from the Richmond Times-Dispatch announcing the address to be made in Richmond on the ninth by Mrs. BOLTON and a copy of her remarks on that occasion.

There being no objection, the news item and the address were ordered to be printed in the RECORD, as follows:

[From the Richmond Times-Dispatch of January 5, 1950]

MRS. BOLTON WILL ADDRESS WOMAN'S CLUB—CONGRESSWOMAN TO SPEAK MONDAY

FRANCES PAYNE BOLTON, Congresswoman from Ohio, will address the membership of the Woman's Club of Richmond as guest speaker on the president's program here Monday, according to an announcement made at the club's meeting yesterday.

Miss Frances Leigh Williams, president of the club, will preside at the Monday session.

Mrs. BOLTON was Ohio's first woman elected to Congress, and is now serving her tenth year in the House of Representatives from Ohio's Twenty-second District. A native of Cleveland, Mrs. BOLTON entered the political field after more than 30 years of homemaking.

An honorary alumna of Colgate University, Mrs. BOLTON was awarded an honorary degree of doctor of laws by Colgate in 1940, and was awarded a similar degree by Ohio Wesleyan University in 1942. She received her education at Hathaway-Brown School, Cleveland, Miss Spence's School for Girls in New York, and in a school in France.

Before she entered public life, Mrs. BOLTON was an active worker for higher standards of nursing education and service. She spoke in Richmond at the commencement exercises of St. Philip's School of Nursing in May 1941.

Before his death, Mrs. BOLTON's husband, Chester C. Bolton, was a State senator in Ohio, and later served in the United States Congress. He died in October 1939, in the midst of his fifth term.

ADDRESS OF HON. FRANCES P. BOLTON, OF OHIO

Madam Chairman, members of the Woman's Club of Richmond, as I drove down from Washington this morning I thought of many matters about which I wanted to speak with you, matters of great moment, for these are days when the fate of our civilization hangs in the balance.

With each mile I found the challenge of your invitation beckoning me more and more, and I wondered increasingly how I could tell you my deep appreciation of the privilege you have given me.

To come to Richmond is always a particular pleasure, for Richmond has a peculiar flavor, an atmosphere all its own, and Richmond women have a well-earned reputation for culture, intelligence, and charm. To come under these auspices is a rare and treasured opportunity.

To all Americans Virginia has a special meaning, for is she not the mother of the man whose dream, whose vision and whose indomitable courage made us a nation?

To me, the Ohio vice regent on the Mount Vernon Ladies Association, Virginia has come to mean much, to symbolize even more. I could not be a member of that board, living right there during council where Washington lived, without feeling closer each year to the Virginia of his day, to the Virginia he served and loved deeply all the days of his life, the Virginia that has given so much to America.

I know there is no need for me to recall to you that here in beautiful Virginia for three quarters of a century before the Declaration of Independence was signed, your people were stump speaking on Virginia court days for the expansion of liberty, of justice, and of freedom. Yet I would like to remind you that here in your Commonwealth there was a deep-seated antagonism to government from across the sea. And that antagonism constituted an excellent schooling for those who later led in the fight for the eventual freedom of the colonies and the birth of the United States of America.

Unlike the northern colonies, the Virginia system of government concentrated the administration of all local affairs in the hands of a few well-born county families who in those times were eminently fitted for the development of skill in leadership. This so-called aristocratic selection developed within your government a people trained to a remarkable degree in political economy. Hence it is not strange that this habit of parliamentary discussion enabled Virginia in those early days to give us men like Washington, Jefferson, Mason, Madison, and Marshall, and of a certainty this was a group of well-born leadership that has seldom if ever been equaled in all of history.

Moreover, it is indeed no happenstance that the Eighth Congressional District of Virginia—now and long represented by my good friend, the Honorable Judge HOWARD SMITH—not alone produced five men who later became Presidents of these United States—Washington, Jefferson, Madison, Monroe, and Taylor—but also the most distinguished and preeminent of all gentlemen, statesmen, soldiers, and patriots, your own beloved and revered Robert E. Lee.

Virginians have never had to apologize for the fact that their forebears brought from their mother country strong aristocratic prejudices and marked distinctions as to rank.

Here in Virginia the word "gentleman" had a very distinct meaning, and carried with it not only an ease of life but also a definite responsibility. Your many beautiful plantation homes are monuments to a way of life and of an economy very different from the severe, puritanical methods of my own forebears in old New England.

How different the life in these two sections of colonial America. In the North the elements themselves forced the already dour Pilgrims into a life dependent upon staple products and stable employment in which one must be assured gainful work as hired or purchased labor.

Here in Virginia the plantation needs were filled by the labor of imported indentured servants and slaves.

Life on the plantations of the Virginia Commonwealth was a life of isolation. Here each man settled where he found a convenient unoccupied plot of land. The parish churches, the county courts, and the election of your burgesses, bringing the Virginians together, kept up a fairly high degree of adult education. The parishes were extensive, and as there were but few schools, parochial and political rights of the minorities were in some measure—and rather unavoidably—curtailed.

The culture of tobacco was then, and in a large degree still is in some sections, the main source of cash income, though there were those who had little success with their tobacco. Oddly enough, Mr. Washington was among those who put himself through some difficult times in his attempt to make this one of his main crops.

As a matter of fact, the low price at which tobacco then sold afforded but scanty resources to the free planter obliged to rely on their own labor. Hence the management of local affairs fell under the control of but a few wealthy men possessed of large tracts of land which they cultivated partly with slave and largely with indentured white labor.

Thus it was that the Commonwealth of Virginia, through its landed gentry, inciting all of its people to clamor for liberation from the yoke of foreign government, liberated not only the Virginians themselves, but nurtured the seed for all mankind in the New World to develop what in this day and age has come to be known as the American way of life.

When at long last liberty had been wrested and the separation from the British throne had been completed, the strong arm that led the Nation on the field of battle lifted its pen at Mount Vernon to point out the path that lay ahead.

In writing the Governors of all States subsequent to the time he disbanded the Continental Army, George Washington said in part:

"According to the system of policy the States shall adopt at this moment, they will stand or fall; and, by their confirmation or lapse, it is yet to be decided whether the revolution must ultimately be considered as a blessing or a curse—a blessing or a curse not to the present age alone, for with our fate will the destiny of unborn millions be in-

UNIVERSITY OF MICHIGAN LIBRARIES

volved. There are four things which I humbly conceive are essential to the well-being, I may even venture to say to the existence, of the United States as an independent power:

"(1) An indissoluble union of the States under one Federal head;

"(2) A sacred regard to public justice;

"(3) The adoption of a proper peace establishment; and

"(4) The prevalence of that pacific and friendly disposition among the people of the United States which will induce them to forget their local prejudices and policies; to make those mutual concessions which are requisite to the general prosperity; and, in some instances, to sacrifice their individual advantages to the interest of the community."

The names of Virginia's Washington and Jefferson are as much a part of the Constitution of the United States as the Bill of Rights itself. This was so eloquently stated by your own Edmond Randolph who, in writing to General Washington and urging that he should accept the Presidency, said in part:

"The Constitution would never have been adopted but for a knowledge that you had once sanctioned it, and moreover, the expectation that you would execute it."

Thus it was that Washington, son of Virginia, became the first of the great galaxy of its sons whose names, having reached stardom, will be held in perpetual honor by the people of these United States.

High in your firmament—part of the great contribution Virginia has made to the inherent strength of this great country of ours—are the Pages, the Nelsons, the Tuckers, and the Lewises; the Douglases, Stuarts, Spottswoods, Howards, and Beverleys, few of whom are now left; the Blakeleys, the Fairfaxes, the Williamses, the Harrisons, Carters, Welfords, and Careys; and last but not least, that eminent and distinguished Virginian who now serves as the senior Senator from your great Commonwealth, the Honorable HARRY F. BYRD.

I say to you with deep sincerity that no man who ever served his State and his Nation in the Congress of these United States has given more of himself to his country than does HARRY BYRD. He stands as a pillar of cloud by day and of fire by night, pointing the way whereby in economy and in truth we must all unite in the common cause of saving this Nation from the pitfalls which lie ahead, pitfalls indicated by President Washington when he said: "It is yet to be decided whether the revolution must ultimately be considered as a blessing or a curse—a blessing or a curse not to the present age alone, for with our fate will the destiny of unborn millions be involved."

Virginia WAS proud of HARRY BYRD when he was Governor. She had reason to be, and the Nation looked to Virginia as an example of administration second to none. Virginia then sent this strong son of her loins to the Senate of the United States where he stands out as one of the few men whose eye sees clearly, whose hand points the way, and whose heart holds a courage, a loyalty, and a passion for truth and for freedom that is as a light on a dark road.

Surely it is no happenstance that once again Virginia, through one of her sons, is playing a strong role in the country she started on its way.

It cannot be by chance that it is another great Virginian who stands in the Senate of the United States and points out the dangers that lie ahead under the guise of the welfare state, proposed by the Chief Executive, who is the titular head of the left wing of the Democratic Party.

America is fortunate that this distinguished son of Virginia with whose opinions on matters of bureaucracy and of economy I am in complete accord, should be pointing out daily that literally billions of dollars can be saved annually by the simple expedient of honest determination to do away with the duplications, the extravagance, and the waste now inherent in the administration of our national and Federal affairs.

Any thinking American today, especially such women as you who come out of the free soil of Virginia, cannot but see that Federal powers are reaching out from Washington into every hamlet and home in this great free land, largely under the guise of beneficence under implied powers of the Constitution insidiously destroying the sovereign rights and freedom of the States.

I need not remind you that Federal taxation is already overburdening. Nor do women need to be told that the man—or the nation—that lives on borrowed funds eventually exhausts them at the source and goes bankrupt.

But I do urge you to face up to the facts of our fiscal situation with a determination to know the truth, that with the high courage that runs in your blood you can take hold of your share of responsibility to the oncoming generations.

Never was there a time in history, friends, when we as women had so heavy a responsibility, we who have been full citizens of this last stand of freedom, lo, these many years.

So many have asked me:

What can a woman do as a full citizen in a free land? Let me quote from an editorial of 1946 in the Christian Science Monitor:

"She can start quite basically and simply within her domestic sphere, remembering that politics, like charity, begins at home. She can teach her children that the word 'responsibility' is a companion word to freedom; she can teach them to play and work happily with children of other races, creeds, and colors, and that difference in cultures are to be appreciated and enjoyed—not to be sneered or laughed at. She can lay aside her soap operas, bridge parties, and 'escape' reading along with the other toys of her childhood and do a little home work in the problems that confront her in the grown-up world. She can learn to base her opinions on something firmer than hysterical headlines. She can watch the voting record of her Representatives in Congress and reject or accept them on the basis of that record. She will go to the polls with a bow of gratitude to the men who plowed through abuse and ridicule to give her the suffrage, and exercise her vote."

Let me remind you that a nation is not a tangible thing, not a building of bricks and mortar that will crash to ruins at the first strong blow. It is an echo of the past and a whisper from the future, the whole bound together with the lives, the hopes, and the endeavors of millions of men and women.

I have stressed the splendid efforts of Senator BYRD in the whole matter of our national economy and fiscal policy. I would be amiss if I led you to believe that in my opinion the current dangerous trends here in these United States are primarily economic in character.

Liberty is a thing of the spirit, and freedom is lost when the spirit falters. Liberty as we have known it in this country is the greatest privilege man has achieved. America is the land of liberty, a land built on the certainty that the individual is a part of the very essence of the living God, and on the belief in the right of that individual to build his own home, to live his own life, to worship in his own way—a land built upon the recognition by each individual of his responsibility to protect his freedoms and to render full stewardship to the God from whom he received a riches transcending all imagination.

We who are women citizens of this great Republic must make ourselves more intelligent in all matters pertaining to government, and we must assume responsibility for the future with a keenness and a courage which we are peculiarly able to give.

Is it not our job to protect our children? Is it not ours to see that every man (and woman) accepts his part of the burden right in the home community for the health, the living conditions, and the education of the children.

We who are mothers and teachers should be keenly aware that children for whom too much is made easy do not grow into strong men or capable women. We should therefore recognize the dangers of the welfare state which turns private citizens into public charges. What strength there is in those two words: "private citizen." How they emphasize the proud independence of the individual in the kind of America George Washington envisioned and millions of Americans have been trying to build for 3½ centuries.

Surely all of us wish passionately to remain private citizens, but we must do something about it every chance we get.

We have a wonderful formula of government that divides the very power of power in order to assure to the individual protection from Government itself. Underlying the whole plan, in Madison's memorable words, is "that honorable determination * * * to vest all our political experiments on the capacity of mankind for self-government."

Said William Penn: "We have put the power in the people."

We have a two-party political pattern which in itself is an anchor to windward in these stormy days when free institutions are being swept by tides of strange forces of centralized power.

This system is so fundamental to our political structure and of such protection to the rights of the sovereign States that we cannot give too much thought to it.

When we turned over many of the sovereign powers of our separate States to the Federal Government during the war, we were doing what must always be done in like emergencies. But we have not recognized the implications of our failure to reassume at the State and local levels many of these responsibilities.

It is imperative that we recognize the inevitable results of continuing wartime measures in peacetime—even though peace be but a mirage on the face of the earth.

If there is to be freedom, then we who have a formula, we who have been made stewards of liberty, we must accept the burden of our privilege.

Now, what does that mean in concrete terms?

I have already given you a glimpse of what each individual woman, no matter what her state in life, no matter where or how she lives, must assume if she values her citizenship.

But there is more for each of us to do because American citizenship is twofold in character. We are citizens of sovereign States with aims and purposes not only to protect personal freedom but to protect the individuality and the sovereignty of the States themselves, and we are citizens of that great Union of States, the United States of America.

We are faced today, as our Nation has always been faced since its very inception, with problems that are both national and local in scope.

The answers to these problems must be sought with infinite wisdom—yes; and with infinite patience—if they are to be solved within the framework of a system that has as its goal the preservation of individual freedom from the hands of centralized power, and preservation of the identity of a nation that can take its place of leadership in the great family of nations.

There are many questions before us daily which we must relate to this basic formula for freedom which made us a nation and upon which we have built prosperity and strength. Often we do not stop to do this.

We look at the immediate moment only, failing to recognize the implications for the future.

Let me give you instances.

At what level does the local responsibility for proper teachers' salaries and school buildings fall? Where does the State's responsibility begin and end?

Is our State citizenship, our State and local pride, so weak that we must turn to the Federal Government at every corner?

If so, are we ready to accept the dictation, the control, that is the inevitable result?

One of the inevitable results of turning to the Federal Government—or of expecting the State to do something which, with some effort and a bit of common sacrifice the local community can do—is that the further away we get from the actual need at the community level, the more complicated and expensive the solution becomes.

You mothers and grandmothers, you wives and sisters, look ahead and think twice before you ask for outside help. Get together with your own families, with your neighbors, and tap the unmeasured strength of your own possibilities. Face the cold fact that no matter how beneficent the outward form of government help may be, there are strings to it that grow rapidly into chains that will ultimately bind not only your activities but your hopes and dreams.

There are other questions about which you, in your double citizenship, must concern yourselves.

What of the tidewaters of the States? To whom belong the minerals, the oils, that may be under them—to the States or to the Federal Government?

Who shall own the water sources and the water that flows from them? Who shall own and dispense the grazing rights? Who shall say that forests must be kept if we are to sustain our rainfall and prevent encroachments of deserts upon our fertile land?

These and many more are questions to which each American should be giving consideration, for upon the answers depend more than we know.

These United States of ours that joined together in order that freedom might be protected and extended, were given a formula elastic enough to meet every changing demand—for I remind you that freedom is the manifestation of that liberty which is of the spirit. We are charged with the responsibility to preserve this that was given into our hands. None of us is free of the responsibility that rests upon us as citizens of this great country.

We women who know all too well the irksomeness of restriction must at this moment awaken to a full sense of what stewardship means, remembering vividly that none of this is ours. For the "Earth is the Lord's, and the fullness thereof."

All too long have we left our talents buried under the ground; all too long has our candle been under a bushel. No longer may we sit by the roadside. Rather must we gather ourselves together and with our eyes fixed upon the stars, our feet solidly upon firm ground, our hearts in God's keeping, humbly but with shining faith in the ultimate victory of liberty under law, go out into our own land, strengthening her every sinew that he in her own destined hour may indeed prove herself to be the light set in darkness that shall bring all men to peace.

Where are we going, you ask? I will tell you.

"Towards happiness that is beyond dreams;
Towards truth that surpasses thought;
Towards realization of something that is
both within and beyond you;
Towards freedom, peace, and love."

—*Townshend* (Earth).

During 1949 and From Every State in the Union, as Well as From Alaska, Hawaii, Puerto Rico, and the Virgin Islands, to the RFC Came 11,127 Applications for Business Loans—4,559 Applications Totaling $592,647,000 Were Approved—Pending as of December 30 Were 1,686 Further Loans Aggregating $433,866,000

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. BOYKIN. Mr. Speaker, on Monday last I addressed this House with respect to the wisdom of continuing, if not perpetuating, the Reconstruction Finance Corporation in behalf of small business and other industries of these United States.

I, at that time, pointed out what the record of the RFC discloses as to the beneficent effects upon the national financial economy as well as labor that have continuously flowed out of the activities carried on by the Reconstruction Finance Corporation from its inception in 1932.

Additionally thereto, I pointed out to this House that the RFC, a federally owned corporation, had covered into the Treasury of the United States in excess of $308,000,000, as profits on its preferred stock, all of which is held by the Government of the United States.

Moreover, I pointed out that these were not so-called paper profits but were profits taken in the coin of the realm.

Mr. Speaker, since I made that talk some 72 hours ago, I have been in receipt of many letters, telegrams, and telephone calls. These came not alone from Members of both Houses of Congress, but from lawyers, manufacturers, bankers, industrialists, the heads of public utilities, lumber and mining companies.

Without exception, all commended the stand I had taken in advancing the splendid work now being done by the RFC, and that it should be continued.

The writers pointed out that not alone would it be false economy to abate or in any manner curtail RFC activities at this time, but that to do so now would be to doom thousands of business concerns that are now attempting or will in the next few months attempt to avail themselves of RFC lending facilities.

Several of the letters stated that the writers are as of this very hour negotiating for RFC loans. One writer said that whether or not the RFC was curtailed and if for that or any reason they failed to receive the temporary financial help now needed, and which is not available to them through their local banks, they would be compelled to—

First. Scrap their plans for increasing production by virtue of an inadequacy of working capital.

Second. Curtail their credits and shrink their inventory to a point that would eventually and adversely effect their probable operations.

Third. Continue production as in the past, with high-priced hand labor, pay increased wages under the new minimum-wage law instead of meeting competitive prices by availing themselves of decreased production costs through the acquisition of costly automatic machinery, or else

Fourth. In order to save what they could of their present invested capital, to liquidate their affairs, shut down operations, sell the plant and equipment, take their loss now, and discontinue business.

Mr. Speaker, that is but a typical case of the difficulties that face many small business enterprises throughout the country.

The general tenor of these letters so disturbed me that I called upon the RFC to make specific inquiry as to how many loans were now subject to negotiation; the total volume of money involved in these applications, the nature of the applicant's business and exactly what number, and from what types of business, and general areas from which they expected to receive applications for processing loans in the next 12 months.

In response to my telephone inquiry, I learned that during the calendar year of 1949, 11,127 applications for business loans were filed with RFC. Of that number, 4,559 applications aggregating $592,647,000 were approved, and that at the close of business December 30, 1949, there were pending and undisposed 1,686 applications with an aggregate amount of $433,866,000. The applications were received from every State in the Union and, in addition, from Alaska, Hawaii, Puerto Rico, and the Virgin Islands.

Mr. Speaker, there was one telephone call that I received from a Member of this House about which I would particularly like to speak. I want to do so in order to clarify the minds of all with respect to just how the expense of running the RFC is met each year.

The good friend who called me is a new Member of this body. He was laboring under the impression that because the RFC appeared in the annual appropriation bills, as passed each year by this House, the Congress was annually making appropriations to the RFC for meeting their expenses.

Mr. Speaker, let me say that that is far from the fact. I want not only to reiterate but to elaborate on what I said last Monday with respect to the RFC being a self-supporting organization. As we all know, it is a governmentally owned private Corporation. The capital with which it operates and loans out was made available to it by this Congress from the Treasury of the United States. The Corporation charges a reasonable rate of interest, comparable to that charged by private banks, and certain other expenses on all moneys loaned to borrowers.

Rather than having cost the Government of the country any taxpayer's money, the fact is that the RFC has earned the taxpayers of the Nation, as of this hour, a net total of $573,000,000—$265,000,000 of that sum being retained by the Corporation to set up, as do all

safe and sane banking institutions and other commercial concerns, a reserve for bad accounts. The reserve for bad accounts that has been established was likewise set up solely out of the profits earned by the RFC.

Now, Mr. Speaker, hear me well on this. The difference between the net total of $573,000,000 that has been earned by the RFC and the $265,000,000 which has been set aside as a reserve amounts to the $308,000,000 that have been covered into the Treasury of the United States.

The deposit of this huge sum into the Treasury of the United States, and in behalf of the American taxpayers, has decreased the cost of operating the Government by just that much money—which would otherwise have to be raised by taxing our people.

Mr. Speaker, now let me continue and point out just why it is that the financial costs of operating the Reconstruction Finance Corporation do appear in the President's budget as sent here to Congress.

While the moneys which the RFC expends for operation do appear in the appropriation bills as they come to the floor of this House, there is this significant difference between the sums voted for RFC and the sums appropriated for other agencies and departments.

All other agencies and departments are voted appropriations to pay for their operations directly from the Treasury of the United States, whereas in the case of the Reconstruction Finance Corporation, and some several similar organizations, what the Appropriations Committee recommends to the Committee of the Whole House actually is the maximum amount which, in our judgment and findings, the RFC can spend out of their profits in carrying on their operations.

The Government Corporation Control Act of 1945 placed practically all Government corporations under the annual review of the Appropriations Committee of the Congress. What profit they earn goes to the United States Treasury.

Mr. Speaker, I repeat: We in this Congress do not make an appropriation from the general fund of the Treasury to the RFC. We merely authorize or, more precisely, limit the amount they might use of the corporate funds or earnings for administrative and all other purposes.

Mr. Speaker, the wonderful economic and financial accomplishments of the Reconstruction Finance Corporation are too well known to the Members of this House for me to dwell on that subject at greater length. I am, however, in receipt of one letter which has to do with their modus operandi that so clearly exhibits and pictorializes the splendid work an RFC loan accomplished in behalf of one borrower that I am going to place that letter, together with the comments of its writer, into the records of our proceedings today.

That communication comes from a man not alone well and favorably known to the Members of this House but well and favorably known to business and financial interests throughout the United States.

There is no man in all of our great South country more intimately respected, more conservative, more righteous, or is there another who in the last two decades has done more to raise the standards of life and living of all of our people in the cotton South than has Jim Allen, executive vice president of the St. Regis Paper Co.

Mr. Speaker, from first-hand knowledge I can testify that lumbermen and forest farmers everywhere throughout the South recognize in Jim Allen the greatest living force in forest conservation and utilization that has ever lived.

One of the pioneers in the manufacture of kraft paper from slash pine trees, he was responsible for the establishment of the Mobile mill of the International Paper Co. It has been said that he has done the most inconceivable things with a pine tree—"practically everything except to fix it in some manner that would make it edible."

From country boy to empire builder, he has interested and concerned himself in dozens of successful enterprises in some 18 States.

At the time that this letter was written in May of 1945, Jim Allen was president of the Florida Pulp & Paper Co. with its main interests in Pensacola, Fla. He was active in the development of the great Southern Kraft Corp. which now operates mills in Mississippi, Louisiana, Alabama, Florida and South Carolina.

In the years 1934 and 1935, while associated with the Union Bag & Paper Corp., he planned, organized and built the first pulp and paper mill at Savannah, Ga., and that, Mr. Speaker, was a development that was made possible only through the aid of the Reconstruction Finance Corporation. Today the Union Bag & Paper Corp. plant at Savannah is the largest and by far the greatest pulp and paper mill in the whole world.

The people of Savannah willingly acknowledge that it was this development, by and with the participation, and the sympathetic understanding of the Reconstruction Finance Corporation that made Savannah the prosperous community which it is today. This is but one of the communities and one of the many developments that our cotton South can point to with pride and a feeling of gratitude to the RFC.

There are innumerable projects in my own First District of Alabama as well as elsewhere in the State that were successfully financed by the RFC, the loans of which have been completely amortized as of today. The great Bankhead tunnel was financed by the RFC. The Cochrane Bridge was constructed with an RFC loan. This is another which has long since been paid in full. In my opinion, the great development and growth in trade and commerce between the cities of Mobile, Ala., and Pensacola, Fla., is in a very large measure directly traceable to the helpfulness and services extended to our people by this fiscal governmental agency.

Mr. Speaker, for more than a decade past and while representing my district in the Congress of the United States, I have had innumerable opportunities to know of many small business groups which made their application for financial assistance to the Birmingham office of the RFC. I would be remiss in my duty and wholly unappreciative of work well done if I failed to tell this House of the great help, courtesy, consideration and aid that the men who represent the RFC in my State have extended to my own constituency in the discharge of their duty.

I am proud to stand here in the well of this House and express to you, Mr. Speaker, and to all of my colleagues, that I have the utmost respect for and confidence in the abilities of men like Fred Foy, RFC agency administrator in Birmingham, Jack Holliday, his assistant, and all of the rest of the personnel of that district office who work so ardently and unstintingly in the discharge of their official duties.

Mr. Speaker, it is true that the Birmingham office has probably turned down more requests for loans than they have approved, but I assure you that, to my personal knowledge, not one penny of the money that they ever loaned on any security was not absolutely necessary and at the same time absolutely essential to save small business from distress, from foreclosure and bankruptcy to the end that our people could earn a living and at the same time continue to serve the trade and productivity of our great Nation.

In my Washington connections I am more than gratified to have found men with the ability of Frank Prince working on the staff of the RFC. I knew Frank Prince when he was a banker in the South, and I have first-hand knowledge that he could today be president of one of our greatest banks in Alabama were it not for his devotion to the aims and principles of the RFC, where he is now serving as Chief of the Loan Operations Division. I know that it is at great personal sacrifice that he continues with untiring willingness to serve the large as well as the small enterprises seeking their aid. Frank Prince gives unselfishly of himself through every hour of the day and night in discharging with honor and dignity the job entrusted to his care.

Mr. Speaker, if there is anything that I can say that is derogatory to the RFC organization, insofar as my experience with it is concerned, is that they are far too conservative, too careful; yes, far too careful in the handling of their funds.

The letter from Jim Allen, which I have heretofore said I would insert as part of my remarks, is dated May 17, 1945. It was written to the Hon. John W. Snyder, Secretary of the Treasury, who then had in turn succeeded the Hon. Jesse H. Jones and the Hon. Fred M. Vinson as the Loan Administrator, charged with the handling of all Federal lending agencies, including the Reconstruction Finance Corporation.

I wish that every Member of this House would take time to read that letter from Jim Allen to John Snyder. I wish that they would take time to trace this single loan made by the Reconstruction

Finance Corporation to a business organization which, after having discharged with interest every penny of the $1,878,000 loaned to them, wrote in grateful appreciation of the splendid service afforded to them by the RFC.

Trace with me the temporary financing of what is now a huge enterprise, step by step. Note the care with which the equity security was scrutinized, evaluated, and checked.

Note, also, the way the RFC invoked the so-called matching dollar formula, and the serious consideration given to the postwar program of creating new jobs by the examiners and other officials of the RFC.

Mr. Speaker, note the care with which the Reconstruction Finance Corporation persuaded every party financially interested in this transaction to participate to the limit of their abilities to the end that each would have an acual cash stake in the risk that the RFC was assuming. This participation by interested individuals and concerns was from as little as $1,700 by one equipment company to as much as $245,000 by the principles.

Study the income, the operation, and the expense statements gratuitously given by the beneficiary of the loan after the entire sum of $1,878,000 that had been advanced had been repaid.

Note the profits which that concern has derived from its successful operations. Mark well the great benefits which have been added to the natural forest reserves of these United States, and above all else, note the one significant paragraph from the letter Jim Allen wrote:

> We simply could not have gotten started, in the beginning, without help from the Reconstruction Finance Corporation. We just weren't eligible for private bank financing.

Mr. Speaker, that project is wholly typical of the hundreds of millions of dollars of loans now pending with the RFC and it is for these reasons that I repeat what I said to this body last Monday:

> Let us not alone continue the activities of the Reconstruction Finance Corporation, let us in behalf of small enterprise throughout the Nation and in behalf of our national economy, make the RFC a permanent institution of Government.

Mr. Speaker, I now hand to the reporter a copy of the communication written by Mr. J. H. Allen, addressed to the Honorable John W. Snyder, Secretary of the Treasury, on May 17, 1945, at which time he was serving as Federal Loan Administrator of the RFC.

That letter is preceded by the self-explanatory cover letter written to me by Mr. Allen under date of February 1, 1950.

ST. REGIS PAPER CO.,
New York, N. Y., February 1, 1950.

Congressman FRANK BOYKIN,
House Office Building, Washington, D. C.

DEAR FRANK: I note from the press that the Reconstruction Finance Corporation has been under criticism by some who certainly must not know of the creative work the Corporation has done.

We had a great experience here in the Pensacola area with the use of funds of the Corporation. On May 17, 1945, I wrote the directors and officers of the Reconstruction Finance Corporation, telling them of our appreciation of the services they had rendered the commerce of this area. I am attaching to this letter a copy of the letter I wrote at that time. All of the directors acknowledged receipt of this letter. I am also attaching a copy of the acknowledgement of the letter from Mr. John W. Snyder.

My letter points out clearly the value of this Corporation to those seeking equity capital. If the Reconstruction Finance Corporation were destroyed or limited, I would hate to contemplate just what the result would be to commerce generally. This sort of contraction at this time would bring on a stoppage of expansion, caused by new projects that would stifle commerce.

I hope you will do all you can for those who need capital to keep this great enterprise as a part of our public facilities.

Sincerely,

J. H. ALLEN.

MAY 17, 1945.

Mr. JOHN W. SNYDER,
Federal Loan Administrator,
Reconstruction Finance Corporation,
Washington, D. C.

DEAR MR. SNYDER: On May 14 we paid our entire indebtedness to your Corporation, which amounted to $869,308.51. This is the balance due on a loan we received from you on June 17, 1940, amounting to $1,878,000. We have met all interest payments and all monthly payments, in every case, on the due day.

As we are now closing a 5-year association with you, we want to express our appreciation for the very splendid advice and financial service we received from Mr. Ribenack and the courteous attention from the Jacksonville agency, not only in the promotion and operation of our business, but particularly in the service rendered in helping us make our business a permanent business, which shall prove to be, we feel, one of the most complete, unique, and permanent forest project developments in the South.

We simply could not have gotten started without help from the Reconstruction Finance Corporation. We just weren't eligible, in the beginning, for private bank financing.

The story, we believe, is worth recording.

NINETY-TWO THOUSAND ACRES OF LAND AND $2,700,000 IN CASH TO GO

In the beginning, Mr. James G. Pace and his family owned 92,000 acres of land which the Reconstruction Finance Corporation valued at $800,000. That was the only asset the Florida Pulp & Paper Co. fell heir to in the beginning. The Pace family took the most distant junior securities for their stock. That is, they took the last place in equity.

The lands were fine, but we needed $2,700,000 in cash, with which to build a mill and operate the project.

The Reconstruction Finance Corporation used the formula of matching dollars with us, for the cash and/or any fair asset value we put in. This meant, of course, that we had to raise, out of equity securities, approximately $1,078,000, in addition to the $800,000 in land referred to above.

(The matching-dollar formula, when applied to new projects, is most difficult, and we feel that, in your postwar job-creation plan, you should give serious consideration to liberalizing this formula. It might become necessary for you to do, for new job-creating industries, what you did when you saved the banks, namely, buy preferred stock and let the management place the senior securities. This is simply a suggestion.)

HOW WE RAISED THIS EQUITY MONEY

Messrs, Hilton-Green, Finlay, and Ed Leigh McMillan agreed to sell to the Florida Pulp & Paper Co. 35,000 acres of very fine timberland for $245,000, and agreed to accept, in payment for same, 4 percent in the common stock of the company, and 96 percent in the 15-year debenture notes of the company. This accounted for $245,000.

Mr. and Mrs. John C. Pace subscribed for 15-year debenture notes in the amount of $62,000, and common stock in the amount of $6,000.

Mr. Ben Mintz, of the Trinity Bag & Paper Co., subscribed for 15-year debenture notes in the amount of $96,300, and to common stock in the amount of $8,000.

Mr. S. A. Allen, of Savannah, Ga., subscribed for 15-year debenture notes in the amount of $48,300, and to common stock in the amount of $4,000.

The purveyors of equipment agreed to take part pay for their equipment in our 15-year debentures. These fine concerns and the amount they subscribed are listed below:

Babcock & Wilcox Co., New York, N. Y.	$41,200
The Black-Clawson Co., Hamilton Ohio	126,700
Chicago Bridge & Iron Co., Chicago, Ill	18,300
The Dorr Co., Inc., New York, N. Y.	5,100
Improved Paper Machinery Co., Nashua, N. H.	23,700
International Pulp & Equipment Co., Bee Bee, Quebec	1,700
Layne-Central Co., Memphis, Tenn.	14,200
Lockport Felt Co., Newfane, N. Y.	10,200
Pittsburgh Piping & Equipment Co., Pittsburgh, Pa	74,400
Swenson Evaporator Co., New York, N. Y.	5,200
Warren Steam Pump Co., Warren, Mass	6,000
Westinghouse Electric & Manufacturing Co., Pittsburgh, Pa	160,100

The city of Pensacola purchased our mill site and improved it partially, for $50,000, and gave the company a 99-year lease on same. We pay 1-percent interest on this money.

The Frisco Railroad Co. built our sidetracks for $25,000.

All of these items are considered as part of the asset value management had to raise.

As stated above, you then stood ready at any time after we had spent our equity money, to make available to us $1,878,000. This you did, and without a hitch.

The Citizens & Southern National Bank, through Mr. William Murphey, advanced us the promotional money necessary to arrange for timber surveys, engineering, legal expenses and, in fact, all promotional expense.

Mr. Ed. Lane, of the Atlantic National Bank of Jacksonville, along with the Citizens & Southern National Bank, agreed to handle some early financing of the subscriptions made to junior securities of the company by some of the companies above listed.

The local banks in Pensacola loaned some money to Mr. John Pace to be used for the purchase of junior securities of the company.

You can see from the story that the city and county governments, the Federal Government, the railroads, private banks, the Reconstruction Finance Corporation, and private industry all had a hand in the creation of this development. As far as we know, there has not been a disgruntled purchaser of any of our securities.

OPERATION

I shall give you herewith summary of the performance of this mill from the date it started in 1941, up to and through the year 1944. We do this just to show you what an investment of $3,700,000 can do.

Comparative profits, taxes, sales, expenses—Years 1941 to 1944, inclusive

	Profit before interest and depreciation	Interest	Depreciation	Income tax	Net to surplus
1941	$366,699.13	$47,592.93	$42,675.35	$32,925.04	$243,504.91
1942	632,925.52	131,917.67	102,975.04	8,432.75	389,600.06
1943	893,024.69	121,899.42	117,286.59	124,450.27	529,388.41
1944	1,256,466.56	105,092.26	159,090.72	449,690.41	542,633.17
Total	3,149,115.90	406,502.28	421,997.70	615,489.37	1,705,126.55

	Gross sales	Discount and commission	Freight	Net sales	Tons shipped
1941	$1,128,586.95	$77,221.39	$91,522.21	$959,843.35	9,875
1942	2,742,137.63	183,154.06	255,848.53	2,303,135.04	26,257
1943	3,945,324.07	215,283.78	376,206.79	3,353,833.50	36,059
1944	4,773,705.38	249,770.25	410,760.95	4,113,174.18	38,374
Total	12,589,754.03	725,429.48	1,134,338.46	10,729,986.07	110,565

The first 4 months of this year, 1945, we have added approximately $190,000 to surplus:

Current assets	$1,234,735.25
Other assets	437,298.24
Fixed assets	3,998,478.47
Total	5,670,511.96
Current liabilities	678,731.53
Deferred liabilities	2,003,034.61
Net worth	2,988,745.82
Total	5,670,511.96

(NOTE.—Not included in the above: Our timber holdings have appreciated approximately $1,000,000 since purchase.)

Today we are working in the woods and in the mill better than 1,000 men. Our pay roll and wood costs are running, currently, at the rate of:

	Yearly
Pay roll	$1,250,000
Wood	900,000

Approximately 60 percent of the wood cost is labor.

We own, in fee simple, 172,000 acres of land. We are raising better than 86,000 cords of wood yearly, which is about the volume of wood our present plant is consuming. We know that our timber farms are sufficiently productive to keep this mill running forever. Therefore, the jobs referred to above are permanent jobs.

As soon as we became eligible for private financing, two very fine banks, the Citizens and Southern National Bank of Savannah, and the Bank of the Manhattan Co. of New York, agreed to purchase our two notes of $900,000 each, dated May 5, 1945, due in 5 years, with interest at 3 percent.

Believing that it was the intent of Congress for a concern to pay up the Reconstruction Finance Corporation when its own securities became seasoned and salable, we issued the notes and made the loan, and, as stated in the beginning of this letter, we took up all of your indebtedness, as well as all of our 15-year debenture notes.

WHAT HAVE WE PROVEN TOGETHER?

We have proven that, in forestry, through the medium of pulp and paper making, permanent jobs can be created, and that, in your postwar planning, if you are able to secure experienced managements in forest projects, thousands of permanent jobs may be created.

We have been able to select capable executives to manage this enterprise. The writer was attracted to this development when he was vice president and director and in charge of an expansion program for the Union Bag & Paper Corp., and resigned his connection with that very fine company the fall of 1939, to undertake this promotion, construction, and operation; and, together with A. D. and J. C. Pace, entered into a long-term contract for the management of this business.

The whole enterprise has been pleasant and constructive and full of cooperation by all parties in interest.

In the beginning the company was assured of a market for all the trees it might raise, and cut from its forest farms, by the Trinity Bag & Paper Co. of New York, who are large and wise distributors of pulp and paper throughout the United States.

In closing let us say again that we are grateful to you for making this very fine project successful and permanent, for you can take it from us, the forest-project development here shall not be "gone with the wind," but, quite to the contrary, it is here to stay.

Yours very sincerely,

FLORIDA PULP & PAPER CO.,
J. H. ALLEN, *President.*

FEDERAL LOAN AGENCY,
Washington, D. C., May 24, 1945.

Mr. J. H. ALLEN,
President, Florida Pulp & Paper Co.,
Pensacola, Fla.

DEAR MR. ALLEN: Please let me thank you for you nice letter of May 17.

Expressions of appreciation such as this help make this job of ours here in Washington seem tremendously worth while.

I hope you come in to see me the first time you are in Washington.

Sincerely yours,

JOHN W. SNYDER.

Statement by Hon. Margaret Chase Smith, of Maine, on Social Security and Old-Age Assistance Program

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, February 9 (legislative day of Wednesday, January 4), 1950

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on the subject of social security and the old-age assistance program, which I made on February 3 before the Senate Finance Committee in connection with House bill 6000.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I am pleased to be here at this part of the committee's hearings.

The highlight has been the testimony of Dr. Francis Townsend. Certainly no one has done more on the problem of old-age assistance than Dr. Townsend, and he deserves the thanks of every American citizen.

The legislation which you are now considering is probably the most important domestic problem now confronting our people. From the cradle to the grave—from the first cry of the baby until the last beat of the heart—each and every one of us strive for the same things—happiness and security.

Individual independence and the capture of security through sacrifice, hard work, and saving should be the goal of all of us before we first turn to the Government as the dispenser of security to us. But not all of us are endowed with the tools and ability to achieve security through individual effort.

Circumstances, or "breaks" if you want to call it that, have granted some of us greater ability to achieve happiness and capture security. We have been endowed with greater productive or creative ability or with greater financial resources or with the rare and admirable ability to be happy with less of the material things than what the next fellow has.

Others of us are not so lucky. Our mental or physical capabilities have been limited from birth or have not been developed because of lack of means of development or have been impaired by misfortune. Depression, war, and inflation in unbroken succession have shaken the faith in the belief that man is the master of his own destiny. These conditions have proved beyond question that our Government must cope with the problem of social security and old-age assistance.

I think most everyone today readily agrees that our present social-security and old-age assistance program is woefully inadequate both in coverage and amounts of payments. It has been for a long time and this legislation is long overdue in the interest of a happy and stabilized America.

Only one out of every five of our senior citizens over 65 years of age receive any old-age assistance, and the average payment is less than $45 a month or less than $1.50 a day. This is not even bare subsistence in the face of today's cost of living.

If we possess the genius to build an atomic bomb, a hydrogen bomb that can threaten the very existence of the world, surely we must possess the will to provide the means of security for ourselves and our fellow Americans in our old age after we have given the best years of our lives to the development of our country.

Insecurity breeds war. A happy and secure people are the best guaranty against war. Adequate social security can make a great contribution to the realization of permanent peace. And the best place to start is right here at home in America—right here before this committee—right here in Congress.

Need for Veteran Hospitals in California

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. HOLIFIELD. Mr. Speaker, the acute shortage of well-staffed hospital facilities in California for care of dis-

abled veterans was discussed by the California congressional delegation and representatives of the American Legion Department of California at a meeting held February 7.

The serious problem which confronts us is not new. Decisions making its solution possible have been postponed many months. On Monday, December 12, Congressman CECIL KING and I called together the southern California members of our State's congressional delegation in Los Angeles to meet with representatives of the veterans organizations and the Veterans' Administration to gather up-to-date evidence and coordinate our efforts to obtain adequate hospital facilities. Veterans organizations represented at the meeting were: American Legion by Messrs. Sloneker, Merryfield, and Dunn; Veterans of Foreign Wars by Mr. Hendricks; Disabled American Veterans by Mr. Lucas; and Military Order of the Purple Heart by Mr. Sutro.

Those attending the meeting, congressmen, veterans representatives, and the local Veterans' Administration officials unanimously agreed upon the need and the kind of action we must take.

At the meeting on February 7, after hearing further testimony from the American Legion, Department of California, we determined to proceed as a delegation on this problem. A resolution was drafted by the veterans committee of the California congressional delegation recommending that the Veterans' Administration acquire the military facilities including the McCornack General Hospital in Pasadena, Calif., the naval hospital at Corona, Calif., and the Long Beach Navy and Mare Island Navy Hospitals. The motion was adopted unanimously and our veterans committee was instructed to transmit the delegation resolution to General Gray, Administrator of the Veterans' Administration, and Mr. Frank Pace, Director of the Bureau of the Budget.

Mr. Speaker, I sincerely hope that the action of the California delegation will hasten decisive action by the executive departments to meet California's critical need of hospital beds for veterans.

Mr. Speaker, under unanimous consent I insert factual material supplied by the American Legion in the Appendix of the RECORD, as follows:

[The American Legion, Department of California, Lewis K. Gough, commander. Rehabilitation commission: Stanley S. Coffey, chairman; John C. Dunn, vice chairman; Lewis S. Sloneker, director. Department service officers: Charles R. Farrington, J. Earl Merifield, Frederick Fish]

FEBRUARY 1, 1950.

HOSPITAL BED SITUATION FOR VETERANS IN CALIFORNIA

(Compiled by rehabilitation commission, through the office of the director, 1380 Sepulveda Boulevard, Los Angeles, Calif.)

It is well to again review what progress has been made on approved construction for additional Veterans' Administration hospitals, and additions to existing Veterans' Administration hospitals in California. For this purpose we will list them as to their intended types of treatment in this order: Neuropsychiatric, tuberculosis, and general medical and surgical.

Hospital	Type	Date approved	Approximate date of maximum use for patients	Number of additional beds
San Francisco area	Neuropsychiatric	Oct. 19, 1946	No construction started; no bids called; site selected only.	1,000
Los Angeles area	do	do	Not even a site selected	1,000
Livermore	Tubercular	Dec. 17, 1943	Undetermined	119
San Fernando	do	Oct. 16, 1945	do	130
Fresno	General medical and surgical.	Sept. 12, 1944	July 1950; dedication March 1950	250
San Diego	do	Oct. 19, 1946	Site obtained; bids called for; low bidder announced then entire project canceled.	200

The slow and unexplained progress made toward completing the construction already approved is very discouraging and believed inexcusable. Added to this delay the canceling of one of the hospitals approved for California by the executive branch of the Government is further disheartening to the sick and disabled veteran.

The Veterans' Administration being fully aware of not having enough beds to meet their requirements in California, entered into contracts with the Army and Navy, to hospitalize veteran patients in several of the armed services hospitals. The peak of such contracts, including 50 beds at the United States Public Health Hospital at San Francisco, reached 1,750 beds as follows:

	Peak contract	Closed, announced closed, and reduced	Contracts expected to remain
United States naval hospital, Mare Island	150	150	0
Letterman General Hospital, San Francisco	175	0	175
United States Public Health Hospital, San Francisco	50	0	50
United States naval hospital:			
Oakland	400	0	400
Long Beach	400	400	0
San Diego	250	50	200
Corona	225	225	0
McCornack General Army Hospital, Pasadena	100	100	0
Total	1,750	925	825

There is no assurance that the Veterans' Administration will maintain the present contracts for hospitalizing veterans in Army and Navy hospitals. In fact, it is evident that they may soon lose all such contracts. According to the Army Times Vet-Letter of November 19, 1949, Maj. Gen. Raymond W. Bliss, Army Surgeon General, confirmed to the Vet-Letter, the Department of Defense has under consideration the feasibility of terminating 5,500 beds in Army and Navy hospitals now at the disposal of the Veterans' Administration. The Vet-Letter goes on further to quote Dr. Paul B. Magnuson, Chief Medical Director of the Department of Medicine and Surgery, Veterans' Administration, when asked about this, said: "That's the way the wind is blowing."

The trend of doing away with hospital beds for Veterans' Administration patients in Army and Navy hospitals is further indicated in the Army and Navy Journal of November 19, 1949, on page 326, third column, under the caption "Medical service cut." The article infers that Brig. Gen. Richard L. Meiling, USAFR, OSD, Director of Medical Services, stated that the service to nonmilitary patients may be cut at service hospitals and that it includes beds being used for veterans' care. With the already existing shortage of hospital beds for veterans in California, we understand that by the stroke of a pen in Washington, D. C. would eliminate the remaining beds for veterans in Army and Navy hospitals in California.

Another possibility of losing these beds for veterans has been demonstrated by the Army closing its McCornack General Hospital in Pasadena, Calif., the Navy closing its hospital at Corona, Calif., and the announcement by the Department of Defense of the closing of Long Beach Navy and Mare Island Navy Hospitals. By the closing of those 4 hospitals, 875 beds are lost for veterans' care. The Veterans' Administration records will show that aproximately 1,200 veteran patients per month were admitted to these 4 hospitals. This is another clear indication of the mistake in canceling the new 200-bed general medical and surgical hospital for San Diego, the site for which had been selected, bids had been called for and the low bidder had been announced. It should be built without further delay.

Further evidence as a sound reason why additional hospital beds are needed for veterans in our State is the waiting lists at the various Veterans' Administration hospitals. The waiting lists are made up of veterans who have made applications for hospitalization, have been found to be legally and medically eligible, and have been placed on the waiting list because no beds are available. Included in this list is the approximate number of veterans with active tuberculosis who have been hospitalized outside of Veterans' Administration hospitals and outside of our State because of the shortage of Veterans' Administration tuberculosis beds.

To further point out the need for additional beds for psychoneurotic patients, the figures below will show the crowded, overcapacity conditions, in addition to the existing waiting lists:

Neuropsychiatric hospitals

	Number on waiting list
Palo Alto (Jan. 23, 1950)	503
Standard bed capacity, 1,161.	
Patient population, 1,430.	
Over capacity, 269.	
Brentwood, Los Angeles (Feb. 1, 1950)	1,000
Standard bed capacity, 1,842.	
Patient population, 2,053.	
Over capacity, 211.	
Other Veterans' Administration hospitals	18
Present waiting list	1,521
Veterans patients in State mental institutions, 2,965, of which 1,111 show on Veterans' Administration waiting list, leaving balance of 1,854 who, too, should be hospitalized by the Veterans' Administration	1,854
Present neuropsychiatric beds needed	3,375

Of the 1,521 on the waiting list for mental and nervous conditions, it is interesting to know just where these veterans, who have been declared legally and medically eligible

for Veterans' Administration hospitalization, are located:

At home without proper supervision or care	311
In understaffed, overcrowded State hospitals	1,111
In private and other Government hospitals	99
Present total	1,521

It does not require very much imagination to see the menace to society and the unfairness to the veterans caused by the failure of these men to be hospitalized by the Federal Government.

Tuberculosis hospitals

	Number on waiting list
Livermore (Jan. 23, 1950)	125
San Fernando (Feb. 1, 1950)	128
Birmingham (Van Nuys) (Feb. 1, 1950)	31
Present tuberculosis waiting list	284
Service-connected patients in county and private hospitals	152

Tuberculosis hospitals—Continued

	Number on waiting list
California veterans patients sent out of State for hospitalization due to bed shortage in our State	150
California men in service with active tuberculosis who would be transferred to Veterans' Administration hospitals and discharged from the service, were Veterans' Administration beds available	100
Present tuberculosis beds needed	686

Relief to the extent of the 249 beds for tubercular patients is expected sometime in the future by the additional construction at Livermore and San Fernando hospitals. The additional construction is completed, patients and the administrative offices have been transferred from the old building to the new construction. Renovation, repair, and some construction in the old buildings prevent full utilization. While this renovation, repair, and construction has been approved by the Veterans' Administration, the work is being held up due to lack of funds.

General medical and surgical hospitals

Hospitals	Beds lost	Further need for general medical and surgical beds	Number on waiting list	Total
Fort Miley, San Francisco			42	
Oakland			44	
Birmingham, Van Nuys			34	
Wadsworth, Los Angeles			139	
			259	
Mare Island Navy	[1] 150			
Long Beach Navy	[1] 400			
Corona Navy	[2] 225			
McCornack General Army	[2] 100			
	875			
Occupying domiciliary beds, Los Angeles		400		
Probable loss of remaining contract beds in service hospitals		825		
	875	1,275	259	
Total				2,350
Gained by opening Veterans' Administration Hospital, Fresno				250
Present general medical and surgical beds needed				2,109
Domiciliary waiting list:				
Veterans' Administration Center, Los Angeles			501	
Veterans' Home of California, Yountville			205	706
Grand total of all waiting lists				2,770

[1] Announced closing.
[2] Closed.

Due to the shortage of general medical and surgical beds, the Veterans' Administration for the most part are rejecting hundreds of veterans badly in need of hospitalization for disabilities and diseases coming under this category, because they have had to make a more restrictive determination as to need for hospitalization. If true waiting lists were kept at these general medical and surgical hospitals is is safe to say it would be four or five time larger than is shown. This is partially explained by them giving appointments to hundreds of veterans instead of placing them on waiting lists when no beds are available. Added to this are the poor unfortunate victims classed as medically ineligible that would be hospitalized if beds were available.

In estimating the need for additional Veterans' Administration hospital beds for general medical and surgical cases in California, consideration should be given to the continued large influx of disabled veterans to our State, many of whom are chronic cases who will require long periods of hospitalization. Several hundred beds in general medical and surgical hospitals are frozen with chronic cases that require mostly nursing, attendant and dietetic care. It is safe to say that California has a higher percentage of these types of cases than any other State in the Union.

The only chance we see for immediate relief is for the Veterans' Administration to take over the Army's former McCornack general 500-bed hospital in Pasadena, and the Navy's 1,350-plu-bed tuberculosis and general medical and surgical hospital in Corona. The closing of these two service hospitals and the announced closing of the Mare Island Navy and Long Beach Navy Hospitals should be seriously considered as a solution for the shortage of general medical and surgical, and tuberculosis beds for veterans in California.

It is apparent from the information coming out of the White House, the Bureau of the Budget and the Veterans' Administration that if California is to receive adequate hospitals and domiciliary facilities for its veteran population of 1,750,000 veterans, favorable action on the part of the Congress itself will be necessary.

Additional important facts for consideration are:

1. A high percentage of Veterans' Administration hospital and domiciliary beds in California are used by veteran patients from out of the State.

(a) The Veterans' Administration Tumor Clinic for the western part of the United States is at Los Angeles.

(b) Their paraplegic center for the western part of the United States is at Van Nuys.

(c) Their psychoneurotic patients from Arizona, Nevada, and other Western States for the most part are hospitalized in California.

(d) The large influx of veterans to California consists of a high percentage of sick and disabled veterans.

2. Veterans' Administration records will show that California has a higher percentage of veterans drawing compensation and pension than any other State in the Union.

(a) Of the Nation's 77,569 100-percent service-connected total and permanent disabled World War II veterans, California has 9,800, or 12.63 percent.

(b) California has the highest number—38,023 service-connected World War I veterans. New York is second, with 32,840.

(c) California has the highest number—5,619 service-connected regular establishment. New York is second, with 2,603.

(d) California has the highest number—13,827 Spanish-American War veterans drawing compensation or pension. New York is second, with 8,402.

While there has been a curtailment in the number of hospital beds for veterans in California, the number of applications for hospitalization continues to show a steady increase of approximately 18.5 percent. For the fiscal year 1948–49, 96,503 applications were received.

The number of veteran case folders transferred into California Veterans' Administration offices over a 30-month period show 227,497 as compared with 194,223 transferred out, indicating that 33,274, or 1,109 per month new veterans with active cases took up permanent residence in California.

It is clearly indicated therefore, from actual facts and figures that regardless of the Veterans' Administration's estimate on veteran population in California, that California must have a higher ratio of hospital beds per veteran population than any State in the Union, if the veterans from our State and those coming from all other States to California are to be cared for.

The Great Lakes Waterway Must Be Completed

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 9 (legislative day of Wednesday, January 4), 1950

Mr. WILEY. Mr. President, I send to the desk a statement which I have prepared on the subject of the vital necessity of completion of the Great Lakes waterway. I ask unanimous consent that the text be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, Mr. WILEY's statement was ordered to be printed in the RECORD, as follows:

THE ST. LAWRENCE SEAWAY—A NECESSITY IN THE ATOMIC AGE

Mr. President, I have in my hand one of the many fine issues of the splendid magazine published by the Great Lakes Harbors Association entitled "Great Lakes Outlook." This periodical, as usual, in its January 1950

issue, contains a wealth of vital statistics on Great Lakes shipping in relation to our entire economy.

LAKE-OCEAN SAILINGS

It, for example, reports that an all-time record was established in the number of ships operated directly between the Great Lakes and foreign ports in the 1949 navigation season. Twenty-five ships in the direct service last season ran up a total of 71 sailings from the Lakes, compared with 56 sailings in the previous year when 22 ships plied the route.

Mr. President, these and other statistics belie the base and foul charges which enemies of the Great Lakes waterway have hurled at the proponents of this vital project. These and other facts point up the truth that the opponents of the seaway are as backward looking yes, as reactionary if you please, as those blind souls who opposed the Panama Canal in 1900 on the ground that it would not be used. Let me point out, Mr. President, that the Soo locks alone last year passed some 96,000,000 tons of freight, of which over 71,000,000 tons were iron ore, 8,000,000 tons wheat, other grain 3,000,000 tons, and soft coal 8,500,000 tons, and so forth. Vessel passage through the Soo locks totaled 22,157.

These facts underline the vital shipping role that a deepened 27-foot Great Lakes seaway could play in the future, not to mention, of course, the vital role it could play in connection with the generation of 2,200,000 horsepower of needed electricity through the power project that would be associated with it.

TOO MANY SURVEYS, TOO LITTLE ACTION

In other words, Mr. President, the Great Lakes waterway project will not down, it cannot down and be defeated. Why? Because it is so fundamentally right and its enemies are so fundamentally wrong. On February 27, hearings are scheduled to be opened in the House Public Works Committee on this issue on which there has unfortunately been so much talk, talk, talk, investigation, double investigation and triple investigation, but so little conclusive action unfortunately in the last quarter century.

The facts emphasize the necessity for action now in this critical technological age.

According to the statistics which were secured by the Foreign Relations Subcommittee, which I headed in the Eightieth Congress, the waterway would have a potential traffic of between 56,000,000 and 84,000,000 tons per year. Let us note, Mr. President, that these estimates were made prior to the tremendous information now available on the subject of crucial iron ore that will be brought down from Labrador, now that the Mesabi Range is being depleted. How can we possibly safeguard our defense if we deny ourselves the elementary materials for United States armament?

NOMINAL SEAWAY COSTS

The Great Lakes seaway would be entirely self-liquidating. The latest estimates fix over-all costs at $966,768,000 for a 27-foot channel. Of that sum, $802,566,000 would be for new construction, $229,105,000 would be allocated to Canada, and $573,461,000 would be allocated to the United States.

These sums are admittedly large, but not when one considers the enormous sums which are appropriated for projects elsewhere that (a) would not be self-liquidating, (b) would not contribute to the welfare of so large a number of people as the 50,000,000 people in the valley of the Great Lakes, (c) would not contribute to national defense, (d) have not been endorsed by outstanding leaders of both parties and by every President of the United States in the last quarter century.

Mr. President, we serve notice on the enemies of the waterway that we intend to battle through until we achieve victory. Recently President Truman indicated once more his personal fervent approval of the dual-purpose project. We only wish that certain members of his party were equally zealous in abiding with his position.

MIDWEST IS ORGANIZING FOR SELF-INTEREST

We of the Midwest will not always take this throttling of our legitimate rights lying down. Already there are rumblings of grassroots organization action to come, so that the Midwest will not always be a stepchild of this Nation and so that Midwestern legislators will receive effective support for their efforts on a bipartisan basis.

We have been short-changed far too many times while other sections have been deluged with Federal funds. We are not asking for hand-outs. We are not asking for pork barrels. We are simply asking for our rights.

We have not been allocated any maritime surplus vessels out of the 5,000 ships available for disposal. Our package-freight service on the Lakes has never been reinforced to make up for war losses. Milwaukee alone lost 500,000 tons in annual package-freight service. These and other instances of Washington neglect of the Lakes could be cited ad infinitum.

It is not only we who have suffered, but the whole Nation as a result.

CONCLUSION

Mr. President, referring again to the Great Lakes Harbor Outlook, I should like to have printed at this point one of the particularly fine articles which summarizes the great job being done by the Milwaukee municipal port. We of Wisconsin are proud of that port just as we are proud of all the other great ports which the Badger State possesses on the Lakes. I ask unanimous consent that the text of this summary be printed at this point.

The matter referred to is as follows:

"MILWAUKEE MUNICIPAL PORT BREAKS ALL RECORDS IN 1949

"In a year-end review prepared by Mr. Frank H. Ranney, president of the Milwaukee Board of Harbor Commissioners, he describes 1949 "as one of the significant years in Milwaukee's history as a port." He outlined some of the high lights of the year at Milwaukee Harbor as the following:

"Water-borne commerce through the municipal outer harbor reached an all-time high.

"Operating revenues from municipal port operations reached an all-time high, crossing the quarter-million-dollar mark for the first time.

"The number of ocean vessel sailings was at an all-time high in 1949.

"Petroleum traffic through the port of Milwaukee again broke all records, exceeding a million tons during the past year.

"Use of river-type barges for Lake Michigan operation was firmly established during the past year and may be the forerunner of future regular water service between Milwaukee, Mississippi River points, and the Gulf of Mexico.

"The outlook for the St. Lawrence seaway project was greatly improved as the result of developments in 1949.

"Water-borne grain traffic was at the highest level in recent years and general port commerce flourished, although the coal strike resulted in a large reduction in water-borne coal receipts and considerably reduced the over-all water-borne commerce through the port.

"The port of Milwaukee has set its sights on becoming the principal heavy-lift port of the Great Lakes. The Milwaukee port authority, which, in 1949, contracted for a new 70-ton capacity electric gantry crane, is confident that the crane will attract large tonnages of export freight through the Milwaukee gateway. Although intended to serve the export needs of heavy machinery manufacturers in the Milwaukee area, the new crane will be publicized throughout the Middle West to persuade exporters in the area to consign heavy-lift traffic via Milwaukee.

"Illinois exporters have been using Milwaukee's present 25- and 30-ton cranes to transfer heavy freight from railroad cars to lake and ocean ships for several years past, due to the lack of crane facilities in the port of Chicago.

"The new Milwaukee crane will cost about $125,000, including the expense of reinforcing a section of the municipal open dock terminal to take the heavy weight of the equipment. The crane itself will weigh 225 tons. Its rated capacity will be 70 tons at a 45-foot radius, but its potential capacity is considerably greater at shorter radii and by use of its overload capacity. Without unduly straining the equipment, the Milwaukee board is confident that 90-ton lifts can be handled on occasion, making the Milwaukee crane comparable to practically the finest equipment in any salt-water port.

"THE 1950 IMPROVEMENT PROGRAM

"The Milwaukee Board of Harbor Commissioners has scheduled a large improvement program for 1950, entirely at municipal expense, which will set the pace for all lake ports. Improvements scheduled for the Milwaukee water front this year include the building of a new outer harbor pier 1,026 feet long, exclusively for petroleum tankers, at an estimated cost of $350,000; construction of a modern dock office building, $60,000; 9,250 feet of new water mains for harbor fire protection and industrial water supply, $115,000; lake-front airport improvements, $150,000; railroad trackage and sewers, $25,000. In addition, the new heavy-lift crane and dock reconstruction will entail another $130,000 as noted. The total estimated cost of the 1950 construction program is $830,000.

"Petroleum traffic through Milwaukee public docks in 1949 exceeded 1,100,000 tons, an all-time record, and about 350,000 tons higher than the 1948 volume. Milwaukee is fast becoming one of the major petroleum ports of the Great Lakes. About 350-tanker cargoes of gasoline and fuel oil were received at that port in 1949. Another innovation at Milwaukee has been the establishment of barge traffic on Lake Michigan, between the Illinois River and the Chicago refining district for movement of petroleum products to Milwaukee by barge. Scores of barge movements have been made during 1948–49 on Lake Michigan between the two ports without incident or accident.

"Although traffic through Milwaukee's municipal wharves reached an all-time high in 1949, the total commerce of the port will probably show some decline as a result of the coal strike and the 3-day week in the coal mines. According to Mr. Ranney, coal receipts at the port were at the lowest ebb in the modern history of Milwaukee, with receipts of only 2,600,000 tons compared to 4,000,000 tons in 1948.

"Grain receipts and shipments by lake were at the highest level in years, totaling 14,416,000 bushels. While a substantial boost from the 8,700,000 bushels handled in 1948, the grain increase was far from sufficient to offset an estimated 1,400,000-ton loss in coal traffic."

Proposed Extension of Federal Social Security Act

EXTENSION OF REMARKS

OF

HON. ROBERT C. HENDRICKSON

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, February 9 (legislative day of Wednesday, January 4), 1950

Mr. HENDRICKSON. Mr. President, in view of the great concern of our pub-

lic employees at State and local levels over the possible effect of H. R. 6000, the Members of the Senate cannot be urged too strongly to consider carefully an amendment to that measure whereunder all public employees in positions covered by a retirement system would be excluded.

I hold in my hand a statement by John J. Goff, chairman of the Committee of Associated Pension Funds of New Jersey, in opposition to the enactment of H. R. 6000 in its present form, which merits the study of the entire Senate.

To the end that this statement may be properly before the Senate, Mr. President, I ask unanimous consent that it be inserted in the Appendix of the RECORD, together with a resolution on the same general subject, sponsored by me as a State senator and adopted by the Legislature of the State of New Jersey on March 23, 1942.

There being no objection, the statement and resolution were ordered to be printed in the RECORD, as follows:

STATEMENT OF JOHN J. GOFF, CHAIRMAN, COMMITTEE OF ASSOCIATED PENSION FUNDS OF NEW JERSEY, IN OPPOSITION TO THE ENACTMENT OF H. R. 6000 IN ITS PRESENT FORM

Mr. Chairman and members of the Senate Finance Committee, my name is John J. Goff. I am chairman of the Committee of Associated Pension Funds of New Jersey, embracing the pension and retirement organizations which are listed immediately hereafter:

Board of Health Employees, Newark, N. J.
Board of Health Employees, Paterson, N. J.
Board of Education Employees of Essex County, N. J.
Essex Council No. 1, New Jersey Civil Service Association.
Employees' Retirement System of County of Essex, N. J.
Employees' Retirement System of County of Passaic, N. J.
Newark, N. J., Board of Works Pension Fund.
Newark, N. J., Municipal Employees' Pension Fund.
Newark Firemen's Pension Fund.
Newark Policemen's Pension Fund.
New Jersey Civil Service Association.
New Jersey Education Association.
New Jersey State Health Officers' Association.
State, County, and Municipal Employees' Retirement System of New Jersey.
State Prison Officers' Pension Fund.

There are approximately 50,000 employees throughout New Jersey represented who are members of existing public employees' pension and retirement systems.

Many of these funds are affiliated with the National Conference on Public Employees' Retirement Systems, of which I had the honor of serving as chairman for 4 years. At the present time the pension and annuity organizations affiliated with the national conference have a total membership of approximately 1,000,000.

I am an active participating member of a pension fund. As such, I am well aware of the concern which my fellow members have pertaining to the question of the possible extension of social security to public employees and I can speak from personal knowledge of their feeling toward such extension which would include public employees who are now members of, or who may become members of, these legally constituted pension and retirement systems.

The membership of these State and local systems have a vested interest in the continuation of their own retirement plans, without impairment by Federal legislation.

For many years, public employees such as policemen, firemen, teachers, civil-service employees of all classes have devoted themselves to public service as a career, in considerable degree only because of the large measure of security in old age assured by their membership in various pension and retirement systems.

In most intances, one of the compelling reasons which led to acceptance of a State, county, or municipal position was reasonable assurance that after the stipulated number of years of service had been rendered, the employee would receive a retirement benefit that would at least enable him to live free of the fear of want.

Most public employees in New Jersey are now covered by retirement funds established by State authority. In all instances these funds provide a retirement annuity which is more adequate for the career employee than that now provided or proposed under social security. And they make it possible for public employees, many in hazardous occupations, to retire at an earlier age than under social security.

Consider what might have happened during the recent war, when private industry began to bid for manpower by raising salaries higher and higher. Had there not been this picture of lack of fear and want which had been assured them for their old age, many public employees undoubtedly would have left public employment and accepted jobs in industry, with their promise of large immediate financial gain. The fact that public employees, members of existing pension and retirement systems, did not in any large degree shift to industry dispels the statement that shifting in and out of State and municipal employment is similar to that in other employments.

Not at this time, nor since the Committee of Associated Pension Funds was organized some 9 years ago, have we ever expressed any opposition to the extension of social-security benefits to those public employees who at present have no protection from want in their old age. As a matter of fact, we concur in the resolution adopted by the National Conference on Public Employees Retirement Systems on April 2, 1942, which reads in part, as follows:

"It is the sense of this conference that it takes no position on any pending legislation in the Congress of the United States, except insofar as the same may tend to diminish, defeat, or impair the interests, present or future, of any public employee in any existing pension system."

Although we do not oppose the extension of social security to those public employees who are not members of public pension funds, we are unalterably opposed to the extension of social security to public employees who are members of, and eligible for membership in, any State, county, or municipal pension or retirement system. To include such public employees would inevitably lead to the destruction of their own local systems, because the local taxpayer will not support both, nor is it reasonable to expect him to do so. Also, the superimposing of social security upon existing retirement plans would impose a double burden of contributions upon the underpaid public employee.

A technical staff for a previous Ways and Means Committee, in a painstaking report, made reference to the problem of the lack of coverage for so-called migratory public employees. This question was answered during the war. The records will reveal that very few public employees who were members of existing systems left public employment for the higher salaries that were offered. However, any loss sustained by migratory public employees could be negligible in comparison with the loss which career public employees now covered by their own retirement systems would sustain, were they embraced within social security, or if a Federal-State voluntary agreement, or pact, were provided, which loss would be the ultimate destruction of their own retirement systems.

As this committee well knows, there was no coverage of State and local employees under social security at the time the act was passed in 1935, because at that time there was no thought of taxing State and local employees, let alone the taxing of States and political subdivisions.

The first suggestion for covering State and local employees under social security was contained in the original Wagner bill introduced in August 1940. Such coverage under that bill would have been compulsory, and public employees challenged the right of the Federal Government to collect social-security taxes from States and their political subdivisions. They also protested against the policy of covering State and local employees, since many were already protected against the hazards of old age through State and local retirement systems.

This committee may remember the political repercussions in the fall of 1940 leading Senator Wagner to announce (1) that he had no intention of jeopardizing State and local retirement systems, and (2) that he would amend his original bill to exclude members of State and local retirement systems from the proposed coverage. That bill, of course, did not pass.

Then came the Wagner-Murray-Dingell bills, of the Seventy-sixth Congress. Then the Kean bill of the last Congress, which was objectionable; however, Mr. KEAN agreed to amend his bill to meet the objections of public employees, members of existing funds. Then the Ways and Means Committee of the first session of this Congress drew and passed H. R. 6000 under the gag or no amendment rule.

Mr. KEAN, of New Jersey, tried to have his bill H. R. 6297 which amply protected public employees who are members of existing pension or retirement systems, substituted for H. R. 6000. However, sufficient votes were not available to recommit H. R. 6000.

It may be said that the referendum in case of retirement systems which is found on page 82, line 10 of the bill is ample protection. To this we say "No"—because it will place existing systems in constant jeopardy. There could be one referendum after another. It will permit the Social Security Board with its unlimited funds to deluge the persons concerned with well-planned propaganda. Speakers from Washington will appear before every group of employes that can be persuaded to welcome them.

The referendum permits voting by persons already retired. In many instances these will not understand the issue involved. They may even believe that if they vote in the affirmative they would receive both their pension and social security even though they never were in covered employment as required by the social-security statute. Similar attitude may be taken by many employees believing also they would receive both. But as before stated, it is hard to conceive that the taxpayers would pay for both or is it reasonable to expect them to do so.

The referendum requires a two-thirds affirmative vote, but does not state two-thirds of what. Is it two-thirds of those voting? Two-thirds of all eligible to vote? The possibility is that we may have a compact approved by a number far less than a majority of all existing members of a system.

The dangers inherent in the referendum section become apparent only after one studies what will happen to the members of existing systms if a referendum is decreed in any State.

The public employees, members of existing pension systems, are not asking for anything, just to be left alone, with security

after our own State's ideas, security to continue in the enjoyment of our existing systems, where most of us have benefits superior to those offered by social security.

In closing we ask that the proposed amendment to section 106 of H. R. 6000, as follows, be included in the bill before it is reported by the Senate Finance Committee.

PROPOSED AMENDMENT TO SECTION 106 OF H. R. 6000

Strike out section 218 (d) (1) (beginning with line 10, page 82, to and including line 17, page 83) and substitute therefor the following paragraph:

"(7) Such agreement shall exclude all public employees in positions covered by a retirement system, as previously defined in subsection (b) (4) of this section."

Which amendment was submitted by the National Conference on Public Employees Retirement Systems and is supported by the Municipal Finance Officers' Association of the United States and Canada as well as all public employees who are members of existing pension funds.

This, gentlemen, we believe to be a most fair and reasonable request and I wish to thank each member of the committee in behalf of the more than 50,000 public employees in New Jersey, now enjoying the benefits of their local retirement systems.

Present here today are Frank Walker and Charles I. Levine, whom with myself were directed by the New Jersey Civil Service Association to oppose H. R. 6000 unless it is amended to provide total exclusion of public employees, members of existing pension and retirement systems. They concur in my statement and remarks.

Attached hereto and made a part of this statement, please find a resolution which was adopted by the Legislature of New Jersey on March 23 and was signed by the Governor of New Jersey on March 25. It is known as Joint Resolution No. 4, laws of 1942.

To the Members of the United States Congress, Washington, D. C.:

The following resolution was adopted by the Legislature of New Jersey on March 23, and was signed by the Governor of New Jersey on March 25. It is known as Joint Resolution No. 4, Laws of 1942.

(State of New Jersey, introduced February 9, 1942, by Senator HENDRICKSON)

"Joint resolution memorializing the Congress of the United States to refuse to enact any legislation which would impair the rights of public employees of the State of New Jersey and its political subdivisions

"Whereas the Federal Social Security Act as enacted by Congress in the year 1935 and as subsequently amended, excludes from its provisions employees of the United States Government and of any State or political subdivision thereof; and

"Whereas under the provisions of the Federal Social Security Act, each State and its political subdivisions are immune from the tax imposed upon employers by the act aforesaid; and

"Whereas the employees of each State and political subdivision thereof are immune from the tax imposed upon employees by the act aforesaid; and

"Whereas there are one or more bills now pending in the Congress of the United States which would have the effect of extending coverage of the Social Security Act to all States and their political subdivisions and the employees thereof; and

"Whereas the President of the United States has said that the objectives of the Social Security Act should not and need not be attained at the sacrifice of protection now available to some municipal workers through existing pension and retirement systems; and

"Whereas there are approximately 50,000 public employees in the State of New Jersey who have contributed to and are members of approximately 150 statutory pension funds; and

"Whereas the extension of the provisions of the Social Security Act would not only impose additional taxation upon the State of New Jersey and many of its political subdivisions and the employees thereof, but would likewise tend to impair the benefits and protection which have been gained by public employees now members of existing pension funds: Now, therefore, be it

"*Resolved by the Senate and General Assembly of the State of New Jersey:*

"1. The Legislature of the State of New Jersey looks with concern upon any proposal to extend the present Federal Social Security Act to the State of New Jersey, its political subdivisions and the employees thereof who are now members of existing legally created pension and retirement systems and, therefore, respecfully urges and petitions the Congress of the United States to refuse to enact any legislation which would extend the provisions of the Social Security Act to those public employees now members of legally constituted State or local pension, retirement or annuity systems.

"2. The Secretary of State be and he is hereby directed to transmit copies of this joint resolution to the President of the United States, the Vice President of the United States, the chairman of the Ways and Means Committee of the House of Representatives, the Senators and Representatives of the State of New Jersey in the Congress, the Federal Security Administrator, and the Federal Social Security Board.

"3. This joint resolution shall take effect immediately."

Although the resolution by its own terms provides that certified copies be sent to certain Members of Congress, serving on the Ways and Means Committee, this resolution is sent to you together with all other Members of Congress, for your information, through the courtesy of the Committee of Associated Pension Funds of New Jersey.

JOHN J. GOFF, *Chairman.*

NEWARK, N. J., *April 10, 1942.*

Nation Was Economical When the People Insisted

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 9 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD a very timely article entitled "Nation Was Economical When the People Insisted," written by Herman Lowe and published in the Philadelphia Inquirer of January 21, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATION WAS ECONOMICAL WHEN THE PEOPLE INSISTED

(By Herman A. Lowe)

WASHINGTON, January 20.—This is a capsule course in escapism for you who get jitters over the growing national debt, continued deficit financing, and the descent into the soothing quicksand of statism. It turns back the calendar to the good old days when the Nation paid as it went, and when Federal fiscal statistics ruffled nobody.

So, if you get heebie-jeebies over "whither are we drifting"—and, brother, your number is legion—a good dose of these statistics will soothe you more than mother's cooking.

Do you have a roaring in your ears when you hear of our $257,000,000,000 national debt which is still climbing? Astronomical debt figures are a thing of the past 15 years. Relax and turn back the pages to the beginning of the Republic. In 1791 the year opened with a national debt of $75,000,000, mostly taken over from the Colonies which had become the Original Thirteen States. By 1812 it had been worked down to $45,000,000. The war which broke out with Britain that year sent the debt soaring back to $127,000,000 by 1816. Then the Nation really buckled down to economy. By 1835 the national debt was an almost invisible $38,000—yes, thousands.

That is the closest the United States Government ever came to being completely debt free—wonderful memory for those who live under the $257,000,000,000 debt. It was not until 1863, in the middle of the great Civil War, that our debt crossed the $1,000,000,000 mark for the first time. It fluctuated up and down and dropped below $1,000,000,000 during 1092 and 1893.

Do you have nightmares at the thought of the $5,500,000,000 deficit the President announced for the current fiscal year and the $5,100,000,000 he predicts for the next fiscal year?

Relax with this. In the period 1789–91, the National Government took in $4,418,913. It not only ran for 3 years on that but actually wound up with a surplus of $150,000. There have been lots of surplus years in our history. However, the only two since 1930 were during the much-damned Republican Eightieth Congress.

Lots of folks don't sleep nights when they think of a peacetime appropriation of $13,500,000,000 for national defense. It was better in 1792. The Navy Department, exclusive of civil functions, got an appropriation of $53 (yep, 53 bucks). The War Department, including rivers and harbors, cost $1,100,000.

The great pork barrel of public spending continues to be public works. For the current fiscal year it is costing just short of $3,000,000,000. President Truman has asked Congress for $3,500,000,000 for the coming year.

Turn back the clock to 1791. The Government spent $23,000 on public works. Most of it seems to have been to build lighthouses.

Another current source of irritation is the postal deficit amounting to several hundred million dollars a year. Earlier administrations and earlier Congresses saw to it that the Post Office Department paid its way. Year after year there was a surplus to turn into the Treasury. Up to 1820 there had been a deficit during only 1 year—a deficit of $2,246. Not until 1841 was money voted to cover a post-office deficiency.

Once we used to make ends meet in the National Government, because the American people insisted upon it. If the people should insist upon it now, there is no doubt the Government could and would make ends meet again.

Shubert Theater Monopoly

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. CELLER. Mr. Speaker, I have made a check on the Shubert strangle-

hold of the theater in this country and I find a very malodorous picture.

The Shuberts control over 60 percent of the theaters presently operating in New York, and approximately 90 percent of the theaters throughout the country. They dominate the League of New York Theaters, arrange for the allocation of tickets to their own pet brokers, using kick-backs of all kinds. In Boston, the sister of the Shuberts has control of the brokerage agencies, and on "hit" shows it is almost impossible to get tickets unless one gets them through an agency. If the agencies are unable to sell them, the tickets are returned to the box office just before curtain time and many of the theaters are empty as a result. In Chicago and in Philadelphia, this is true only to a minor extent. There, they control only the box offices of the theaters they rent, through the distribution of tickets and affiliation with the ticket brokers.

I ask this question: What happens to the amusement tax on the mark-up of their tickets? The answer is that the Government is cheated out of its rightful revenue. You can bet all the tea in China, no income tax is paid on South Pacific tickets which sell for $25 plus.

Theater people hesitate to testify. They are afraid of being put out of business, for they don't know where they could house their productions either on the road or in New York, if they were to speak out.

The Shuberts have kept even the critics out of certain of their theaters if they disapprove of their reviews. Wolcott Gibbs and Louis Kronenberger are two examples of this practice.

This Shubert monopoly and its baneful practices are drawing the public away from the legitimate theater.

Gordon Gray, an Enlightened Public Servant

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, February 9 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, an editorial in the Washington Post of this morning, entitled "North Carolina's Gain," expresses the sentiments of most of the Members of Congress, on both sides of the aisle, with reference to the Secretary of the Army, Gordon Gray. We regret losing the services to the Federal Government of such a capable and conscientious public servant. We know, however, that as president of the University of North Carolina he will continue to make a great contribution to the Nation. The South needs the leadership of such men as Gordon Gray, and we know that more understanding and progress will come to the Southland as a result of his presidency at the University of North Carolina.

I ask unanimous consent that the editorial from the Washington Post be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NORTH CAROLINA'S GAIN

The University of North Carolina will gain a public servant of truly exceptional ability and stature in its new president, Gordon Gray. Mr. Gray has progressed through the Army ranks from private and captain to Assistant Secretary, Under Secretary, and finally Secretary. He has profited from the experience. In actuality he has been the first civilian executive since Henry L. Stimson who has really run the Army. His firmness, however, has been accompanied by an almost inexhaustible patience and a North Carolina charm that have won him the stanch admiration not only of the other services but also of the generals.

It was he who engineered the unanimous Gray Board report on the National Guard, a project that took both persuasion and courage, and it is by no means to Mr. Gray's discredit that political pressures resulted in the selving of the report. As Assistant Secretary he did valiant work in helping to place the procurement work of the Munitions Board on a sound basis. As Secretary he has approached the ticklish problem of race relations in the Army with both principle and realism, a realism he has carried over in his advocacy of the continued need for the foot soldier as against the slick claims of the pushbutton and aerial blitz addicts. In short, he has been an Army Secretary of extraordinary merit who will be extremely difficult to replace. The one consolation is the knowledge that he will be in a position to continue his public service in his home State.

The Boy Scouts of America Conclude 40 Years of Service to American Youth and American Institutions

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. HAYS of Arkansas. Mr. Speaker, we hear a great deal these days about the mid-century. Many writers have looked back at the past 50 years while comparatively few have looked ahead to the next half century.

America's future lies in its youth. We have heard that expression many times. It gives me pleasure to bring to the attention of the House the fortieth birthday anniversary of the Boy Scouts of America which is being celebrated by Boy Scout Week, February 6 to 12. Here in Washington just 40 years ago yesterday, February 8, 1910, the organization was incorporated, and in 1916 the Congress of the United States granted the Boy Scouts a Federal charter.

The purpose of Scouting, reads the Federal charter, "shall be to promote, through organization and cooperation with other agencies, the ability of boys to do things for themselves and others, to train them in Scout craft, and to teach them patriotism, courage, self-reliance, and kindred virtues."

Scouting has become so woven into the American way of life it is difficult to recall when our Nation did not have this character-building, leisure-time program for its youth.

Today there are 2,579,515 boys and adult leaders enrolled—the highest active enrollment at any time. Since 1910, more than 16,500,000 American boys and men have had the benefits of the training, fellowship, handicraft skills, and high adventure of Scouting. America is all the richer for it. Many men in high places in American affairs today proudly credit Scouting's influence in their lives.

The year-in, year-out civic and emergency service to the Nation by the Boy Scouts needs no recital here. Scouting brings to boys at an important time in their lives a program of worth-while activities, under high-grade, volunteer leadership.

Simply stated in the words of their chief Scout executive, Dr. Arthur A. Schuck, "the Boy Scouts of America is dedicated to the high purpose of enriching the Nation by helping its boys and young men grow physically, mentally, morally, and spiritually so that our heritage of freedom will be strengthened in the citizens of tomorrow."

Many of us will have the opportunity this summer of seeing for ourselves what makes Scouting grow.

At historic Valley Forge next June 30 to July 6, some 40,000 Scouts and leaders, from every part of the Nation and a few hundred guest Scouts from overseas, will live together in their own tent city at the Second National Jamboree. There will be boys of every race and creed, and of every economic level, sharing in a great adventure that will be the climax of the Scouts' 2-year "crusade to strengthen the arm of liberty."

If you get out to the hallowed ground of George Washington and his heroic Continental Army, and mingle with the Scouts, you will be assured that our Nation in the years ahead will be in strong and dependable hands.

Newsprint Inquiry

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. CELLER. Mr. Speaker, the Subcommittee on Study of Monopoly Power, of which I am chairman, has received complaints that the price of newsprint is excessive. Accordingly I have announced that hearings will be held on the question of monopoly in newsprint.

In a preliminary way I would say that we want to know whether the prices on imported newsprint are excessive. We want to know whether American producers are following the import prices,

and if so, whether they are operating at capacity. If American mills are operating below capacity, why do they not lower their prices enough to get full capacity? Has anyone recently considered setting up new paper mills in American territory, including Alaska, and if so, what happened to these projects?

Other questions will appear as the investigation proceeds, and I hope that persons having authentic information on this problem will offer their aid to this subcommittee.

Arming Our Future Adversaries by Shipping Arms to the Middle East

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the RECORD a very able letter to the editor from the New York Times of February 1, 1950, signed by Dr. Manfred Sakel. The letter discusses the curious State Department pattern of action and inaction in the Middle East, not exhaustively, but capably. I feel, personally, that the present Secretary of State, the Honorable Dean Acheson, has gone far toward correcting the startling imbalance of the middle echelons of State Department officials; but I agree with Dr. Sakel in this essay:

SHIPPING ARMS QUERIED—SECRETARY ACHESON IS CRITICIZED FOR STATEMENT CONDONING THIS TRAFFIC

To the EDITOR OF THE NEW YORK TIMES:

The statement made recently by Secretary of State Dean Acheson, condoning the shipment of arms to the Middle East, in answer to Congressman JAVITS' question, as reported in the New York Times of January 16, should be of grave concern to every citizen of our great Nation.

Two points seem particularly distressing and contradictory. The condoning of such traffic of arms is directly counter to our inherent and oft-stated policy of nonsupport to aggressors, even latent ones. But their own declarations, several of the middle-eastern countries who have been supplied with arms have recently stated that they have suffered a loss of their military prowess of aggression. They frankly give as their reason for their present need of arms their wish to recapture their lost military aggressive pride. We, as a nation, by nature and officially, deplore aggression and we do not knowingly encourage the aggressor. The Secretary's statement, however, seems to weaken this position of ours and, at the very least, undermines our pronounced stand on these principles.

REPEATING EXPERIENCE

The second and more important point is our apparent reluctance to help one of our closest allies avoid repeating our painful and costly experience in the Far East. It is clear that our State Department, that of the greatest nation on earth, is somehow unable to free itself of the influence of the permanent officials of the colonial office of our ally, the once-powerful Britain. We seem disinclined to try, at least, to point out to them the very bitter lessons, at the expense of several billions of dollars, which we learned from our far eastern experience: that, by supplying arms to those unwilling or incapable of using them, we are actually supporting those groups whom we did not intend to, for these very weapons find their way into exactly those hands opposed to those we originally wished to help. Consequently, our actions indirectly and inadvertently helped subvert our aims and defeated our chosen friends. In turn, it alienated all of them from us.

If the strategic planning of the Government of the United States has decided that the Middle East is so vital to our defense, how can we abet the colonial office in repeating these very same miscalculations? If these officials continue, with our acquiescence, to practically give their armaments (at the ultimate dollar expense of our taxpayers and at the expense of the blood of our citizens) to those who are not in a frame of mind or who are not capable of using them effectively, and will lose them eventually to a potential adversary of our Nation, as was demonstrated in the most recent historical events in th Middle East, are we not again driving our more capable friends into the opposite camp and so helping to defeat the purposes to which we are dedicated? Will not their present acts tend to alienate the only people in this strategic area who so recently have proved themselves both willing and able to use arms effectively in defense of the very principles of democracy and peace to which we subscribe?

WEAKENING LINK

It would be reassuring to the citizen to know that the State Department is aware of the fact that any chain is as strong as its weakest link, and that goes for the chain of defenses too. Against the background of this fact, it seems the State Department is weakening the potentially strongest link in the chain.

This letter is written by one who does not claim to be too well versed in politics, and, therefore, does not wish to give political advice, but who, choosing the science of logic as his field, wishes merely to point out the contradictions in the policy devised by the State Department.

MANFRED SAKEL, M. D.
NEW YORK, *January 25, 1950.*

The Columbia River

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I include articles 9 and 10 in the series written by Mr. Leon Starmont on the Columbia River region:

[From the Spokane (Wash.) Spokesman-Review of January 30, 1950]

LET'S EXPLORE THE BASIN

(Art. 9)

(By Leon Starmont)

Potholes Dam having been officially renamed O'Sullivan Dam, Foster Creek rechristened Chief Joseph, and Umatilla Rapids changed to McNary, State and Federal officials connected with the Columbia Basin irrigation project point to three other opportunities to honor men identified with basin development or Northwest history.

South Dam at Coulee City is virtually complete. It holds water in the reservoir in Grand Coulee. U S 2 runs along its top. A bill was introduced in Congress to attach the name O'Sullivan to South Dam, thus honoring a pioneer worker for the project and long-time secretary of the State Columbia Basin commission.

For some reason James O'Sullivan's friends wanted his name attached to Potholes rather than South Dam. This leaves South Dam open for another name.

LONG LAKE CONFUSING

North Dam, now under construction on the outskirts of the city of Grand Coulee, is the north end of the 27-mile equalizing reservoir.

Long Lake Dam, overlooking Stratford, also needs a new name, as it is duplicated in the largest dam on Spokane River. It is part of the main canal, and has no separate power or storage function.

Of these four dams only North Dam was provided for in the original 308 report at its present location. South Dam was first planned for a location 3 to 5 miles north of Coulee City, and Long Lake and O'Sullivan (Potholes) Dams were not in the original scheme of things at all.

The original plan called for a bifurcation works at Bacon siphon, a few miles south of Coulee City, with the west main canal running down the east side of lower Grand Coulee to Soap Lake, around its north end and on past Ephrata and Quincy. There is no change in the present design south of the Soap Lake siphon.

CONSTRUCTION DEFERRED

The main east canal, in the original 308 report, was to follow roughly the line of what is now mapped as the east high canal, with construction deferred indefinitely. It reversed, at a somewhat lower level, the first-planned north canal under the gravity ditch as projected in 1920.

Towns or railroad stations which were below the main canal in the original report, but are now above the main canal, include Stratford, Ruff, Warden, and Cunningham.

Lind, which was within the gravity irrigation area, was about 5 miles from the area reached under the original pumping plan, and is now 15 miles from the district to be reached by the east low canal.

The easterly limits have been moved a dozen miles west by the dropping of the east high canal.

HAD THREE MAIN LATERALS

Most of the area reached by the Potholes east canal and its Wahluke lateral was to be reached by a long ditch from Ruff, under the original plan. The southern part, however, was to be served by a lateral leaving the main canal just north of Cunningham and running west of Hatton to the present location of the Pasco pumping unit.

Another lateral from near Sulphur, on the Connell branch of the Union Pacific, was to serve the section east and south of Eltopia.

These numerous changes in design have complicated the problem of locating highways, particularly in the east and south Columbia districts. Where to put the roads, and how to finance them is one of the main problems before the State Columbia Basin commission, which has scheduled a session on this subject at Ephrata today.

As a general rule, the Bureau of Reclamation bears the expense of bridging the major canals wherever there is an existing road. But when a new road is put through the expense falls on the counties, which already are bothered by growing pains in school finances.

MINOR CHANGES

Other changes made since the pumping plan was adopted involve town locations, wasteways, and supplementary reservoirs.

When O'Sullivan Dam was first planned, about 1944, it was to create a reservoir including Moses Lake, which was to be raised

UNIVERSITY OF MICHIGAN LIBRARIES

a few feet and the whole developed as a recreational area.

Announcement last year that the reservoir would not include Moses Lake created consternation at the city of Moses Lake, formerly Neppel. Many residents had bought business and residential property there in expectation of placing boats on the 22-mile waterway that would extend from O'Sullivan Dam to the mouth of Rocky Ford Creek. This change is still being protested.

One change then announced has been canceled. This is the decision not to run fresh water from wasteways into Moses Lake.

The latest is that Winchester and Rocky Coulee wasteways will not be extended to the lake, but a new supply of fresh water will be directed into its southeast corner, near the creeping Barcan dunes and the proposed bypass that will take U S 10 south of the town.

[From the Spokane (Wash.) Spokesman-Review of January 31, 1950]

LET'S EXPLORE THE BASIN

(Art. 10)

(By Leon Starmont)

If there is anything these days that makes residents of the Columbia Basin irrigation districts fighting mad, it is the question of what road will be built first, and where it will go.

This was illustrated at yesterday's meeting of the State Columbia Basin commission at Ephrata, which only three of the seven members were able to attend. Chairman Jack Rogers, ex officio member as director of conservation and development, was present, with Frank T. Bell, Ephrata hotel operator, representing the Quincy-Columbia district, and Leon L. Bailie, of the south Columbia district, who also is president of the Washington State Reclamation Association.

ROAD ARGUMENT BITTER

It was away below zero in most of central Washington, and many roads were blocked, but 125 residents of the districts, and others from Yakima valley and Seattle, were on hand. So were W. A. Bugge, State director of highways, and James Travis, assistant manager of the Atomic Energy Commission's Hanford works, which is involved because of its closing of the Connell-Yakima cut-off via Wahluke ferry.

Rogers emphasized that no subject was to come before the meeting except roads. Later meetings, he indicated, might take up schools and domestic water. The meeting was held in the Ephrata community hall.

Principal disputants were the advocates of the Warden and Othello routes for the projected north-south highway through the district, from Pasco to Coulee Dam.

In 1945 a route was proposed by the Bureau of Reclamation, based on a joint State and Federal investigation, which left U S 395 at Eltopia and ran 2 miles east of Othello and 3 miles west of Warden, veering westward and following the Connell Northern branch of the Northern Pacific almost to Adrian. At that point one branch turned west to Soap Lake and another east to Stratford.

ANOTHER ROUTE BUILT

Another road has been improved, however, running straight north and south through Warden, about 3 miles east of the route recommended in 1945. It starts on U S 10, 12 miles east of Moses Lake, and ends on an east-west road about 6 miles east of Othello. If continued north it would reach Coulee Dam without going near Grand Coulee reservoir at all. If continued south it would hit U S 395 about Eltopia.

Othello objects strenuously to this road, and wants a more westerly route selected for the ultimate improvement. Its route is about 3 miles west of the 1945 proposal, and generally 6 miles west of the Warden route.

Othello is without a good highway now, although it is on a direct line between Pasco, metropolis of the South Columbia district, and Moses Lake, largest town in the presently irrigated district crossed by U S 10.

Advocates of these routes made it clear that the 1945 compromise satisfied neither side. Debate grew bitter at the morning session, but Chairman Rogers calmed the waters with assurance that no snap judgment would be taken.

Another dispute raged over the projected Burke cut-off, which would create a beeline from Ephrata on State Highway 7 to Burke Junction on U S 10, west of Moses Lake. This projected route bypasses Quincy.

Result of the discussion was passage of a resolution, addressed to Gov. Arthur B. Langlie, asking that he declare a state of emergency on Columbia Basin road problems, and that the legislature be petitioned to give priority to county and farm-to-market roads in the irrigation districts, instead of to the State highways.

The resolution makes it clear that the suggestion comes from an informal public meeting, called by the State Columbia Basin Commission, but not from that body.

Advocates of the various routes are expected to prepare the strongest cases they can make, for their respective routes. Decisions probably will be made by the State Highway Department and the Bureau of Reclamation, although either agency would like to rid itself of the necessity.

OTHER ROADS IN BASIN

Bids were to be opened today for a bridge across Lind Coulee near O'Sullivan Dam, but because of the deep snow in the area the opening was postponed to February 14, the Bureau of Reclamation announced. It has been impossible for prospective bidders to examine the area, the Ephrata office of the bureau explained. The same contract would call for relocating of about 6½ miles of county roads wiped out by construction of O'Sullivan Dam, near the south end of Potholes Reservoir.

Meanwhile work is being rushed on the new speed-ball highway along the east edge of Grand Coulee Reservoir, between Coulee City and Coulee Dam.

Also undergoing extensive improvement is the middle route (W. 7) between Davenport and Ephrata, which when linked to Spokane via the proposed Four Lakes cut-off east of Harrington will be the shortest route to a good share of the East Columbia and Quincy districts.

Blueprint for a Better America

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 9 (legislative day of Wednesday, January 4), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the conclusion from a policy statement entitled "Blueprint for a Better America" by the New York Young Republican Club.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

CONCLUSION

We believe that the basic difference between the Republican Party and the Democratic Party is clearly defined. It is not a difference in goals. It is a basic difference in the necessary consequences of the policies pursued in attaining our goals. This difference is reflected in the completely dissimilar political and social philosophies prevailing within each party. The choice between these two philosophies lies with the American people—a choice between:

1. SELF-HELP VERSUS HAND-OUT

The leaders of the Democratic Party pursue a policy of unlimited Federal spending for the purpose of appeasing pressure groups which command large blocs of votes. Their program is not one of prudently conceived assistance to the individual in need, but it is rather a program of creating a reliance upon government, from the cradle to the grave. The result has been the slow destruction of self-reliance and of individual incentive to provide for a rainy day. By appealing to the something-for-nothing instinct, the Democrats have endeavored to obtain widespread support of their program.

We firmly believe that the American people are a self-reliant, independence-loving people, and that they will grow to resent being made the involuntary objects of permanent charity. The American people prefer to rely primarily upon their own industry, ability, and decision to provide not only the necessities, but also the luxuries of life, rather than to rely upon the uncertain benevolence of Government. Assistance to those who, through no fault of their own, are either consistently unable to obtain the necessities of life or unable to cope with sudden physical or economic misfortune is accepted as the responsibility of a humanitarian society; it should not be made a substitute for individual enterprise.

2. PAY-AS-YOU-GO VERSUS EXTRAVAGANCE

The Democratic administration has pursued a policy of spending each year billions of dollars more than the annual Federal income in order to effect more and more Government hand-outs. The result has been a meteoric rise in the national debt—which today is equivalent to a mortgage of $7,000 on every American family. Lenin once boasted: "We shall force the United States to spend itself into destruction."

We believe that the American people will not continue to support such spendthrift policies and that they will demand strict adherence to a pay-as-you-go Government program. The Republicans must refuse to out-bid the Democratic administration, and must develop a program which is geared to what we can afford. Our immediate goal should be a balanced budget and a gradual but substantial reduction of the national debt. Within these strict limits, we favor expenditures for health, housing, old-age security, and other services and benefits as previously proposed in this blueprint. We are confident that our human, technological, and natural resources can provide a rising standard of living for our people far superior to that offered by a permanent Government dole.

3. HOME RULE VERSUS BIG GOVERNMENT

Under the Democratic administration, the Federal Government has preempted many areas of taxation, economic regulation, and social welfare formerly reserved to State and local governments. The result has been the development of a gigantic Central Government, with an alarming concentration of powers in the executive branch. The theory that the Central National Government should and must be given all major powers and functions is diametrically opposed to our concept of a system of sovereign State with a Federal Government of enumerated powers. Concentration of power is but one step removed from abuse of power.

We feel that the present concentration of power in the National Government is dangerous and inefficient. State and municipal governments must be permitted and encouraged to perform those functions which relate to matters of local concern. We firmly believe that a minimum of governmental interference with the individual's decision and action is alone consistent with an opportunity society.

Under the Old Pricing System Farm Products Were Worth No More Per Unit of Measure Than the Value Placed Upon the Needless Surplus Products—Every Panic, Depression, or Recession Marked by Industrial Unemployment Can Be Directly Traced to the Archaic, Unjust Pricing of Agricultural Products

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. BOYKIN. Mr. Speaker, I am in receipt of one of the finest talks on agriculture that I have ever read. It was directed to my attention by Col. C. C. Hanson, secretary of the Association of Southern Commissioners of Agriculture.

I need not remind my colleagues that the Association of Southern Commissioners of Agriculture is an association made up exclusively of the duly elected public officials of the 14 cotton-producing States, who have been charged by their electorate with the care and the well-being of the agricultural industry within their respective States.

The speaker was the Honorable FRANCES P. BOLTON, of the Twenty-second District of Ohio, and the address was delivered before a State-wide meeting of the Ohio Farm Bureau Federation in Columbus, Ohio, November 28, 1949.

In transmitting this talk, Colonel Hanson told me that he regarded it as one of the "clearest expositions he had ever read of the agricultural problem facing this Nation today and the need for full parity prices to be paid the farmer for his products."

Complimenting Congresswoman BOLTON upon her depth of understanding of this problem facing the American farmer, to say nothing of repercussions upon the American industrial workers, Colonel Hanson commends its consideration to Members of Congress and others who are interested in the Nation's welfare problems. In his letter of transmittal he said:

> If the Congress had more Representatives like Mrs. BOLTON from the great metropolitan areas who could grasp the problem of the farmer with the understanding and the wisdom exhibited in her Columbus talk * * * the American farmer would achieve a parity of price for that portion of the fat, food, and fiber consumed within these United States, and without either the purchase of a single dollar's worth of farm commodities by the Federal Government or appropriation by Congress of a single dollar of taxpayers' money * * * to support agricultural prices in this or any other year.

The address follows:

PARITY PRICE IS AN ECONOMIC, NOT A POLITICAL PRINCIPLE

You have done me a signal honor in inviting me to address you, the representatives of the Ohio farmers, gathered here in annual convention tonight.

My anticipation has been keen, and I want you to know that there is a deep measure of satisfaction in having opportunity to talk with this great audience of Ohio farmers here tonight because I come of solid farm stock and count myself very much as one of you.

My brother owns the rocky little farm in Connecticut that my father's people worked for more than 150 years. My father's father left three fingers of his left hand in the mill there to which he took the grain of one fall's harvest to be ground into the winter's supply of flour.

My mother's people came west and farmed both in Geauga and Cuyahoga Counties. Payne's pastures are only memories today and Nathan Perry on his pony riding across his farm seems like a dream—for a great city has swallowed most of it up. But next time you come to Cleveland go past Euclid Avenue and Twenty-first and Twenty-second Streets where the Perry pastures once were. You'll see a sign "Perry Parking" and in the middle, raised above the cars a yellow house. The central section was built in 1824—there my mother and my grandmother grew up—and there I spent many years of my own youth.

How I used to love the excitement of crawling under the barn and finding the eggs. I think it was such memories that made me rather resent the all-too-organized life of the modern hen when my own sons came along. There is no better foundation for living life than a farm youth—and I am deeply happy that at least one of my sons has kept up the tradition not only of my family, but of his father's as well. Franchester Farms and its golden Guernsey milk, its strong strains of useful animals is no doubt known to many of you. Just as the old farm down town was crowded out, Franchester Farms in Cuyahoga County has begun to make way—and most of the animals and all of the real farming has moved down to beautiful Wayne County. Even my chickens have gone.

Although my life has been devoted in the main to widely diversified interests quite apart from agriculture, the roots of it go deep into the soil—nor can I imagine losing my interest in diversified farming. Some day—when I have served my tour of active duty I shall find myself a tiny farm where my hens can lay their eggs in exciting places and there will be a cow that won't mind yielding her milk to my fingers rather than to the machines.

You see, to me farming has been and will always be more a matter of a principle of life—a mode of living—than just a means of livelihood. To me you who till the soil, who plant and harvest, who contend with nature, whose understanding of God's law is a part of your very being, are the rock upon which this Nation stands. Yes—farmers—dwellers on the land, producers of the food man must have to live all over the world, know the deeper meaning of life as no city dweller can ever know it. Even as you know the bitter cost of labor you know the sweet, the indescribable joy of planting that new life may come from the seemingly dead earth. You know, as none but farmers know, the deep gratitude that wells up when the harvest time is successfully over and your bins are full, and your surplus sold. To you the Thanksgiving season is one when you have often gone out alone perhaps at dawn or at sunset-time and raised your heart to the God whose tool you know yourself to be, under whose great laws you have known freedom. You know that a man must sow, he must care for his fields, his orchards, his stock with his own hard labor if he is to reap. You know also the joy that such living gives.

Men follow many lines of endeavor—their vocations are increasingly diversified—but there is none that gives greater dignity than that which agriculture affords. It is the most basic of all industries. When I say basic I mean that of all the tens of thousands of commodities known to man—of goods that satisfy our senses—that afford us all the comforts of life—physical, intellectual, spiritual—the farmer alone is the producer of that commodity without which all life would in the last analysis perish.

In reality there are just two classes or kinds of goods in this world: Those which are dispensable to human life and those which are indispensable. The farmer produces the indispensables—the fat, the food, and the fiber. It is the farmer who produces those things which feed and clothe and house us. Oh, I am not saying that there are not scores of other commodities which to a modern civilization may seem necessitous to human life, but again I repeat, it is only the farmer who produces those things which are indispensable to all life.

There is not time for me to go into detail in the matter of the well-being of the farmer. Suffice it for me to say quite categorically that the thoughtful people in this country know that when American agriculture is prosperous all America is prosperous. When agriculture slows down, unemployment is present in every mine, every mill, and every factory in the land.

Nor is it only that those who live in cities are dependent upon the farmer for their food and all other of life's indispensables, but they are exceedingly dependent upon him for his purchasing power.

As a Representative of the Congress of the United States, I find it difficult to understand some of my colleagues who seem to feel there is no justification for paying our farmers for the products their toil wrings from an often reluctant earth. I have contended with them that if, through some unjust system of agricultural economics our farmers are paid too little for the products of their labor they, in turn, cannot buy the products of American manufacture. That if the farmers are paid justly; yes, generously for the products of the farms, they then in turn can buy generously of the thousand and one gadgets and other things that are processed in the great cities of the land, and in that wise afford gainful employment to the industrial workers who run our great American industries.

Read history and you will find that every human crisis, upheaval, panic, depression, recession, or what not that has ever temporarily stopped or caused marked distress to the financial structure and the progress of our country, has been directly traced to unjust pricing of agricultural products in these United States.

This unjust system of pricing decreed that the annual crop was worth no more per unit than the value placed upon a needless surplus.

The farm parity of price formula is a keystone upon which the economic security of these United States today can be dependent. That security must not rest upon the possible direction of political winds, it must rest quite simply upon basic economic principles. When I use the term "parity of price" I do not mean any laws in which are written formulas or even provisions to pay 60 or 70 or 80 or even 90 percent of parity. Parity to me would mean par, justice, equality. When made applicable to agricultural income in this year of 1949 in these United States, parity to me means that we should pay to the American farmers a price commensurate with—or shall I say, in parity with—the prices which, under the modern system of pricing, the farmer is compelled to pay for the industrial goods which he finds necessary to his enjoyment of the American way of life.

It is certainly not economically unsound or unjust to fix the price of basic crops in behalf of the agricultural producer, when society in general and Government in particular has practically fixed the prices on everything the farmer has to buy.

Are not taxation rates, railroad freight and passenger rates fixed by law? Isn't the price of electric current and gas per thousand feet also fixed by law? Aren't you fixing the price of the industrial products the farmer must buy when you regulate hours of labor and minimum wages paid? It would seem rather clear that society as a whole cannot continue with all the price fixing that has been done to bolster industry, transportation, communications, public utilities, insurance, et cetera, without doing something to insure the farmer a parity of price for the products of his toil, his risk, his faith, without which we would all die.

I rejoice today with American farmers everywhere, with those who farm their little tracts to cotton, or to peanuts or to tobacco in the forks of the creek in the great Southland. I rejoice with those who cultivate their broad acres on the plains of Kansas and in the Dakotas, and with those who practice the diversified type of farming which we follow here in the great Buckeye State.

I rejoice that the day has dawned when the American people at long last are learning to pay their just debt to their agricultural producers, cattle and dairy men, for the endless toil and privation spent in producing the fats, the foods, and the fibers without which this Nation would perish in a single crop year.

American agriculture has not alone built America great, but for more than a hundred long years our exportable surpluses of farm crops—whether beef, pork and pork products, lard, tobacco or cotton—have maintained the balance of our foreign trade against the world.

Yet, my friends, in spite of these things there are those today who say our farmers constitute a pressure-lobby group—that parity formula is a species of political relief.

To them I would say that the principle of parity of price is an economic principle, grounded in equity and justice, and that we should never permit it to be traduced and made use of as a political football by any political party at any time.

How many people in our country realize that they are eating a greater variety of food of a better quality than ever before in the history of this Nation?

When I was a girl in Cleveland, oranges were a rarity except at Christmastime, and grapefruit was unknown. Figs and dates were something a few of which one might find in a Christmas stocking. Lettuce, radishes, string beans, green onions were garden vegetables which we then enjoyed on our tables but a few weeks in the year, in the late springtime season.

Strawberries were something that we knew in strawberry time. Peaches, in peach time. Raspberries, blackberries, and blueberries, in berry time. Today strawberries are available in the market places of America when winter snow is 2 feet deep outside the food shops in our cities.

Lettuce and string beans, radishes, celery, fresh fruits and green vegetables of every variety are today available to the American people the year around, from the rock-bound coasts of Maine to where the Pacific Ocean laps our shores on the west, and from Canada to the Gulf of Mexico.

The American consumption of citrus fruit and juices has increased more than 382 percent in the last decade alone, that of canned fruits and vegetables has likewise increased by more than 20 percent, while frozen vegetables and fruits—a thing unknown to the American people as short a time back as 1935—have made the prodigious increase of 725 percent.

As it has been with fruits and vegetables, so it has been with meats; the annual per capita consumption of which now stands at an all-time high.

There is no scarcity now, nor has there ever been a scarcity, of meat for the American table. Americans everywhere are eating more meat than ever before. I am especially glad to say that this is particularly true among the low-income groups. Moreover, they are eating better cuts of meat and eating more of them.

The limited supply of choice cuts of pork and beef, steaks, chops, hams, bacon, and what not, is in no wise due to any shortage of cattle or swine, or any decrease in the production or slaughter of the same. The cattle and beef slaughter is heavier than ever. It is merely that there is now a sharper competition between all income groups for the better grades and better cuts of all meats and meat products, that prices are high, and the better cuts are in short supply.

And here is an even more amazing fact. This great superabundance of food consumed by the American people (which in 1935 required 31,000,000 people, working on 6,600,000 farms, to feed 140,000,000 people) now is being produced by 28,000,000 farmers working on 5,900,000 farms, and feeding more than 149,000,000 people—our population as of today.

Somewhere in the Scriptures it is written: "By their fruits ye shall know them." And so I say to you, the members of the American Farm Bureau Federation, that it is by the fruit of the things that the American farmer has produced that we do know him, and the work that he has done and is doing among us.

My friends, some several weeks ago I had occasion to make inquiry of the Fats and Oils Division of the United States Department of Commerce, with respect to the declining prices on hog lard. The decline in prices had been more or less reflected by the increased importation of competing coconut, cotton, and other vegetable oils and fats used for cooking and shortening purposes.

Complaint had reached my desk that hog lard, a product upon which America had from the inception of the Nation built its brain and brawn, was destined to be thrown into the soap kettles. My problem was to find out why. You can imagine the economic shock I received when facts and figures were presented for my consideration to show that America was eating higher up on the hog today than ever before in all our history.

And because of that change in eating habits, the packers of pork and pork products have no longer found it profitable to pack, ship, expose, and offer for sale such things as pigs feet, pigs knuckles, backbone, chitlings, and other secondary cuts of pork and pork products which for decades past have been enjoyed on the tables of the great masses of American people. Now, for want of profitable markets, these valuable food products are actually being dumped into soap kettles, there to be boiled into soap.

It grows more and more apparent that people in the cities are no longer content to eat the end chops off a loin. I have seen the end chops or loin butts sell at a discount of 10 cents a pound below the price of the center cuts. And despite this—shall I say a standard of high living—we are still paying the American farmer a less percent of the average industrial income for food than we had previously paid for the smaller quantities, lower qualities, and a far less diverse diet. If I had not investigated, I would not have believed that the people in the cities, when they buy such breakfast cereals as corn or wheat flakes in the individual 1-ounce packages—which retail at about 4 cents apiece—are compelled to pay at the rate of $38.40 per bushel for the corn or the wheat which they contain.

Let me remind you that Saturday on the Chicago commodity market corn sold at a price of $1.29½ per bushel and wheat at $2.16⅜ per bushel.

When you buy a cereal in a hotel such as this—at 15 cents per individual package—you pay for the corn or wheat which the cereal contains at the rate of more than $100 per bushel.

These facts prove beyond all doubt that the high retail prices in the food shops of America today are not the fault of the farmer.

I have no complaint whatsoever to make with the attractive, sanitary, and hygienic methods that now characterize the packaging and the marketing of our food products, for while they are tremendously costly and add to the cost of living, nevertheless they do guarantee us standards of cleanliness and quality heretofore unheard of.

Certainly I would rather buy and pay for a package of Uneeda Biscuits wrapped in waxed paper, with both moisture-proof wrappers and moisture barriers covering the same, than go back to the day when at the corner grocery the clerk would stir a broomstick in the cracker barrel to chase out the rats before reaching down to take up and weigh out a pound of ofttimes stale, damp soda crackers to be carried home in a paper bag.

But by the same token this standard of high living represents the difference roughly between $1 and $38.40 per bushel of corn and can be laid at the door of our modern system of packaging, distribution, and marketing.

In conclusion, my friends, let me repeat what I have heretofore stated: that if the American people pay the farm producers of this Nation too little for the fat and the food and the fiber necessary to sustain their lives, that our farmers can in return spend but little to buy the products of the mines and mills and factories of America.

So long as the American people pay our farmers in equity and in justice a parity of price for the products of their soil and toil, then can the American farmers buy generously and maintain the millions of factory workers at gainful employment in the industries throughout America.

It is not, perhaps, as simple as I am making it sound—for the moment is upon us when we must reevaluate existing methods and conditions. We must find ways to put these basically important matters clearly into the field of sound economic principle, where they belong. We must take them definitely out of politics.

We know that when agriculture declines, America declines. We know that when the American farmer is prosperous, America is prosperous. We know also that at this critical moment in the life of man on this earth America's prosperity is the key to world peace. Unless we are prosperous there will be nothing with which we can express that curiously deep desire that is in the heart of every American to help those who need help, to protect others from bondage, and to see freedom under law the lot of all men.

Great as are the problems facing the farmer today, difficult as are those facing the workers in the mines, the factories, the shops, the stores, and the offices, they are but parts of the whole great future of America, and we must face them and solve them as such.

The strength of the United States, of this wonderful Nation of ours, must be increased—the honor and integrity of our America must be maintained—we must give constant proof that here in this land of ours men and women recognize their individual responsibilities toward each other and to the Nation whose formula for freedom has given more comfort, more opportunity, more joy to more people than any formula in known history.

If we, as farmers, seek our own particular solutions with no thought of America as a whole, if industry or labor or the white-collar worker looks after himself only, we shall find ourselves in a dead-end street instead of on that great road to freedom upon which destiny placed this Nation of ours.

True as it is that America prospers in proportion to prosperity on the farms, it is no less true that unless America as a whole swings along with everything in balance, with all the instruments of her great symphony of freedom synchronized and in harmony, not only the people of America, but the people across the world will find themselves lost in an intolerable darkness.

You, who contend with nature—who are close to the earth and her seasons, to the beauty of twilights and dawns, to the wonder of silence, the miracles of life, you know that a nation is not a tangible thing, not a building built with bricks and mortar—you know a nation is not its laws, its customs, its behavior, even its history. It is its people. You know, too, with a deep certainty of experienced knowledge, that the earth is the Lord's and the fullness thereof, the world and they that dwell therein and that it is to Him that we are responsible.

We can carry this responsibility with worthiness and abiding joy if we remember that to Him all people matter—not just one or two groups. Remembering this we can find the right method of application of the principle of parity of price for the farmer, of the principle of just recompense for the men and women in industry, and all its ramifications for teachers and preachers, for scientists, for those who care for the sick.

Remembering our responsibility to the Infinite Father of all mankind we can and must solve the many problems we have made for ourselves that America may be strong in freedom, in justice, in humility, and in peace.

United Ireland Urged by Knights of Columbus

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. McCORMACK. Mr. Speaker, recently the supreme board of the Knights of Columbus met in Washington for their regular midwinter meeting to arrange the forthcoming program for the Knights during the current year. Among the various resolutions adopted was one of particular interest to the Congress, since it recommends the passage of the Fogarty resolution, now pending before the House Committee on Foreign Affairs.

Mr. John E. Swift, of Boston, supreme director of the order, was chairman of the committee which drafted the resolution, which urges the complete unification of all Ireland unless a majority of all the voters in Ireland should by a plebiscite determine otherwise. No fairer means of solving this very controversial issue could be employed than the holding of a free plebiscite of all the people in Ireland, who alone have the right to determine whether any part of that small island country should be cut off and attached to the dominions of a foreign nation. Certainly the foreign parliament of that foreign nation does not have that right, even though they presumed to accomplish just that by an act of the London Parliament.

I trust that the recommendation of the Knights of Columbus will be given full consideration. The text of the resolution unanimously adopted by the Knights of Columbus reads as follows:

Whereas the Honorable JOHN E. FOGARTY, Representative in Congress of the Second Rhode Island District, submitted to the House of Representatives, June 28, 1949, the following resolution (H. Res. 270):

"Whereas the House of Representatives, Sixty-fifth Congress (1919), third session, by House Joint Resolution 357, duly passed a resolution declaring that the people of Ireland should have the right to determine the form of government under which they desired to live; and

"Whereas in the intervening 30 years, the people of Ireland have so determined but the effect of their determination has been thwarted, and they have in fact been deprived of the right to the form of government under which they desire to live; and

"Whereas 26 of the 32 counties of Ireland have been successful in obtaining international recognition for the Republic of Ireland which has, as its basic law, a constitution modeled upon our own American Constitution: Now, therefore, be it

"*Resolved*, That it is the sense of this House of Representatives that the Republic of Ireland should embrace the entire territory of Ireland unless the clear majority of all the people of Ireland, in a free plebiscite, determine and declare to the contrary"; therefore be it

Resolved, That the supreme board of directors of the Knights of Columbus endorses the sentiment and purpose of House Resolution 270; and be it further

Resolved, That copies of this action of the supreme board of directors be forwarded to Congressman FOGARTY and to the members of the House Committee on Foreign Affairs.

Point Four

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. GORDON. Mr. Speaker, the recent announcement of our decision to make the hydrogen bomb has now forced us all to think seriously and realistically about the foreign policies of this country. There are many who feel that all hope for the preservation of civilization is gone. I do not shut my eyes to the terrible facts that confront us; and I commend the President for his forthright decision of a few days ago. But I suggest that we should not lose sight of the genuinely constructive leadership of the President and his advisers, clearly manifested in his recommendations for a point 4 program. This program, embodied in proposed legislation, is now under active consideration by the Committee on Foreign Affairs, of which I am a member. The point 4 program is an effort to make permanent and lasting improvements in the world by assisting the stable development in areas of the world that are at present economically underdeveloped. One aspect of this program is the development of a favorable climate for private investment.

Americans generally, and Chicagoans in particular, are deeply interested in the various problems that affect the successful accomplishment of the point 4 program. On February 1, 1950, the Chicago Council on Foreign Relations, with the cooperation of the Inter-American Council of Commerce and Production, sponsored a luncheon at which the principal speaker was the Honorable Edward G. Miller, Assistant Secretary of State for Inter-American Affairs. Mr. Miller's address was an important contribution to our thinking on this subject, and I feel that it should be read by all of us. The address follows:

A FAVORABLE CLIMATE FOR PRIVATE INVESTMENT

I

I feel honored that you have asked me to be with you today here in the heart of our country. I was last in Illinois a little over a year ago, when I came to attend the inauguration of your Governor, Adlai Stevenson, whom I am proud to count as one of my dearest friends. The record he is making should be an inspiration to men of talent and high purpose, attracting them to the public service. Illinois is also fortunate in the two Senators who represent it in Washington. Senator LUCAS, as majority leader, set a high standard of performance during the first session of the Eighty-first Congress. Senator DOUGLAS has in 1 year established himself as one of the most respected Members of the Senate. No State is better represented in that great body than is yours.

This audience of leaders in the business and professional world affords an excellent occasion to deal with a subject now under intense discussion in financial circles. That is the question of creating favorable conditions for private investment in Latin America. This question, in turn, raises further questions as to how the economic development of the Latin American countries can best be achieved.

The basic position of the United States is clear. We want to support the efforts of our sister American Republics to achieve economic maturity. No nation in the world's history has ever embarked so deliberately upon a policy of helping other nations to strengthen themselves. The point 4 program is the true expression of a national ideal, an ideal that is shared by business and labor and is reflected by our Government. Accordingly, we are prepared to extend loans of public funds to other American countries to help them build basic projects essential to their development. The two great lending agencies in Washington, the Export-Import Bank, and the International Bank, have made many loans for undertakings such as highways, agricultural development, railroad improvements, hydroelectric power, and other projects suitable for public financing. These banks have between them more than enough capital to take care of the requirements of the underdeveloped areas, in terms of feasible projects, for some time to come.

Loans of public funds, however, cannot of themselves bring about economic development. They may help to create the basic structure, but the main job must be done by private capital. Now, the plain fact of the picture in Latin America as we confront it today is that, large as United States private investments are, the rate of new investment is slow, much slower than it need be or should be.

Why is the rate of private investment in this area so slow? What can be done to attract new capital? What do we mean when we talk about a favorable climate for private investment?

The first thing we mean is confidence—and confidence involves personal considerations. It is no accident that the first article of the Treaty of Friendship, Commerce, and Economic Development recently signed with Uruguay is entitled "Entry and Basic Personal Rights," and that the second is entitled "Protection of Persons." Unless management can

follow capital in reasonable numbers, there will be no investment. Unless the managerial staff receives personal protection, there can be no stability of investment. I am talking about basic concepts—the inviolability of the home; the right to pursue one's own religious beliefs; the right to a prompt and fair trial in case of accusation of crime. If one of our nationals is the victim of a personal crime, it is reasonable to expect that effective police and judicial measures will be taken against the criminals. Where criminals go unpunished, as in some cases in which managerial personnel have been murdered, the result is necessarily a lessening of confidence.

The basic factor of confidence is thus inseparable from a second factor, namely, the kind of government that exists in the country which seeks foreign investment. Our people cherish the ideal of stable, representative, democratic institutions. They have fought and died for this ideal throughout our history. Though we have deep emotional and sentimental feelings about this ideal, it is based on sound practical considerations. Our people know that stable democracy provides the best governmental structure under which private enterprise can operate. And let us not forget that, though there is much governmental regulation today, this is still a land of free enterprise. Indeed, much of the regulation—such as the antitrust and fair trade laws—is specifically designed to insure the survival of free enterprise.

The great economic development of this country could not have taken place if stable, democratic government had not functioned here since the earliest days of the Republic. It could not have taken place if investors had lacked confidence in the stability and continuity of the National Government, if they had lived in fear from week to week of abrupt changes in the Presidency, with all the attendant uncertainties. It could not have taken place if the security of their persons and their businesses had been subject to the whims of a dictator with arrogated powers to tax and to destroy. Secretary Acheson was referring to this basic concept in his speech on Latin American policy last September, when he said:

"In countries where [favorable] conditions are provided, it will follow that we can collaborate more effectively in working out development programs. Public and private capital will be attracted more readily to such countries. While this is dictated by logic rather than emotion, it has been our experience that these conditions are generally found in countries where constitutional and political democracy exists."

The third basic factor essential for the attraction of foreign investment is local investment. Our Nation has always been open to foreign capital, but one of the circumstances which encouraged foreign investors to come in was the fact that our own capital would be working side by side with theirs. In countries where foreign investment is the only investment, foreign investment is an oddity and its managers are intruders. The foreign enterprise, by its conspicuousness, is exposed to dangers which would not arise in a setting that included domestic as well as foreign investment. Moreover, an active and healthy degree of local investment activity is bound to insure a richer market for the products of foreign investment whatever they may be. Investors are not ordinarily attracted to areas that are stagnant economically. Finally, many businesses operating abroad want local partners. They want guidance in local affairs. Many of the most successful foreign ventures of American business are carried on in collaboration with local capital, and some of our companies have even been satisfied to take minority stock positions.

The inadequacy of local capital is, in fact, one of the substantial deterrents to new investment in Latin America. Age-old habits of investment in real estate—the epitome of a stagnant economy—cannot be easily broken. In many countries you find, among the peoples themselves, symptoms of an essential lack of confidence. The most obvious symptom is the flight of capital. So long as a great part of private Latin-American capital is invested in the more developed countries there is bound to be a shortage of locally available capital. Another symptom of lack of confidence is the tendency to amortize an investment in the least possible time. A return of 10 percent per annum on an equity investment is often regarded as too small. Twenty percent or more is not regarded as excessive in some countries. This kind of thinking about the function of capital investment is obviously different from our own.

It is not only private investment from abroad that is inhibited by the shortage of local capital. Loans of public funds are also held back. It has not generally been the policy of our public lending institutions to provide for local currency expenditures. In an irrigation or hydroelectric project, however, local expenditures may represent a great part of the total enterprise. One of the major impediments to the making of loans in such cases has been the difficulty that confronts local sources, including governments, in providing for the local currency costs without causing inflation.

A fourth requirement for a favorable climate is absence of discrimination against foreign investment. A foreign company may be an attractive target, especially if it is big. Discrimination may take the form of direct action, such as expropriation or exclusion from certain types of normal business activity; or especially onerous taxes may be imposed upon foreign enterprises. It is our policy to eliminate the threat of discrimination by negotiating treaties of friendship, commerce, and economic development with our fellow American republics. Such treaties are designed to provide a set of rules under which foreign investment activities may be carried on. I have already mentioned the signing of one such treaty, with Uruguay. Negotiations for others are now impending. These treaties will go far toward establishing confidence by reducing the threat of discrimination. Furthermore, they will furnish a basis for discussing a broad range of problems relating to foreign investments with the governments concerned. Finally, being reciprocal, they will constitute a reaffirmation of this country's age-old policy of freedom of opportunity to capital from anywhere in the world.

A fifth factor essential to United States foreign investment is confidence on the part of the investor that if he earns money abroad there will be dollars available for the transfer of his earnings. There are only six or seven countries in the Hemisphere that do not have dollar shortage difficulties. Some of the others have, nevertheless, assigned a high priority under their exchange-control systems to the transfer of current earnings on foreign investment. What is more, the standard form of the treaty of economic development contains general assurances on this point. The stark fact, however, is that any assurances of this nature—regardless of their sincerity—are subject to the availability of foreign exchange at any particular time. That dependence on the supply of foreign exchange cannot be completely eliminated by any written document. This situation has no counterpart in the field of domestic investment.

To deal with this problem of convertibility we have asked Congress to authorize the Export-Import Bank, on the basis of funds already available to it, to extend certain limited guaranties to foreign private investments with respect to risks pecular to such investment. The most important risk is that to which I have just referred, which arises out of foreign-exchange shortages, although other risks, such as those of expropriation and war damage, could be included. A similar guaranty provision has been included in the ERP legislation. The present proposal has substantial backing in business circles. It also has opposition in business circles. Part of the opposition is based on a fear that the proposal threatens established American enterprises abroad. I do not, myself, find this fear well founded. The proposal involves only an extension of the Export-Import Bank's present authority. The Bank already has ample power to purchase many types of securities and notes of American companies or their subsidiaries abroad. It has always administered this authority with due regard for established American businesses. Since it has not misused the authority which it already possesses, there is no reason to suppose that it would misuse its extended authority. Furthermore, the Bank proposes to make it clear that guaranteed investments rank in all respects with all the other United States investments in the country involved and that the nature of the treatment accorded them will reflect this equality. Any local currency received by the bank in connection with a guaranteed investment will rank with local-currency proceeds of other United States investments in regard to priority of claims upon the exchange resources of the country concerned.

Some critics have objected to the guaranty program because they believe that our Government should not associate itself with private business in such a way. These critics have overlooked the extent to which our Government has, throughout our history, helped private industry right here at home. Where would Chicago be if railroads had not been helped through land grants and subsidies? What of the activities of the Reconstruction Finance Corporation, which does not merely incur contingent obligations with respect to private businesses but actually advances funds for their support? Our aviation and shipping industries receive direct subsidies from the Government. Our agriculture is based on various types of subsidy to which both political parties are committed to different degrees. The guaranty program is much more limited and indirect than any of these examples. It involves no present appropriation of funds. In the long run it may involve no outlay whatever by our Government.

A sixth factor in attracting foreign investment is that of a fair and rational system of taxation. Prospective foreign investors pause before the prospect of double taxation. They are even more hesitant to involve their funds in the uncertainty that characterizes the administration of the tax laws of some foreign countries. Our Treasury Department is now negotiating tax conventions with a number of American republics. These should provide incentives to investment through real concessions on both sides. Such treaties will lay down the rules of the game in the tax field. They will prescribe mutual formulae for such unglamorous but vital questions as the determination of income and of allowable deductions. They will also prescribe methods of consultation between the administering agencies of both governments. They should, consequently, go far toward improving the climate for foreign investment.

A seventh element in attracting foreign capital is the technical competence and know-how to make the capital productive. The absence of technical competence in underdeveloped areas—and that absence is a prime characteristic of such areas—raises a

problem akin to that of the chicken and the egg. Technical skills attract capital and capital is accompanied by technical skills. Through the Institute of Inter-American Affairs and other agencies of our Government we have been actively helping the peoples of the Americas to improve their basic skills in agriculture, public health, and industrial arts. We have asked Congress under the point 4 program for an increase and expansion of such cooperative activities. But help of this sort must come in very large part from private enterprise in conjunction with private investment. That is the only way through which to produce, eventually, a managerial class competent in modern methods of plant management, cost accounting, inventory controls, and the distribution of finished products. It is the only way to produce, eventually, skilled industrial labor. The necessary skills cannot be exported by themselves. They are inseparable from the going enterprises with which they have been developed.

I might add a word about the role of labor in all of this. Nothing could be more conducive to a rapid rate of investment than an increased recognition of the important role of responsible and progressive trade-union movements. By this we mean unions dedicated to increased productivity and improved working and living conditions and not those serving the political ends of a foreign country.

II

I have outlined some of the major factors affecting the rate of private investment in the other American Republics. I have also mentioned some of the things that we are doing about it.

What more should we be doing?

I must say to you, first, that the job is not ours alone, and it is not even primarily ours. It is not, in the first instance, the job of our Government or of private enterprise in this country.

Our 20 fellow republics in this hemisphere are juridically our equals. Like us, they have their own sovereignty and enjoy the dignity of their own independence. Like us, they assume responsibility for themselves. Each carries its own destiny in its own hands. Each regulates its own affairs with no less authority than that which we exercise over our affairs in this country. Each must decide for itself what it will do about its own economic development. Each must decide for itself whether it wants foreign private investment and, if so, whether it is prepared to establish the conditions necessary to such investment. It would be an impertinence on our part to presume that we could make these decisions for our neighbors in the hemisphere. We come into the picture only when they come to us, as a source of capital and technical knowledge, and request our support of the efforts they are prepared to make for the strengthening of their own economies.

There is a basic principle involved here that we must all keep in mind—we in this country and our friends in the other American Republics. Secretary Acheson expressed it effectively when he said on January 12 before the National Press Club that American assistance can be effective when it is the missing component in a situation otherwise favorable with respect to economic and political progress. Most of the components in the situation we have been contemplating must be furnished by the other American Republics. They must furnish all seven of the components I have discussed, though we can help with some of them. Only they can furnish other components, tangible and intangible, that bear upon the possibility of conducting business under fair conditions. For example, the rate of exchange fixed by a government may, without being discriminatory, be so arbitrary in its operation as to make it impossible to conduct business in the country. Again, even though an exchange rate is realistic, the operation of an exchange control may obstruct progress. The system of justice in a country may be such as to create doubts as to contractual rights. We have all seen how nationalistic tendencies, when they affect fiscal and governmental policy, may stultify the possibilities of foreign investment. Finally, I shall allow myself to depart from diplomatic practice just long enough to say to you that there are cases, as we all know, in which administrative venality is a major impediment to investment and to the economic development of a country. These things are not wholly unknown anywhere, our own country included, but wherever they exist they are a local responsibility.

The creation of favorable conditions for private investment depends fundamentally upon the will of the country concerned. In the absence of that will, nothing we could do would create those conditions. The treaties I have talked about would be of little use. Public loans would not lead to the private initiatives on which economic development depends.

This, then, is the setting in which our State Department must perform the role which falls to it. This role, as I see it, is through good will and mutual effort to help, first, to bring about a clear understanding of the factors that affect investment, of the need for programs of positive action by the governments that want investment, and of the things that can be done by governments to attract investment. By and large, this process resolves itself into tedious and unspectacular efforts in specific situations.

The suggestion has been made that we withhold all economic cooperation except on condition that the other country enter into a treaty of friendship, commerce, and economic development with us. I respect the thinking of those who make it. Nevertheless, I think it confuses the form with the substance. It substitutes the device of a treaty for the objective of a treaty which may be attained by a variety of other and in some cases better means. It substitutes indirect compulsion for the willing reciprocity that must exist in the long run between cooperating nations. For 20 years we have been trying in our Latin-American policy to erase the old notion that we would not scruple to throw our weight around, to use our economic power in order to force concessions from other nations. Though we have made great progress, the notion still has some currency in Latin America. The fact is that we are cooperating on a voluntary basis with the other American republics in our common interest because the health of our entire community depends on the development of each one of us. The common good, which is the objective of our policy, must not be confused with petty bargaining advantages. The spirit of reciprocity is not a bargaining matter. A bargaining attitude on our part would, in fact, destroy it.

At the same time, it should not be thought that the State Department is disposed to favor large loans of public funds to countries which do not welcome our private capital. In some countries so many difficulties have been erected in the way of private investment, local as well as foreign, that private productive investment is infinitesimal. In such circumstances it is difficult to see how United States financial assistance could be fruitful from the standpoint of achieving sound economic development. We do not intend through public lending to compensate for the failure to make the most of natural resources through vigorous economic activity on all fronts. Our Government will naturally favor making public loans to countries where the broader objectives of our program can be accomplished. We will, in general, select situations where public loans will be accompanied by private activity, local or foreign. If our record of public lending is scrutinized, it will be seen that the recipient nations have generally been those where our loans can do most good in terms of these objectives. It will also be seen that they have been those with the highest development of stable democratic government. This is because our public-lending agencies, like private investors, must have confidence in the investment climate. And for them, as for the private investor, confidence in general is synonymous with democracy and all that democracy stands for.

While there are obviously hard problems ahead, we find that some countries have made encouraging progress. In these cases the adoption of a few additional measures of self-help and mutual aid should complete the necessary basic framework for rapid and continuing economic expansion.

The fact is that the Latin American republics are more keen today than ever before to do something positive for the achievement of their economic development. In many countries it has become the principal preoccupation of their governments. I have an impression, moreover, that they are increasingly aware of what it takes to achieve economic development. They are learning to think about the heavy disadvantages of a narrow economic nationalism. They are learning the importance of making themselves attractive to capital.

That brings me, finally, to what we can all do in a positive fashion to improve the climate for foreign investment in the other American republics. Our foreign enterprise must so conduct itself as to justify a welcome reception abroad. It must act in good faith. It must understand the essential principle of mutuality, that both parties must profit. Just as the investor must be assured of fair and sympathetic conditions, so the country receiving the investment must be assured that its own vital interests will be honored. We must be willing to justify such assurance by our conduct.

It is only fair that, having referred so undiplomatically to some failings among our neighbors, I should also state that some American businesses have, on occasion, behaved in a fashion that has tended to make all American business enterprise unpopular. Such behavior has always been exceptional and it is rare today. I assure you, however, that our Government, if only in the interests of American business as a whole, is not going to encourage this kind of foreign investment. One of the most encouraging elements in the whole situation today is the statesmanship that most United States enterprises are displaying abroad and their growing regard for public opinion in the countries concerned. This is the kind of thing that will in time contribute more than anything else to a favorable climate of investment.

I am glad that I am not alone in the point of view that I have expressed today. After I had prepared this speech, a bill was introduced in the House of Representatives by Chairman KEE of the Foreign Affairs Committee and Republican Congressman HERTER, under the name of "International Economic Development Act of 1950." This bill—which is the proposed legislation implementing point 4—has bipartisan support. You will be interested in the following excerpt from the statement of policy in the bill:

"International investment can make its maximum contribution to economic development only where there is understanding of the mutual advantages of such investment and where there is confidence of fair and reasonable treatment and due respect for the legitimate interests both of the people of the country in which the investment is made and of those who make the investment. This involves confidence on the part of the people of the underdeveloped areas that investors will conserve as well as develop local resources, will bear a fair share of local

taxes and observe local laws, and will provide adequate wages and working conditions for local labor. It involves confidence on the part of investors, through intergovernmental agreements or otherwise, that they will not be deprived of their property without prompt, adequate, and effective compensation; that they will be given reasonable opportunity to remit their earnings and withdraw their capital; that they will have reasonable freedom to manage, operate, and control their enterprises; that they will enjoy security in the protection of their persons and property, both industrial and intellectual, and nondiscriminatory treatment in taxation and in the conduct of their business affairs."

If we in our country and the peoples and governments of our fellow American republics proceed along these lines, confidence will grow and over the years a vast development of the American republics will occur through wholesome private enterprise.

Economic Aid to Korea and Non-Communist China

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. BOGGS of Delaware. Mr. Speaker, it is my intention to vote for the bill S. 2319, which provides for limited economic assistance to the Republic of Korea and to areas of non-Communist China. I do not care to do so, however, without making the following clarifying statements.

Last month I was one of those who voted against the bill to provide certain economic aid to Korea. I voted in that manner at that time not because of any failure to understand the Korean need, and not because of any lack of desire to help the freedom-loving people of Korea. I voted against the other bill because it was piecemeal legislation and because I sincerely hoped that it would force those formulating our foreign policy for the Far East to draft a more complete, more coordinated program of a realistic nature, having a greater opportunity to be effective.

The present bill before the House falls far short of reaching those goals. Nevertheless, Mr. Speaker, I consider it to be progress in that direction, and, therefore, as I have said, I expect to give it my support.

In voting for this bill today, I wish to direct attention at this time, however, to the following facts. The committee has stated in its report that the major portion of the funds needed to carry out the provisions of this bill have already been appropriated. It is therefore assumed that these funds for aiding non-Communist China, which have been available for many months, will now actually be used in the most effective manner possible. Furthermore, the committee in its report has stated that this bill makes it explicit that the authorizations contained in the bill are limited to the fiscal year 1950 and that subsequent authorizations must be considered on their merits; in other words, that this bill contains no pledge of continued assistance.

Therefore, Mr. Speaker, my vote for the pending bill should be interpreted to reflect my interest in establishing world stability and peace through American foreign economic assistance, but it must not be construed as any pledge or any commitment for additional foreign economic aid. In other words, as the committee itself has stated, requests for subsequent authorizations are to be considered solely on their merits and with full regard for their effect upon our own American economy and stability.

It must be remembered that it is vitally important to free people throughout the whole world that the credit and leadership of the United States remain strong. We must ask ourselves how long the credit, security, and economic stability of the United States can endure under a continuing policy of deficit financing and tremendous burdensome national debt. It is my firm opinion that under this administration policy of operating in the red, our Government is seriously impairing its ability to provide help and leadership in the great struggle for freedom and world peace. By continuing this destructive policy we are weakening our ability to meet even our obligations to our own people. If we are to continue to make enormous assistance grants to other nations, then those who formulate such a policy should also accept the responsibility for advocating additional revenue sources to offset these additional expenditures. It is only in that manner that our people here in the United States will realize and feel today the full impact of this policy.

Americans have always been known for their generosity and their humanitarianism. Coupled with these splendid American characteristics there must be, however, a full evaluation of the facts and a practical realism so that we will not unduly weaken ourselves in our efforts to strengthen others.

Democracy in Northern Ireland

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. SHELLEY. Mr. Speaker, I have just received a copy of a news release from the Irish Legation in Washington which clearly shows that the Special Powers Act of 1922 is still being enforced in Northern Ireland. Recently the world had been informed that provisions of the act had been repealed and the inference was made that this undemocratic piece of legislation had been abandoned.

The Special Powers Act in Northern Ireland established the pattern for similar legislation under Hitler and Stalin in their forced control of occupied areas. Under that act, trial by jury has been denied, imprisonment for prolonged periods without filing of any charge is authorized and has been employed frequently and numerous other recognized civil rights have been abrogated. That such legislation should continue to exist and be employed in a country which claims to be democratic seems unthinkable. Little wonder that Stalin belittles democratic nations and their avowal of democratic principles.

In the instance cited in the news release it is evident that the display of any flag is permitted, even the Soviet flag, with the sole exception of the flag of Ireland. Yet, Great Britain recognizes Ireland as an independent republic, and hence her flag should be given the same recognition as granted to that of any other nation. Or is it that Northern Ireland, realizing that those six counties are rightly a part of the Republic of Ireland, so fears the display of the true flag of the area that, their consciences quaking at the sight, the puppet administrators of the government must resort to tyranny to preserve the usurpation of power in that area.

Interesting is the fact that Mr. MacEntegart, who carried the Irish flag and was thereupon arrested, had served during the recent war with the British forces. His arrest is part of his reward for his wartime services. During World War II it is estimated that between 150,000 and 180,000 men from the 26 counties volunteered for military services. While no official figures on this have ever been released, this estimate is considered to be quite conservative, according to the article appearing in the January 1946 issue of the Foreign Affairs Quarterly. In addition no less than seven Victoria Crosses were awarded to citizens of the Republic of Ireland during the war. This award is Britain's highest military award and is granted in very limited numbers, even in wartime. I am sure that the record for service in the six counties will not outshine that of the rest of Ireland, in spite of the so-called neutrality of Eire.

Perhaps the real reason behind this arrest was the fact that the incident occurred during the welcome-home ceremonies held in honor of Senator J. G. Lennon and Mr. Malachy Conlon, M. P., members of the Belfast Parliament, who had just returned from a speaking tour in the United States, during which they repeatedly decried the continuance of the partition of Ireland and urged a prompt elimination of that unnatural border which divides the country. The only answer available to the demand for an end of partition is this unwarranted exercise of the Special Powers Act and the continued denial of civil rights under its undemocratic provisions.

The full text of the release from the Irish legation reads as follows:

IRISH FLAG FORBIDDEN IN OCCUPIED IRELAND BUT SOVIET FLAG ALLOWED

Prosecuted by the six-county government for displaying a tricolor consisting of three vertical stripes, green, white, and yellow, purporting to be a flag of the Irish Republic, on the occasion of the return from America of Senator J. G. Lennon and Mr. Malachy Conlon, M. P., to Armagh on the 4th of December last, a former member of the British forces, James MacEntegart, appeared in Court Armagh on January 26. With another defendant, Anthony Smith, he was further

charged with obstructing a police officer in the course of duty. In court, witnesses described the procession welcoming the two northern leaders on their return.

Giving evidence, a Royal Ulster constabulary policeman said that MacEntegart was told by police "Take down the flag" and that he would not be allowed to carry it on the street. MacEntegart replied, "It is the flag of Ireland—you have no authority here—I fought for the freedom of small nations for 6 years under the Union Jack and was proud to do so. I am now fighting for the freedom of Ireland and I shall continue to fight under its tricolor." Defending Counsel MacSparran asked, "Supposing that it had been the Soviet flag—would you have interfered with it?" The policeman replied he would not have interfered with the Soviet flag. MacSparran continued, saying, "This case has been brought under the Special Powers Act of 1922; an act recognized not merely by the present British Government but by members of the present Northern Ireland administration as a repressive act. It has now endured for 28 years. Most people are under the impression that the regulations under it had ceased to exist by virtue of the statement made last year and many would be surprised to learn that one of the most obnoxious regulations of the act is still valid. Surely it is an absurdity that Britain should recognize the validity of the Irish Republic Army and national emblem and yet in part of the British Commonwealth there should be a situation whereby a person displaying the flag of a recognized state within the community of nations should be prosecuted."

The prosecution was brought under regulation 25 (c) Special Powers Act of 1922.

Trade With Soviet Satellites

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. GWINN. Mr. Speaker, under leave to extend my remarks, I should like to insert in the Appendix of the RECORD the following report from the Scarsdale Inquirer of a timely warning on trade with Soviet satellites by J. Anthony Marcus, president of the Institute of Foreign Trade of New York:

POLITICAL FORCES ABROAD THREATEN SALES EXECUTIVE

"What Becomes of the Sales Executive When Stalin Takes Over?" was the title of an address given this winter by J. Anthony Marcus, of 35 Church Lane, president of the Institute of Foreign Trade of New York and a former international trade adviser in Washington. The occasion was a meeting of the Association of Commerce of South Bend, Ind. Says Mr. Marcus of his talk, "It is not pleasant, but we are not ostriches. We must face facts no matter how discouraging they may be. We can still master the situation if we act before it is too late." The Inquirer prints excerpts of Mr. Marcus' speech which many of the community will find it worthwhile reading.

In a number of countries in recent years freedom has been liquidated; the free enterprise system murdered, and with all that the sales executive has vanished. Being the product of a free society, he dies when freedom perishes. In Russia and the satellite countries freedom, even the most elementary forms of freedom and liberty, are a thing of the past.

The evil forces that have brought this about have been on a rampage since 1917. They have brought death and suffering to untold millions. Thus far very little has been done to assure the ultimate defeat of the Red plague. We have a North Atlantic Pact, to be sure, we have been pouring out billions first through the mismanaged UNRRA. Now, through the superbly administered ECA by your illustrious citizen, Paul G. Hoffman, we are pumping new billions of dollars into the rehabilitation of the economic and industrial power of the free nations of Europe, but that is not enough. Money alone will not do the job; wishful thinking, a pastime of many of our so-called liberals and religious groups, will do even less. Unless all of us recognize pretty soon that Red fascism is an irreconcilable force which will continue to wage war against civilization of one form or another until either "we" or "they" survive, as Lenin had proclaimed, it might be too late to save civilization from inevitable doom.

There is much that our Government can and should do to help eradicate this plague that is not being done. But there is much that the free citizens of the world must do and should do, but are not doing. Since history has decreed that ours shall be the leader in this struggle, what should be some of the first steps our Government should take?

INSIGNIFICANT MARKET

Sever trade relations with the Soviet Government at once. In 1913 President Wilson, outraged by the Tsarist's government persecution of a Russian Jew named Mendel Bailis on a trumped-up charge of the ritual murder, abrogated our trade treaty with that government. Since 1945, numerous American citizens, military and civilian, have been arrested without cause, kept in prison incommunicado for months and subjected to uncivilized treatment. All this after we had poured out billions of our treasure and rivers of blood of our young boys to help liberate Russia from the Hitler tyranny. And what did we do? We engaged in a diplomatic word battle.

The Russian market is the most insignificant of all in the world to us. It will never amount to anything as long as there is a Soviet Government in Russia. During the 20 years preceding the last war Russia's average purchases in this country amounted to about $60,000,000, while during that time she stole from us technological know-how worth billions of dollars. Severing trade relations and a complete stoppage of sales to Russia will do great injury to the Soviet economy, despite the lying claims of their government that practically every invention known to man has been created by their people.

But most of all, such severance of trade relations will serve as a tonic for the tens of millions of Russians who hate their government with an ever-burning hatred; it will hearten them to carry on the struggle against their tyrants. The mere fact that there are from nine to twelve millions of men and women in slave-labor camps in Russia, with many more millions in concentration camps and jails is conclusive evidence that the people are resisting the Communist regime. Had it not been for the stupid agreement with Stalin in Yalta, there would have been today several million Russian enemies of Stalin in Europe, men and women who preferred hardships in a strange land rather than return to the so-called paradise of the workers.

Many a time top-ranking Russian officials in Moscow and other cities have said to me: "Why do you Americans come here to trade with our Government? You are only enhancing their prestige; you are helping tighten the noose around our necks." Those remarks came from their wounded hearts; they were brave men, for they knew that they could have been liquidated without trial if overheard or if I chose to report them to the police.

TREATY VIOLATIONS

Insist upon scrupulous observance by Russia of our treaty which was a condition of recognition by us in 1933. They have been violating it almost since the day it was signed, according to the statement of our former Secretary of State, Cordell Hull. Our leniency is being interpreted by them as cowardice and stupidity on our part. For 2 years, since 1946, the Soviet-owned Amtorg Trading Corp. had been flouting the alien registration law and only after my testimony before the Senate Judiciary Committee on July 28, 1949, did the authorities wake up to act and arrested the top officials of that agency which has been the center of economic espionage in this country.

And unless they live up to the very letter of treaty obligations, diplomatic relations should be broken completely. They are not and never will be friends with us. No pretty diplomatic verbiage will ever change matters.

If Vishinsky and company want to take a walk out of the UN, let us wish them "Skotyertyoo doroga"—a smooth journey like on a table cloth, the Russian version of our good riddance of bad rubbish. According to Stalin's own teaching, they are in the UN and any other international body of nations merely for propaganda purposes, to bore from within and to destroy the institution, just as the parliamentary struggle is a school and an aid in organizing the battles outside the parliament, according to Stalin.

There can never be a silver lining to the Soviet horizon in its relations at home or abroad. If from time to time they do change their tone, it would be well to remember the Biblical passage: "The voice is the voice of Jacob but the hands are the hands of Esau." Don't trust them; treat them as they do us—enemies.

The next time an American civilian or military person is molested by them, don't use diplomatic niceties. It is futile. Act. Arrest 10 for 1. That is precisely what should have been done in the recent incident in Prague. When two of our embassy personnel were expelled from Czechoslovakia on 24-hour notice, four of theirs should have been hustled out of this country and instead of giving them 24 hours, it should have been 12 hours. This is the only language Communists understand and respect.

It is high time for our UN delegation to have at least one member who can speak Russian perfectly, who knows the true nature of the poisoned men of the Kremlin better than anyone now in our Government. Such men are available; they could be used with effect in dealing with the tricky Vishinsky and company—men whose culture is that of the head hunter and the manners of cavemen.

The Soviet diplomatic and business personnel in this country should be held down to the exact number of Americans allowed in Russia. Stalin's government must be taught the lesson reciprocity. A Russian Communist explained to me their meaning of the term: "You give us everything and we give you nothing." And a second official present added: "And we will repay you by helping bring about a Soviet Government in your country through a revolution."

ASSERT OURSELVES

What should the citizens of this and other freedom-loving countries do? For 32 years the Soviet Government has been fomenting uprisings, creating fifth-columns here and everywhere to bring about the destruction of our way of life by means of force and violence. Only gullibles like Henry Wallace and some of our ignorant university professors and parlor Bolsheviks refuse to recognize the underground work of the Soviet tyrants. The time has therefore come for our citizens, as distinct from our Government, to assert themselves. We must not leave everything to Washington. The best

brains, the most courageous ones are still in civilian life.

With the zeal and courage of the founding fathers we must begin to take certain steps which would help the Russian people overthrow their tyranny. They can and will do it themselves, if we get behind them to encourage them and help them directly and indirectly. Our Revolution in 1776 did not secure liberty to us for all time without our doing something to keep it secure. A new force, an evil force the like of which has never existed before, and certainly one of which Washington, Jefferson, and the other statesmen could not have imagined would ever arise, is working with all its might and main to destroy freedom here and elsewhere.

I am not advocating a new organization. America is overorganized as it is. But let the thousands of clubs, trade organizations, labor unions, church organizations, etc., discontinue many of their unnecessary activities and devote their time, money, and energy to this goal—the ridding of the world of the Red plague.

For this purpose we have in Russia at least 90 percent of the population as our allies. The mere news of the formation of such a movement will hearten them and steel them to the supreme effort to liquidate their liquidators. They have done it before; they will do it again. But they need our encouragement. We can and must give it to them.

A coordinating committee to guide the thousands of citizens' organizations in this work will soon be formed. I have been working on this plan since 1927. Our people have yet to realize that we are living in an emergency, that the war is not over. We have downed two adversaries and have helped rear a third—the Soviet power. The incompetent men who helped guide our late President to his dealings with Stalin and Molotov are much to blame for the situation which is now plaguing us.

The hundreds of thousands of Russian DP's in Europe and now being scattered all over the world have a story to tell that must be heard. Our press, unfortunately, has hardly scratched the surface in this connection. But first of all the story must be told in telling terms in Europe. American ingenuity is needed badly in this work in Europe. Stalin has too many ideological brothers in Italy and France. The European countries have done a miserable job about exposing the true physiognomy of the Soviet state. Let this be our task No. 1.

We have failed thus far because we are not accustomed to dealing with arch-conspirators such as the Communists are. We must outdo them in their tactics. They have already hurt so many tens of millions of people in Russia and the newly annexed countries that we would be unworthy of the freedom we still enjoy if we did not take full advantage of their eagerness to join with us in this undertaking.

Let us keep before us at all times the following basic philosophy of Stalin as published in volume 8 of his collected works:

"What is this country of ours which is building socialism if not the base for the world revolution?"

This fundamental goal will never be changed regardless of who is on the Kremlin throne—Stalin, Molotov, Malenkov, or anyone else. And as long as that is the case, there can never be lasting peace for us, and we will have to tax ourselves to the limit to prevent this scourge from consuming us as it has already consumed hundreds of millions in other lands. With a little effort by comparison with the billions we are now spending and might have to spend in the future, without sending our boys abroad to die on alien lands, we can encourage the discontented tens of millions in Russia and the satellite states to do the job and do it promptly. Five or 10 years from now it might be too late.

Supersonic Ram-Jet Engines

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, February 9 (legislative day of Wednesday, January 4), 1950

Mr. JOHNSTON of South Carolina. Mr. President, I desire to have inserted into the RECORD a story appearing in the New York Herald Tribune on February 2, 1950, about the supersonic ram-jet engines for intercontinental guided missiles, which are being developed at the new jet engine laboratory at Wood-Ridge, N. J. These engines simulate flight speeds of 2,600 miles an hour at altitude conditions up to 80,000 feet.

The story is written by Mr. Ansel E. Talbert, the aviation editor of the New York Herald Tribune, also president of the Aviation Writers' Association. Mr. Talbert is recognized as one of America's leading aviation writers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW JERSEY LABORATORY BUILDS JETS FOR GUIDED MISSILES—AIR FORCE PLANT SIMULATES SUPERSONIC SPEEDS AND ALTITUDES OF 80,000 FEET

(By Ansel E. Talbert)

WOOD-RIDGE, N. J., February 2.—Supersonic ram-jet engines for intercontinental guided missiles are being developed here at a new jet engine laboratory which simulates flight speeds of 2,600 miles an hour and altitude conditions up to 80,000 feet.

The laboratory opened today for the first time to nonmilitary observers. It was constructed by the Wright Aeronautical Corp. for the Air Force, which, together with Navy and the Army Field Forces, is pushing "a national guided missile program."

This program includes investigation of the best methods and techniques for conducting intercontinental warfare, and already has progressed from subsonic to supersonic missile speeds.

DEFENSIVE SAFEGUARDED

On the defensive side, United States strategists expect the introduction of surface-to-air guided missiles to bring extensive improvements in the ability to defend local areas from intruding planes and missiles.

The ram-jet engine, most effective at speeds in excess of 760 miles an hour—the approximate speed of sound at sea level—is favored by many missile designers as the ideal power plant for high-speed, long-distance propulsion. Although proposals for ram-jet missiles were made in Europe during the war, the engine was largely in the drawing-board stage at war's end and has been developed mostly in the United States since then.

A ram-jet can be compared to a flying stovepipe with no moving parts, or to a giant milk bottle with the large end sawed off to make an exhaust for the high-temperature gases created by combustion of fuel in the engine's interior. When a ram-jet engine moves at high speed, small end forward, and fuel ignites inside under pressure created by the air flow the resulting exhaust gases give the engine tremendous power.

PERFORMANCE STILL SECRET

The faster the engine goes the more efficient it becomes. In the new Wright Aeronautical laboratory here, ram jets up to 20 inches in diameter may be operated in the new test chamber and future modifications of the chamber will make it capable of testing units twice this size.

Although the output of ram-jet engines to be tested here is classified as secret, the laboratory's capacities give a good indication of the power which can be obtained from this engine type.

Fuel pumps supplying engines undergoing tests are capable of delivering more than 6,000 gallons of fuel an hour—or the contents of 14 railroad tank cars a day. A series of steam jets, which can produce steam at the rate of 150 tons an hour, are pointed into the exhaust system to aid or retard the escape of exhaust gas.

By varying the air pressure for the test chamber, which is supplied at the rate of 140 tons an hour from the turbine compressors at a nearby $3,500,000 gas turbine development laboratory, it is possible to starve or overfeed an engine and create the effects of altitude or speed.

UP TO 4,000°

In parts of the ram-jet test chambers near the exhaust end the temperature of the gases reaches 4,000° Fahrenheit. Because this heat causes the test chamber to expand more than 1 inch over its entire length, the designers of the chamber put it on rollers. To muffle roaring of the ram-jet exhaust gases and steam jets, three silencers, each 45 feet high, have been installed at the end of the exhaust line.

The central test cell of the new Wright ram-jet laboratory is a steel tank 12 feet in diameter and 96 feet long. The ram jet to be tested is mounted in a platform in the center of the test chamber and connected to electronic thrust measuring instruments.

In 1948 the first facilities contract for the present ram-jet laboratory was awarded to Wright Aeronautical. Ground for the laboratory was broken in December of the same year and the main testing chamber was installed last fall. The first check runs on the laboratory as a complete unit were run last winter.

Equal Rights

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks, I wish to insert in the Appendix of the RECORD an article referring to a rider attached to the equal rights amendment. This comment was written by Florence C. Kitchelt, chairman, Connecticut Committee for the Equal Rights Amendment, and which appeared in the New York Herald Tribune on February 3, 1950. It follows:

EQUAL RIGHTS—AMENDMENT RIDER CRITICIZED AS MISPLACING THE ISSUE

To the NEW YORK HERALD TRIBUNE:

There is no doubt of the good intentions of the Senate in voting a rider to the equal rights amendment, last week, guaranteeing women benefits and exemptions.

It was done because some Senators interpreted the amendment as menacing protective legislation, laws providing seats for women in factories, etc.

The amendment does not mention either men or women. It says: "Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex." We logically conclude that

if it menaces protective legislation for women it does the same for men. Are laws safeguarding sailors on the high seas, miners in coalpits, soldiers ready to give their lives in war to be endangered, but stools for factory women guaranteed? This puts the self-seeking of women in a very unlovely light.

The rider misplaces the issue. Legislation in regard to health and welfare comes under statutory law, the work of State and national legislatures. The amendment is a constitutional principle like that in the Charter of the United Nations.

Women are now inferior and adolescent under the law. The amendment would give them full adult citizenship. This legal inferiority has been stated clearly in a speech by Attorney Helen Elizabeth Brown before the Lawyers Civic Association of Maryland:

"Men, aliens and corporations are persons entitled to the equal protection of the laws in this country; American women are not.

"It is unconstitutional to try a Negro man with a jury from which Negro men have been excluded; it is not unconstitutional to try a woman, black or white, with a jury from which women have been excluded.

"It is unconstitutional to place restrictions on men's liberty to contract; it is not unconstitutional to restrict women's liberty of contract.

"It is constitutional to bar women from any lawful means of earning a living; such laws as to men are unconstitutional and void.

"Women may be subjected to labor restrictions; men may not.

"Women may be excluded from business and the professions; men may not.

"Women in business and the professions may be discriminated against; men may not.

"Women may be deprived of their property without due process of law; men may not."

Miss Brown quoted the cases before the Supreme Court which decided that a woman was not a "person" and entitled to equal protection of the laws. She recalled the statement of Bishop Hoadley that whoever interprets the laws is the lawgiver. As Justice Holmes said, the Constitution is what the courts say it is.

The dean of Barnard College, Mrs. Millicent McIntosh, is reported as saying that civilization still tries to thwart woman's intellectual development by imprisoning it within mid-Victorian concepts.

We submit that the Senate rider, with its reference to "the female sex," is mid-Victorian as well as misplaced. The issue is not seats in factories for women. We rely upon the common sense of our legislators for that. The issue is the full humanity and dignity of all the citizens of the United States.

FLORENCE L. C. KITCHELT,
Chairman, Connecticut Committee for the Equal Rights Amendment.
NEW HAVEN, CONN., *January 31, 1950.*

Address of Robert P. Boylan

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Robert P. Boylan, chairman of the board of governors and president pro tempore of the New York Stock Exchange, at a dinner meeting of the Association of Stock Exchange Firms at the Shoreham Hotel, Washington, D. C., on Tuesday evening, February 7, 1950:

This dinner of the Association of Stock Exchange Firms, held so fittingly in the Nation's Capital, is of special importance because it brings together representatives of Government and business. We are accustomed to being on the receiving side in listening to Government. This time the position is reversed and Government is going to listen to business. I hope that all of you enjoy the experience. We are happy indeed to have so many distinguished Members of both Houses of Congress and of the executive branch of Government with us tonight.

This year, 1950, marks the one hundred and fiftieth anniversary of the moving of the seat of government from Philadelphia to Washington. As many of you know, plans are under way to hold a Freedom Fair here next year to celebrate 150 years under a free economy. It is being sponsored by the Government. Congress has approved it. All sections of our national life have been invited to participate. Such an exposition has great possibilities in dramatizing the progress of our country under our American system—way of life—call it what you will—which has brought us so far in the last century and a half.

The New York Stock Exchange, formed not long after the Revolutionary War, and now but 3 months from its one hundred and fifty-eighth anniversary, is proud of the historic parallel between it and the Republic. To me, the significance of this parallel lies in the fact that free markets and a free economy—you cannot have one without the other—have existed in the United States for a century and a half, drawing their strength from increasing consumption and from thrift and investment.

During those 150 years, the well-being of the Nation has been at all times dependent upon a proper balance between consumption and investment. Imbalance is always upsetting to the American economy. To cite an example: In the twenties, consumption was neglected. Income was not well distributed. There was too much at the top—not enough at the bottom. A condition of underconsumption developed. Today, investment is neglected. Underinvestment is evident on the part of individuals and of business. This is an alarming trend, particularly when we consider that it takes about $5,000,000,000 annually in new investment to create some 700,000 new jobs for young people entering the labor force each year.

Industry cannot provide these new jobs unless it can raise ownership capital. Ownership capital is not now available on favorable terms. Last year, as measured by Moody's, the average yield was 2.96 percent for corporate bonds and 6.63 percent for common stocks. Thus, it theoretically costs a company two and one-fourth times as much to obtain ownership capital as to go into debt.

Faced with the necessity of going into debt to finance improvements and expansion, or of drawing on current earnings, a company, unless exceptionally situated, usually will undertake only the essential. It will not invest the large sums needed for growth and development. Thus, it cannot utilize research and productive efficiency to create the new and better products at lower prices needed to improve the living standards of the lower income groups.

Permit me to review for a moment the reasons why underinvestment is putting a cloud on the economic horizon. During the depression preceding the war, in an effort to stimulate consumption, the Government taxed and spent freely. This tax philosophy still underlies our Federal tax policies. It has not been changed, although during the war and afterward consumption rose to levels that were undreamed of at the time this tax theory was accepted. Meanwhile the equally vital problem of investment continues to be neglected.

In a sense, I speak for the American investor. I do not pretend to do so with his authority. Certainly, however, from my vantage point as the chairman of the board of governors of the New York Stock Exchange, I am in a position to appraise the attitudes of investors. I know what the investor, the former investor, and even the potential investor are thinking about in terms of their willingness or unwillingness to supply capital. The New York Stock Exchange has some 600 member firms with more than 1,500 offices located throughout the country. We are constantly in contact with these firms. They, in turn, are in contact with those who own the securities of American industry. Our member firm organization, far flung as it is, is acutely aware of the fact that an extremely large number of people would like to employ their surplus funds. These people would form the habit of investment if conditions were made attractive for them.

A free economy, under which we have prospered for more than 150 years, cannot continue to expand and meet the needs of a rapidly growing country without an increasingly larger number of investors. It has been truly said that the American investor is the forgotten person in this country. Yet, the millions of men and women who invest in American industry and whose numbers would greatly increase if given reasonable assurance that they and their invested dollars would receive fair treatment, are among our most useful citizens. I am speaking of them not only as the suppliers of capital, without which our system would perish; but I have in mind also their qualities of thrift, their faith in American industry, their devotion to our free economy and our free institutions, and their rejection of the forces and influences that endanger our country.

May I tell you, briefly, what causes the fears that are uppermost in the minds of these millions of people:

1. Restrictive taxes (and this is the factor of most immediate concern). I am referring to taxes that diminish the incentives of both the stockholders and the managers of business.

2. The enormous growth of the Federal establishment, together with the indifferent attitude of large numbers of people with respect to the necessity of shrinking the size and the cost of government.

3. Tax-free organizations that are now doing an estimated $10,000,000,000 business annually, resulting not only in unfair competition, but in a substantial loss of tax revenue to the Government.

4. The taking over by Government of lending functions which properly belong to our private capital markets, except when emergency conditions exist.

I would like to take this opportunity to mention another factor which is disturbing to investors and to business. This is a very widespread impression that Government and business are unfriendly—that some deep-seated antagonism divides them. I doubt whether this will stand up under analysis. Congress fully recognizes the urgent necessity of keeping our economic system strong and in this it is in complete agreement with business. Congress is an able, hard-working body, both vigilant and courageous with respect to the best interests of the country. I am sure that those who are acquainted with the complex problems with which it has to deal and with the pressure under which it works share my sympathy and respect for our Senators and Representatives.

A friendly relationship between business and Government is highly desirable, and never more so than at this juncture in our national life. The need for harmony among

all segments of our population has never been greater than at this time. I earnestly appeal to all for restraint in the interest of internal strength and solidarity.

Whatever weakens business confidence, retards the country's economic progress. All of us can remember the time when it seemed to be popular in one breath to praise the genius of American business and in the next breath to denounce the creators and guardians of our prosperity as men engaged in exploiting an unsuspecting public. Of course, this doesn't make sense.

As to the necessity of keeping our economic system strong, I would like to remind you that the rewards for achievement are taxed so steeply that they reduce the incentive of those who operate business and the incentive of those who would otherwise supply its capital. Such taxation is eating away the forces that have given America its strength—a strength that grew out of incentive and a strength that is unique among the nations of the world.

What we call the good life, for all of our people, can only be provided by a dynamic and expanding economy stimulated by incentive. Only the Government, through wise monetary, tax, and debt-management policies, can give full scope to the dormant energies of American industry.

I commend to all of you, as preferred reading, a study by Prof. W. L. Crum, of the University of California, who shows that incomes of stockholders—especially small incomes—bear a much heavier tax burden than those of citizens not owning stock. Considering the importance of the stockholder in our economy, can there be any excuse for this discrimination? The answer is "No."

Now as to the measures that would remove the fears of investors and of businessmen. The steps that should be taken to substitute confidence for anxiety are indicated in the four principal causes which I have outlined. A variety of remedies are, of course, necessary, but what we need above everything else are national policies and attitudes that recognize the investor as indispensable in the processes by which jobs and opportunities are created.

I am amazed, in my contacts in different parts of the country, to discover how few people realize the extent to which incentive has been destroyed in this country. I have never understood this. Given proper encouragement, our economic machine will operate at such a rate as to assure not only progress and prosperity for the Nation, but adequate revenue for the needs of government. The effectiveness of policies shaped around incentive has been demonstrated in the past. Our policies, particularly our tax policies, should be so shaped again. Why not try incentive?

I say restore the incentives needed to activate the businessman, the enterpriser. Thus, a dynamic economy can be developed in which the country certainly can attain a national income of $300,000,000,000 or larger. Such an income certainly cannot be attained soundly without incentives. With a national income of that size, the cost of carrying the war debt and its relation to the economy will assume proper proportions. The obstructions to the investment of equity capital have prevented our capital markets from reflecting the true value of private wealth. The present Government debt of $257,000,000,000, not to mention many other forms of debt, is compared in the public mind with a national wealth of $310,000,000,000 figured at prewar prices. As a result, many people have reached the conclusion that the country is near bankruptcy. It is not, of course.

The restoration of confidence will require, however, a change in tax philosophy which was based on the false assumption that the United States had reached a position of economic maturity. These policies are retarding investment ownership. They are eliminating the able, the competent, from the fields of enterprise.

Our tax problem is really not as complex as it appears. It is a matter of choosing those taxes which retard enterprise the least. Let us take a familiar symbol—the man with a pack on his back. It is true that the heavier the pack, the greater the handicap. But, it is also perfectly clear that a pack skillfully adjusted can be carried more readily than one which is badly arranged. Because of our heavy obligations, there are limits to the reduction which can be made in the over-all tax burden. But, we can redistribute the tax load in such a way as to stimulate equity investment and spark the economic machine.

Canada is showing the way by demonstrating that the gradual elimination of double taxation on dividends is both basic and possible in a modern nation. I would like to quote Canadian Finance Minister Douglas Abbott. He said, in announcing a sweeping tax cut last spring, and I quote: "It seems to me that, under a system of private enterprise, which depends for its existence on a steady flow of venture capital, we cannot afford to neglect the implication of this defect of double taxation in our tax system. * * * It is a matter of concern for the future under a system where we depend, and must depend, for full employment and the creation of new wealth on the willingness of our people to risk their money in constructive enterprises." End of quotation.

Our Canadian neighbor has put his finger on one of the most indefensible features of our tax structure, and that is the double taxation of dividends. I have yet to hear any logical justification for this particular tax policy. It is unjust, it is unsound and it outrages the investor's sense of fairness. It has been proposed to allow individuals to take a credit equal to 10 percent of their dividends in computing their tax liability. This would be an encouraging first step toward a long overdue correction of an injustice which crept into our tax system as long ago as 1913.

Another serious inequity in the tax structure which has very damaging consequences is the capital-gains tax. There is an easy remedy for this tax which, to be realistic, is not a tax but a form of confiscation. It has been in our tax structure so long, however, that its complete elimination is too much to expect at this time. An approach to a solution which is widely favored would be to reduce the rate to 10 percent, to increase to $5,000 the amount of capital losses which could be offset against ordinary income each year, and to reduce the holding period to not more than 3 months.

Originally, the objective of the capital-gains tax was revenue. Later on, it was regarded as a means of soaking the rich. This was and is an absurd idea. By making the acceptance of capital gains optional, you cannot levy on the rich through a capital-gains tax. All you can do is to deter the taxpayer from selling an old capital asset and from putting money into a new one. You can stop him from using his own best judgment and thereby needlessly interfere with the functioning of a free market. The investor who finds that he cannot use his own judgment because of an arbitrary time factor becomes apathetic in regard to risk-bearing and finds shelter in tax-exempt securities.

I have merely attempted to point out a list of alarming conditions and trends that are endangering a Nation grown great through the magic of incentive. Unless these trends are checked, much that we have today will disintegrate, and once the light of a great, free, industrial economy is extinguished here it may be a long time before it is relighted anywhere.

Our enterprise system will continue to grow if national economic policies in general are directed to release its potentials. I believe that people everywhere can be most effective in reversing dangerous trends by constantly drawing attention to every tax, every attitude, and every action that is suspect, as regards their effect upon incentive, enterprise, and initiative. In doing this, they are contributing to the common welfare. National policies must be modernized to fulfill the needs of a dynamic America.

I thank you.

The Eleventh Hour

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon by Rev. Clarence R. Haden, Jr., rector of St. Philip's Episcopal Church, Durham, N. C.:

THE ELEVENTH HOUR

(Septuagesima, February 2, 1950)

We are in the throes of a social, political, and economic revolution. So far the changes have been effected gradually and through legislative processes. There is always a lag between what people want and believe in and legislative enactment. Our legislators, because of self-interest as well as their purpose of representing their people endeavor to keep in touch with the desires of their constituents. That this is a difficult task, no one will deny, for lobbyists and pressure groups often confuse the issue by the exertion of influence beyond their importance. Reconstruction is bound to come, however, for the ferment of unrest throughout the world makes it certain. This ferment itself may in part be due to an awakened conscience to the needs of man.

The standard of the market place is contractual in nature, but a more basic standard is what is best for man. His welfare is of greater importance than monetary considerations. As a business executive stated to me recently, "Beginning wages are much higher proportionately than ever before. After a level of around $60 weekly is reached, and it is soon reached, it is slower and more difficult to advance." This it seems to me is sound principle. A man is given more than he is worth, economically speaking, to begin with because of his basic needs, and then advancement is dependent on manifested skill and talent. This present status has been reached because of society's conviction, implemented by minimum wage laws, organized pressure, etc., that man has a basic need which must be met. Such other boons as old age pensions and unemployment insurance are also based on this consideration for the welfare of human beings.

The standards of the Kingdom of God are those of family life wherein each member is of significance and worth. Toward the achievement of these standards society is moving, and great gains have been made, though much still remains to be done. There are times, no doubt, when we feel that democracy is so slow, inefficient and unwieldy, that it should be abandoned. But when we compare the status of social consciousness in the United States with that in the other countries in the world, we know that it is our most valuable asset and must be preserved so that even greater progress may be made. The development of a social conscience was possible because of the democratic way of life.

The world situation wherein rival systems are warring for supremacy should awaken us to the great danger that is confronting society. With the advent of first the atom bomb and now the hydrogen bomb, the future of civilization, even civilization itself, is in question. No one has any right to be complacent in the face of what will inevitably happen if we get in another war. Dr. Harold Urey, the great scientist and expert on nuclear fission, has said that if the hydrogen bomb is used, it will render whole countries uninhabitable for thousands of years. Dr. Clifford Morehouse, editor of the Living Church in an open letter to the President of our country, points out that no weapon of war has ever been developed and not used. This is the most sobering of facts in view of the estimated destructiveness of the hydrogen bomb. We cannot afford to use, we cannot allow, the hydrogen bomb to be used.

It is all very well to recognize the awfulness, the horror, of the hydrogen bomb, but we are faced with doing more than saying it must not be used.

No nation can have a monopoly on the hydrogen bomb, just as no monopoly on the atomic bomb was possible. It will take two years for us to manufacture the hydrogen bomb, and it is estimated our potential enemy, Russia, will have it in four years. We are already in an armaments race, the end of which is sure and certain—war and destruction—unless. Civilization hangs in the balance—we are at the eleventh hour, so this "unless" is of infinite importance to you and to me and to all mankind.

Unless international control of the atomic and hydrogen bombs is effected in the very near future, we shall be destroyed. I am aware that the United States has proposed a plan of international control which Russia has consistently refused to accept. I am also aware that Russia will claim that our possession of the hydrogen bomb is a threat to world peace. Through vitriolic denunciation she will accuse us of all manner of imperialistic designs. But we must now allow the world or ourselves to be confused or deluded by the motives she imputes to us. Russia does not want war with us within the next 4 or 5 years. She is trying to keep us fearful of her until she thinks she is strong enough to withstand the world. It is sad but true that each passing month she intrenches herself more strongly behind the so-called "iron curtain."

We blindly watched the Nazis take more and more territory and get stronger and stronger and thought they would finally stop before we were sucked into the maelstrom. Our residence in this fool's paradise was abruptly terminated. We refused to take a stand for justice, for our principles while we could have done so without resort to war, and then inevitably we were drawn into war. We are making the same old mistakes of thinking we can work with Russia on the basis of right and wrong. They have no standard of right or wrong. Their policy is openly and avowedly one of expediency and opportunism. They will do whatever is best for Russia. Lying, double-dealing, inhumanity, brutality, fear and oppression are basic to their political philosophy. They will never rest until they achieve world domination. This goal is plainly stated in their writings, just as Hitler's plan was clearly presented in Mein Kampf.

So what can we do now to help avert war?

Firstly, this is one world under one God. Nations must surrender their sovereignty to a larger organization, such as the United Nations. The United Nations must change itself by the five leading nations giving up their veto power. The United Nations needs a police force to carry out by power if necessary its rulings. If Russia will not give up her veto power, then let her withdraw from the United Nations. We can show our good faith by proposing that the five nations relinquish this veto power.

Secondly, we as a nation must carry forward our desire to effect an adequate international control of the atomic and the hydrogen bombs. No longer can Russia and her satellites be allowed to sit in the council of the nations of the world when she consistently refuses to cooperate with the others. This will have the effect, no doubt, of lining the world up into two camps, but I submit that that is just what exists today—only we stumble along, hoping that despite all the evidence we shall somehow avoid war. When the differences are clear-cut, we shall know, and the world will know, just where we stand.

Thirdly, we of the Christian Church have the spiritual resources to help change the world. We of the Episcopal Church at this moment of history are endeavoring to send more missionaries throughout the world to proclaim the gospel of Jesus Christ which essentially is the Fatherhood of God and its corollary the brotherhood of all men. Human dignity and freedom rest on the foundation of God. When we work to implement such beliefs, we are on God's side and He will bless and further our efforts. We must give generously in this eleventh hour of mankind to missions at home and abroad.

To demonstrate our desire to avoid world destruction from the use of atomic energy, I urge you to write our two Senators, the Honorable FRANK GRAHAM and the Honorable CLYDE HOEY, and our Representative, the Honorable CARL DURHAM, and advise them of your personal belief that the Congress of the United States should vote for us to relinquish our veto power in the United Nations in conjunction with a majority of the five nations now holding same, and that the United States push with all the influence and power at our command the establishment of adequate international control of atomic energy including its newest development—the hydrogen bomb.

Operation of Television Stations in Chicago

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. SABATH. Mr. Speaker, the great city of Chicago by the City Council of Chicago, passed a resolution on January 20, 1950, requesting the Congress to take necessary steps in order to provide the city of Chicago with adequate facilities for the operation of seven television stations. Seven television stations were allotted to Chicago by the Federal Communications Commission, but only four authorizations were issued for operation in the Chicago metropolitan district.

The New York metropolitan district and the Los Angeles metropolitan district were each allotted seven television stations and they were respectively issued seven authorizations. Certainly this discrimination should not continue, particularly in view of the fact that the importance of Chicago as a center of commerce and industry is further evidenced by the fact that it was selected as the site of the first United States International Trade Fair to be held in August 1950. Chicago should have its full quota of television stations.

The resolution as adopted by the City Council of Chicago follows:

REQUEST FOR CHICAGO FACILITIES FOR OPERATION OF SEVEN TELEVISION STATIONS

Whereas Chicago has always been a leader and pioneer in radio broadcasting and manufacturing and the many allied industries; and

Whereas many Chicago residents are gainfully employed in said vocations and rely thereon for their livelihood, including technicians, actors, musicians, scientists, and advertising, management, and research personnel; and

Whereas in the production and origination of programs for Nation-wide distribution by networks or otherwise, Chicago has been and remains in strong competition with the cities of New York and Los Angeles; and

Whereas television is a new and recent development in this general field of broadcasting that promises to attain dominance thereof in the very near future; and

Whereas the importance of Chicago as a center of commerce and industry is evidenced by the selection of Chicago as the site for the first United States International Trade Fair to be held in August 1950; and Chicago should have its full quota of television broadcasting stations; and

Whereas adequate television broadcasting facilities are a basic essential to the growth and progress of all industries related to and dependent upon broadcasting; and

Whereas the Federal Communications Commission by regulation has allotted seven television stations to New York metropolitan district, seven to the Los Angeles metropolitan district, and seven to the Chicago metropolitan district; and

Whereas a sufficient number of applications were filed in each city to provide for the assignment of all allocated facilities; and the Commission did issue authorizations to seven applicants in New York and seven in Los Angeles for the operation of said stations, but has issued only four authorizations for operation in the Chicago metropolitan district; and

Whereas the failure of the Commission to issue authorization for all seven television stations in Chicago is attributed to a suspension of the processing of applications by said Commission pending a review of Commission regulations concerning television; and

Whereas in September 1948, when the Commission suspended its processing of applications, there had been pending for many months applications for all the facilities allocated to Chicago; and

Whereas the Commission's review of its regulations has developed into a complex and time-consuming procedure which will delay the commencement of further operations in Chicago for at least 18 months and perhaps for another 3 or 4 years; and

Whereas it appears that the authorization of the three additional television stations already allocated to Chicago need not hinder a satisfactory solution of the issues the Commission is currently considering in review of its regulations; and

Whereas a delay of 18 months to 4 years in the establishment of such additional facilities will grievously injure Chicago industries and residents and will seriously, if not permanently, impair the ability of Chicago to compete with its principal rivals in this field, and all of this without countervailing benefit to the Nation as a whole: Now, therefore, be it

Resolved, That the mayor of the city of Chicago be, and he is hereby, directed to advise the delegation of the State of Illinois to the Eighty-first Congress that it is the sense of the city council that all necessary and appropriate steps be taken to the end that authorizations for the operation of additional television facilities in the city of Chicago, allocated by the Federal Communica-

tions Commission, may be issued forthwith; be it further

Resolved, That the city clerk be, and he is hereby, directed to send a copy of this resolution to Senator SCOTT W. LUCAS and Senator PAUL H. DOUGLAS, to each Representative from the State of Illinois in the Eighty-first Congress, and to the Chairman and members of the Federal Communications Commission in Washington.

STATE OF ILLINOIS,
County of Cook, ss:

I, Ludwig D. Schreiber, city clerk of the city of Chicago, do hereby certify that the foregoing is a true and correct copy of the certain resolution adopted by the City Council of the City of Chicago at a regular meeting held Friday, the 20th day of January A. D. 1950.

Witness my hand and the corporate seal of the said city of Chicago this 2d day of February A. D. 1950.

LUDWIG D. SCHREIBER,
City Clerk.

What Should the United States Policy in China Be?

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD the following speech, delivered by me at the Washington Town Meeting, January 30, 1950. The other participants were Senator Paul Douglas, Congressman Walter Judd, and Barnet Nover, of the Denver Post:

In any discussion of China policy two premises ought to be agreed upon at the outset. Unless they are, we will end by obscuring the very issues which we are supposed to clarify.

First of all, China is not merely a group of political and military chieftains on the island of Formosa. Nor is it a few Chinese Marxist theoreticians in Peking, or—as they are at present—in Moscow. We mean or should mean when we speak of China the 475,000,000 Chinese people who possess a very ancient and distinct culture and who, during the past half century, have come to develop an increasing awareness of their national unity. They constitute the China toward which the friendly hand of the United States traditionally has been extended. They are the China we have long sought to encourage in the direction of democracy and freedom from foreign control.

In the second place, we ought to agree that China policy is not solely the question of "to aid or not to aid" Chiang Kai-shek, but rather the whole course of action and inaction in our relations with that country. The question we must ask ourselves is whether the course we have set is the best that can be pursued under existing circumstances. Does it serve all the interests of the United States? Not merely our commercial interests in China, although they are of some importance; not merely our strategic interests in the Far East, although obviously those, too, are important—but the entire range of American concern with China, the Far East, and the rest of the world.

If we keep these two fundamental facts in mind, we shall find, I believe, that the policy followed in turn by General Marshall and Secretary Acheson during the administration of President Truman has been on the same bipartisan track pursued by administration after administration—Republican and Democratic—during the past half century. It should be kept on that track despite the efforts of those, who for reasons of sentimentality or politics, would derail it.

So much heat and so little light has been shed on this policy by the debate of the past few years that I should like to review briefly just what we have done and what we have not done with respect to China.

During the war and immediate postwar period the United States extended both economic and military assistance to the Chinese. The amount of that assistance was not large enough to satisfy some people. It was much smaller than that which went to Russia or Great Britain. At the time, however, most of us were concerned not with dividing the American inheritance equally among our allies, but with using available resources in a manner best calculated to defeat our enemies. The fact that we are meeting here tonight seems to indicate that the decisions of our wartime leaders in this respect were at least reasonably correct.

Assistance given to China during the war, limited though it may have been, was the critical factor in saving a valued ally from collapse and I think it is about time we stopped being ashamed of it. American interests were served by this aid in that we were able to share the terrible human sacrifices demanded by the war. China's interests also were served since that country emerged from the conflict in a stronger and more independent position than it had ever before occupied in the modern world.

Partly to complete our wartime commitments and partly to equip China for its greatly enhanced and important international role, the United States continued aid to China during the months following the end of the war. The Chinese people wanted the removal of the 3,000,000 Japanese remaining in China. They wanted internal stability and rapid economic and political reconstruction. And above all they wanted an end to civil war.

The intention of our postwar aid was to assist them in realizing these objectives; we were not concerned with furthering the interests of any particular group of Chinese officials. If we extended our assistance through the National Government, it was because the available evidence indicated that, at the time, most of the Chinese people still looked to the generalissimo, who had led them in war, to continue to supply them with leadership in peace.

General Marshall's mission similarly was in accord with the wishes of the Chinese people. The general did not go to China to force Chiang Kai-shek to accept Communists into his government as has been so recklessly charged by some in this country. He went to help achieve what the Chinese people clearly and desperately desired—what the generalissimo and the National Government had repeatedly proclaimed as their official policy—a settlement of the internal problem of unity by peaceful means.

When it proved impossible to achieve such a settlement, President Truman reiterated the traditional policy of the United States—that we would not become directly involved in a Chinese civil war. That decision was applauded by the people of China, who were overwhelmingly opposed to the suicidal conflict being precipitated among them. As the civil war spread, we sought ways to alleviate the suffering it caused and to prevent China from collapsing into utter anarchy.

The cost of these American efforts to help the Chinese people has been great. An official calculation placed the total amount in excess of $2,000,000,000 in loans and grants since VJ-day. It is possible to argue about the exact amount and millions of words have been wasted in proving that it was closer to one billion or to three billion.

The significant facts, however, are these: During the first few weeks after the defeat of Japan the United States transported by sea and air 400,000 to 500,000 National Government troops over and around the Communist forces to key sectors of East and North China. The purpose of this undertaking was to insure an orderly surrender, disarmament, and repatriation of the Japanese. Fifty thousand American marines held such vital cities as Peiping, Tientsin, and Tsingtao for months, thus preventing their seizure by the Chinese Communists. By the end of 1945 we had delivered sufficient tonnage to equip 39 divisions of National Government ground forces and an eight and one-third group air force. Whatever Japanese equipment the Chinese Communists obtained with the facilitation of the Russians in Manchuria was offset by the Japanese equipment surrendered to the Nationalist forces in North, Central, and South China.

In December 1945 Chiang Kai-shek held a numerical superiority in combat forces over the Communists of five to one. He had a monopoly of heavy equipment and mechanical transportation and an unopposed air arm. Yet by December 1948, exactly 3 years later, this preponderance of strength had been so dissipated that General Barr, head of our advisory mission in China, was forced to conclude that without direct American involvement with its combat forces the complete defeat of the Nationalist armies was inevitable.

What lies behind this colossal failure? We have the answer from General Marshall, General Wedemeyer, General Barr, and practically every other competent observer who has had the opportunity to view the situation in China first hand. The failure was due not to any lack of arms and ammunition. The failure was due to the incredible ineptitude of the Nationalist Army command. It was due to the inability or unwillingness of the Chinese Government to take the necessary and repeatedly advised measures of social, economic, political, and military reform which alone could have retained for it the support of the soldiers and the common people of China. It was due to the downright corruption in official circles.

In the face of the mass of evidence, there are still people who cling to the theory that the Yalta agreement is at the root of all of China's difficulties. It follows, then, that since we participated in this dark and wicked conspiracy we are guilty of some sort of gross betrayal.

Let us see what this much-maligned agreement actually provided. Under its most pertinent clause, the United States committed itself to intercede with the Chinese Government in order to obtain the return to the Soviet Union of certain limited port and naval concessions in Manchuria. They were substantially the same as had been lost by Russia to Japan in 1904. In return the Russians agreed to enter the war against Japan. They also reaffirmed their recognition of China's sovereignty over all Manchuria, and consented to give assistance and support to China exclusively through the National Government.

Military considerations were largely responsible for the American decisions at Yalta. It is all very well, with the wisdom of hindsight, to ridicule these considerations. But at the time, the war with Japan was still of uncertain duration. Without the unforeseeable impact of the atomic bomb on the outcome, hundreds of thousands of additional casualties might have been the price of the defeat of Japan. The administration wanted to share that toll as far as possible with other countries. No one, it seems to me, is justified in talking glibly of such a consideration.

The fact is that we could not have prevented, by any method short of war, the penetration of Manchuria by Russian imperialism, so we tried to limit it. The American people have never indicated a willingness to go to war for the ejection of non-Chinese control from Manchuria. Our traditional China policy has never countenanced such a step. We did not go to war when the Russians originally penetrated the area toward the close of the nineteenth century. We did not go to war when the Japanese replaced them in 1904. It was, as a matter of fact, President Theodore Roosevelt, who arranged that first "Yalta" agreement. And in 1931, another Republican administration refused to lead us into war over this issue when the Japanese expanded economic concessions into political domination of all Manchuria.

We have placed on record in the past our conviction that Manchuria is Chinese territory. At Yalta we did so again. And we still believe Manchuria remains Chinese territory, regardless of the advantages taken by predatory neighbors in this time of China's weakness. But the task of restoring Manchuria to China in fact as well as in name is primarily the task of Chinese nationalism. It is not now and it has never been the responsibility of the United States armed forces.

Rather than speak of Yalta as a gross and iniquitous betrayal, I think it is time to recognize it for what it was—the best possible chance, at the time, of preserving the long-term interests of both the United States and China.

Another bogey has now made its appearance in connection with the island of Formosa. This time the administration is accused, not of betraying the Chinese, but of betraying the Formosans who, incidentally, are about 98 percent Chinese.

At the Cairo Conference in 1943, the United States pledged the restoration of Formosa to China. There was practically unanimous approval of that decision both in this country and in the allied world. When the war ended, the Formosan Chinese welcomed the return of the National Government as a liberator. Chen Yi, an old friend of Generalissimo Chiang Kai-shek was appointed the first governor. Chen Yi found living standards on the island better than on the mainland. He found a populace both industrious and law-abiding. And he found no Communists. After a little more than 1 year of Chen Yi's carpetbagging maladministration, the island was rocked by a fierce uprising against the mainlanders. Chen Yi crushed the revolt with a ruthlessness that claimed several thousand lives. It is not surprising that many Formosans believe their lot—bad as it might have been under the Japanese—was preferable to what they have suffered under the National Government. Successive and more enlightened governors, Wei Tao-ming, Chen Cheng, and K. C. Wu have not been able to wipe out the bitterness and hatred which the Formosan Chinese feel for their oppressors.

It is into this ugly situation that we are now invited to project ourselves. Since a peace treaty with Japan has not yet been signed, a legal loophole exists whereby we might assume some sort of protectorate over Formosa. In this manner we might conveniently avoid or postpone in Chiang Kai-shek's interest the pledge given to the Chinese people at Cairo. This ignores the fact, however, that for 3 years we have not questioned Chinese control over the island and to do so now would be unabashed interference in internal Chinese affairs.

The "gunboat" policy for Formosa currently being advocated in some quarters is not a new one. It was first proposed a hundred years ago by Admiral Perry and decisively rejected by the American people then. If we were to follow it now, we might be able with superior force to discourage the present Communist masters of China from seeking to take the island. But in doing so, we would give credence to the anti-American propaganda in the Orient that charges us with using our power for imperialistic purposes. We would build, in the final analysis, a lasting heritage of hatred just as the Russians are now busily doing in Manchuria, Sinkiang and Mongolia.

The situation in Formosa points up the key difficulty involved in keeping our China policy on the right track. We must discriminate between what we can do and what we cannot do both in a material and an ethical sense. There is no virtue in doing in foreign affairs just to be doing, and there are times when inaction is more effective from the point of view of American interests than action.

The cardinal principle of United States China policy must remain what it always has been—recognition of the fact that the internal problems of the Chinese people, whether on the mainland or on Formosa, must be solved primarily by the Chinese people themselves. They do not want and they will not acquiesce indefinitely in solutions forced upon them by foreign intervention.

We cannot make ourselves responsible—militarily or otherwise—for a regime which has been abandoned by the Chinese people. To do so would be the certain way of diverting attention from the real threat to their nation arising in the north.

We cannot continue to supply armaments to a government which the Communist leader Mao Tze-tung has callously, but unfortunately with much accuracy, labeled his supply service for the delivery of American equipment.

We cannot, by conducting naval exercises in the path of an impending engagement in the Chinese civil war find a cheap and involvement-free solution to the complex problem of China policy. It is irresponsible and dangerous to threaten force unless you are prepared to use it. And I doubt that even those who advocate such a policy are ready to go to war over Formosa.

We cannot, on the other hand, give recognition to a Chinese Communist government which shows little regard for the rights of our citizens and little respect for even the most elementary international usages. There would appear to be little point, moreover, in our association with a regime which claims to speak with the authentic voice of China but which has the accent of the Soviet Union. At the conclusion of the present and unexpectedly long talks in Moscow we may know better whether that regime has abandoned the accent or China's fundamental interests.

What we can do in the present circumstances is to maintain our faith in China—not in a handful of exalted figures but in the Chinese people themselves. We can continue to help those people with the limited means at our disposal—through public and private channels—in whatever regions remain open to us. The Chinese people will not forget acts of genuine friendship in their hour of trial.

We can, moreover, through the Voice of America, the United Nations, and other feasible ways, keep the attention of the Chinese and the world focused on the Soviet exploitation that is now going on in China's remote provinces. Through the United Nations, we can also seek to prevent the present Communist masters from pushing the peaceful Chinese people into aggressive campaigns beyond China's borders.

By lending encouragement to legitimate Nationalist aspirations and by extending practical economic assistance under point 4 to the countries surrounding China, we can demonstrate our genuine interest in the progress of all Asia.

Finally, we can keep our thinking on general foreign policy flexible. Only in this way will we be able to act appropriately in any given circumstances. Above all, we must avoid the fallacy of believing that consistency in foreign policy lies in acting precisely in the same manner in every part of the globe. It is, for example, fantastic to suggest that what we have done in Greece we must also do in China, which has 58 times as many people, 60 times as great an area, and a vastly different set of political and strategic problems.

The only consistency we need be concerned with is the consistency with which we devote ourselves to the protection of the security and all the legitimate interests of the United States. That is the basic ingredient of a nonpartisan, nonpolitical approach. Beyond it let us exercise a little imagination and a lot of discretion.

The Secretary of State and the Man

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. NIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, from the New York Times of January 27, 1950:

IN THE NATION—THE SECRETARY OF STATE AND THE MAN

(By Arthur Krock)

WASHINGTON, January 26.—To comment as Mr. Acheson did on the conviction and sentencing of Alger Hiss was politically explosive, and in his capacity as Secretary of State he was fully aware of that. Also, experience and observation must have shown him that an officeholder, especially of his eminence, cannot divest himself of official status and speak or act as a private person when the matter concerned touches a public issue and the setting is the place in which he conducts the public business.

These circumstances of Mr. Acheson's comment, combined with the fact that he deliberately expanded it beyond the remark that it would be "highly improper" for him to discuss the legal aspects of the Hiss case while it was still before the courts, led this correspondent to a certain conclusion. It is that Mr. Acheson expected the question and determined that when it was asked his conscience as a man and his ethical concept as a Christian required him to reply as he did despite the obvious consequences—at any rate the immediate ones—and the inseparability of Dean G. Acheson from the Secretary of State in the premises.

A minority among the many in Washington who were heard to discuss the incident today approved the decision he reached as Mr. Acheson, and some of these held that the compulsions of conscience entitled his comment to be weighed as that of an individual only. In this opinion, any who believed in his right as a man to say what he did have no grounds for criticizing him for doing so because of the office he occupies and the world importance of the popular estimation of its occupant.

That opinion may become general as the event is discussed and rehashed not only in the political community of the capital but in countless gatherings of the American peo-

ple. Personal, deliberate courage, loyalty to friends in dire trouble and professions of the Christian ethic of compassion are admired and respected in Western and other civilizations. And all these were displayed by Mr. Acheson.

VIEWS OF THE CRITICS

Nevertheless, among those whose opinions were heard today the critics outnumbered the defenders, and on these grounds:

In two jury trials 20 of 24 jurors decided that Hiss was guilty of perjury as charged. In the second of these trials, though the attitude and rulings of the court were more satisfactory to the prosecution, it allowed the defense to present evidence excluded from the first trial and urged by the defense as vital demonstrations of the innocence of the defendant.

Trial by jury is basic among democratic institutions, and Mr. Acheson's citation of the Last Judgment of Jesus against the background of Hiss' conviction was bound to leave a critical implication toward the operation of that system in this instance with the verdict still before the courts. If Mr. Acheson had waited to cite the doctrine of compassion for all sinners until the verdict was affirmed, which he could have buttressed with another quotation from St. Matthew (12: 31), this implication would not have touched a pending case. For the present, Hiss has been found guilty of perjury in relation to accusations of disloyalty to his country and breach of official duty for which he could not be tried under the statute of limitations. As a lawyer, Mr. Acheson should merely have observed that the case is still in court.

As Secretary of State he should have confined his comment to the remark about propriety. He should have done so because (1) it is his duty to keep his office out of unnecessary controversy, and this was unnecessary; because (2) the former connection of Hiss and certain others with the Department of State has already hampered its effective operation by arousing the distrust and resentment of many worthy Members of Congress and the public, and yesterday's comment was sure to stimulate these at the expense of the general welfare, and (3) because Mr. Acheson's personal and business relations with Mr. Hiss and his brother make him a biased observer in the minds of many.

A POLITICAL JUDGMENT

Those who evaluated Mr. Acheson's comment wholly on the scales of politics and foreign policy found the heart of the matter in its possible effect on these. Some who support the domestic and foreign policy of the administration were disposed to criticize the Secretary, though in private, as having committed an irresponsible act in the circumstances which no prompting of conscience or religious doctrine could excuse. They agreed with the others that Mr. Acheson should have awaited the final judgment of the courts before he amplified his refusal to discuss the legal issues that remain, adding it is plain that, if the jury's verdict does not stand, the reason can only be a legal technicality.

Even then, said these critics, whether the case goes back to the courts on a technicality or the verdict is sustained, Mr. Acheson should weigh the effects of what his conscience as a man might prompt him to say or do against the consequences of these on the great public duty he has accepted. Then, since he knows the obligations of his office and the nature and sources of his opposition, he should resign as Secretary of State if to follow his conscience required him to do so in the interests of his country. And, in this opinion, Mr. Acheson is a practical enough judge of consequences to know when resignation would serve those interests best.

Place Names in West Virginia

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. KEE. Mr. Speaker, the place names of West Virginia have been studied by the State's industrial and publicity commission, and many quaint and curious pieces of lore have been uncovered. They smack of the early pioneer life of Americans in a rough mountain region. I find in the Monroe Watchman, of Union, W. Va., a reproduction of the commission's report, and it is with pleasure that I commend it to my colleagues, under leave to extend my remarks in the RECORD:

PLACE NAMES IN WEST VIRGINIA

West Virginia place names do more than merely designate locations. They give us a graphic picture of the life and times in the State's early development. In fact, a study of West Virginia's names is a study of its history.

Take Mohawk and Mohegan, Mingo, Seneca, and Guyandot—names of the great Indian tribes that inhabited or hunted this region. Wyoming, Shawnee, Potomac, and Watoga are places and rivers that recall the rich beginning of our recorded history. Even before the Indian there lived the Moundbuilder, hence Moundsville.

Many streams in West Virginia still carry descriptive titles of the colorful Indian language. Monongahela was known to the Delawareans as the "river of falling banks." Pocatalico was the "river of fat doe." Ohio means "river of many whitecaps." The Great Kanawha pays tribute, not to the river, but to the once great tribe of Canoys.

The little town of Pickaway, in Monroe County, is a rough pronunciation of the tribal name, Piqua.

Names give us a true insight on the life of the early pioneers. Moreover, in names like Little Italy, Ireland, Polandale, Welsh Glade, and Germany Valley, we discover the origins of these people. Helvetia, in Randolph county, is the Swiss name for its settler's native country. Ronceverte, meaning Greenbrier, shows the French influence in the southeastern area.

Many of West Virginia's commonplace names depict the environmental conditions of those early days. Names like Elelber Run, Ramp, Spice, Sang, and Seng Runs reveal the pioneer dependence on root and herb medicines. Panther Fork, Elk River, Copperhead Branch, and Wild Cat Knob emphasize the wild unsettled conditions. Pigeonroost, Cow Creek, Bull Run, Goose Lick, and Turkey Wallow Branch indicate agricultural pursuits. Names like Tunder Hill Run, Mount Storm, Hurricane, and Tornado show the settler's deep awareness of natural forces.

Perhaps it was the pioneer women who gave us such names as Cupboard Run, Kitchen Creek, Kettle Run, Pot Branch, Skillet Run, and Tub Run. Tearcoat Hill, Mitten Ridge, Scissorsville Branch, Wash Hill Fork, and Suds Run can be credited to them, too. What stories lie behind names like Peddler Run and Gunbarrel Hollow?

Even foods are immortalized in names like Apple Pie Ridge, and Potato Hole Knob. An early day humorist probably gave us Pickles Fork. And to show that the frontiersman was of sturdy stuff, there is Grogg Run, Mash Fork, Rum Creek, and Still Run.

Religion played an important part in the lives of the pioneers. Such names as Canaan Valley, Eden, Herods Creek, Pharaoh Run, and Pisgah are taken from the Bible. There is a Job Knob, a Moses Creek, also a Christmas Ridge. Names like Paradise, Purgatory Knob, Devil's Tollgate, and Hell For Certain Branch mirrored the moral fiber of these places. Desolate Branch, Shades of Death Creek, and Troublesome Valley reveal more somber aspects of frontier life.

Feelings and emotions are betrayed in names like Big Ugly Creek, Hardscrabble, Desolate Branch, Stinking Creek, and Hateful Run. Soak Creek and Lissie's Roost connote humorous incidents of long ago.

Proving that the pioneers also explored the great world of literature, Avoca, from Moore's Irish Melodies, and Ravenswood, from Sir Walter Scott, are added to the list. A knowledge of Greek and Roman literature is hinted in Caesar Mountain, Socrates Mountain, Eureka Island, Polemic Run, and Styx River. Geography is evidenced by the Congo, Nile, and Rhine Rivers.

The building of railroads resulted in such names as Rose Siding, Engle's Switch, Switchback, Jones' Crossing, Vivian Yard, Tunnelton, and others. Combo evolved from the Cumberland Valley and Baltimore & Ohio Railroads.

Wars are responsible for such names as Brandywine and Bunker Hill. Dunmore and Cornwallis were named for famous generals. Jefferson, Washington, and Lafayette are names of districts; counties are named for Lincoln and Grant. Civil War heroes are recognized by the districts of Stonewall, Lee, Sheridan, and Sherman. Scott and Winfield were named for the hero of the Mexican War of 1847.

Nearly all the Presidents are represented in some way. There is both a Woodrow and a Wilson in West Virginia. Women, too, have been honored by place names. Both Belva and Lockwood were named for the famous women's rights advocate of 1877. More recently, the little Putnam County community of Eleanor was named for the wife of the late President, Franklin D. Roosevelt.

Excise Taxes Should Be Immediately Repealed

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. HAGEN. Mr. Speaker, the Nation is clamoring for repeal of the wartime excise taxes, which have served their purpose long ago.

I present an editorial from the Washington Daily News for January 30, which gives added reasons why these excise taxes should be repealed immediately. If not, thousands of small firms may go out of business because buyers are waiting for Congress to repeal these taxes.

The editorial will be of interest to Members of the Congress and readers of the RECORD.

It follows:

PARALYZING BUSINESS

Wartime excise taxes, still in effect 4½ years after the war ended, are depressing certain lines of business.

President Truman says so, and everybody else knows it to be true.

The original chief purpose of most of these taxes was to discourage travel and business-as-usual, thus releasing transportation facilities, manpower, and materials for war work.

They continue to serve that purpose when all lines of business need every possible encouragement to produce and sell, thus providing more jobs and more Government revenue from individual and corporate income taxes.

They serve that purpose, as Mr. Truman says, with particular detriment to low-income groups.

And now, since Mr. Truman has advocated reducing many of these excise taxes, they serve that purpose more effectively than ever.

For customers are putting off buying excise-taxed goods in the belief that the taxes will soon come off or come down.

The effect on some lines of business has become worse than depressing. It's paralyzing.

But Mr. Truman tied a string to his recommendation for cutting such taxes. He said that Congress must replace the revenue lost by closing tax-law loopholes which now permit some groups to escape their fair share of taxation. Otherwise, no excise-tax cuts.

Closing the loopholes is a difficult, time-consuming job, which Congress apparently intends to study for several months before acting.

A few months of stagnation in the market for excise-taxed goods could put a lot of employers out of business and a lot of employees out of jobs.

We believe that Congress should do quickly whatever it means to do about reducing or repealing excise taxes, and should firmly commit itself to offset any consequent loss of Government revenue by cutting down Government spending.

Report on European Visit

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of my visit to military headquarters, units, and installations in Germany and Austria, and certain other points in Europe, November 9 to December 9, 1949, made to the Honorable CARL VINSON, chairman of the Committee on Armed Services:

This report of the trip made by the undersigned to Europe commencing November 9 and concluding December 9, 1949, is designed to make available to the members and staff of the committee essential information gathered and the views and impressions gained on such trip. While the main mission of my tour was to inspect American military installations and American troops in the occupied zones—Germany and Austria—nevertheless because our overseas military missions are largely determined by social, economic, and political conditions abroad, I spent considerable time investigating those conditions. And although certain of the matters coming to my attention are not directly within the jurisdiction of the Armed Services Committee, it is believed that they may be of general interest to the other Members, particularly those whose schedules did not permit them to visit Europe during the past year.

ITINERARY

During this trip stops were made at Westover Air Force Base, Massachusetts; Lagens, Azores; Frankfurt, Heidelberg, Weisbaden, Berlin, Munich, Germany; Vienna, Austria; Rome, Paris, Iceland, and Newfoundland. The major portion of the time overseas was devoted to the study of installations in Germany, with 2 days in Austria and 4 days each in Italy and France.

The following items and conditions with respect to our troops in Europe were noted during this trip:

The number of American troops in Europe today represents merely a token force whose mission is that of maintaining law and order. Nevertheless the mere presence of American troops very obviously means much to reassure the peoples of the occupied zones that the United States is vitally concerned with their welfare and their problems.

PERSONNEL

The health, appearance, and discipline of our forces in Europe were uniformly good. American military leaders in Europe, under General Huebner, and more recently under General Handy, have made substantial strides in these fields; and our military personnel by their appearance and conduct reflect credit upon the United States.

The strength of the United States forces in Germany has been gradually reduced since the close of hostilities, and today our troops constitute a very small number particularly in comparison with their missions, or the number of troops maintained by certain other powers. Under such conditions, it is doubly important that the highest quality personnel be recruited and trained, and that the maximum combat strength be organized from the personnel available. I am not convinced that these objectives are being fully attained. Due to the requirements of the Selective Service Act of 1948, and the shortage of voluntary enlistments, the Army lowered its personnel standards to a degree. Furthermore, there are still substantial numbers of military personnel in Germany assigned to more or less nonmilitary duties, such as the operation of hotels, service stations, restaurants, etc. The fact that such activities are necessary for the maintenance and convenience of our occupation forces does not, in my opinion, require that, in the stabilized conditions now prevailing, military personnel be directly assigned to such activities. The State Department, through the High Commissioner for Germany, Mr. John M. McCloy, has taken over the responsibility for civil government, economic affairs, and most policy matters affecting the German population. It would appear that they should also take over, or make suitable arrangements, for the support and maintenance of their personnel, and that our armed forces should be reorganized to emphasize their strategic and tactical combat missions. Furthermore, it may be noted that among the personnel assigned to nonmilitary duties a substantial number have been engaged on such activities for 2, 3, or 4 years. While such specializations may contribute to technical efficiency in the particular job concerned, it does not advance over-all training or develop maximum potential combat strength.

Some units and headquarters appear to be overstaffed with officers as compared to actual needs. This condition, I understand, has come about principally because during the period following the seizure of Czechoslovakia by Communist forces, and enactment of the Selective Service Act of 1948, the Army anticipated an increase in its effective strength from 550,000 to over 800,000, and encouraged a large number of emergency and Reserve officers to volunteer for 3-year tours of duty. Subsequently, the President determined not to increase the armed forces to the extent authorized by the Congress; but the Army and Air Force still had a substantial number of officers in excess of actual requirements. This problem is clearly understood, and I understand efforts are being made to solve it, by relieving Reserve officers on their own application and by limiting the recall to extended active duty of others. However, some forced attrition has become necessary, resulting in the involuntary separation of certain Reserve officers. Needless to say, such a program, no matter how fairly and efficiently carried out, creates uncertainty and injures morale among those who have gone overseas expecting a 3-year tour of duty and now find themselves subject to possible involuntary separation. It would appear to be in the best interests of all that the policies to be followed in this matter be promptly disseminated, and that the program be carried through as expeditiously as possible.

TRAINING

One infantry battalion of the First Division is stationed in Berlin, where, together with a battalion of the constabulary and one battalion of military police, it constitutes our tactical force. This infantry battalion has not been afforded opportunity to rotate with other similar units of the First Division; consequently, while the individual training and discipline are at a high level, it scarcely can be considered fully trained as a divisional unit. It would appear possible, now that the Berlin blockade has been lifted, to replace the battalion concerned with another similar unit in order to provide the personnel better opportunities for combined-arms training.

With respect to the Air Force units in Germany, it may be noted that current directives authorize a maximum of 4 hours flying time per month for combat pilots, and limit the operation of aircraft to those of the type to which the officer is regularly assigned. While the need for economy and efficiency in our military affairs is recognized, I do not believe that 4 hours flying time per month is sufficient to maintain the proficiency of air crews, particularly on high performance or combat-type craft such as fighters. As a temporary measure, such limitations on training may produce economies, but by reducing the readiness of our combat squadrons and pilots they weaken our defenses, and subject the personnel concerned to undue hazards. I recommend that the committee take up with the Secretary of Defense and the Secretary of the Air Force the matter of maintaining real flying proficiency, particularly by those air crews assigned to duties with tactical units in Europe.

EQUIPMENT AND QUARTERS

The equipment of our ground force elements in Europe is generally satisfactory. The standards are those of 1944 or 1945, and the problems of maintenance and repair have required great ingenuity and resourcefulness on the part of the leaders concerned. In general, though, our Army forces have sufficient weapons, transportation, and other equipment to meet their needs. In an effort to maintain in serviceable condition the maximum amount of motor equipment, the Army has taken over and is now operating in the vicinity of Munich a major industrial plant constructed by the Bavarian Motor Works for the manufacture of aircraft engines. There, unserviceable trucks, cars, and jeeps are completely dismantled, inspected, and rebuilt, by the labor of several thousand German workers. Due to the efficient organization of the plant, the skill of the workmen, and the low rates of pay (in comparison to United States industry), as well as the saving of transportation costs, the operations of this plant and others in the United States zone have achieved very substantial economies. Of course, the process of rebuilding and repairing used motor vehicles cannot go on indefinitely, but the Army and particular-

ly the Ordnance Department, deserve the sincere commendation of this committee for the resourcefulness and initiative shown by this operation, and the efficient results obtained.

So far as aircraft equipment was concerned, the only deficiency noted appeared to be at Neubiberg Air Force Base where our most advanced fighter units were still equipped with World War II planes. The reasons for delay in equipping these units with modern jet fighters are not known, unless it be the need for extended runways which are now under construction; but every effort should, in my opinion, be made to provide such units with the newest and best equipment available. This Air Force base is approximately 20 minutes from the Czech frontier and 1 hour from Berlin by air. If they are to perform their mission in combat, the units stationed there should have the very best that American industry can provide in the way of weapons and equipment.

The problem of quarters for officers and enlisted men of our services stationed in Europe is one of unusual gravity. During the last months of the war in Europe, and the first year following, the United States Army took over, by requisition, large numbers of dwellings as billets and quarters. Subsequently, General Clay, in an effort to stabilize the situation and to avoid unnecessary drain on the German economy, discontinued requisitioning and in many areas turned back substantial numbers of quarters to the Germans. The transfer of several staff functions from Berlin to Frankfurt, and more recently to Heidelberg, has produced a severe shortage of family quarters in those areas. Another factor has been the increasing tendency since conditions became more stable for officers and enlisted men to bring their families to Germany. In any event, there is now a serious shortage of family quarters for assignment to Army and Air Force personnel of all grades, with the possible exception of senior general officers. I did not, during this trip, have time or facilities to determine what solution should be reached, but I am convinced that the problem urgently requires more thought and effort on the part of the responsible commanders than it has heretofore received. One minor aspect of the problem is that, due to the interpretation placed upon the definition of dependent parents (under sec. 102g, Public Law 351, 81st Cong.) some officers and enlisted personnel are encouraged to transport overseas parents who could be better cared for in the United States. Such interpretation appears unnecessary and the results are entirely wasteful and injurious. It appears that our Army and Air Force should be required in Germany for a very substantial period in the future. As will be noted in a subsequent paragraph, the Germans have already regained a major portion of their spirit, and if our troops are to be effective they must maintain the dignity and prestige of the United States. In order to do so, and to maintain reasonable morale, those officers and men with families must be provided quarters in the areas where they are stationed. Their presence constitutes a very major addition in the valuable form of the dollar exchange to the German economy; and I believe that economy is now sufficiently recovered to provide shelter for the personnel concerned by means of leases, requisitions, or otherwise, as may be best adapted to each particular location.

ECONOMIC RECOVERY AND ECA

While matters in these fields are more clearly within the purview of the Committee on Foreign Affairs, I believe that the other members of this committee are, like myself, interested in the results which our numerous and very substantial programs of aid have obtained. Since the end of hostilities in Europe, Congress by means of UNNRA, Interim Aid, United Nations Welfare and Relief organizations, funds for the government and relief of occupied areas, loans and credits to Britain, and the Economic Cooperation Act have made available very large sums for the relief, rehabilitation, and recovery of the European economy. According to a Commerce Department report carried in the press on January 3, the United States has laid out nearly $30,000,000,000 in postwar aid to foreign nations, including $3,385,000,000 subscribed to the World Bank and Monetary Fund and $24,802,000,000 in aid furnished directly to foreign countries. I will mention certain specific situations in the various localities in an appendix; but, in general, the following are my impressions and conclusions:

With the exception of Berlin and other industrial cities of Germany, the war damage in western Europe has been largely repaired. Railroads, highways, electric power systems and many industrial plants are back in production.

ECA and similar programs have largely filled the pipe lines and restored inventories. Shipments of foodstuffs, textile fibers, and other raw materials have resulted in a marked increase in business activities; and today the stores in Europe are well stocked with a wide variety of goods and foodstuffs.

Problems of markets for restored western European economy have not been solved. Export business is very limited on most items to other European countries. The amount of imports which this country can absorb is limited.

The problem of payment for food and raw materials imports likewise remains unsolved. Significant amounts of imported foodstuffs are necessary in order to maintain the populations of western Germany, Austria, and Italy. Thus far, the United States Government has shipped large quantities of food and raw materials, some of which were surplus under the domestic-support program to Europe. Whether such programs should be continued without reimbursement is the question for the American people, and the extent to which such activities can be carried out without impairing the solvency and credit of the United States and weakening our economy is a matter which must be determined by the Congress.

It is my own opinion that the economies of western Europe are not, in general, now self-supporting, although the recovery has been amazing. They are well on the mend. And it is also my opinion that the necessary arrangements to achieve that end will not, as anticipated, be effective by 1952. Large-scale efforts to achieve balanced economies in those countries will take the form of future industrialization, leading inevitably to increased competition with our domestic industry and producers, either in the United States market or in overseas areas such as South America. I believe that we must recognize and face the fact that some aid will be required long after 1952; but the amount of such aid should be drastically reduced, starting with the fiscal year beginning July 1, 1950, as it is questionable how long the economy of our country can continue to stand the terrific strain on our finances and resources without finding ourselves in difficulties.

Finally, it must be noted that maintenance of sizable United States military forces in Europe, and the assistance to be furnished, under the military-aid program, will both result in substantial economic benefits to Europe.

CONCLUSIONS

The United States is committed, as a result of the policies and decisions reached during World War II to the maintenance of forces in Europe for a number of years. We likewise find ourselves committed to the economic support of numerous areas where the population exceeds the means of subsistence, until a new European economic system is evolved or export markets become available. Under such conditions, it is imperative that all possible measures be taken to maintain and increase the morale, efficiency, and prestige of our limited military forces. It is likewise essential that the programs for European aid, whether in the form of loans, economic aid, or otherwise, be scaled down to a level which the United States can support.

DETAILED NOTES AND OBSERVATIONS BY PARTICULAR LOCALITIES

Westover Air Force Base, Mass.

This base, located near Chicopee Falls, Mass., is the United States terminal for MATS Atlantic flights, and serves as a general port of aerial embarkation. The strength at this base is almost 6,000, including some 670 Navy personnel. There are very few permanent buildings on the base—a few hangars, a photo laboratory, four sets of officers' quarters, and four sets of noncommissioned officers' quarters. There are projected, and under way, 750 sets of family quarters to be constructed under the provision of Public Law 211, Eighty-first Congress (Wherry housing bill). While this amount of construction will assist in developing the base, additional permanent construction is urgently needed. Maintenance and operation of temporary wartime-type buildings, particularly in the climatic conditions prevailing, is neither economical nor efficient.

Lagens, Azores

This base is an important installation in our military air-transportation service for any ferrying operations between the United States and Europe. However, quarters and buildings are still of a very temporary nature, inadequate for permanent use, particularly at this important station. If the United States is to maintain an air base at this location, appropriate steps should be taken immediately to provide permanent quarters and, so far as possible, a dependable water supply.

Frankfurt

Maj. Gen. George W. Hayes, deputy to Mr. John J. McCloy, concerning the economic problems of Germany, pointed out that west Germany would be in a favorable position if markets for its products could be made available. Western Germany faces two major difficulties: The first is markets for manufactured goods, and the second, sources of food and raw materials, within western Europe, or otherwise available to them. Concerning the problem of refugees from Russian-dominated areas of Europe, General Hayes estimated that these persons are still arriving from east Germany and Communist-dominated countries at the rate of approximately 100,000 per month. While General Hayes regarded this matter as a German problem, it is apparent that the addition of such large numbers of persons in an area already overcrowded and short of housing and employment, constitutes a serious economic burden.

So far as the ECA counterpart funds are concerned, Germany has been relatively slow to develop plans for submission concerning their use. However, this delay is being overcome and will in the future diminish.

Berlin

As a result of conference with Maj. Gen. Maxwell D. Taylor, and inspection of various areas and units the following was developed:

(a) The situation with Russia is less tense than it was a year ago.

(b) Berlin is suffering a severe depression, due to the fact that sales from western zones of that city to the surrounding Russian area are almost impossible so long as the west German mark is worth approximately 6 east marks. Furthermore, the dismantling and stripping of industrial plants by Russia, immediately following the termination of hostilities, has required the use of improvised

or old equipment which is less efficient than the relatively modern machines in the west zone. As a consequence, there are now unemployed in Berlin some 250,000 workers, constituting 25 percent of the employable populace.

(c) A visit to a battalion of the Sixteenth Infantry located in Berlin and commanded by Lieutenant Colonel Barker, indicated that individual training is now carried out in Grunewald. There is no rotation with similar units in the United States zone. Most of the battalion's enlisted personnel are very young soldiers, only 10 percent having served during World War II. The barracks and quarters in this unit, were very good.

(d) The Seven Hundred and Fifty-ninth Military Police Battalion in Berlin is commanded by Lieutenant Colonel Lancer. This unit is responsible for supervising the police in the United States sector of Berlin, and for negotiating with the Russians concerning incidents and arrests involving United States personnel. Within this military police battalion, there is always available one alert company with a minimum strength of 100 men, capable of being mobilized and ready to move within 20 minutes. Lieutenant Colonel Lancer stated that the number of incidents with Russian forces has decreased during the past several months, but they still picked up quite a few Americans for interrogation or information if found within their zone. This battalion and its equipment made an excellent appearance, but there are too many young, inexperienced soldiers assigned for duties requiring mature judgment.

(e) A constabulary battalion, commanded by Lieutenant Colonel Prunty, is the other major United States tactical force in Berlin. This unit is equipped with light reconnaissance vehicles and guns, and make a very good appearance.

(f) A visit to the refugee reception center at Anhalter Bunker, where political refugees from the eastern zone and Communist countries are received, showed that the Germans are endeavoring to meet this problem with their limited facilities and resources. The refugees themselves present a pitiable sight, having mostly only ragged clothing on their backs and giving every evidence of having been terrified before or during their flight to the western zone.

(g) In general, the western sectors of Berlin present a hopeless economic picture. People there are definitely less prosperous than those in the western zones of Germany. There has been some reconstruction, mostly minor repairs, but the future of this area is far from clear. The municipal government is unable to meet the problems of mass unemployment and depression by any means available to it; and no solution was suggested other than continued United States aid. We cannot abandon 2,250,000 people—a considerable number of whom would be marked for liquidation—to Russia; but there is no early termination to the need for United States assistance; i. e., support.

Vienna, Austria

The briefing at this headquarters, conducted by Mr. Ashenese, was very informative and excellently handled.

There is more consciousness in the military headquarters in Austria of the need of efficiency and economy than in many other places. Careful studies have been made as to the most economical methods of carrying out our missions in that country, and those responsible deserve great credit.

With the United States aid, including that under ECA, the Austrian economy has made considerable recovery, and production has increased markedly from 1946 levels. Nevertheless, the requisitions by Russians in the eastern zone of the country constitute a heavy burden.

At conferences with Chaplain (Rabbi) Lipschutz and General Woods of the IRO concerning displaced persons and refugees, it was manifest that very few potential immigrants eligible for admission in the United States remain in Austria. Only the hard core who would not be eligible for admission, even if vacancies were available, are left.

Despite the spirited and efficient efforts of the Army and the Department of State, in the rehabilitation of Austria and the recovery thus far achieved, the future of that country as an independent nation, it would seem, depends on continued United States subsidies. Austria lost her empire in World War I, and is now located within the Russian orbit. While United States funds for economic recovery will alleviate distress, they can scarcely alter the basic situation. The Russians have taken over the Danube River shipping, and control the only oil field in that country, which they are exploiting in a manner which is certain to reduce its life. From the oil production, they take a significant proportion prior to refining and a large output from the refineries. They also requisition substantial amounts of wheat and beet sugar. In addition, they claim an extraterritorial status for a number of industries and plants as German assets. The relative amounts of Russian acquisitions as compared to United States aid is not known; but I fail to see how we can ever place that country on its feet, no matter how much money we pour in, so long as the present drain continues.

Munich

This city is being rebuilt at a rapid rate and with great energy. Construction work is in progress in every quarter and significant results are being achieved. The countryside around Munich appears to be prosperous and the farms look in excellent condition with well-tilled fields and buildings in a good state of maintenance.

So far as military units are concerned, there are several important Army and Air Force installations in this vicinity. There is an acute shortage of quarters for families, as discussed in the main body of this report and immediate action should be taken to alleviate the housing shortage.

At Garmish, Partinkurken, the Army operates a large recreational center with a capacity of 200 officers and 750 enlisted men. This worth-while activity is a self-supporting establishment, the cost being provided from nonappropriated funds or assessed against those participating in the use of the facilities.

While in Munich, the undersigned at regional headquarters of the United States Displaced Persons Commission talked with Mr. Main, formerly of Immigration and Naturalization Service, and Mr. Taylor and Mr. Young, who work in that office. This agency is charged with screening and processing prospective immigrants under special legislation enacted for the relief of displaced persons. According to information gained, the general administration of this law has been markedly improved during the past few months, following the visit of Commissioner Carrusi, but there still remain a significant number of eligible refugees. The requirements of the Displaced Persons Act concerning the proportion of farmers and farm laborers pose some difficulties; and it is hard to find sponsors for potential employment for professional men, such as doctors, lawyers, etc., many of whom are of high type and would make valuable citizens of the United States, even if they are required to accept employment in less-skilled fields.

Rome

Conference with Mr. Dayton, acting ECA chief in Italy concerning the program in that country developed that to date progress has been largely in the fields of agricultural aid and reclamation. The United States has assisted Italy by approximately $2,000,000,000 of aid, since the war, of which ECA has spent $700,000,000. In addition, that agency has a program for approximately $500,000,000 more. Real progress has been made in agricultural rehabilitation and reclamation, but industrial equipment has been slow to arrive. So far as the rehabilitation or recovery from war damages is concerned, the ECA program in Italy is about concluded. If further improvement is to be made in fostering Italian economic plans, it must be through broadened and expanded markets in other European countries, or overseas. Mr. Dayton has an excellent grasp of the economic and political difficulties involved and realizes the obstacles in the way of European integration. He is of the opinion that such unification should be carried out now while the United States economic aid is available. There are now some 2,000,000 unemployed persons in Italy out of a labor force of twenty to twenty-five million, and, in addition, industries are carrying a million more without real need or justification. The result is, of course, high costs of production resulting in high prices and limited export markets. On the other hand, Italy has a chronic food deficiency which can only be met by imports.

While visiting the office of the military attaché of the United States Embassy, the undersigned had a very interesting conference with Lt. Col. John F. Franklin, member of the survey team outlining the military-assistance program for several European countries. While plans were just getting under way, Lieutenant Colonel Franklin advised they contemplated an Army, Navy, and Air Force team in each country under command of a general or colonel who will be responsible to the chief of the mission (generally a State Department employee). Each military staff will have sections for training and logistics. The State Department chief of mission handling this program in each country will work with the ECA representatives and political advisers to the Ambassador.

The highest organization of the military-assistance program is extremely complicated; and I entertain serious doubts whether such a complex organization can be sufficiently flexible to meet changing requirements in time of peace, let alone tactical problems in event of an emergency.

Paris

During the few days available in Paris the undersigned had the privilege of an extended conference with Gen. deLattre de Tassigny, formerly chief of staff of the French Army and now commander of the ground forces, under Field Marshal Montgomery, for the western European powers. In response to questions concerning the status of the French Army and plans for a unified force, General deLattre outlined the history of reconstruction of French forces during the postwar period. At the end of World War II, French forces comprised some 12 divisions, largely deriving logistical support from United States and British sources. Following the end of hostilities, the French Army command was faced with the difficult problem of integrating various diverse and hostile groups—prewar French forces who had largely been taken prisoners in 1940—the resistance group or maquis who had carried on guerrilla warfare against the Germans, and the colonial forces from Africa who had participated in the liberation of France. It was necessary to allay the suspicions and hostilities of these various groups, meet minimum needs without adequate financial support, and improve the general caliber of the officers' corps.

In this conference General deLattre stressed the problem of French Indochina which he described as a key spot. It appears that the best French officers and troops have been sent to that area in an effort to hold it against native occupancy and Communist infiltration. According to the general, there

UNIVERSITY OF MICHIGAN LIBRARIES

is a shortage of new and serviceable equipment, particularly tanks and motor vehicles.

With regard to the western European army, General deLattre stressed that it would require work, strength, and confidence. He stated that the French will have an army which, together with the available British and Belgium forces, will provide the basis for a strong ground force. He expressed his personal pleasure at the participation of the Italians in such force, and stated that he would also like to have the Spanish infantry, which he described as very good. As for equipment, he emphasized the need for United States supplies, which he says should be strictly modern and ready for employment. Otherwise the delays and costs involved in the conversion would negate the anticipated benefits. In regard to the staff organization under the military-assistance program, my conclusions from talking with General deLattre were that there were too many large international committees of political, military, and fiscal experts to permit rapid and decisive action.

It was a distinct pleasure to talk with an experienced military leader who clearly recognized the difficulties facing the Western Powers, but who is determined to carry out the job of organizing and equipping a modern ground army. Whether the United States can or should assist Indochina is beyond my knowledge. I do agree with the general that whatever military equipment is furnished western Europe should be of the most modern type and fully serviceable. Any other course will involve a waste of money for processing, and shipment, and a loss of confidence on the part of those furnished such material.

The undersigned also had the pleasure of a conference with Mr. Averell Harriman, American Ambassador in charge of ECA affairs in Europe. Mr. Harriman feels that the ECA has fulfilled its essential objectives, and that the major problem now remaining is the integration of the separate and conflicting European economies into a single system. It is further his opinion that an essential element of such European integration is the incorporation of Germany into the western European economy. Regardless of my personal views on other aspects of European economic matters, I am in thorough accord with this last statement.

L. H. GAVIN.

Federal Housing Program

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. GORSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered over Station WHAM, Rochester, N. Y., on February 6, 1950:

Yes, I believe that Congress should pass an enlarged Federal housing program.

We Americans like to think of the typical home as a vine-clad cottage, with roses growing on trellises, and trees and grass in the yard; and with all this we associate the pleasing and lively sounds of healthy children at play. It is one of the glories of America that so many of our homes are of that kind—or, at least, equally attractive.

But it is one of our moral, political, and economic responsibilities to do something to lift more homes at least to the minimum level for satisfactory living. The 15,000,000 or more Americans who live in blighted areas are not inferior to the rest of us. They are only less fortunate. Imagine how you would feel if you and your family were housed as they are. Trouble does not come from men who are living agreeable lives. It breeds among men who are frustrated, ashamed, and envious.

Congress is at last recognizing one of the most crying needs of the American people. In both the House and Senate the best brains of both parties are combining to push through a housing measure which, in its broad outlines, will represent one of the most solid achievements of the Eighty-first Congress.

The impressive cost of the low-rent housing program loses much of its impact when one considers what the measure offers in the way of results. Some 810,000 dwelling units will be built by local housing authorities in the next 6 years with the aid of Government subsidies.

Equally important the measure provides for a 5-year plan to raze some of the Nations disgraceful slums and a broad farm-housing program, an aspect of the housing program or problem that frequently has been overlooked in the emphasis on urban needs.

To applaud the passage of the housing bills does not necessarily mean that one feels the problem has now been solved and all that remains is to sit back and watch slums tumble down and edifices rise up in the wake of an avalanche of Federal dollars. Indeed, the Senate has demonstrated its desire to solidify an extended housing program by passing additional legislation designed to stimulate the construction of privately owned homes. This it plans to do by increasing the amount of money that may be used by the Reconstruction Finance Corporation to advance on secondary real-estate mortgages.

It is a victory for the people who have long been demanding better roofs over their heads and now seem likely to get it.

Federal aid in providing decent housing is not an issue of Big Republicanism versus Big Democracy. It is an issue on which the two parties should have got together long ago.

Housing is an issue that both Houses of Congress should be interested in. Senator TAFT, one of the administration's arch foes on other measures, is in complete agreement with the housing program. In fact, Senator TAFT got a similar bill through the Senate in the Eightieth Congress, but the House refused to pass it. The fact that thoughtful legislators favor this program and have helped to shape it on the basis of a careful study of the situation may be taken as evidence that its critics have exaggerated its potential weaknesses and overlooked the strong points in its favor. The strongest of these points is the simple fact that during the past decades blighted areas have grown more blighted and the construction of new low-cost housing has lagged far behind our population increase of 17,000,000 since 1940.

Proposed housing bills and those already passed will have an economically and socially wholesome effect on the future life of the Nation. A large number of builders and real-estate men have bitterly opposed housing but their arguments have been based on false premises.

Housing programs as authorized by the Federal Government will result in a good deal of healthy progress, during the next few decades, in a field where there is certainly a very clear need for construction on an extensive scale.

Critics of the bill hold that it will lead to far-reaching Federal intervention in local affairs; that private industry can meet the current demand without Government help; that the program will endanger free enterprise in the field, and that it is not only economically unsound but also socialistic. Rather the law carefully assigns the dominant role to the localities; that private industry is definitely unable to do the job all by itself; and the whole undertaking, far from being socialistic or a menace to free enterprise, represents a wise long-range investment promising to pay rich dividends in terms of contracts for independent builders and enduring social betterment for a large segment of the population. It will provide Americans with good homes at prices they can afford, that will give builders a fair but not an exorbitant profit, that will keep things on an even keel so that there will be work for those employed in the forests, in the mines, in the mills, in the factories, on freight trains and trucks that produce and bring the materials that go into the final product of the home.

Housing, may I repeat, is a long-range policy under which the Government will help local communities. It is a policy that is sound and practical even though it may have to be inaugurated on a small scale compared to the need.

Socialism is not the issue though this may be the cry of housing opponents. Americans have never regarded it as socialism to aid families who, by reason of misfortune or low income are forced to live in squalor or unhealthful environment. Housing is predicated on the belief that private enterprise should provide housing for all the families that it can possibly serve. Beyond its reach, however, are vast slum areas that must be wiped out by governmental effort to save our cities from an incredible burden of crime, delinquency, disease, and social malaise. Our highly integrated society cannot neglect this problem without risking its own health and stability.

I would favor solving the housing problem by private effort if it could be done that way. But since it cannot, I think the National Government must do it. When the soil resources of this Nation were threatened by erosion, the National Government properly set to work to save them. It must act similarly when human resources are threatened. The situation is badly out of control and will speedily grow worse if all building is left to private enterprise or capital. Only a major operation can handle this problem and only the National Government can perform that operation.

We have seen some wonderful illustrations of private enterprise at work. But, to assure a reasonable profit, homes had to be so high as to create other problems of congestion. This must be recognized and must be solved through and with the assistance of the Government.

The apparent cost of an enlarged housing program will run into millions, but the benefits will be inestimable. It is not an investment in the narrow sense. It is an investment in American ways of living, and in ever-rising American aspirations. It is an investment in social and political stability. It is an investment in the fundamental resource of this free country—the people.

I feel that our Government has been dangerously slow in recognizing that decent housing is a basic necessity for the public welfare. There is no sense in waiting longer, because it is now plain that only governmental aid can solve this national problem.

The Creeping Shadow of Socialism

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. AUCHINCLOSS. Mr. Speaker, under permission to extend my remarks in

the RECORD, I am glad to insert an address made recently by Mr. George E. Stringfellow, vice president of the Edison Industries and a prominent citizen of New Jersey, before the young-man-of-the-year award dinner given by the Camden County Chamber of Commerce, on the subject, The Creeping Shadow of Socialism.

This is a timely address and I hope that every Member of Congress will take the opportunity to read it.

THE CREEPING SHADOW OF SOCIALISM

"Cherish public credit and avoid the accumulation of debt," said George Washington in his Farewell Address. Let's see how well we have followed this advice.

The total debt of this Nation 18 years ago was less than $20,000,000,000. By June 30, 1951, the President tells us it will have reached $264,000,000,000. The annual cost of running the Government has increased from $5,000,000,000, 18 years ago, to approximately $50,000,000,000 today. The President has consistently underestimated Government expenditures. For the fiscal year ending June 30, 1950, the President budgeted a deficit of $900,000,000. This deficit will probably exceed $6,000,000,000. He has budgeted a deficit of $5,500,000,000 for the fiscal year ending June 30, 1951. This deficit can conceivably reach $10,000,000,000. The debt, therefore, may appreciably exceed $264,000,000,000 by June of next year.

The budget of this Nation has been balanced but once in 20 years. It was balanced by the Eightieth Congress, which the President said was the second worst in the Nation's history. Its successor, the Eighty-first, which the President has characterized as the best, has authorized the expenditure of more money than any other peacetime Congress in our history. President Truman gives us no assurance when we will stop the accumulation of debt or when the budget will be balanced. He predicts it will be balanced when the income of the Nation is greatly increased over what it is today.

If our business were in the red and we told our directors we couldn't do anything about it until sales increased, they would likely say, "Cut your costs or we will find new management." I think that is exactly what we must tell our Government through our elected representatives.

"Any government, like any family, can for a year spend a little more than it earns," said Franklin D. Roosevelt in 1932 when the Government was spending a little more than it was earning. "But," he continued, "you and I know that a continuation of that habit means the poorhouse."

Poorhouse for a government means inflation. Inflation means dictatorship. When a corporation gets into financial difficulties, the courts appoint a receiver and either it is liquidated, or, if there are enough assets left, the corporation is reorganized, new officers are elected, and the corporation often becomes a going concern again.

When a government gets into financial difficulty, there is no court to appoint a receiver. A self-appointed dictator usually arises and takes over. The people lose their liberties, their savings, and their property. Their way of life is prescribed by the dictator. History shows that this has always happened when a government habitually spends more than it takes in. Uncontrollable inflation has always followed and it always will.

It was inflation that produced Mussolini; it was inflation that produced Hitler; it was inflation that produced Stalin and if continued is certain to produce a similar dictator in America.

When leaving Independence Hall in the late afternoon of September 17, 1787, following the signing of the Constitution, Benjamin Franklin was asked by an unknown woman, "Dr. Franklin, what have we got?" The wise old man replied, "We have a republic—if we can keep it!"

If we are to keep our republic, we must avoid inflation; if we are to avoid inflation, I repeat that we must tell our governments—State and National—through our elected Representatives, to stop spending more than they take in. That is your responsibility and it is mine. If we do not discharge it, we will be derelict in our duties as citizens and should not complain about the consequences.

The cash-in value of all the life-insurance policies in this country is $44,000,000,000. This would run the Federal Government, at its present rate of expenditures, for 10½ months.

Twenty years ago the total cost of the Federal Government was about two-thirds of the total income of the citizens of the State of California. Today the cost of Federal Government is equal to the total income of the citizens of every State west of the Mississippi except Louisiana, Arkansas, Missouri, Iowa and 11 percent of Minnesota; and as long as it continues to increase, it will continue, like a creeping shadow, until it reaches Maine; our entire Republic will then have been engulfed by state socialism. This creeping shadow of socialism should concern every American citizen who values his liberty and his way of life.

The difference between capitalism and socialism is one of principle. The difference between socialism and communism is one of degree. Capitalism produces things for people to divide; socialism divides the products of capitalism, and when there is nothing left to divide, chaos reigns and communism takes over.

One of the things which is spreading the socialistic shadow consists of the large grants we have made and are making to foreign countries. For example, since World War I we have given Britain $44,000,000,000. Since World War II we have given other foreign countries $33,000,000,000; yet the outpour continues. Much of this money, we are told, was given to fight communism. Since World War II we have given Communist Russia $440,000,000 and her satellite Poland, $480,000,000. This, of course, has had a tendency to strengthen communism at its base at the expense of the American taxpayer. At the time we were aiding Russia and Poland with grants, we gave Greece over $600,000,000 with which to fight communism. We recently purchased rye from Poland thus aiding her economy. We have in this country a great surplus of rye which we don't know what to do with.

In a recent radio broadcast, Sir David Maxwell Fyfe, a conservative and former attorney general told British working men that without American financial aid, there would be 1,500,000 unemployed in Britain.

Our State Department, with the President's approval, appears to have advanced the interests of the Communists in China more rapidly than Molotov or Stalin could have done had they been left alone. General Marshall, a great general but anything but a diplomat, did much to undermine Chiang Kai-shek and help communism to engulf China and weaken our prestige and influence in Asia.

In speaking over the radio the other day, Clement Attlee, Prime Minister of Britain's Socialist Government, said that in general his Government was doing nothing in a social manner or in an economic manner that the Truman government is not doing in this country. The difference is, of course, that Truman calls his socialistic activities Fair Deal while in England they call theirs socialism. It's a distinction without a difference. Winston Churchill recently said that the difference between Truman and Attlee is that Truman has a Florida tan and is smooth shaven while Attlee is anemic and has a little moustache.

The drive for socialized medicine continues in this country despite the fact that we have the best hospital system in the world, despite the fact that our health is better than ever before, despite the fact that the lives of our people have increased about 20 percent over the last quarter of a century, and despite the fact that all of this has been accomplished on a voluntary, private-charity basis.

Sixty years ago, someone asked James Russell Lowell, United States Minister to the Court of St. James's, "Dr. Lowell, how long will the American Republic endure?" Lowell responded, "As long as the ideals of the men who made it continue dominant."

Those who would socialize our people, destroy their initiative, and confiscate their wealth through taxes, are not imbued with the ideals of the men who made America.

"Our representatives in Trenton and Washington will not save us from socialism unless we can stimulate our citizens to understand, to act, and demand that our representatives throw overboard all socialized principles and return to those of our founding fathers," said former United States Senator from New Jersey, Albert W. Hawkes.

Our representatives in our National and State capitols want to hold their jobs. They will be responsive to the will of the majority. Have you registered your will with them?

"It is not the duty of the Government to support the people," said Grover Cleveland. "It is the duty of the people to support the Government."

There are so many large groups of people receiving benefits from the Government today in one way or another that it is extremely difficult for them to vote on the merits of the issues presented at the polls. Many of them fear that they run the risk of losing, directly or indirectly, their grants or subsidies. Then, too, the Federal pay roll has grown so large that in many States it has a tremendous influence on the outcome of elections.

Twenty years ago there were approximately 600,000 employees on the Federal pay rolls. Today there are more than 2,000,000.

The administration did everything it could to bring about the election of LEHMAN as United States Senator from New York and to defeat Dulles, who opposed socialism. There is little doubt that a large majority of the 183,000 Federal employees in New York voted for LEHMAN, the "welfare stater," who defeated Dulles by about 183,000 votes.

* * * * *

The pay roll of Federal employees is continually growing. If we reduce the cost of Government, these pay rolls will be reduced, thus correspondingly reducing their influence on elections, especially their use to elect men who, unlike our founding fathers, are less interested in the public welfare than in perpetuating themselves in office at the taxpayers' expense.

Our form of government, as conceived by our founding fathers, was something to live under. It was motivated and controlled by the citizens. It was a servant of the citizens. Millions today seem to think it is something to live on—a vehicle intended for a free ride.

May I cite an example of free rides in two directions at the same time. The United States Department of Agriculture is engaged in two expensive programs which are basically contradictory. It employed $3,148,500,000 of the taxpayers' money during the first 10 months of last year on a program to take foodstuffs off the market and store them in warehouses and caves, where they are rotting or being given away. This program did three things:

1. Kept the cost of living fictitiously high;
2. Increased national debt; and
3. Exhausted national wealth.

The purpose of this program is to get the farmers' votes.

On the other hand, the Agriculture Department is spending hundreds of millions of dollars a year to increase the farmer's yield per acre, thus tending to aggravate the very problem which the first-mentioned program was designed to correct.

The Brannan farm plan would let the price of farm products fall to their natural competitive levels. This is intended to appease the consumers and get their votes. The Brannan plan would tax you and me to provide the funds to make up the difference between what the farmers receive for their produce in the market and what the politician determines they should receive for it. It has been suggested that the housewife would pay the market price and the husband would pay in hidden taxes the difference between the market price and that determined by the politician. This plan is designed to please the consumer and the farmer and hoodwink the taxpayer.

No one knows what the Brannan Plan would cost, not even Brannan. That appears not to interest the Fair Dealers. They are interested in the farmers' votes, much more than in what it may cost you and me and future generations in dollars or in the fact that it gives further impetus to the creeping cloud of socialism.

The politicians have not cherished public credit nor have they avoided the accumulation of debt as urged by the Father of our Country.

It is the duty of the individual citizen to lift his voice above the self-serving, conniving politicians and force them to cut extravagances, force them to balance budgets, stop further inflation before it is too late, and thus preserve our way of life.

"Duty," said Robert E. Lee, "is the sublimest word in our language. Do your duty in all things," charged this great patriot. "You cannot do more, you should never wish to do less."

The times call for men in public office of:

"Strong minds, great hearts, true faith, and willing hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor, men who will not lie;
Men who will stand before a demagogue and damn his treacherous flatteries without winking;
Tall men, suncrowned, who live above the fog
In public duty and in private thinking."

It is your duty and it is my duty to ferret out such men, urge them to seek office and, once they are in office, to support them. In no other way can we serve America, and thus roll back the creeping cloud of socialism.

Lutheran Day Schools in Western New York

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. TAURIELLO. Mr. Speaker, a great deal has been said of the tremendous influence for good which has been made by religious groups of all denominations in connection with the education of our young Americans.

Among the foremost in New York State is the Lutheran School Association of Erie County, the territory of which encompasses my hometown, Buffalo. This association occupies a respected and unique place in our community and has achieved an enviable record in religious, educational, and community matters and in bringing about cooperation and mutual understanding among the church and schools groups of various denominations in western New York.

Under leave to extend my remarks in the RECORD, I include the following article from the Buffalo (N. Y.) Courier-Express of January 30, 1950, which discusses the possibility of expanding the Lutheran day schools in western New York:

SCHOOLS' LACK OF RELIGION POINTED OUT—LUTHERAN EDUCATION DISCUSSED AT RALLY

To discuss possible expansion of Lutheran day schools here, a rally sponsored by the Lutheran School Association of Erie County was conducted yesterday in the First Lutheran School, 427 Goodyear Avenue. About 275 persons, representing 20 churches, attended the affair.

The principal speaker was Vernon H. Koehler, principal of the east end Lutheran school in Fittsburgh, who said, "Democracy cannot function without religion * * * but democracy at the present time is not making adequate provisions for religion in education."

Discussing the purpose of Lutheran schools, he stressed the fact they "inculcate a Christian philosophy of life and since Christianity is not a mere acquisition of knowledge but is a way of thinking, living, and interpreting all life, therefore there can be no such thing as a secular subject."

The speaker said the curriculum of Lutheran schools is of the best available, comparable to that in any school system anywhere.

He maintained the curriculum of Lutheran schools "is patterned after, although not identical with, the curriculum used in Buffalo public schools. The difference in the curriculum of Lutheran schools is that it is Bible and Christ-centered."

"The Lutheran day school is an agency of the Lutheran Church to promote the heritage of the Reformation," he said. "The great reformer, Martin Luther, wrote a language, advocated schools and penned textbooks for the propagation of the divine truths he rediscovered.

"Luther's educational conclusions were a natural outgrowth of his knowledge, faith, and gratitude to God. Luther was truly a steward of the truth he found. The Lutheran churches in Buffalo are endeavoring to carry out their stewardship responsibilities through the establishment of the Christian day school."

Speakers during the afternoon session included Orville W. Richter, principal, First Lutheran School, who discussed phases of school management and control; the Reverend Oswald A. Waech, pastor of Gethsemane Lutheran Church; Dr. William J. Weinbach, school board member, and Robert J. Schutrum, school board member and church legal counsel.

HIGH SCHOOL DISCUSSED

During the evening meeting, the Reverend Bertwin L. Frey, pastor of Bethany Lutheran Church, declared the time is not ripe for the establishment of a Lutheran high school.

He pointed out that before a high school is created there should be an elementary school enrollment of about 700 pupils "which would give us a potential high-school enrollment of about 200 pupils." Present elementary school enrollment totals about 300 for the area, he added.

Other evening speakers included the Reverend Ernest E. Heuer, secretary of parish education, eastern district, Missouri synod, and Arthur E. Will, school board chairman. The Reverend Walter E. Succop, pastor of St. Andrew's Lutheran Church, was moderator.

Keep America Free

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. MILLER of Maryland. Mr. Speaker, under leave to extend my remarks, I include the address of Hon. JOSEPH W. MARTIN, JR., minority leader of the United States House of Representatives, before the Advertising Club of Baltimore, at the Emerson Hotel, Baltimore, Wednesday, February 1, 1950:

I am honored by your invitation to review with you today the state of the deficit.

I am delighted to come here with my good friend and your able Congressman, TED MILLER. Congressmen BEALL and FALLON are detained because of an important committee meeting affecting Maryland.

As a newspaper publisher, it is always a pleasure for me to get together with advertising people. Nobody realizes better than a publisher how much the advertising fraternity contributes to the general welfare.

How many times I have wished in my reflections in Washington that we might somehow harness all the wonderful skills, energy, and genius of the advertising clubs throughout the country in the great battle that is now being waged for solvency and constructive order in Federal administration.

This battle being fought in Congress may well determine the future, not only of our own country, but the free world as well. The importance of this struggle is why we must have the united support of all people—Republicans, Democrats, and Independents alike.

This country must continue to be free; it must continue to function under the constitutional requirements of three separate and independent branches of government. It must continue as a nation with an honest dollar and a people who will continue to pay their debts and obligations with an honest dollar.

A new session of Congress is under way.

Although these grave issues confront the country, both in the realm of domestic affairs and foreign relations, this new session thus far has not indicated a firm sense of direction. Beyond the fact that we face another deficit of more than five billions for the new fiscal year there is not much to be said with certainty of the Eighty-first Congress.

There is the annual demand for more taxes, and yet more taxes.

But there is also a growing determination in Congress to put the brakes on Government spending. We on the Republican side—and many fine, patriotic Democrats in both the House and Senate—insist that the American people and American business are already heavily overburdened with taxes. We contend that economies in Government—through elimination of waste, extravagance, and duplicating functions—is the true American way to a balanced budget at this time.

There are limits to how much the Government may spend. There are limits to the amount of taxes which safely may be extracted from the national economy. There

are limits to the percentage of personal incomes which can be diverted to government for new ventures in state socialism.

This year of 1950 affords a challenging turning point in history. The first half of the fabulous and war-torn twentieth century leaves the whole world with a staggering legacy of debt. We have seen two world wars in a single generation. Some Democrats say we shall all be paying the bill for at least another hundred years. Some say it will never be paid as the future generations will be frustrated in their better aspirations through the yoke of this big debt.

As we look forward to this hundred years or more of debt, let us also look back the same span of years and renew our vision of the America that was—the America which was the light of the world before the present era of bureaucratic domination.

Just 100 years ago, in 1850, President Zack Taylor reported the total national debt at the very modest figure of $63,500,009.

That was a debt of $2.85 for every man, woman, and child in the United States.

But today our national debt is $258,000,000,000, which means $1,800 for every man, woman, and child.

Today the average American family of four owes $7,200 as its share of the Federal debt.

In 1850 there were 33,000 Federal employees in the entire civil service. Today there are more than 2,000,000 Federal workers, not counting the Army, Navy, or Air Force. And worst of all, we are still trying to think of new ways to add to the burdens the people must carry.

In 1850 the Post Office Department reported a surplus of $370,000. Today we face a postal deficit of more than $500,000,000 for the current fiscal year.

Big government is the real challenge before us today.

Big government takes more than 27 cents from every dollar of income we can earn.

Big government saddles upon the people a gigantic bureaucracy of regulations and controls, and these new instruments of public power are the stepping stones to the police state, the state which governs by the old creed of tax and tax, spend and spend.

Such is the real significance of our new Federal budget—a budget which calls for more than $42,000,000,000 of Government spending in Washington in the 1951 fiscal year.

During the last 21 years, there have been only two balanced budgets reported out of Washington. They were for the fiscal years 1947 and 1948—the 2 years in which Republican majorities were in control of the House and Senate.

It was a Republican Congress—the Eightieth—which passed the last income-tax reduction—the bill which was vetoed three times before it became law.

I make the prediction today that that tax reduction will stand for many years as the last income-tax reduction enacted by an American Congress.

The planners are now off on another wild-spending spree. In the three fiscal years 1949 1950, and 1951, by their own figures, they will run up a combined deficit of more than $13,000,000,000. And this at a time when tax collections are the highest in the peacetime history of the Nation.

If we cannot live within our income now, what will happen if the tragedy of a depression should hit us.

More than a year ago we presented in the House a bill to repeal and reduce many of the wartime excise and nuisance taxes. These rates were imposed to retard sales and to drive manufacturing into essential wartime production. The principal argument for these excessive rates vanished with the end of hostilities. They should be repealed without delay.

This bill would have taken $700,000,000 a year from the Washington spenders and returned it to the people to spend for themselves.

There is a curious theory developing these days in Washington. The thinkers and planners tell us that if the Government spends one of your dollars, that's good, but if you spend the same dollar yourself, that's bad. If you spend your own dollar, that helps make inflation. But if the Government spends the same dollar from your pay envelope before you ever see it, that's not inflation.

Let me remind you that Canada, our good neighbor to the north, already has cut back her wartime excise taxes.

Canada already has repealed the wartime tax on transportation. We still pay 15 percent.

Canada already has repealed the tax on amusements and admissions. We still pay 20 percent.

Canada also has repealed the wartime taxes on telephone charges; reduced the taxes on jewelry by more than half; cut back the taxes on cosmetics by more than half; reduced the tax on luggage, hand bags, fountain pens, and many other items.

And all of this is on top of three different reductions in the Canadian income taxes since the end of the war.

The personal exemption from income taxes in Canada today is $1,000 per person, against $600 in this country. Yet Canada, in spite of its tax reductions, reported a surplus of $87,000,000 at the end of its last fiscal year.

We could do the same. The removal of these excises would not cost the Treasury a single penny. They would stimulate business, put millions of people to work. Through income taxes from happy, prosperous, busy workers, we would gain revenue and at the same time, reduce spending for unemployment.

The serious budget problem is one far beyond the recriminations of narrow partisanship.

There are many influential Democrats all over the country who support the Republican demand for an honestly balanced Federal budget—a budget to give the American people the kind of government they want at a cost they can afford to pay.

Let me quote just one of these Democrats—Chairman CLARENCE CANNON, of Missouri, the chairman of the House Appropriations Committee. In the House on January 9 this year Chairman CANNON reviewed the budget submitted by his fellow Missourian in these grave terms—

"From every technical and statistical point of view, our fiscal situation is the most unfavorable in the peacetime history of the Republic."

And Senator WALTER F. GEORGE, of Georgia, the chairman of the Senate Finance Committee, has said—

"Canada is moving in the right direction. We can and must follow a similar path."

There is obviously a broad common ground upon which men and women of all parties can meet to enforce policies of prudence and common sense in the administration of the Federal business. That broad common ground is the ground of old-fashioned American patriotism—a sense of loyalty and devotion to America and her cherished institutions of freedom.

We must not permit reckless men and irresponsible policies to drag America into the treacherous paths of statism.

One reason for our confused financial situation in Washington is that there is division and conflict in the highest councils of Government. The President's advisers are at war with themselves. The Chairman of the Council of Economic Advisers, Dr. Nourse, resigned several months ago because, as he stated publicly, he could not go along on another round of deficit financing, higher prices, more taxes, and more governmental controls.

Let no one be deceived that he stands to gain by the inflation program now clearly mapped out for this mighty Nation.

It is true that we are promised an income of $12,000 for each family by the year 2000—50 years forward.

But did President Truman mention what the dollar would be worth in buying power by the year 2000?

He did not.

Maybe he doesn't know.

But he does know that today's dollar buys only 60 cents worth of goods as measured in 1939 purchasing power, and less than 30 cents worth of goods as measured in the purchasing power of the year 1900.

If the purchasing power of the American dollar falls off as much in the next 50 years as it has in the last 50, it will be worth about 18 cents. Then the $12,000 income for each family will represent $2,160 in 1939 purchasing power.

We must beware of the economic narcotic of inflation.

So much for the problem of red ink in Washington.

Let us now explore, in our friendly, informal way, the problem of the red herring.

The red herring is a special White House dish—served up by press and radio whenever a protected Communist or fellow traveler unexpectedly falls into the hands of the law.

When a committee of the House reported in the summer of 1948 that vital State Department documents had been stolen, microfilmed, and delivered to couriers for transmission to Moscow—that was a red herring.

When some of the microfilmed documents were discovered on a Maryland farm, in a hollow pumpkin shell—several weeks after the 1948 election—that was more red herring.

When the FBI reported to Congress in 1943 that there were more than 2,600 persons on the Federal pay roll whose loyalty was open to question, that was the beginning of the red-herring era.

Nevertheless I feel that there is a real sentiment in America in support of the proposition that we should root out the Communists and fellow travelers who now frustrate and sabotage operations within the very structure of the Federal Government itself.

The Eightieth Congress set down the principles that Communists have no place in the Government of the United States. In that Congress, in 1947-48, we appropriated more than $17,000,000 for a loyalty check of suspected subversives in the Federal departments and agencies.

It is now a solid fact of history that the first conviction of a Communist within the Government structure—the first conviction since 1933—did not come until 1947, when the Eightieth Congress had been in session almost 4 months. That was the Marzani conviction, a State Department employee, who had been in charge of secret maps and war plans during the African campaign in 1942 and 1943.

It is also a solid fact for history that the Eighty-first Congress—the one now in session—did not renew the appropriation for the loyalty check of Government workers challenged by the preliminary inquiries of the FBI and the Civil Service Commission.

This is the one point at which economy in Government became a virtue—for the first time since Pearl Harbor.

The exact point where red ink and red herring meet is where money is requested to weed out subversives, spies, and saboteurs in government.

But I insist there is no place in our Government for these Communist traitors.

Communists despise our American system of private enterprise and ordered liberty under law.

Communists have only contempt for our cherished American ideal of justice and equal opportunity for all.

Communists mock and jeer our aspirations for peace and order in the world. They veto every effort toward world accord. They can govern only with the tools of tyranny and oppression.

It is a matter of official record that the secrets of the pumpkin papers were revealed to an Assistant Secretary of State in 1939.

But the American people did not hear of these stolen documents until 1948.

Where were these vital secrets during those ten long years?

Who bottled them up in the cloisters of the State Department?

Certainly the American people are entitled to some explanation. They deserve something better than to hear their Secretary of State rush to the defense of his friend, Alger Hiss, after being convicted of treachery to his country.

The American people gave unnumbered thousands of dead and wounded on the fields of battle, and poured out billions of their wealth during those 10 years to save China from the cruel fate of aggression.

And now China has been abandoned to the Communist aggressor.

What will the secret, hidden documents impounded for 10 years by the State Department tell us of this amazing posture of American policy in the Far East?

I say it is high time that we open the sheltered cloisters of the State Department to fresh air of American public opinion.

The American people are entitled to know what our real policies are abroad; and they are entitled to ask frankly if those policies are being applied by men and women who are in full sympathy and accord with our traditional American ideals of freedom, justice, and fair dealing all around.

Woodrow Wilson stirred the hearts and minds of Americans when he pronounced the doctrine of open covenants openly arrived at. He thought, as many of us do today, that the people who suffer, sacrifice, and die have a right to know the facts. No man in America should be powerful enough to defy the people of America, and through the use of high office, prevent the people from getting the truth. The truth should be known in time, and not years afterward, or after we have been plunged into a bloody war.

Let me remind you the United States is a republic, we must maintain the Republic and in maintaining it we must demand with Woodrow Wilson that no one shall conceal the truth about the acts of our Government officials either at home or abroad.

I am aware that your Maryland traditions of freedom and resolute independence trace as far back into American history as do the traditions of my own Commonwealth of Massachusetts.

There is a kinship here which I am certain transcends all considerations of faction or party.

As Americans we are the guardians and custodians of a precious heritage. We must all be true to the faith that is in us. We must all resist the tides of passion and hate which would rip us from our stout spiritual moorings and set us blindly adrift in a boundless sea of Socialist experiment and irresponsible public finance.

Common sense tells us all that we can take no more out of Government than we put into it—whether we measure our contributions in spirit, energy, work, or dollars.

It is not mere partisanship which condemns the hollow promise that holds out to the people the lure of something for nothing.

We hold it humiliating to the true spirit of America to see ambitious men conniving in a persistent and calculated effort to aline our people in bitter classes of race, creed, or economic station.

The great work of constitutional restoration is a call and a challenge to men and women of all parties. A crusade of patriotism is forming to redeem mighty America from bungling bureaucrats and spendthrift party-liners. We must stop this growth of bureaucracy and meddling by Washington into all the details of our daily lives.

The power to determine taxes and to appropriate money was vested by our wise forefathers in the Congress. Yes, so anxious were they to keep this power in the hands of the people that they further required that such bills originate in the House of Representatives, which was popularly termed "The People's House."

When we see the executive branch usurping this power, this great Republic is in danger.

Congress must fight to be independent, and you must support that fight. This is not a minor issue. It is one upon which hangs the fate of popular government. We must not fail to uphold this precious heritage.

Maryland will have her traditional part in that crusade.

Resolution Against Reds

EXTENSION OF REMARKS
OF
HON. ANTHONY CAVALCANTE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. CAVALCANTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Knights of Columbus, Uniontown Council No. 1275, Uniontown, Pa., on December 13, 1949. This resolution against Reds was later adopted by Bishop O'Connor, fourth degree, Knights of Columbus, Connellsville, Pa.:

RESOLUTION AGAINST REDS

Uniontown Council No. 1275, Knights of Columbus, is the first religious fraternal group in the United States to take a positive stand supporting J. Edgar Hoover, Director of the FBI against attacks launched by the National Lawyers Guild, an alleged Communist-front organization.

A resolution, presented at a regular meeting, December 13, 1949, was approved by the council, and it was adopted later last month by Bishop O'Connor, fourth degree, Knights of Columbus, Connelsville, Pa.

The resolution:

"Whereas the Lawyers Guild, an organization with principal place of activities situated in the city of New York, has been listed as subversive to our national security and our way of life by the Un-American Activities Committee of the Congress of these United States; and

"Whereas the Federal Bureau of Investigation is maintained and entrusted by the people of these United States with the delicate and arduous duty of detecting and bringing to justice the enemies of our security and our American way of life; and

"Whereas it is indispensable for the Federal Bureau of Investigation to operate in secret and to keep the results of its investigations in secret until such time as the enemies of our security and our way of life are brought before our courts of justice to be tried in accordance with the laws of our democracy; and

"Whereas the aforementioned Lawyers Guild has taken action to petition the President of these United States to appoint a commission for the purpose and with power to subpena the files and agents of the Federal Bureau of Investigation for examination and inspection; and

"Whereas the uncovering of the operations and files of the Federal Bureau of Investigation has long been sought after by the enemies of our security and our American way of life; and

"Whereas the action of the Lawyers Guild in so petitioning the President of these United States is indicative of aid and comfort to these enemies of our security and our American way of life; Now, be it

"Resolved by Council No. 1275, Knights of Columbus, at Uniontown, Pa.—

"1. That the action of the Lawyers Guild is subversive to our American security and our American way of life.

"2. That the Federal Bureau of Investigation and its agents deserve the protection and gratitude of the American people for the courageous and vigilant manner in which they have so far guarded our security and our way of life against subversive elements, domestic and foreign.

"3. That it is indispensable to the security and way of life of these United States that the Federal Bureau of Investigation, its agents and files, should operate and remain in secrecy until such time as the results of their operations, files, and investigations are subpenaed by proper courts of justice against the enemies of our security and our way of life.

"4. That a copy of these resolves shall be sent to the President of these United States, to J. Edgar Hoover, Director of the Federal Bureau of Investigation; the Supreme Council of the Knights of Columbus; Congressman Anthony Cavalcante; Walter Winchell because of his untiring efforts to quash communism and to any other party of which the grand knight shall be advised.

"RALPH CAVALCANTE,
"Grand Knight."

Foreign Trade Agreements—One Year Later

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. SCUDDER. Mr. Speaker, exactly 1 year ago today I stood before this House to speak for the first time. At that time I was discussing the Reciprocal Trade Act, which was then up for renewal. I warned of the disaster which would strike my district in northern California and many other parts of the country if the act were renewed without adequate checks and safety valves.

Today I am sorry to have to tell you that many of my predictions have come true. Thousands of Americans are jobless, factories are closed, and our farmers have been forced to take tragic losses because of the cheap goods from abroad that are flooding this country.

The administration's chickens are coming home to roost.

When the Reciprocal Trade Act was being considered by Congress 1 year ago, I said that I favored its principle. I still do. I still believe that we should do everything within our power to expand world trade on a sound basis.

But I also said that I opposed importing unemployment and starvation wages and a miserable standard of living, and bankruptcy. The way to avoid these tragedies was through a peril-point clause and an escape clause. These clauses are simply common sense.

The peril-point clause would say that the President could not reduce tariffs on foreign goods below a figure that would damage United States producers without first telling Congress why he was doing it. And the escape clause would say that if a tariff-cutting agreement with a foreign country caused great injury to United States producers, the United States could ask to change or repeal the tariff cuts.

These two provisions had been placed in the reciprocal-trade law by the Republican Eightieth Congress, and they had done much good. They had protected the American farmer, workingman, businessman, from the unfair competition of countries with wages far below ours.

With a number of other Congressmen, I fought against taking out the peril-point clause and the escape clause, but we were defeated. Congress last year renewed the Reciprocal Trade Act for 2 more years without any such safeguards for the American economy.

Today we can see the results all around us. To understand how the reciprocal-trade treaties are menacing American producers, we need only look at my district in California—at the lumber industry and the fishing industry and at the hop, walnut, olive, almond, prune, grape, cherry, and many other industries.

The hop industry is a good example. Two years ago the United States and Czechoslovakia negotiated a treaty under the reciprocal-trade program. The treaty reduced the tariff on hop imports from Czechoslovakia from 24 cents a pound to 12 cents. This was done in spite of the protests of California hop growers, who pointed out that even with a 24-cent tariff, the American market was being swamped with cheap Czech hops.

Before the treaty went into effect on April 21, 1948, Czechoslovakia became a Russian satellite, with semislave labor and nationalized industries. In view of this development, American hop growers asked our State Department to cancel the tariff cuts, but the State Department refused. It said that if it turned out that American hop growers were being injured badly, something might be done under the escape clause.

So the tariff cut went into effect. Czech hops immediately began pouring into this country at an even faster rate. Imports increased by 40 percent. As a result, the bottom dropped out of the American market. Prices dropped from 75 cents a pound to 30 cents, while it was costing American producers as much as 50 cents a pound to grow hops.

Our California growers, who had invested millions of dollars in land and equipment, faced ruin. We appealed to President Truman, Secretary of State Dean Acheson, and the Tariff Commission to investigate their plight and cancel the tariff reduction. But we were turned down. We were told, in effect, that it was just too bad about our hop growers. We were told, in effect, that it was too bad if our California people were thrown out of work.

This is not an isolated case. The same thing is happening daily throughout the country. On October 15, 1949, the California Farm Bureau Federation telegraphed to ask for my help in obtaining price supports for the olive industry to compensate "for the serious loss they will sustain through the recent drastic lowering of tariffs on olives, olive oil, and other olive products."

Foreign competition was forcing United States olive oil prices down to disastrous levels. This was possible because the average worker in the Mediterranean area is paid $1 a day, while the average wage in the California industry is $1 an hour. You can see what this means to my district when I tell you the olive industry is highly important to California as a source of employment during December, January, and February, when other work is scarce in our agricultural valleys. Most of the olives are grown in modest family-size farms averaging 9 acres by people who are in no position to stand heavy losses from cheap imports.

Up in Massachusetts we see the same forces at work. Last Friday the Waltham Watch Co., a 100-year-old firm, closed its doors, throwing 1,231 employees out of work on 1 day's notice. Walter W. Cenerazzo, president of the American Watch Workers Union, told why the plant had been forced to the wall. It happened, he said, because of a flood of cheap Swiss watches that came into the United States under the reciprocal-trade program. These Swiss watches, he said, were made "under conditions which we would not permit in the United States."

Waltham was one of only three watch companies remaining in this country. The Federal Government, through the Reconstruction Finance Corporation, had previously loaned Waltham $4,000,000 in an attempt to keep it going, but now even the Government has given up in the face of the Swiss watches which are still flooding the country under our tariff system.

Just yesterday we read how Canadian potatoes are being permitted to come into this country under the reciprocal trade program and compete with our own potatoes. In New Orleans 1,000,000 pounds of imports from Canada were being unloaded from a single ship, while we are trying to support the price of our home-grown potatoes. How can our American farmers obtain decent prices when they are being undercut by foreign producers with far lower wages and living standards? How can our American farmers obtain the benefits of price supports when cheap foreign goods are pouring in by the shipload?

I see nothing "reciprocal" about our tariff system when all the benefits flow in only one direction—to foreign producers. Last October, after Congress passed the administration's bill for extending the so-called reciprocal program, the State Department signed tariff-cutting agreements with ten foreign countries for no less than 350 items. Most of the reductions in United States tariffs were up to 50 percent.

This was the second time in 2 years that the administration had lowered its tariffs. The reduction covered such items as wrapping paper, paperboard, and plywood from Finland; olives and olive oil from Greece; olive oil from Italy; matches from Sweden; and butter and cheese from Denmark. These are the type of tariff cuts that mean jobs and bread and butter in my district.

What did the United States obtain in return for these favors? Almost nothing. Even the State Department admitted there will be no benefits for a considerable time. Most foreign nations still restrict the imports of goods from the United States, as the people in my district know only too well when they try to export their fruit and many other products.

It is easy to see where all this is taking us. Only yesterday the Federal Government admitted that unemployment is now up to 4,480,000. We have more people walking the streets for jobs than at any time since the war, and the number is still going up.

Fortunately, more and more people are joining the fight to defend American agriculture, American labor, and American business against cheap foreign goods. Last month more than 100 representatives of labor and management met here in Washington to form a permanent organization to protect American wages and living standards from attack from abroad. The meeting was called by the Wage Earners Protective Conference of the American Federation of Labor, and 16 AFL unions were represented.

As for myself, I will continue my efforts to help American producers before it is too late. I have introduced a bill—H. R. 6902—to restore the peril point and escape clauses in the Reciprocal Trade Act, and I am going to press for action on the bill. I hope that all who are sincerely interested in the welfare of our country will join me. We must defeat all attacks upon American jobs. The American producer must be permitted to sell in his own market.

Saving Jobs and Preventing Suffering

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. KEATING. Mr. Speaker, the President has this week decided to use the tools furnished him by the Congress to deal with strikes imperiling the national health and safety. Although he has said he does not want this power, it is a fortunate thing that he had it. It affords some protection at least to the

general public, most important of all, the working people of this country.

The only question is whether he waited too long to invoke the powers which he has. We must all hope that he has stepped into this critical situation in time.

It was 2 weeks before he acted that his Director of the Bureau of Mines, who had been studying the effects of the partial strike on the economy, reported to him that a crisis was in the offing. His words were "unless there is an immediate resumption of substantially increased coal production the national economy, health, and welfare is now, or soon will be, impaired."

Even though the machinery has at last been set in motion to restore full production in coal, nothing tangible can result, at the earliest, before the middle of next week. The fact-finding board which has been appointed must report to the President, which, we have been told, will be done next Monday. After that he must review their report and ask the Attorney General to take appropriate action if he feels it is warranted by the facts.

These are 10 days that can certainly be ill-spared in the middle of winter when coal stocks are at the lowest level in many years. Then, there is, of course, still the question whether anything further will be done and, if so, what it is.

It certainly must be apparent to everyone, however, that without some law to deal with this situation, we would now face a complete chaos in our economy. Even now, I am told that there is serious doubt in the community which I represent whether it may not be necessary to put into effect some kind of a rationing system on gas and possibly steam and electricity before relief can be afforded. If that is done, the curtailment is likely to come first in industrial plants, which means no jobs or, at least, short work. We have read that railroad service will be drastically reduced tomorrow.

Just today I have received a telegram from a small plant in my community in which they say:

> We wish to register our protest against the long delay in handling the coal strike. Our plant will close February 14, throwing 125 men out of work and will cause shortage of material critically required in building program.

In this case, apparently relief has come too late. Unemployment in midwinter with all its attendant suffering and disruption of normal family life cannot be prevented. No doubt all over the country such situations are being repeated manyfold.

Laws are of no value on the statute books unless they are enforced. Everyone who works for a living should be grateful that there was in existence a law to cope with the catastrophe which faced our Nation when the supply of coal stopped. Despite the belated action of the President, we can only hope and pray that his delay will not entail the loss of too many jobs and cause too great hardship.

The Root of All Evil

EXTENSION OF REMARKS
OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to present to the House of Representatives an unusually interesting and timely address by a great statesman, the Honorable C. A. Christopherson, of Sioux Falls, S. Dak. Mr. Christopherson for a long time was a Member of this distinguished body, serving the people of South Dakota ably and well. He is now chairman of the board of the Union Savings Bank of Sioux Falls, S. Dak., and has continued his intense interest in State, national, and international affairs. I am sure the senior Members of both parties will long remember the outstanding service of Representative Christopherson. The following address, appropriately called The Root of All Evil, was presented by Mr. Christopherson over radio station KISD, Sioux Falls, on January 22, and clearly reflects the clear thinking of an able and alert senior statesman, a man of whom every South Dakotan can be proud, and to whose eminence and prominence I, who now represent them in Congress, can only humbly aspire:

Have had in mind for some time a discussion of that which has frequently been termed "the root of all evil," viz: money, of which commodity everyone strives to get all they can. To designate money as the root of evil is a misnomer, a statement without any basis of fact to support same.

The brief and generally understood meaning of money is that it is a medium of exchange, which is a correct definition. People in the remote past did not have money. In the period of early recorded history there was no generally recognized medium of exchange. It was barter and trade. This answered the purpose, when people lived in what might be termed "community groups," and there was no interchange of commodities with people in other areas. If one person raised more potatoes than he needed for his own family, he would trade the surplus to someone who had a surplus of wheat, corn, or something which the potato grower did not have. So down the line; a general exchange of whatever one had he did not need, for something of which someone else had a surplus.

But as the human family developed, began to pay visits to neighboring groups, the exchange business grew and was carried on to an ever-increasing extent. This created a problem. It became difficult for the potato grower to find people who had what he wanted, who were in need of his potatoes. So, with all commodities. To make the deal it was necessary for the one who had a surplus of anything, to find someone who was in need of his particular commodity, and who also had a surplus of the very things of which he himself was in need. It can readily be understood that as the human family developed and expanded in its activities, trade and barter between the different groups became a factor in the daily life of each one.

It has been said, "Necessity is the mother of inventions." So with money. As the problem of barter and trade became more difficult, someone sought an article that would command a trade value at any place. That commodity was readily at hand, viz: Gold. This rare mineral had been discovered. People had learned how to find same in streams of water, placer mining; to excavate ore which carried a small percentage of the precious metal, and how to separate the gold from the slag.

Gold held a fascination for people from the very earliest days. It was scarce and precious; it could be hammered or pressed into any shape desired. As a consequence, people sought gold, which they fashioned into trinkets, finger and ear rings. These they wore with pride. As civilization progressed, and the houses of worship came into being, gold was used to adorn their altars. All of which gave gold a value wherever human beings lived, in community life or illiterate tribes. It could be exchanged for something else; it had a universal value.

Gold was therefore especially adapted to the use as a medium of exchange, in that it was plastic and could be pressed or molded into any form desired. It could be buried in the ground, or exposed to the elements without any deterioration. At first, and even as late as our time, in the mining areas, it was exchanged by weight. But many years ago, it was discovered that it could be pressed into disks, of certain size and weight, on which could be stamped its value, thereby greatly facilitating exchange. In fact, that was money; a medium of exchange which everyone recognized.

Money is often termed wealth, which is not a fact. The phrase "Rich as Croesus" is often heard. Though he was the last King of Lydia he was the first to press gold into the form of coins and use same as an exchange medium—money in fact. Money in itself has no especial value. It was created for convenience and as such has become a very effective part of the complex system of trade and commerce. Gold itself, which is recognized as a valuable mineral by all people, is at times of greater value as a material which the dentist uses to repair decayed teeth. Therefore, we should recognize that money, as such, does not have the value frequently ascribed to it. If on a desert island, money in any form would be to its possessor of no value. In such circumstances, food and garments would be of use, but not so any money the lonely occupant might have. We have, however, come to think of money as wealth. In this appraisal, we should ever be mindful of the fact that money has been tampered with, to the loss of the people in the years that have gone by.

It has been said that the two outstanding inventions are money and printing. Each one of these has played an important part in the progress of civilization. Printing, in the dissemination of news, information, exchange of ideas—in truth, learning, and education. Money, the medium which has facilitated business, trade, and commerce to a degree it could not have achieved without its use. But money has no definite, constant, and fixed value. In normal times gold has a fairly stable value, but the kings of ancient days found methods by which they enriched themselves through tampering with the gold coins of the people.

When a monarch found himself in financial distress, he called in the coins of the realm, melted them down, recast them with only one-half as much gold. Thereby he doubled his wealth. That method has been frequently resorted to in the past.

We, here in the United States, indulged in some high finance, some years ago, when we, without either rhyme or reason, raised the price of gold nearly 60 percent. That, of course, increased the price of the gold our

Government had in reserve; its money. But it also, stimulated the mining for gold. In Africa, mines which had not operated for 50 years because of the low-grade ore, with the higher price, resumed operation and sent millions of dollars worth of gold to our Treasury which we readily purchased at the increased price, thereby incurring further indebtedness, and now we have the gold stored in Kentucky.

When this increased valuation of gold was announced, I made an effort to learn just what was back of it all and what benefit we could possibly derive from this surprising move in finance. I contacted people in Washington, but failed to get any understandable explanation. Some years later I had the opportunity to attend a meeting where there were to be four financial experts from Washington. Some were from the United States Treasury and some were from other departments. Notices were sent out that they would answer any questions which anyone wished to propound. The question was to be sent in on or before a certain date. Here, I thought, is the opportunity to find out about this high price of gold, set by our Government, so far as known, on its own motion. I, therefore, prepared a question, asking the real cause for this increased price and what if any advantage had we derived from the purchase of foreign and other gold at this above-market price. At the meeting in question, the four financial experts (all Government officials) were there. They devoted some two hours to answering questions, relating largely to banking, credits, exchange, etc. My question was ignored. I then concluded that that is the answer—there is no logical reason for our Government raising the price of gold near 60 percent, and buying all gold offered at this premium value. We, thereby, gave to foreign miners, profits running into the millions. The only reason appears to be that some bright genius thought this a good idea; our officials approved, and in the experiment we incurred added billions to our national debt.

Oh, yes, we have the gold, to be sure. Already foreigners are looking upon this pile of gold in Kentucky as world wealth to be distributed. You will recall last fall an official in Europe suggested this very procedure, viz, that the United States should make a distribution of this gold in order to bolster the financial status of Europe. A very thoughtful suggestion, to give to Europe gold which we had purchased from their miners at a price 60 percent over its market value. I am surprised that our officials, who have shown such deep interest for the welfare of Europe did not fall for this gentle hint from abroad. Though we did not take this hint seriously, the day is coming when we will, in all probability, take a loss running into the billions, on our gold stock. It will come about in this way. The time will come when it will be expedient to again return to the gold standard. To this all will agree, but the statesmen from abroad will say to Uncle Sam, "You have all the gold; we cannot come in, etc." Then there will be some haggling over price, which will ultimately end in our selling other nations gold, for reserve against their circulating medium; no, not at the high price we paid, but at a figure of less than 25 percent of the cost to us. Loss—billions more swept into the European game in which we are holding a hand. What would George Washington and his conferees say if they could view our foreign attempts to regulate civilization? Shocked, to say the least. As said, "A great game if you do not weaken," but can we continue the present pace without weakening to a marked and dangerous degree? Time to think.

We like to refer to the kings and monarchs of the Old World for examples of juggling the money of the realm. But we have one example in our own land which points a lesson to what can happen to the medium of exchange.

Many articles have been used as money, among others, what became known as wampum. This is a type of beads which the noble red man of the West made. It consisted of beads—white ones made from the shell of the periwinkle and black ones made from the black part of clam shells. These were attractive, were made into belts, necklaces and other articles for personal adornment. This "wampum" was so attractive that it was used as money. It came to be recognized by the Americans, and in some of the colonies, was by legislative act made legal tender. But soon the red men learned a lesson. The shrewd white man developed a method by which they could make these in competition with the Indian. The white man found it an easy matter to dye the white beads black thereby adding to their value. Also found beads somewhat similar, but of less value; fixed them to imitate the real ones; thus, flooding the market and making the real wampum worthless. That was, so far as I know, the first inflation in this country. And that is just what it was, so far as the Indian was concerned, an inflation. His money suddenly lost its buying power, and the legal-tender privilege soon was repealed.

We have had several inflationary periods. You have frequently heard the expression, "Not worth a continental." That refers to the continental currency which, of course, became worthless as a consequence of the revolution. Then, there was the pronounced inflation, following World War I. A definitely pronounced inflation which had set in before World War II, and has been spiraling upwards ever since. War always brings about such conditions. Inflation is simply a recurrence of the wampum money. To meet war expenditures, our Government was obliged to borrow in sums running into the billions. This was in turn paid out to meet expenses; in short, distributed throughout the land, adding greatly to the circulating medium, thereby reducing its buying power. Our dollar is now down to about one-half of its former value.

The war is over, so far as actual combat is concerned, but we are still engaged in war expenditures, beyond our income. That tends toward more inflation, which if not checked may break loose some day in an uncontrolable wave which will overwhelm us, as it has other nations in the past. I mention this, because so many with whom I have discussed money, and its present value, do not seem the least concerned about that phase of the matter. In truth, it is of vital concern to each one. That great reservoir of savings of the American people, life insurance, amounting to billions of dollars has been cut in two by the depreciation of our dollars. The same depreciation in all securities, to be sure. This, through no fault of the insurance companies; solely by reason of inflation brought about by deficit financing on the part of the Government. In war this is necessary; in times of peace it is the height of Government mismanagement. It endangers our status as a Nation, and the security of every individual.

The Hiss Verdict

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. NIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of January 27, 1950:

REWRITING THE HISS VERDICT

Alger Hiss has been convicted by a jury and sentenced to 5 years in the penitentiary for lying when he said he did not steal secret Government documents for Russia's spies. To read a good many editorial pages, however, it might seem that Hiss either deserved a medal or was a much maligned traitor.

Mr. Willard Edwards, who reported both Hiss trials for this newspaper, has discussed the "loaded" presentation of the trial offered their readers by the New York Herald Tribune and Washington Post. We were not particularly surprised to learn that pro-Hiss treatment of the news was pronounced on the eastern seaboard, for both Communist inclinations and internationalism are most marked in that area, and Hiss typified both.

In sentencing Hiss, Federal District Judge Goddard stated, "This should be a warning that a crime of this character may not be committed with impunity." It might be thought that among patriotic citizens there would be no dissent from the view that it is not praiseworthy conduct to be a traitor, or that a man who had been found out in his double dealing deserved neither admiration nor sympathy.

But loyal Americans would be underestimating the extent to which fluffy communism has spread through the ranks of editorial writers and columnists if they were to believe that this was the unanimous position of the American press. Newspaper after newspaper playing the New Deal line, the internationalist line, and the State Department line found it possible to reserve sympathy for Hiss, condemnation for Whittaker Chambers, his accuser, and doubt for the wisdom of a jury which received all of the facts, knew how to appraise them, and had the courage to act on its conviction.

The Louisville Courier-Journal, as was to be expected, wept over the ruined life of Hiss and bemoaned the truth still hidden. The St. Louis Post-Dispatch thinks that, despite the evidence and the conviction, the citizen still cannot be sure, and tosses in the thought that the Government should have a sound basis for such serious charges, as if there were no evidence in the 40 days of courtroom presentation.

The late E. P. Adler's Davenport Times, also in character, expresses relief that Hiss was found guilty of something. It says he could never quite completely sweep aside the evidence of the stolen papers and his own typewriter, upon which the papers were copied for Russia. This publication achieves a far-fetched parallel to the Dreyfus case and finds the Hiss case worked up emotions which had little to do with the national welfare. It might be thought that it was no service to the Nation to expose public officials working in the service of a foreign state.

Marquis Childs, the columnist, would suggest that, if some Americans served Russia, others, with a like "failure of faith," used to look up to Hitler and Mussolini. We never heard of a fascist or a bundist who got into the bureaucracy and sent secret papers to Berlin or Rome, whereas the Communist network, existing by New Deal tolerance in Roosevelt's Washington, was widespread, effective, damaging, and has been thoroughly proved to have had a real, not a fanciful, existence.

Mrs. Roosevelt, who during the first trial of Hiss used her daily column to whip up sentiment in his behalf, has issued two statements since the verdict was reached. The first: "I have never heard anything that I could think would approximate the idea that Alger Hiss was a Communist. It is difficult for me to accept what Whittaker Chambers has to say." The second, "It's a very difficult case to know what to think. I never

once heard him say anything that would approach the idea that he was a Communist. I feel he may have perjured himself, but I don't feel he ever sold any secret papers."

This is the same columnist who, on August 17, 1948, wrote, "Smearing good people like Lauchlin Currie, Alger Hiss, and others is, I think, unforgivable. * * * Anyone knowing either Mr. Currie or Mr. Hiss, who are the two people whom I happen to know fairly well, would not need any denial on their part to know that they are not Communists."

A review of post-trial comment ought to warn readers of a good many "liberal" newspapers that they are justified in greeting the pap served out to them with the utmost reservation. Some of these organs are so steeped in propaganda attitudes that they are even ready to take the side of traitors against the United States.

The Hiss Verdict

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. ASPINALL. Mr. Speaker, with no intent of attempting to minimize the importance of the personal and public reaction to the finding of Alger Hiss guilty of perjury in the recent trial, but with the thought that there has been far too much politics in the thinking of the people who have made public utterances, I insert in the Appendix of the RECORD an editorial from the Daily Sentinel of Grand Junction, Colo., published by former United States Senator from Colorado, Walter Walker, which quotes an editorial from the New York Herald Tribune. I wish to state that the editorial specifically expresses my personal thoughts in this matter.

GUILTY

Because it is, in our opinion, fair, sound in its reasoning, and entirely justified, we are reprinting the editorial comment from Monday's edition of the New York Herald Tribune on the verdict of guilty in the case of Alger Hiss. We give the sentiments expressed in this editorial our full endorsement. It follows:

"There can be no sense of vindictiveness, now that the long proceedings against Alger Hiss have ended in a verdict of guilty. The personal tragedy is great; the evidence of fine talents perverted, of promising careers wrecked, of prolonged mental suffering, made the trials painful to observe. And the national tragedy is even greater. No judicial action, no penalty, can wipe out the hard facts that stand on the records of the court, of disloyalty at the heart of the Government and the knowledge that trusted men were unworthy of their trust.

"What redeems this sorry picture, and does give cause for solemn satisfaction, is the painstaking manner in which the American judicial system operated to safeguard the interests of both the defendant and the community, to seek the truth through the mazes of a tangled jungle of evidence and allegation. Alger Hiss was given every opportunity—expert counsel, a judge who was learned in the law and administered it without favor, an intelligent jury which approached its duties conscientiously, and performed them decisively. Indeed, the protection which the law affords an accused person does not end with conviction; the right of appeal to higher courts is still open to Mr. Hiss, and his lawyer has announced that he will take advantage of it.

"Many recent instances have served to heighten the contrast between the workings of American processes of justice and those prevailing in Communist-dominated lands. It is a very real source of pride and strength in this country that in a matter of this kind involving complex human relationships, intricate problems of personality and motive, and capable of stirring strong passions, the courts move deliberately and the juries apply themselves diligently to the question at issue. Whatever private moral judgments may be delivered on the case, whatever heart-searching may be applied to discover how, in our society, a man like Alger Hiss could come to his present pass, it is good to know that 12 men and women, representing the American people, after hearing the fullest and fairest possible basis for a verdict reached, without haste, a decisive result."

Alger Hiss

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. NIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Indianapolis Times of January 24, 1950:

Marquis Childs, a writer whose sincerity we respect, sets forth on this page today an opinion with which we wholly disagree.

It is on this page at all only because we believe it expresses a point of view that is going to be heard quite often as the apologists for Alger Hiss go into action—and one that appears already to be widely held among his associates in our Government.

Mr. Childs portrays Alger Hiss as a naive, innocent, sincere young seeker after truth who was somehow forced by the great depression into a hard choice between communism and fascism—and maybe chose the better of the two.

Poppycock.

Alger Hiss was a sophisticated, informed Government official. He had been educated in the best universities in this country. He held a confidential post in the innermost circle of our State Department. He had access to the facts. Not one American in a million had his chance to know the score.

No American had to choose between communism and fascism—if, indeed, there is any difference between them.

Alger Hiss had already sworn loyalty to the United States and to the principles of this Republic. He chose to betray that oath, and the trust placed in him, in behalf of another nation and contrary principles, and he lied about it when he got caught.

That's what he was convicted of doing.

He was not on trial for the ideas he held. He was on trial for the direct and overt violation of laws he had solemnly pledged himself to uphold.

And he was found guilty.

The suggestion that those who turned to communism in this country did so to save the soul of America from fascism could hold no validity for any convert above the grade of a retarded moron.

Where were they when Hitler and Stalin and Mussolini were allies, hurling their armies together for the destruction of democracy and liberty and human decency?

We heard no protest from them.

They still served communism—and fascism—together.

Waste no tears on Alger Hiss.

He knew what he was doing.

Back to Reality

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. HAND. Mr. Speaker, because I think it is worthy of the attention of the membership, I enclose an editorial appearing in the Bridgeton Evening News of January 28. The theme is Back to Reality. It helps us to reappraise some of the fantastic paths we are now treading.

BACK TO REALITY

In 1946 a New England editor coined the phrase "Have had enough" and urged its adoption as the Republican slogan in the congressional election of that year. The suggestion was generally taken up, with the result that the people responded to it by giving the Republicans control of both Houses of Congress, much to their surprise so far as the Senate was concerned.

We are now face to face with another congressional election. The people in the intervening 4 years have had more than enough of the New Deal administration and are ready for a bold leadership and sound, forward-looking governmental program to lead them out of the financial, economic, and foreign policy morass in which the country has become involved; but the program to achieve its purpose, that of again conferring control of Congress on Republicans, must be bold, not only strongly attacking the present administration for its misdeeds, but promising the people a return to a conduct of Government on a sound basis, a high level of living, adequate returns for their labor, whether in industry, cultivation of the soil, professional life, or investment, and full and free opportunity to carve out their own destinies, free from Government control or interference, through a Government economically administered for the equal benefit of all, and such a policy made so clear and explicit that there can be no misunderstanding of its purpose and assurance.

During a conversation with a lady a few days since, she surprised us by suddenly digressing and asserting with vigor that she didn't know what the future of the country was, but she thought it was high time that the thinking people organize themselves into clubs or leagues to rescue the Nation from the administration and policies now in control in Washington and adopt a slogan under which to move forward. Continuing, she said the women of the Nation should take the lead in such a move and throw their every effort into the work, and she suggested "Back to reality" as a good slogan for the crusade—"for crusade," she said, "it should be."

Back to reality.

On second thought it must be plain to anyone that that is the prime need of the Nation today, to get back to reality.

We are not living in a real world in this country. We are living on a bubble that is liable to burst any day involving the country in a vortex of disaster that will take us years from which to recover, and that bubble is as sure to burst as that the sun will rise tomorrow morning unless we speedily retrace

our steps. We cannot live on false promises, borrowed money, and inflation forever.

Yes, we want to get back to reality.

Here are some realities we want to get back to—

A foreign policy that is the same in Asia and the isles of the Pacific as in Europe, but is first, last, and all the time in the interest of the United States.

A State Department whose first objective in its diplomatic dealings with other nations of the world is the protection of the interests of the United States, and staffed by men and women from the head of the Department to the scrub women all 100-percent loyal Americans.

A financial policy based on the gold standard, which will give the people a 100-cent dollar instead of the 51-cent dollar we now have, and will put us back on a solid financial basis, wipe out the inflation we are now living under and again put in circulation the hundreds of millions of gold now buried in Kentucky hills.

A Federal Government conducted on a strictly efficient economic peace basis and not one conducted, as at present, to provide sinecures for thousands of employees of useless bureaus and agencies, all for political purposes and to spy on the people.

A Federal judiciary manned in all branches and learned in the law, instead of one largely filled by men in payment of their political services and usefulness, as is now the case.

An economic domestic policy assuring to every citizen the opportunity not only to earn a high standard of living but to carve out his future by his own energy and initiative, in accordance with his ability, but not try to boost one class of citizens at the expense of another, as has been done for the past 15 years at a terrible cost to the people.

Restore the old, proud feeling of every American citizen that he was as good as any of his fellows and free to carve out his standing by his own efforts and knew no class distinctions and hatreds until unleashed by the New Deal Party, which lives on class and race hatreds.

Restore the moral standard of all business, industrial, and agricultural life, which has been sadly lowered as a result of the broken and unfulfilled promises of the New Deal and which has affected the entire social fabric.

Make real effort to live within our income instead of loading down the taxpayers with a back-breaking burden of taxation, the proceeds of which are spent on wasteful socialistic schemes and profligate conduct of the Government.

W. E. M.

Tribute to War Veterans

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. LANE. Mr. Speaker, following is the text of the inspirational message delivered by National Chaplain Edward J. Carney, of the American Legion, before the special conference of department commanders and other representatives assembled in Indianapolis, Ind., January 7 and 8, 1950, for briefing on the recommendations of the Hoover Commission on veteran affairs.

My fellow Legionnaires, "It is a holy and a wholesome thought to pray for the dead that they may be loosed from their sins."

Those words are taken from the Old Testament, the Book of Maccabees. After some of the soldiers, who probably had the taint of sin upon their souls, were killed in battle, Massabeus brought some money to the temple to ask that the priest therein would spend some time in praying for the repose of the souls of those who had not paid the last farthing.

With those words in mind, this morning I am going to tell you one of the most beautiful things ever written by Sir Walter Scott was of a character called Old Mortality. Old Mortality was a Scotsman who day after day, week after week, and year after year, felt it his duty to go to the graves of his fellow countrymen and make sure that the moss didn't gather too deeply on their gravestones, and that the emblems that marked the Divisions to which they belonged were not erased. Sir Walter Scott says of him that he was probably as wonderful a character as one would know because he remembered with his notices of devotion the old men who had gone before him, who had fought for a cause of their country and their God. He wanted all generations behind him to remember these things, and therefore he brushed these things up from time to time, that they might read the inscriptions, and that they might know that "it is a holy and wholesome thought to pray for those dead," lest they be forgotten and in order that they might be relieved of their punishment should any have befallen them.

Whenever veterans get together, I know too in their hearts they always have a feeling of their fellow veterans who have gone before them, fellows with whom they walked and talked and laughed and smiled and had the social amenities of life. When we pay them tribute, our heroic dead, we certainly know that we are giving tribute to men who lived a life and died a life in sacrifice that these great American institutions might endure. Some way in our life we try to emulate them.

What is true of all veterans as we pay this tribute is often too rare. Once a year we have a memorial service, but this should be constantly in our mind because "it is a holy and a wholesome thought to pray for the dead." We should, especially Legionnaires, pray for the men who have done so much for this great organization. Forever enshrined in our minds should be the names of Teddy Roosevelt, Galbraith, Bill Doyle, Jerry Twomey, and the rest of those countless men who have given their all to this great organization's cause.

We who are of World War II stand in awe and admiration for your accomplishments, gentlemen. We want you to know it is with deference and respect that we approach you and we ask you to be kind to us if we haven't the full understanding of the many sacrifices you have undergone in order that the cause of the veteran might be furthered.

If you ask any one of the men who have gone before—men who have given of their last drop of blood for God and country in this great organization—what their greatest request is, what their last will and testament is, it was the same as the fellows who were left on the battlefields, who as they breathed their last breath said: "Don't bother with me. Take care of our sick buddies who can make it and those who are wounded."

We are gathered together at a time like this, and you know that you have a great cause on your hands. You know that you have a principle to fight for. Most of all we should measure this principle in a spiritual value.

You know they say of a man who doesn't catch on very fast and who can't see through things, that he is dumb. But I say to you that two of the principal things that should be indelibly impressed on the memories of each and every one of us here today, is a divine sense of humor. Not a sense of humor just to make somebody laugh, but a divine sense of humor—that is, to see through things. See in the snowflake the purity of God; see in the mountain the power of God, and see in the rainbows and in the heavens the beauty of God.

That divine sense of humor is most essential for us, for when we go about our work of rehabilitation, when we go about our work of preserving the good things and carrying out the last testaments of our dying comrades, we shall see to it that when we take care of a fellow in room 262, we are not only taking care of a fellow in room 262, but we are taking care of somebody in the name of Christ, somebody that He died for, somebody that He loves. And as a reward for that, we have a promise some day in store for us: "Well done, thou good and faithful servant."

I didn't do anything. I'm sorry. I didn't. But, you gave a cup of cold water, you fought for a cause in the Legion's program to help one of those lads to see to it that they weren't thrown out in the streets, out of the hospitals, because of some false economy. You saw to it that these, our heroes, were enshrined and never to be forgotten in our hearts. That cup of cold water that you gave took on a spiritual investment in the bank of heaven where the rust and the moss cannot destroy, nor thieves break in and steal. You placed these things in spiritual value and every effort that you extend to that end will pay great dividends.

I said that you needed two things, not only a divine sense of humor, but you have to have the knowledge of the pain of an incision. Not necessarily a physical incision, but an understanding of pain.

You know, these lads who left the classrooms became history's graduates. Left at home they were to be probably the greatest statesmen this country has ever known. They grabbed the rifles and marched off to war. They might have been the scientist who would discover the cure for cancer, they might have been a captain of industry, they might have been a rabbi, a minister, or a priest who would bring spiritual consolation to future generations. They might have been an artist, or a painter, or a sculptor.

But today many grope with the blindness inflicted upon them by battle. They are warped in mind because they still scream in the psychopathic wards, hearing the ghost-guns of battle. They clutch with stumps of hands. They are carried around in wheel chairs, and you who are here today must know and have an understanding of pain in order to give them your all.

These are the things that I would like you to make a part of your mental make-up. Leave on the indelible tablets thereon these impressions.

What you do, you do well before the throne of the most high God.

Two thoughts, therefore, in conclusion.

Remember your dead who have done so well for you in days gone by. Remember them where remembrance counts—at the altar of God. And don't forget their last wish and will and testament. Take care, at all costs, take care of the sick and the wounded and those who are suffering on beds of pain.

Achievement in Government

EXTENSION OF REMARKS
OF
HON. A. FERNÓS-ISERN
RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. FERNÓS-ISERN. Mr. Speaker, on February 6, the honorable ambassa-

dor, Warren R. Austin, representative of the United States at the United Nations, addressed a joint session of the Legislative Assembly of Puerto Rico. The legislature assembled at the special call of Gov. Louis Muñoz-Marin.

I regret I was not able to be in San Juan at the time. I would have been thrilled to participate in this grand occasion, close both in flesh and in spirit to my people in the island. Unfortunately, I was able to participate in spirit only, because the pressure of urgent duties here entailed by representing in Congress 2,000,000 Puerto Rico Americans who toil and struggle up hill, confident and courageous along the roads of democracy and the "four freedoms."

Mr. Speaker, Ambassador Austin has delivered a message of great significance for the people of Puerto Rico. He made before our legislature, an informal report on the work of the United Nations, on our participation in that work, and on the prospects for peace.

He did this, I am sure, because he knows the American citizens of Puerto Rico are as much represented in the United Nations by him as are the citizens of any of the great sisterhood of States. And he realizes that we Puerto Rico Americans know it, too.

So we feel and know that Ambassador Austin speaks there for our ideals of peace and fair play, for freedom for all, for respect to the dignity of man, for the security of the democratic way of life in this shrinking world—in short, for the ideals which have made this Nation great, and which are as much loved and upheld in San Juan, Ponce, and Mayaguez as in any other community within continental United States.

There is additional significance in Ambassador Austin's words. As he put it, he went to Puerto Rico to report, and after doing that he could come back and report further. He found in Puerto Rico, a self-respecting people trying to help themselves and making themselves deserving of outside assistance. He saw the people of Puerto Rico, even within their meager and limited resources, not only striving to help themselves, but to help others help themselves. He observed what contributions Puerto Rico could make toward our common goals and he saw that Puerto Rico is making them.

As the Representative of Puerto Rico, I should like here to express my profound thanks to our honored Ambassador at the United Nations for his illuminating and inspiring words delivered before the joint session of Puerto Rico's Legislature. I believe, Mr. Speaker, that the distinguished membership of this Congress should be acquainted with what Ambassador Austin had to say at San Juan.

ACHIEVEMENT IN GOVERNMENT

Your excellencies, Gov. Muñoz-Marin, Mr. Speaker of the House, Mr. President of the Senate, it is good to be here again in a sunny corner of the United States which holds pleasant memories for Mrs. Austin and me. The time we spent with you in 1937, on a mission of the United States Senate, gave me an opportunity to become acquainted with your problems, and to meet and know your people.

Our special objective was to ascertain what, if anything, Puerto Rico needed from the Congress with respect to her judicial system.

During that study we had an extremely pleasant welcome from agriculturists, manufacturers, and educators. I believe that the most vivid impression given us was at the university. There we were shown research projects respecting possibilities of diversification in crops, and the development of parasites to eliminate certain pests that attack agricultural and horticultural products. We were entertained beautifully at social events in different parts of the island. Mrs. Austin and I have often recalled many an enchanted evening when we danced out under the stars in your salubrious climate. The warmth of personal generosity and friendliness that was lavished upon us enriched our lives.

This time we are in Puerto Rico as your representative, as the representative of the United States at the seat of the United Nations. As such, I feel that I owe you an informal report on the work of the United Nations, on our participation in that work, and on the prospects for peace.

Before commencing that report, I must express congratulations to Gov. Muñoz Marin for the progress of this part of the United States under his gallant leadership in his Operation Bootstrap. This great progress which has occurred since our visit and to which, I am sure all Puerto Ricans have contributed, is positively helpful—not only in the Caribbean, but the world—because of its proof that under the inspired leadership, and by diligent application to the welfare of a state, its inhabitants can speedily raise the standard of living and increase the moral power of the community.

We who work at Lake Success are acutely aware of certain public misgivings and the reasons for them. We are poignantly conscious of the fact that our negotiators have not reached agreement on effective means of international control of atomic energy. Now, the walk-out of the Soviet Union has frustrated continuing efforts among the sponsoring powers. We know only too well the widespread uneasiness that has resulted from inability to reach agreement on the setting up of the peace forces contemplated by the United Nations Charter. We are aware of the public's concern over the abuse of the veto and over all Soviet walk-outs.

It is a function of my office, not only to consult the other 58 states in the United Nations, but also to inform our own people of our policies and transactions, to aid them to arrive at sound opinions, which are necessary for the strength of American policy. Therefore, I bring to you an accounting for the conduct of our mission.

In my opinion, United States policy in the United Nations is an open-minded policy. On the question of atomic energy, for example, an overwhelming majority of the nations have expressed satisfaction with a control plan worked out by the United Nations Atomic Energy Commission. We support that plan. It is the only plan we know of that would maintain safeguards effective and enforceable against use for destructive purposes. At the same time, we have repeatedly expressed our willingness to consider any other effective and enforceable control plan.

This is typical of our attitude on every controversy within the United Nations. The reasonableness and the fairness of our approach is attested, in my opinion, by the great majority of member nations that have reached conclusions similar to ours.

The troublesome question is always, "Why is it so difficult to reach agreement with the Soviet Union?" In answer, I will not go into the possible motives of the Soviet Union. I need not discuss questions of Soviet aggression and interference in the political affairs of other countries, for it will be enough if I simply assert that the Soviets are an intensely isolationist country—far more isolationist than the United States ever was—and that reason is enough to make agreement exceedingly difficult. Here is an illustration:

In Geneva, Switzerland, last summer the Economic and Social Council had up for discussion a question relating to narcotics. Narcotic experts had decided that if the United Nations had a laboratory in which its experts could conduct a scientific analysis of opium seized in illicit traffic they would be better able to trace its source and track down the illegal operators. The United States offered laboratory facilities to the United Nations without charge. The question before the Economic and Social Council was merely whether this offer should be accepted. The Soviet Union voted against acceptance.

The representative of the United States was astonished, and said so, asking the reason for the negative vote. The Soviet representative merely stated that his Government preferred national action to suppress the illicit opium traffic.

It is not surprising, then, that a country which refuses to cooperate in a sphere so universally established as the international control of the narcotic-drugs traffic declines to accept effective international control of atomic energy.

This illustrates not only the narrowness of the internationalism currently apparent in Soviet foreign policy. It illustrates that international cooperation through the United Nations requires two steps, not just one. It requires first participation in the making of the decision. This the Soviet Union usually does. But it requires in adition that the country carry out what the United Nations decides to do. This the Soviet Union usually does not do.

To illustrate I will not repeat the well-known political examples, such as the Soviet boycott of United Nations peace efforts in Greece and Korea. I cite instead what the International Children's Emergency Fund has accomplished and the noncooperation of the Soviet Union.

The International Children's Emergency Fund is not solely a collecting agency; it is an operating agency. It has not been a relief program solely; it requires an equal effort on behalf of the recipient countries—a matching system is in practice by which the equivalent value in supplies or services has been added either by the Government, the locality, or some voluntary organization. The matching food supplies—bread, vegetables and other indigenous products—were made available out of limited stores, but, with what the International Children's Emergency Fund was able to add, an extra meal was made possible for millions of Europe's children in time of dire need. During the peak period in 1949, 6,000,000 children, including Arab and Jewish refugees in the Middle East, received daily lunches; the vaccination of millions of children for tuberculosis has been accomplished; several million children received one or more garments, for which the emergency fund supplied the raw cotton, or the raw wool. Another several millions of younsters were given shoes for which the fund provided the leather. The fund was able to produce, at a generously reduced price, more than 100,000,000 pounds of dried milk from the United States stores. This milk, when reconstituted, will fill 1,000,000,000 cups, and, because the fund is available, it can now extend its child feeding this winter to many more children, including those in countries in Asia and Latin America that have not so far had feeding assistance.

The expansion of the program has brought the total number of countries and territories aided, or shortly to be aided, by the International Children's Emergency Fund, to more than fifty. The Soviet Union had a representative on the executive board which made the policy and operational decisions. Yet, while small nations like Iceland and Norway and New Zealand gave cod-liver oil and hides for shoes when they couldn't give dollars, and while the United States

gave $72 for every $28 contributed by all other countries combined, the Soviet Government made no contribution.

Of such are the difficulties in the way of universal cooperation in the United Nations. Even so there is a more positive side.

When the United Nations Charter was created in San Francisco in 1945, the public received the impression that an instrument had been forged with teeth in it. In those days, we were accustomed to thinking in terms of armies and navies and air forces, in terms of military force. Thus when the peace forces of the United Nations were not set up at once, a certain amount of public disappointment resulted.

But in 4 years of extensive experience the United Nations has discovered and developed new forces behind its decisions. I refer principally to the moral force of world opinion. The discussions of the United Nations General Assembly, and of the Security Council, and of other United Nations bodies, is picked up and radiated throughout the world by modern means of transmission and communication. The result is a body of opinion world-wide in scope. That opinion is a force for any nation to conjure with. It is an immense power in support of United Nations activities.

We first became aware of the tremendous effectiveness of this force early in the history of the United Nations when the little country of Iran complained that the big Soviet Union, in violation of a treaty commitment, had refused to withdraw its military forces. The issue came to dramatic focus in the Security Council. The Secretary of State of the United States himself came to New York to speak on behalf of this country. The Soviets found themselves unable to defy the world censure aroused by the case. The Soviet troops were withdrawn from Iran.

The case of Indonesia is also in point. In 1948 there was a disturbance there involving the use of military forces on both sides. The issue was brought to the Security Council of the United Nations. Without peace forces, and without the threat of sanctions of any kind, but through the aid of a Good Offices Commission of the United Nations, the Netherlands and Indonesia were brought to pacific settlement. Peace, order, and freedom were established for the 77,000,000 of people in Indonesia. Within a year a new and independent republic had been formed—public opinion had demanded it—and the good will and sense of justice of the parties, aided by the United Nations, triumphed.

But the development and utilization of world opinion requires increased vigilance and understanding on the part of citizens of the world. It takes form through independent personal judgments becoming composite.

It is vital, therefore, that we protect the processes by which we are able to make these decisions. We must guard those human rights, such as freedom of the press, freedom of speech, free assembly, freedom of movement, which permit each one of us to obtain essential facts. For without the facts our judgment becomes warped. Only well-informed judgments aid the cause of peace.

Another force we discovered in the United Nations is the force of technical assistance to under-developed countries. Here by pooling our brain power in the interest of others, we help them to help themselves.

This is a field in which the people of Puerto Rico have provided me with a liberal education. I came hoping to report certain progress to you. But it is I who am receiving from you knowledge that I can apply positively in the discharge of my responsibilities when I return to Lake Success. When I see what you are doing here, I am tempted to declare that if all the peoples of the world will face their problems in the spirit in which you are facing yours, the solution of the problems of the world will be in sight.

You in Puerto Rico are today demonstrating a cardinal principle in the achievement of a better life. This principle is that of looking to oneself first and to others second for the solution of one's own problems. I refer, of course, to your adoption of Gov. Muñoz Marín's "operation bootstrap" as an alternative to "operation lament." You have not rejected Federal assistance—you have, in fact invited it—but you are demonstrating here that such assistance as comes to you from outside is effective in direct proportion to the effectiveness of what you do for yourselves by yourselves. What you do for yourselves and by yourselves is what justifies you, as self-respecting people, in asking for cooperation from outside. I have in mind the important bearing of this principle, and your demonstration of it, on the whole concept of assistance as set forth in point 4 of President Truman's inaugural address a year ago. Assistance to a country that is doing nothing for itself is assistance wasted. But assistance that supplements the all-out efforts of the people who receive it, is assistance rendered under conditions that are bound to make it effective. That is one lesson I presume to read into what you have shown me here.

This kind of initiative already has come to my attention in United Nations affairs. Not long after President Truman delivered his inaugural address, your honorable Governor, Muñoz Marín, was in the State Department offering a number of scholarships at the University of Puerto Rico to train experts under the point 4 program. More recently, at the invitation of your government, Assistant Secretary of State Willard Thorp and a team of experts came here to study technical assistance in Puerto Rico. They returned vastly impressed by what they saw and learned, and I can readily understand that from what I have seen since I arrived.

The initiative taken by your insular government to contribute what this island has to offer for the constructive development of the point four program gives hope that your experience here will have a salutary impact on the problems of areas in the world at large. At this stage, of course, I can only speculate. It does seem to me, however, that you might well provide procedures and an organization that would make it highly desirable to bring individuals from other countries here for technical and administrative training. You are overcoming, here, problems that are in many respects similar to the problems of a number of other agricultural countries in the tropics. You offer here the example of an effective democracy in action in a rural community of predominantly Latin speech, and you offer an illuminating picture of the successful coexistence of the two cultural streams—the Anglo-Saxon and the Spanish—each tolerant of and helpful to the other, preserving and developing a national life according to the wishes of the inhabitants.

I also envisage the possibility that this island, perhaps through the University of Puerto Rico, might provide some preliminary guidance to technicians from the continental United States who are on their way, for the first time, to work in the countries of Latin America. That would depend, I suppose, on what facilities were developed here. Given the right circumstances, the point four program of the United Nations and the point four activities conducted by our Federal Government might well profit from the intelligence and generosity of your whole approach to the problem of cooperating in the development of underdeveloped countries.

Indeed, examples of Puerto Rico's contribution to the training of technicians from other countries are already well known. To mention one, I need only refer to the arrangement with the Institute of Inter-American Affairs, by which a score of experts from Haiti have been brought to Puerto Rico over a 4-year period for advanced training in agricultural matters.

I hope that something of this sort proves feasible. I know that a number of your citizens already have given distinguished service to the United Nations and its specialized agencies. Your treasurer, Señor Descartes, has performed valuable service for the International Trade Organization. Chancelor Jaime Benítez, of the University of Puerto Rico, similarly has contributed to the development of the United Nations Educational, Scientific, and Cultural Organization. Your Commissioner of Labor, Señor Sierra Berdecía, recently attended the International Labor Conference in Montevideo.

It is clear that Puerto Ricans, drawing from both their valuable experience and their youth and vigor, can contribute increasingly to the United States effort toward peace in the United Nations. We are observing your efforts with interest and expectation.

The moral of what you and the insular government of your own choosing exemplify, however, has still wider and more significant application. Up in the United Nations, at Lake Success, we use a good many technical terms with which you people are familiar from your newspapers. One of them is the term "dependent peoples." Another is the term "non-self-governing territory." Whatever the technical meaning of these terms may be, it is apparent to me that they have little application in a literal sense to Puerto Rico and to the people of Puerto Rico. I find among you Puerto Rican Americans an independence of spirit no less than that which characterizes us Americans from the continental States. This does not fit in with any literal conception of a dependent people. What strikes me most forcibly, however, is that it is your own doing, it is what you have made of yourselves, that makes the term "dependent" so incongruous in its application to you as Americans. The lesson you have to teach in this respect is that true independence is not something that is conferred from without; it grows from within, and that is where it must always reside.

The term "non-self-governing" is also subject to qualifications in its literal implications as applied to this island, which is a part of our Federal association. It is true that the progressive development of your position with respect to our whole Federal Union has not given you yet the opportunity to vote for the constitutional instrument under which you are developing yourselves. I understand that you are working on this fundamental principle, and I am confident that you will have cooperation in your high purpose. I see here self-respecting adult Americans with their destiny in their own hands. Is it not a significant fact that the United States Department of the Interior, which has Puerto Rican affairs in its jurisdiction, is unrepresented by any commissioner or commissar or resident official of any sort in San Juan? Is it not a significant fact that the statesman who does exercise the executive powers of your insular government is not designated by Washington, but freely chosen by yourselves from among yourselves, that he is the servant of the Puerto Rican people and not the servant of Washington?

The world may well take note of this dignity that the Puerto Rican people have achieved; and it may also take note that they have achieved it within the terms of their relationship to the metropolitan United States. Just as we would not ourselves be bondsmen, so we would not have others in bondage to us. That is why we have welcomed and, indeed, supported the development that makes you today our associate under an insular government of your own creation. The friendly nature of our association is a tribute to our common democracy.

Let us all throughout the United States of America join your distinguished governor in his inspiring slogan "jalda arriba."[1]

[1] "Uphill" in a rather dynamic sense.

The Conviction of Alger Hiss

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. NIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William Henry Chamberlin, from the New Leader of February 4, 1950:

THE CONVICTION OF ALGER HISS

(By William Henry Chamberlin)

The verdict of guilty on two counts of perjury brought in by the jury after the second trial of Alger Hiss is an event of profound significance. It should be regarded not as an end, but as a beginning. Hiss the individual is unimportant. Hiss the symbol of Soviet and Communist infiltration into high Government circles is alarmingly important.

The best means of insuring that there need never again be an Alger Hiss trial is to open up a long overdue painstaking investigation of indications of treasonable and espionage activities which have been coming to light in piecemeal fashion of late. There are many questions on which the American people are entitled to an answer.

Why, for example, were there so many notorious fellow travelers, if not card-carrying Communists, in the OWI? Three of the most influential individuals in the Polish section of that organization, Herz, Arsky, and a woman named Balinska, subsequently turned up in Stalin's satellite Poland, blackguarding the United States as hard as they could. Annabelle Bucar, the amorous lady who changed sides in Moscow, left her post in the American Embassy and wrote, or signed her name to, a scurrilous book about State Department and Embassy personnel, was an OWI alumna.

For some time after the war it became second nature for me, when reading a magazine article attacking the United States and apologizing for Soviet communism, to see whether the author was not formerly connected with a Government institution. Often this proved to be the case.

Why our chief agency of psychological warfare was so vulnerable would be a subject of rewarding inquiry. Did it just happen that way in the general wartime excitement, with the many accompanying illusions and delusions? Or did some person or persons plan it that way?

Another subject on which intensive research might yield interesting results is the origin of the Morgenthau plan. Most people think of this as a wild scheme of economic revenge which was fortunately not put into full effect. But there is food for thought in the last part of the plan which has been generally overlooked. Here is the precise wording of this provision:

"The primary responsibility for the policing of Germany and for civil administration in Germany should be assumed by the military forces of Germany's continental neighbors. Specifically these should include Russian, French, Polish, Czech, Greek, Yugoslav, Norwegian, Dutch, and Belgian soldiers.

"Under this program United States troops could be withdrawn within a relatively short time."

It is easy now to understand that military control of Germany by its continental neighbors, to the exclusion of the United States and Great Britain, would have meant turning over Germany, and Europe, to Stalin.

Does this reflect political illiteracy, or the blindness which often afflicts schemes of revenge, or a more deliberate purpose? The late Harry Dexter White was one of the principal authors of the Morgenthau plan. He was named by Whittaker Chambers as a source of information to Communist spy rings. Was there any connection—unbeknownst to Mr. Morgenthau—between these two facts? Or can the whole thing be laid to the wartime innocence and/or stupidity of some of our leaders?

These are only a few samples of scores of questions which arise in connection with Soviet and Communist infiltration and espionage before, during, and after the war. An authoritative investigation that would make a more coherent picture of the fragments of information which we possess might be of great service, in exposing the guilty and in clearing the innocent, and in showing conclusively what America is up against.

As for the Hiss trial, both its conduct and the final decision of the jury should redden the faces of those whose standard practice is to shout "Red baiting," "lynching," "hysteria," whenever anyone is accused of pro-Soviet or pro-Communist activity. Anything less hysterical than the proceedings against Hiss can hardly be imagined.

He was indicted only when the pumpkin papers furnished clear evidence that Chambers was not inventing stories of espionage. In the two trials he enjoyed every opportunity to prove his innocence. Indeed, the rulings of the court in the first trial seemed definitely favorable to Hiss, notably in the exclusion of the very important testimony of Hede Massing. And Judge Goddard may be considered to have stretched a point in favor of the defense when he admitted the dubious "psychiatric" testimony. The psychiatrists, incidentally, were handled very effectively by Prosecutor Thomas Murphy.

The jury evidently felt that the main exhibit in the case of the prosecution, the typewriter, the memoranda in Hiss' handwriting, the corroborative testimony of Hede Massing, the confession of Wadleigh, the effective confrontation of the Hisses with the former maid of Chambers, heavily outweighed the psychiatrists and the parade of the character witnesses.

Some of the latter may indeed be well advised to be more reticent in the future, especially when they are considering their attitude toward a man against whom there is strong prima facie evidence. The idea that Hiss "could not" have committed the acts laid to his charge because he was well educated and possessed a "proper" social background, is fantastic and could easily be refuted by dozens of examples in history and in Communist undergrounds in other countries. This is apparently what the jury thought also.

Court of Current Issues

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. COUDERT. Mr. Speaker, on Tuesday evening, February 7, it was my good fortune to appear on the well-known television program, Court of Current Issues, which emanates from New York City, and which on this occasion marked its second anniversary of continuous presentations. I say it was my good fortune to appear on this program, for I welcome every opportunity to bring my views on certain subjects to the American people.

Television in recent months, with the expansion of coaxial cables, is a new media with which the great American public can be reached with a variety of subjects, keeping them informed of the trends of the times, and allowing them, in normal democratic processes, to decide what is good or bad for America.

It is then with a great deal of personal satisfaction that I pay my respects to Irvin Paul Sulds, the originator of the Court of Current Issues. It was he who conceived this plan to have leading citizens of the Nation, representatives of schools, scientists, lawyers, and others skilled in their professions but differing in their opinions, to come before the public through this exciting new media.

Visual education has long been acknowledged as a great form of impressionism. This was greatly developed during the years of World War II in training our soldiers, sailors, and marines. Today programs such as the Court of Current Issues can bring this visual education into the living room of virtually thousands of homes, and give the public information on a variety of subjects. Once the facts are presented, the public is left to draw its own conclusions and make its own decisions.

It was gratifying to me that Mr. Sulds' efforts during the past 2 years were recognized last night by the Veterans of Foreign Wars of the United States, who through their senior vice commander-in-chief, Charles C. Ralls, of Seattle, Wash., presented him an official citation, signed by Commander-in-Chief Clyde A. Lewis, which said:

TO IRVIN PAUL SULDS:

In recognition of the second anniversary of the initiation of the Court of Current Issues, of which program he is the originator, and in commendation of the outstanding service of the program to America's service personnel and veterans in furthering public understanding and evaluation of important national and international issues pertinent to their interest and to the interest of our Nation, whose proud American tradition they fought to uphold.

So long as we have forward-looking citizens such as Mr. Sulds, whose ambition it is to bring information and the light of day in a very interesting and entertaining manner to the people of the Nation, I am sure that we can reasonably expect our people to make basic decisions in the best interests of all of us.

I hope that the Court of Current Issues will continue the splendid work which it has carried on for the past 2 years, and it is my further opinion that should like programs be developed and presented through the media of television, we can look forward to a period in our immediate future when we will have the best informed public of any nation in the world.

Philippine Surplus Storage

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. STEFAN. Mr. Speaker, much has been said about war surplus property in

the Philippines. Charges have been made of considerable waste and many erroneous stories have been printed in the press.

Today I had a discussion on this subject with Mr. John A. O'Donnell, one of the Commissioners of the Philippine War Damage Commission, who is presently in Washington. Mr. O'Donnell called my attention to an article written in the Christian Science Monitor, Friday, January 27, 1950, entitled "Basic Aims Won Despite Manila War Surplus Waste." I have read this article carefully and Mr. O'Donnell assures me that, based on his 3 years' experience in the island, including travel throughout the archipelago, that this article clearly and succinctly states the facts. In order that the membership of the House may have these facts because there is now much discussion on this subject, I include same as part of my remarks:

BASIC AIMS WON DESPITE MANILA WAR SURPLUS WASTE—VAST STOCK FOILED ORDERLY SELLING

(By David T. Sternberg)

MANILA.—When the Philippine Government closed its books in October on the surplus property deal, many felt this had affected the body social almost or profoundly as did the 3 years of enemy occupation.

The deal was that in which the United States Government turned over to the Filipinos a quantity of military surplus material ranging in diversity from bulldozers to beans and having an estimated procurement value of more than 2,000,000,000 pesos.

When the Philippine Government finally dissolved the Surplus Property Commission, its estimated total receipts in liquidation were about $17,500,000, plus perhaps another $9,000,000 pesos worth of goods allotted to government agencies.

There was little excitement here over that announcement.

MORAL LIABILITY

There was a feeling almost of relief, for thoughtful Filipinos came to regard the stock piles of war goods as something of a Pandora's box. Most of the government's scandals have stemmed from surplus, and much of the nation's lawlessness has bred in its temptingly vulnerable piles.

Morally, the gift was undoubtedly more of a liability than otherwise.

Looking at the record, American critics are inclined to charge bitterly that the Filipinos have wasted and dissipated a great treasure trove which could have gone far toward restoring their war-damaged nation. Filipino critics, with equal bitterness, are hinting darkly that they were short-changed. Neither comes very close to the truth.

Army surplus has gone far toward restoring the Philippines to a stage of well-being which compares more than favorably with that of any other war-torn country in the world today. And the task has been accomplished with material which originally may have had a procurement value of more than $1,000,000,000, but which, when turned over, was estimated by the donors at only $100,000,000.

To understand the story of military surplus, it is necessary to visualize the stores and their disposition physically.

COMBAT EXPENDABILITY

In 1944 the Philippine Islands were to be the staging area of the final all-out offensive against Japan. Along their shores were poured millions of tons of military supplies to support the offensive—supplies of high procurement value because they were produced under pressure of time, without regard for cost, and because built into them were certain military virtues absent from their civilian prototypes.

Custodians of these stores were men schooled to a concept of combat expendability, men who, even when well behind combat areas, could grin and shrug their shoulders when a barge tipped and sent three crated trucks and a Sherman tank to the bottom of the Pasig River.

Military logistics, logically enough, had made no provision for permanent storage and warehousing of these supplies. They were dispersed wherever space and strategic requirements permitted over the length and breadth of the archipelago, sheltered only by flimsy temporary roofs and tarpaulins.

VJ-day in 1945 found the bulk of the stores unexpended, and thoughts turned to the problem of surplus. But before much could be done the enthusiastic "bring the boys back home" had swept across the Pacific even to the service echelons which had seen no combat and relatively short terms of service.

COSTLY WASTE

The pace of subsequent demobilization and green replacements created a labor turn-over which would have sent the management of any private industry screaming into the streets, but the more philosophical military merely shrugged, murmured something about "citizen army," and started to nibble at the gargantuan task.

Nibbling, however, was no match for the elements. By late 1945, when the United States Foreign Liquidation Commission here first started limited sales of surplus, typhoon rains and tropic sun—plus GI handling—had reduced such surplus items as heavy trucks to rusty, stripped hulks with rotting tires. By the time the Philippine Rehabilitation (Tydings) Act finally was passed in 1946 by the Seventy-ninth Congress, more than $1,000,000,000 in procurement value was needed to make up an estimated fair value of $100,000,000, the amount granted by the act.

Both valuations could be little more than estimates, because the skeletonized military could barely cope with the minimum demands of maintenance and security, let alone the preparation of inventories.

Both under America's FLC and the Philippines' SPC, not the least deterrent to swift and economical disposal of surplus was a mass of well-intentioned official red tape. Restrictions intended to thwart favoritism and speculation in surplus goods served only to breed greater evils.

CORRUPT SALESMANSHIP

Corruption in the sale of surplus started when the first lieutenant discovered that his strategic position between the impatient buyer and the next desk in a long line leading to official approval could mean easy money at no greater effort than leaving some documents to gather dust in his outgoing basket. And it has continued to the present.

There is a bright side to the picture, however. What the United States may see as a billion-dollar tragedy of waste, and what the Philippine Government sees as a disappointing financial transaction can be regarded as such only in terms of bookkeeping.

It is true that useful equipment was rendered valueless by stripping and looting at the sprawling, vulnerable depots dotting the islands. It is true that fraud and corruption permitted vast quantities to slip out at a fraction of actual worth. It is true that years of costly adminstration and security have eaten deeply into the proceeds of sale and left the Philippine Government with perhaps a third of expected revenue. But it also is true that private enterprise has performed the minor miracle of reassembling, reconditioning, and converting the original contents of those depots into a well-rounded basic national economy.

INGENUITY PAYS OFF

In many areas the Filipino still eats surplus food, wears surplus clothing, and derives his livelihood from the use or sale of surplus materials. Twice as many vehicles are registered as before the war, and the vast majority are surplus trucks, jeeps, and trailers. Surplus sawmills are cutting timber which is being hauled to cities and piers by surplus trucks and trailers. Agricultural lands are being cleared and cultivated with surplus bulldozers and tractors to the extent that rice production this year will exceed prewar levels. Interisland shipping is almost back to normal with surplus bottoms.

Surplus cranes, cement mixers, road graders, and rollers in numbers and type unknown to the Philippines before the war, are speeding public and private reconstruction. From the uncounted jeeps, igeniously converted to carry six or eight passengers, which offer cheap mass transportation, to the pots and pans fashioned from aircraft fuselages, there is scarcely a phase of Filipino life today which does not derive benefit from surplus.

An additional factor which the Philippines must use in appraising its surplus treasure may be illustrated by the history of a surplus crane. Turned over by the Army at a fair value of $2,500 because of a battered cab and missing parts, Filipino manpower alone served to restore it so that it performed, and continues to perform, the functions of a civilian unit costing $12,000—and not until recently available.

Un-American Probe Should Be Continued

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. NIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Spokesman-Review, Spokane, Wash., for January 30, 1950:

UN-AMERICAN PROBE SHOULD BE CONTINUED

The manner in which President Truman dodged the questioning of White House correspondents last week on the Alger Hiss case indicates the degree of embarrassment with which the administration is now confronted as a result of Secretary Acheson's strange defense of Hiss.

It was President Truman who months ago termed the congressional probing of the Hiss record as a red herring. This earlier effort to stand by Hiss and other possible fellow travelers in high Government office did not prevent the House Un-American Activities Committee from pursuing the case, but it did hamper the work considerably.

The Hiss case eventually found its way into the Federal courts, and thanks to the cooperation of the Department of Justice, particularly the Federal Bureau of Investigation, the once-high State Department official was given an imminently fair trial and convicted of perjury.

This type of cooperation was not forthcoming, however, on the release to the congressional committee of a list of Government officials suspected of belonging to Communist-front organizations. Mr. Truman suppressed the loyalty report months ago and continues to do so.

It is hoped that the present House Un-American Activities Committee will continue to ferret out the facts on Communist infiltration into Government offices, and that Secretary Acheson, particularly, be called upon to explain why he continues to defend Alger Hiss.

Alice Morrison Nash and the Vineland Training School

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. HAND. Mr. Speaker, a short time ago Alice Morrison Nash, of Vineland, was the guest of honor at a dinner in New York, at which some of the most distinguished citizens of the Nation joined in paying tribute to her half century of selfless humanitarian work at the famous Vineland (N. J.) Training School, which is located in my district.

In Time of January 23, 1950, there appeared a brief sketch of the work done by this outstanding woman, which I herewith include in the CONGRESSIONAL RECORD:

FIFTY YEARS OF SMALL VICTORIES

When 20-year-old Alice Morrison unpacked her Saratoga trunk in her tiny room at the Vineland (N. J.) Training School in 1900, she had a sinking sensation. The silent, halting students she had just seen were far different from the kind she had been taught to cope with at the New Hampton (N. H.) Literary and Biblical Institution.

In 1900, when Alice Morrison came to Vineland, it was one of three pioneer institutions for the mentally deficient, had been going just 12 years. The rest of the United States knew precious little about retarded children (i. e., those with an intelligence fixed below the 12-year level) or what could be done for them. Horrified and grief-stricken parents hid the uphappy children in back rooms or sent them to be cared for in inadequately equipped asylums.

A STAMMERED GRACE

When Alice Morrison arrived, the school owned 6 buildings and had 200 students. She spent a long day looking around her and sizing up her job. As she surveyed the children's bowed heads at the evening meal and listened to one youngster repeat a stammered grace, she made up her mind to stay.

She stayed. She married one of the school officials, Charles Emerson Nash, set up housekeeping in the administration building. To many of the children whose parents never visited them, the Nashes became "mother" and "pop."

As director of studies, Alice Nash was continually exploring new possibilities for her limited boys and girls; music, dramatics, dancing, and a variety of handicrafts as well as slow-motion versions of the three R's. Vineland became known as one of the foremost schools for mental deficients in the United States.

PLACES IN THE WORLD

Most of her victories were small ones: Teaching a mongoloid boy (with a 3-year-old's intelligence) to plow a straight furrow; coaxing a few words from a 6-year-old who had never spoken; teaching a girl to sew a straight hem or weave a towel. But she also fought for places in the outside world for students she felt were ready, every year sent 15 or 20 out to earn their own way. During World War II she had the satisfaction of seeing a hundred of her boys accepted for service.

Last week, as Alice Nash completed her fiftieth year there, Vineland's 93 buildings spread over a broad 1,100-acre campus. A hundred Vineland boys ran a 400-acre farm which helped feed the school's 550 students. The school had already fostered five other New Jersey institutions for the mentally retarded, served as the model for such schools as far away as Australia. The next step was a $1,000,000 fund-raising drive to build a new research center and expand the school's facilities.

As the drive got under way, 70-year-old Alice Morrison Nash sat in the crowded ballroom of Manhattan's Statler Hotel one night last week and listened to tributes from Nobel prize winner Pearl Buck, stateswoman Ruth Bryan Rohde, and New Jersey Gov. Alfred E. Driscoll. She nodded happily at the applause of friends, former students, and parents who had gathered to honor her, then prepared to return to her boys and girls at Vineland.

There Are Times When Damon's Bound To Unload Pythias

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. NIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Robert C. Ruark from the Washington Daily News of January 27, 1950:

THERE ARE TIMES WHEN DAMON'S BOUND TO UNLOAD PYTHIAS

(By Robert C. Ruark)

NEW YORK, January 27.—I believe friendship, along with respect for motherhood and other abiding institutions, has long been on the editorial free list as an unassailable commodity. So I do not propose to knock friendship as a whole, but would merely like to speculate on some rather odd aspects of it.

Dean Acheson's stanch and Biblical backstopping of the convicted Alger Hiss seemed rather brave and admirable in a man, rather silly as a diplomat, and downright shocking as a Secretary of State. Mr. Truman's sterling advocacy of his old pals, such as the Pendergast mob, and his stubborn protection of that great buffoon, Harry Vaughan, also has been a fine example of butt-headed loyalty.

I am now beginning to wonder just how far you can carry this friendship operation if you hold public office and the respect and welfare of your country weighs upon your back. I am prone to challenge the nobility quotient of friendship if it leads an Alger Hiss, a high and trusted public servant, to snitch vital state papers for delivery to his Communist bosom buddy, Whit Chambers. I even knock love a little bit, too, if it moves a Judith Coplon to swipe the FBI's private files for her Russian boy friend.

Somewhere along the way, it seems to me, Damon is morally bound to unload Pythias, if Pythias gets completely out of hand, and Cupid may even be shot as a spy if he starts pegging his arrows at the wrong people. In some cases this friendship assumes the proportions of the distraught dame who is standing over her lover with a smoking gat and proclaiming that she loved him. This is of short comfort to the chilled gent on the deck.

I believe that friendship should endure until death, that friendship is a perfect blendship if indulged in privately, but when somebody else's friendship is inflicted on the public time then it is strictly friendship, "schmendship," in my book. Nobody is ever criticized for continuing an amiable relationship with some old, sodden bum you played ball with as a kid, but you don't have to put him in charge of foreign relations or appoint him to run the FBI or sit in the Supreme Court.

Mr. Acheson's Bible quotations and jutjawed loyalty to his old pal therefore leave me a touch cold and I begin to wonder about Mr. Acheson's own standards and qualifications to steer us safely through the moment's emergencies.

After what happened to China, under State Department hands, the unpleasant thought strikes me that maybe the joint is leaping with Hiss admirers, and for all I know a big business in hot documents to the Russians is flourishing there. I seem to remember an old saw about man being known by the company he keeps.

I lack Mr. Acheson's nobility of mind. Even if Hiss had been my best chum, fraternity brother, and steady bankroller, I would be inclined today to regard him as a lavatory rat, and dump him, fast.

Lincoln Day Celebration Speeches, Washington, D. C., February 6, 1950

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. DONDERO. Mr. Speaker, I offer for the RECORD the speeches made by the Republican Members of Congress and the Senate on the occasion of the annual Lincoln Republican celebration in the form of a box supper held February 6 at Uline Arena, Washington, D. C., where at least 12,000 people were in attendance and 3,000 were turned away because space was not available to accommodate them:

CONGRESSMAN GEORGE A. DONDERO, OF MICHIGAN, CONGRESSIONAL EXECUTIVE CHAIRMAN

May the day never come when we can no longer stand up, as a free people, and sing "My Country 'tis of Thee." May all Americans who still believe in our country and its Republican form of government join with the Republican Party tonight, in celebrating the birthday of Abraham Lincoln, who still stands as the greatest symbol of freedom the world has ever known.

Lincoln knew that any man worthy of the name would rather be free than safe; because when freedom is lost, all is lost.

We dedicate ourselves tonight and join together to stop the creeping socialism being forced upon our country by the present administration. We pledge ourselves to fight for the preservation of our free institutions—for the freedom and self-respect of the individual—to the end that this Nation of free men shall continue to be free.

GUY GEORGE GABRIELSON, CHAIRMAN, REPUBLICAN NATIONAL COMMITTEE

Thank you, fellow Republicans.

As your national chairman, there are many things that I would like to say to you tonight, but I feel that since we have now issued a statement of principles of the Republican Party, the time for talking is past and the time for action is here.

However, I wish to make one brief pronouncement. From this night on, the Republican Party is going to be the strongest, most active and vigorous opposition party that has ever been known in the history of our country. We are at present the minority party but we have no intention of remaining so—and we mean to become the majority

party in 1950 and, with the help of all patriotic Americans who believe in constitutional government, to elect a Republican President and Vice President in 1952.

TAXES—CONGRESSMAN CHARLES A. HALLECK, OF INDIANA

The Republican Party is the party of low taxes and economy in government.

It was the Republican Eightieth Congress which reduced taxes for the first time in over a generation. This was done over the opposition and veto of the Democratic administration.

The Republican Eightieth Congress forced a Democratic administration to balance the budget for the first time in many long years.

Today, under a Democratic Congress and a Democratic administration, the budget is again out of balance—hopelessly in the red. "Mr. Spender-in-Chief" has again sounded the call. He wants more taxes.

To that the Republican Party says—

"Let's cut the cost of government and reduce taxes—not increase them. Let's balance the budget. Let's be sure we have a sound economy."

DEFICIT SPENDING—SENATOR KENNETH S. WHERRY, OF NEBRASKA, SENATE MINORITY LEADER

Fellow Americans, deficit spending leads to national bankruptcy.

The reckless and extravagant spending by this administration can result only in disaster and ruin for our country.

It will further cheapen the dollar, rob the wage earner, impoverish the farmer, and destroy the savings, insurance, and investments of millions of people.

Why, the only, sound, sensible thing to do now is cut the cost of government, balance the budget, get on a pay-as-you-go basis, cut the debt, and cut taxes.

Carry this issue to the country, and we will elect a Republican majority in both Houses of Congress in 1950, and a Republican President in 1952.

SENATOR MARGARET CHASE SMITH, OF MAINE

I am glad to be here tonight because I honestly hope that this event will start not only Republicans, but more important, Americans on the road to something that is far more important than any one of us—you and me—the Republican Party, or any other political party—to a truly free America with free people—to a land of free opportunity—away from government paternalism—away from government by hand-out—away from government by deception, that promises something for nothing—in which individual freedom is bartered away for the mental drug of politically-promised security.

Yes, all summed up, away from a government that daily dictates our life, that tells us what we can and can't do on matters that we used to decide for ourselves.

I hope with all my heart that tonight the Republican Party will be starting America, you and me, back to that most basic of all freedoms that we used to cherish and enjoy—the freedom to be let alone.

FARM PROGRAM—CONGRESSMAN AUGUST H. ANDRESEN, OF MINNESOTA

The Brannan farm plan is a fraud upon both farmers and consumers.

For the farmer it means full Government control of all his operations and the ultimate nationalization of American agriculture as has occurred in Socialist Britain. It means that every farmer will become completely dependent upon Congress and the Government for a large part of his annual income. It means inefficiency and increased costs in agricultural production, which in the end results in scarcities and high food prices to consumers.

It makes the Secretary of Agriculture an economic czar over American farmers, and in the end, due to the inability of the taxpayers to finance this multimillion-dollar Utopia, the farmers will wind up in bankruptcy and without any farm program whatsoever.

American farmers are justly entitled to an American farm program that will assure them an income and standard of living on equality with other segments of our American economy as against the ruinous political scheme proposed by the Truman administration.

SOCIALIZED MEDICINE—SENATOR HOMER E. CAPEHART, OF INDIANA

The people of the United States have achieved the highest standard of national health the world has ever known under our system of private medicine, aided by Public Health Service.

The Democratic administration now seeks to Trumanize and socialize the practice of medicine.

They ignore the failure of the British experiment.

The power-drunk dreamers want to herd the American people into regimented groups and assign them to doctors and dentists who are identified by number as if they were in prison—well, maybe that is more than a descriptive thought.

The idea, of course, is to make a stomachache a Federal offense.

Seriously, folks, we feel the Government's job is to make possible the education and training of more doctors and nurses.

It is to help provide funds for the erection of more hospitals and research laboratories.

It is to aid in the spread of medical facilities in the areas where they do not now exist.

Socializing medicine will not do these things.

We Republicans would rather place our confidence in a practice we know to be successful than in a theory which so far has failed to work.

MRS. JOSEPH R. FARRINGTON, NATIONAL PRESIDENT, WOMEN'S REPUBLICAN CLUBS, PAST PRESIDENT, LEAGUE OF REPUBLICAN WOMEN

Thank you, Mr. Murphy.

As president of the National Federation of Women's Republican Clubs, I wish to address this appeal to all women within the range of the sound of my voice.

In the last general election, 45,000,000 eligible voters failed to use their ballot. This is a situation that must not continue. Let us—all of us women—everywhere—here and now dedicate ourselves to the proposition of persuading those of voting age of the importance of being alert to the present-day issues: the necessity of finding out who the candidates are and what they stand for—the need for women to be active in politics—then, by all means, last but most important—to cast their votes for those candidates who best exemplify human freedom and American liberty.

If we succeed in achieving this goal—and I know with woman force we shall succeed—the year 1950 will go down in history as the year of the second emancipation.

JOHN TOFE, PRESIDENT, YOUNG REPUBLICAN NATIONAL FEDERATION

This opportunity for Young Republicans to honor our ideal among statesmen is a privilege. As chairman of the Young Republican National Federation, we support the dynamic principles of the Republican Party. The utilization of our ideas, our ideals and our energies in this year's congressional and senatorial campaigns will do much to insure victory.

Lincoln opposed a country half free and half slave. We oppose a country half free and half Socialist. We unite in the fight for a Republican victory. In the fight for freedom, we invite other like-minded people to join us.

MRS. THOMAS, ASSISTANT SECRETARY TO THE NATIONAL CHAIRMAN OF THE REPUBLICAN PARTY, NIECE OF THE FIRST GENERAL OF HER RACE TO SERVE IN THE ARMED FORCES, THE ILLUSTRIOUS GEN. F. O. DAVIS

I am very happy to have this opportunity to honor the man who did so much for my people—the great Abraham Lincoln.

We in the Republican Party honor his memory and intend to carry forward the principles of government and humanity that he believed in so firmly.

Thank you.

BIG GOVERNMENT—CONGRESSMAN LEONARD W. HALL, OF NEW YORK, CHAIRMAN, CONGRESSIONAL CAMPAIGN COMMITTEE

Section 4, article 4, of the Constitution, says "the United States shall guarantee to every State in this union a republican form of government."

Today we are plagued by a monster known as big government, a monster which has not only gobbled up the rights and privileges of the States but also many of the rights of labor, management, and the individual citizen. It is a thing of unlimited appetite.

The time has come to do away with this monster. We subscribe to the belief that the founding fathers knew what they were doing when they formed this Government of ours. We are certain that for 150 years it has been the finest type of government known to man.

The time has come to return to this republican form of government, a government of the people, by the people, and, particularly, for the people.

CHINA POLICY—SENATOR WILLIAM F. KNOWLAND, OF CALIFORNIA

Our bankrupt China policy stems from Yalta. In a secret deal, the Democratic administration—without the knowledge or consent of the Chinese Republic—gave vital Manchurian rights to the Soviet Union.

The action was taken without the consent of the American Congress or the American people.

More recently, a State Department leadership that is reluctant to turn its back on Alger Hiss has turned its back on effective aid to non-Communist China.

In that area of the world they appear more interested in saving face than in saving freedom.

HISS-ACHESON—SENATOR KARL E. MUNDT, OF SOUTH DAKOTA

Tonight we are gathered together to honor Abraham Lincoln. On the bill of fare we have old-fashioned American fried chicken, but there are some people in this town tonight who are attempting to eat their own words—and they are finding those words hard to swallow and highly unpalatable.

Today one Alger Hiss stands convicted and sentenced. His crime? He sold his country down the river—a Russian river. The Democratic administration was first told of Alger Hiss 11 years ago—in 1939; then again in 1943; then again in 1948. Again and again and again.

When questioned about this, one important executive's answer was: "No comment." Another man high in the Government reaffirmed his affection for his former associate.

Yes, indeed there are folks in this town tonight who are eating "red herring," but they are not Republicans. This red herring can only cause us to end up with a horrible case of national indigestion. And how can this indigestion be cured? By substituting a government by intelligent Americans who can very easily distinguish foreign "red herring" from American fried chicken.

THE ATOM BOMB—SENATOR OWEN BREWSTER, OF MAINE

Russia has the atom bomb. The free world trembles. How did she get the atom bomb? The story is now unfolding.

We have exposed our Coplons, our Hisses, our Wadleighs—and now Britain's Dr. Fuchs. When will this parade of traitors end?

Russia got the atom bomb not by independent research—but through traitors within our ranks. The present administration, through stupidity or by design, has coddled Communists, shielded traitors, and aided and protected enemies of our Republic. All of this being treason, let us make the most of it.

We Republicans believe that spies should be arrested and dealt with as spies, that traitors should be treated as traitors, and that the uppermost concern of all elected representatives of Government should be the preservation of our national security, and the safety and protection of our Republic—from enemies within and without.

FBI—CONGRESSMAN FRANK B. KEEFE, OF WISCONSIN

In years past there have been many attempts made to discredit the Federal Bureau of Investigation and its great leader, J. Edgar Hoover.

I wish to state here and now that the Republican Party has complete faith and confidence in the Federal Bureau of Investigation. Mr. Hoover and his men have done a magnificent job under the most difficult circumstances. They have earned the confidence, the praise and the esteem of the American people.

The Republican Party intends to see to it that the Federal Bureau of Investigation is allowed to continue its good work. We will not stand by and allow the left-wingers and the pinkos to discredit the Federal Bureau of Investigation with a campaign of lies and deceit.

We are certain that the Federal Bureau of Investigation is an important cog in the preservation of the American way of life, and we intend to see that it is allowed to function and continue its important work unhampered.

VETERANS—CONGRESSMAN JAMES E. VAN ZANDT, OF PENNSYLVANIA

In the past, as in the present, the Republican Party has always championed the cause of the veterans.

We feel the men who fought our wars are entitled to a decent break from their Government—the disabled, the sick, their widows, and their orphans.

Most of the benefits enjoyed by veterans today were enacted by Republican administrations or passed over the vetoes of Democrats.

As all veterans know, the Economy Act of 1933—written by a Democratic President and jammed through a Democratic Congress—took away many benefits from our comrades of the Civil War, the Spanish-American War and World War I.

Today the veteran is getting a curious kind of deal from the so-called Fair Deal. While he is being given a refund for passed overcharges on his insurance premiums, he is being deliberately overcharged on his current payments. Then one of these days, when an election is in the offing, he may be given another refund.

The Republican Party wants no part of this kind of political shell game. We want a square deal for the veterans.

DECENTRALIZATION OF GOVERNMENT—SENATOR CHARLES W. TOBEY, OF NEW HAMPSHIRE

Stop the trend to centralized government in Washington. It was Jefferson who warned: "Were we directed from Washington when to sow and when to reap, we should soon want bread. * * * When all government, in little as in great things, shall be drawn to Washington, as the center of all power, it will become venal and oppressive."

And our own Abraham Lincoln confirmed this when he said: "The principles of Jefferson are the definitions and axioms of free society."

Wake up, America. Understand how far your individual liberties have been encroached upon; and then, as we celebrate Lincoln's Birthday, join with me in hurling his warning to the Democrats: "You can fool some of the people all of the time, and all of the people some of the time, but you cannot fool all the people all the time."

Wake up, America, cast the scales from your eyes, rebuke the greed and lust for power, so rampant in Washington today.

How? Vote Republican.

FOREIGN POLICY—SENATOR HARRY P. CAIN, OF WASHINGTON

Ladies and gentlemen, I'm supposed to speak tonight on foreign policy. I find it a very difficult subject, and honestly and truly I don't know what our foreign policy is.

All sorts of secret agreements have come to light from time to time, and there is no way of telling how many more we'll discover as time goes on. To my way of thinking, if we have a policy, it is the most confused conglomeration of inconsistencies that has ever been contrived to plague a nation. It has no definite form and definitely is not the result of bipartisan cooperation. It is more probably the complete work of the Democratic administration—ably assisted by Acheson, Hiss, and company.

I propose that we must have a definite foreign policy, discussed and agreed upon by the elected representatives of the people—and most important—I insist that the Congress and the people have a right to know what our commitments are, where our Government is leading us—and most important of all—our foreign policy must be designed for the welfare and protection of the United States of America.

LABOR—SENATOR ROBERT A. TAFT, OF OHIO

The Republican Party has restored equality between employer and employee; outlawed secondary boycotts, jurisdictional strikes, and other unfair labor practices; and guaranteed to every workman the right to work, the right to have his union recognized, the right to strike after a proper waiting period. It has given the President power to protect the public against threats to its safety and health. Under Republican legislation, union membership has increased to new highs. Wages, working conditions, and services and pensions are at their highest point in history. The number of strikes has been reduced. The Republican Party will be vigilant always to protect the rights of the workmen against unfair employers and also against arbitrary union bosses.

THE HONORABLE JOSEPH W. MARTIN, JR., OF MASSACHUSETTS, HOUSE MINORITY LEADER

Ladies and gentlemen, we are nearing the close of this magnificent tribute to Abraham Lincoln. You have heard Republican Members of the Senate and the House tell you where the Republican Party stands on taxes, deficit spending, communism, the Brannan plan, socialized medicine, foreign policy, the atom bomb, our veterans, and labor.

Late today the Republican Members of the Senate and House adopted, and the Republican National Committee concurred in, a new statement of party policy which I consider a great document. On foreign affairs it contains eight specific and positive proposals. On domestic affairs it makes 23 more fundamental and constructive recommendations. Even more important, it sets forth the great issue of today: liberty against socialism.

America as we know it and love it is the last outpost of freedom. We in the Republican Party are dedicated to the proposition that the America of free men, free competition, and free speech shall never die, and we will take this issue to the voters next November, convinced that every thinking American will join us in this crusade to save our country.

Why Does Acheson Defend Alger Hiss?

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. NIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Spokesman-Review, Spokane, Wash.:

WHY DOES ACHESON DEFEND ALGER HISS?

One of the strangest statements to come out of Washington in recent political history is the affirmation by Secretary of State Acheson that "I do not intend to turn my back on Alger Hiss."

To create an aura of martyrdom over the perjury conviction of his former associate, Mr. Acheson refers to the Sermon on the Mount. In so doing he is using a powerful weapon to try to repudiate the decision of the Hiss jury and to assure the Hiss sympathizers within his own Department of State that he will stand by and protect them from a fate similar to that which has befallen their comrade.

Secretary Acheson is granted to be a devoutly religious man and he gives every indication of having been deeply moved by the Hiss conviction. Only time and revelations yet to come will show whether he expressed a sincere concern for a victim he believes to be innocent or whether he has utilized a sacred mechanism to cover up what might be a conspiracy even greater than that openly revealed before congressional committees and at the two Hiss trials.

Mr. Acheson declined specific comment on the legal aspects of the celebrated case, but what he said in support of Hiss had a far more damaging effect upon his own reputation as a lawyer, a scholar, and as America's leading foreign policy spokesman than any discussion he could have advanced on the purely legal phases of the trial and conviction.

That trial and conviction was in the American tradition and was carried through with finite regard to the principles of due process of law. For a high official of the Truman administration to question the verdict in the manner in which he did and to utilize an emotional-religious lever to appeal to public opinion to overrule that verdict is strange conduct indeed for our Secretary of State.

Mr. Acheson's pretrial and posttrial defense of Alger Hiss calls for further probing by those agencies and those men who are attempting to ferret out the forces that have been trying to undermine our Government and destroy our democracy.

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me for Lincoln's birthday, 1950:

It has been a matter of lasting regret to me that I was not personally acquainted with the midwestern Member of the House of Representatives who declared on the floor of the House: "* * * The President is in nowise satisfied with his own positions. First he takes up one, and in attempting to argue us into it he argues himself out of it, then seizes another and goes through the same process, and then, confused at being able to think of nothing new, he snatches up the old one again, which he some time before cast off. His mind taxed beyond its power, is running hither and thither, like some tortured creature on a burning surface, finding no position on which he can settle down and be at ease.

"He is a bewildered, confounded, and miserably perplexed man."

I should like to have known the man who said these words.

That man was Abraham Lincoln.

He said these words on January 12, 1848, while a Member of the House of Representatives from Illinois.

All Americans pay particular homage to Abraham Lincoln on February 12, 1950—the one hundred and forty-first anniversary of his birth. The America into which he was born, and in which he spent his youth and his manhood, has changed in a material way. Spiritually, our America and Lincoln's America are one and the same. The great principles for which he lived and died have not changed.

Let us search those enduring principles for clues as to what we twentieth century Americans must do to bulwark the very survival of our republican form of government.

One of Lincoln's own favorite quotations was Thomas Jefferson's profound statement that "Were we directed from Washington when to sow and when to reap we should soon want bread. * * * When all government, in little as in great things, shall be drawn to Washington as the center of power, it will become venal and oppressive."

When Lincoln was born (1809) the total Federal Government income from all sources was approximately $13,056,000. In that same year—after all expenses of Government were paid—the Treasury books showed a surplus of $3,970,000.

When Lincoln was a Member of the House of Representatives (1847–48)—when Lincoln was at odds with then-President Polk for engaging in the Mexican War—the total Federal Government income from all sources was approximately $28,545,000. In that same year the Treasury books showed a deficit of $5,553,000.

When Lincoln was President (1861–65), during the great Civil War, the total Federal Government income from all sources was approximately $160,907,000 per year. The average yearly deficit for this period was $522,878,000.

Compare these figures with those of President Truman in his 1950 budget message. President Truman said that the Federal Government took in $38,246,000,000 in the fiscal year 1949 while spending $40,057,000,000. This is a deficit of $1,811,000,000. President Truman went on from there to estimate the 1950 deficit at $5,100,000,000 and the 1951 deficit at $5,500,000,000.

These boxcar figures bring us back with a jolt to the aptness of Abraham Lincoln's reasoning when—at the age of 34—he stated: "As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and next, no one left to borrow from, so must it be with the Government."

Keeping his Government solvent was one of the major motivating forces in the life of the Great Emancipator. His devotion to the American system of free enterprise was another motivating force, of equal stature.

On July 1, 1854, almost 7 years before he became President, Lincoln declared: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves, government ought not to interfere." This was a powerful restatement of what he had already said on the floor of the House of Representatives on July 27, 1848: "We see it, and to us it appears like principle, and the best sort of principle at that—the principle of allowing people to do as they please with their own business."

How vividly Lincoln's wisdom applies to American old people today who, living lives of thrift and obedience to law, find, in their old age, that their livelihood is being taxed and regulated out of existence.

"Tax, tax, tax, to spend, spend, spend"—the current battle cry—keeps down the pioneer vitality of American youth whose promise of the future Lincoln underlined in his Cincinnati speech of 1859: "The prudent penniless beginner in the world labors for wages a while, saves his surplus with which to buy tools or land for himself, then labors on his own account for another while, and at length hires another to help him. This is the just and generous and prosperous system which opens the way to all, gives hope to all, and consequently an improvement of condition to all."

The restoration of the right of old age to enjoy the fruits of the labors of a lifetime; the restoration of the right of youth to a tomorrow of unimpaired opportunity—these should be the rallying points of all Americans today. These things have not changed.

Still another motivating factor in Lincoln's triumphant career has remained the same—the Lincoln concept of the place of State and local government as against Federal Government.

Speaking in Columbus, Ohio, in 1858, Lincoln declared: "I believe there is a genuine popular sovereignty. I think a definition of genuine popular sovereignty, in the abstract, would be about this: That each man shall do precisely as he pleases with himself, and with all things which exclusively concern him. Applied to government, this principle would be, that a general government shall do all those things which pertain to it, and all the local governments shall do precisely as they please in respect to those matters which exclusively concern them. I understand that this Government of the United States, under which we live, is based upon this principle; and I am misunderstood if it is supposed that I have any war to make upon that principle."

These words which I have just finished quoting are a guidepost back to the road to national sanity for which the American people have been devotely searching. The American people need seek no further. Lincoln found the way. His way is still the way.

Lincoln never envisioned farmers being dictated to by Washington bureaucrats.

Lincoln did not approve of teachers being told what to teach by Washington.

Lincoln did not advocate telling the people of Nebraska how to run their State, county, and community governments.

Lincoln did not propose the enslavement of physicians.

Lincoln did not stand for the binding of merchants by coils of red-tape regulations.

Lincoln did not support the idea of sending snoopers to pry into the private lives of law-abiding citizens.

He believed—and he repeated over and over—that the best Federal Government was the least necessary Federal Government.

Because of what Lincoln believed—because of the beliefs for which he lived and died—I am proud that his name will forever be associated with the State of Nebraska. I am cheered by the thought that on July 29, 1867—3 months and 28 days after Nebraska became a State—the Capital was removed to a new site. I am further encouraged by remembering that on the very day the site became the State Capital its name was changed from Lancaster to Lincoln. This act was a public acknowledgement that the State of Nebraska had chosen to take the principles of Abraham Lincoln as the principles of our State.

It is my firm opinion that the people of Nebraska have nothing to fear from the future so long as they cling to the ideals of Lincoln—under whose banner this State was born.

Where then should Nebraskans look for possible threats to their way of life? Lincoln said in his Cooper Union speech, "At what point is the danger to be expected? I answer, if it ever reaches us, it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a nation of freemen, we must live through all time or die by suicide."

What should we do when we feel that this land, this great Republic our ours, is menaced by internal dissent, by the setting of race against race, and occupation against occupation? Lincoln said: "I am driven to my knees over and over again because I have nowhere else to go." Let us follow Lincoln's example. Let us get down on our knees—and pray. When we have finished praying, let us rise to new courage, new determination.

Lincoln is gone from us in body. But what he said and what he did are still here to lead us in the right way—his way. On Lincoln's birthday, 1950, the American people must—and, I believe, will, dedicate themselves to their Nation. They will say, as one, so that all enemies of this Republic—both those without and those within—will hear and tremble: "We will follow Lincoln's road. We will not let him down. We will not fail the eternal spirit of the man who never failed his people."

That spirit we will long remember.

Stealing the Savings of the Thrifty

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. RICH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following excerpt

from an address by Hon. Samuel B. Pettengill, former Member of the House of Representatives, entitled "Stealing the Savings of the Thrifty":

STEALING THE SAVINGS OF THE THRIFTY

At a dinner party in New York City some 15 years ago I was urging the responsibility of bankers to do all they could to prevent rot in the dollar. In reply, a vice president of one of the country's biggest banks said to me, "The responsibility for money rests on the Government. If the Government pays off its bonds in cigar coupons, we will have the cigar coupons to give to our depositors."

I will never forget this complete abdication of trusteeship as a banker, and as a citizen. Under our system who is the government anyway?

I was one of the few men in Congress who voted against the repudiation of the gold clause. Under the circumstances then prevailing I knew the Government could not meet all demands in gold. But I knew we had suspended specie payments once before—and resumed them. To me it was one thing for a debtor to say: I regret that I cannot pay now. It was a different thing to say: I will never perform my promise. I ventured to say at the time that this act of national dishonor would sow dragon's teeth to grow into bitter fruit in the years to come.

Having cast my vote, I was, of course, gratified when the United States Supreme Court later held unanimously that Congress had acted unlawfully with "all the wrong and reproach," to use Chief Justice Hughes' words, that repudiation carries when done by a private citizen. But, as the case was presented by the holder of Government bonds, the Court held that while he had been wronged, he had not proved his damage. Four of the judges said, even with respect to the gold clause in private contracts, that "the impending legal and moral chaos is appalling." When the people were denied the right to demand gold for Government paper, their hands were taken off the brake of profligate public spending.

The dragon's teeth thus sown, in 1933, have now sprouted everywhere. The abdication of moral responsibility for the welfare of the thrifty and industrious and therefore the most useful members of society has permeated governmental action. The devaluation we excused in 1933 is now a world-wide example of moral and financial decadence. A United States Government bond for $100 bought in 1939 has lost 40 percent of its then value. A French Government bond bought that same year has lost 98 percent of its value. A French worker gets 15,000 francs a month. What trash will be in the American's pay envelope a few years from now?

Unless public opinion is changed, the following facts prove to me that the trend, not over the next few months, but over the years is toward more inflation—more repudiation, more stealing.

What do I mean by inflation? Assuming that money continues to circulate, the guts of inflation is simply this: More dollars for no more goods or services. That makes money cheap. That makes prices rise and steals the wages and savings of the thrifty.

What proves that the trend is toward more dollars for no more goods?

Most important of all, perhaps, is the politically promoted mass hallucination that people can vote themselves rich, the witchcraft that government can create wealth, that politicians have a magic cornucopia filled with the more abundant life, that "we owe us"—and therefore debt is harmless.

Even some business editors have fallen for the witchcraft that Government spending sustains the Nation's economy. But we have been prosperous when spending was negligible. It ought to be plain to a school child that the Government can't make you rich by spending your own money.

Next, unbalanced budgets during 17 of the past 19 years have poured into the economic bloodstream more dollars than the Government has taken out in taxes. This has developed the habit.

Next in order is that evil sleight-of-hand by which the Government converts its debt into money. This is removed from outright greenbacks or printing-press money only by the fact that debt still carries some interest.

The political need of appearing to tax the people as little as possible to pay interest on the debt leads the borrowing government to force interest rates down, which makes money cheap, and thus dilutes all savings payable in a fixed number of dollars. At the same time the political spendthrifts have the need to cheapen money in order to force wage payments up into higher dollar brackets so they can collect more through the withholding tax.

The loss of the peace—the substitution of Russia as a threat to the world in place of Germany and Japan—has resulted in enormous armament spending, which, however necessary, pours billions of dollars into the economy without the offset of consumable or commercially useful goods.

The next big inflationary factor are Federal politicians paying for votes by putting pressure on employers to force more dollar signs to be written on pay checks or pension checks—more dollars for no more goods.

Labor monopolies and industry-wide bargaining, granted by politicians for votes, permits ruthless men, competing with each other for place and power, to force the Nation to pay more dollars for no more goods. The repeal of the Taft-Hartley law would tighten their grip on our throats.

Price supports for farmers—again more dollars for no more goods. Billions of dollars worth of eggs, potatoes, cotton, wheat, meat, etc., are taken out of the market by the Government and put in vast caves and warehouses under lock and key until they rot and are fed to hogs, or are shipped abroad.

Then we have the prevailing rage of State governments, which had no direct responsibility for the war, to vote bonuses to veterans wholly irrespective of need or injury in the country's service—again more dollars for no more goods.

Next is the boost to minimum wages—more unemployment compensation and longer periods to enjoy it—the increase of pay of civil-service workers—more dollars for no more goods.

Such are some of the powerful long-range forces at work to make money constantly cheaper. But there is more to the story.

Those of you who have read Andrew D. White's classic on inflation in France in the 1790's will recall how one issue of assignats so cheapened money that the politicians printed more assignats to offset the evil effects of the previous issues, thus causing a chain reaction which was not stopped short of total collapse. That same chain reaction is at work in America today as workers demand more and more wages to offset the rising cost of living, or as Congress votes bigger social-security payments because present payments buy so few goods. With a few exceptions, such as HARRY BYRD, of Virginia, or BOB TAFT, of Ohio, politicians have no cure for the evils of inflation except more inflation—more dollars for no more goods.

This chain reaction is also at work as floors under farm-commodity prices cause city workers to demand more wages, which increases the cost of shoes and clothing and machinery to the farmer who then demands that his parity price be raised still higher. And so the music goes round and round.

Another chain reaction is this. The Federal vampire sucks so much tax money out of the pockets of the people and the cities and States in which they live, that they feel poor and so demand Federal aid for housing, doctor bills, education, and all the rest. So Federal power grows on what it feeds on and Marx goes marching on. If the politicians on the Potomac let the people and States keep what they make, they could pay their own bills. There would be just as much purchasing power in the country and a lot more freedom.

Taxes and especially progressive income taxes discourage production and reduce the output of goods which might otherwise keep dollars and goods in balance. The blight of taxes is seen in the steady drying up of risk capital. It is a startling fact that the securities of 9 of the 15 largest American companies are selling today on the exchanges for less than the book value of their assets. And this in a year of record prosperity. This means that if these companies were not in existence, the money could not be found to create them.

The graduated income tax—borrowed from the Communist Manifesto of 1848—lays its heaviest hand on the most dynamic and productive members of our society—the managers, risk takers, and job creators. States and cities are now adding their own graduated income taxes to those imposed by the Federal Government. This penalty against efficient men slows down the production of goods. As Cal Coolidge said, "When the Government takes 30 percent of what a man makes on Monday, 40 on Tuesday, 50 on Wednesday, and 60 on Thursday, he won't show up for work the rest of the week."

Last, we have the blight of socialism and the so-called welfare state. Socialism has an incurable disease. It is that men generally will not work as hard or produce as much for the Government as they will for their own wives and children. Socialism produces less goods per dollar paid out. It encourages shirkers and discourages workers. It lures men away from doing their best by its promises of shorter hours, longer vacations, and more dollars for less work. Socialism is parasitical—by its very nature. The private-property system must be productive—by its very nature. The hope of profits sees to that, whereas crushing taxes and strangling red tape produce fewer goods per dollar spent.

The popular appeal of the welfare state is that it promises to pay the masses more than they pay the government. The very nature of this promise creates greater and greater pressures on those who made the promise to make more promises. After taking all they can from those who are above the average in income, the promise will finally be paid only in rotting money, as the workers of Europe are finding out. The immutable law of socialism demands that their politicians plunder the savings of the thrifty, first by taxation—and then by inflation and confiscation. The money of any socialist government must be sold short for the long pull.

There is, of course, no need for America to breathe any more of this contagion of rotting money. With our marvelous productive capacity—with science, invention, research, and technology anxious to work their miracles, we can produce such a flood of goods as to keep goods and money in balance. We can start prices downward again and bring integrity back to the dollar.

But under the prevailing political climate, despite our almost unlimited capacity to produce, the price of the basic needs of life is being pushed upward by this chain reaction of cheap dollars—food, shelter, clothing, coal,

steel, freight and passenger rates, wages, hospital and medical care, education, life insurance—most of these are higher in price today than in 150 years. No one can produce goods as fast as politicians can print money.

Historically, due to constantly better tools, production per man-hour has increased 2 to 3 percent a year, or from 20 to 30 percent per decade. But the Cleveland Trust Co. reports that the gain in the past 10 years has only been 8 percent. And in some cases, it has been zero, or less. But hourly wages have gone up 118 percent. This is inflation in every language. One hundred and eighteen percent more dollars for 8 percent more goods. Despite our huge investment in new tools and the harnessing of mechanical energy, which should bring all prices down for everyone, we are largely denied the benefits of our technology by feather-bedding practices, and the narcotic of the promise of security without work.

Before turning to the remedy for our ills, note how the moral chaos predicted in the gold-clause case is spreading. Leaving the war and cold war out of consideration, I refer to the immorality of those actions of the Federal Government which cause more dollars to be issued for no more goods—for example, monetizing the debt, or putting pressure on employers to write more dollar signs on pay checks.

This adulterates all dollar savings, just as a dishonest farmer pours water into milk. But there are five groups of voters numbering millions who have an even stronger case than some of us against the pickpocket or Robin Hood state. These five groups hold the direct contracts of the Government itself.

First are those who loaned the Government their money; that is, bought its bonds. At one time these totaled 80,000,000. What right has the Government to take any action, not forced on it, to cheapen the dollar in which its contracts are payable?

Next, some 40,000,000 men and women are compelled to deposit some of their wages with the Government to be redeemed years hence in what is called "social security." The Government has become the banker for millions.

Third, are 2,000,000 Federal civil-service employees—including your postman—who have also been forced to surrender part of their wages for retirement pensions.

Fourth, are millions of ex-GI's who are paying premiums on life-insurance policies issued by the Federal Government.

Fifth, are the veterans who lost limbs and eyes and health in protecting their country, and who now hold the sacred promise of Government to ease their loss to some degree. These millions hold contracts against the Federal Government as borrower, banker, and life-insurance company.

Who thinks of these millions today whose contracts are being stealthily repudiated as politicians cheapen money by swapping public funds for votes? What right has any government—Federal, State or local—to take any action not forced on it that will cause the price to rise of food and coal and clothing for the blinded veteran and his little family? A government that promises social security when it is continually adulterating money is not only a hypocrite, but morally a thief.

The remedy I propose is votes. The time has come again, as in 1896, to campaign for sound money.

It is said that the tide toward socialism cannot be turned for want of a mass base. That base exists. It is these millions of thrifty Americans.

Their nest eggs are being sucked dry by the vampires of taxes and inflation which is only another form of taxation and the cruelest of all, for it lays its hand not only on those in the prime of life, but on the widow's mite, and the little hoard of the aged.

For some years many efforts have been made to inform voters that they get nothing from the Government that they do not first pay to the Government. In fact, they get less, for the political brokerage is always deducted. We are familiar with these programs of tax education. They are all good.

But hidden as some of these taxes are, nothing so stealthily steals the savings of the thrifty as inflation. This vampire has not been really exposed. No one mentioned it at the last Presidential campaign. All we heard was talk about rent and price controls to conceal inflation—not expose it. Inflation is like the giant squid that squirts ink into the sea so it can hide. Inflation surrounds itself with an air of fictitious prosperity—$2 jingling in our pockets where $1 previously made no noise. So inflation needs to be explained. "Old age and want, thou ill-matched pair" is a legitimate political appeal. It proved itself in the recent Australian elections. Sound Democrats and sound Republicans can use it in every district and State. It worked in 1896. Nothing has a better chance of working now. It beats the sterile cry of "statism" a hundred times over.

The stage is being set by events. Up to now the great labor organizations have campaigned for one wage increase after another. They will continue to do so. But they now want something else—pensions, millions of pensions, to be paid not next week but years hence. For the first time, they are ripe for a discussion on the future value of their dollars. Every labor union that has signed up for pensions should warn its members of the vampire of inflation. A company that warns its employees of the danger of accidents, but not of the danger of rotting money to the pension plan, to which it is a party, is defaulting in its duty to its men and itself.

Life-insurance executives are beginning to publicly assert their moral responsibility to their policyholders. An insurance president has recently pointed out the blight of cheap money and high taxes on insurance. A paid-up policy for $10,000 in 1940 is now worth only $6,000 to the widow. Tell that to the women. A typical policyholder now needs 70 percent more insurance to provide the same protection as in 1929.

Mrs. Asa V. Call, of Los Angeles, president of the Life Insurance Association of America, has just said, "We must now frankly face the fact that our Government has become predatory." In short, it is stealing the savings of the thrifty. Tell that to our 80,000,000 policyholders—30,000,000 more voters than those who cast ballots for President last time.

A Government bond costing $750 in 1939 has shrunk in true worth to $594. In short, there is a 20-percent loss in principal and a 100-percent loss in the accrued interest. Much of the loss of course represents the waste of war. But a $6,000,000,000 deficit this year, and more next year, rubs it in. Except in depression, deficit spending increases the demand for goods. It makes prices high and dollars cheap. The people pay twice—in prices today, and in taxes tomorrow.

This is the reverse side of the welfare state. As Mr. Francis Truslow, president of the New York Curb Exchange says, "The same policies which whet the thirst for security debase the money in which that security is measured." A government that is always borrowing is morally insolvent and moral bankrupts become financial bankrupts.

Then you have the millions of depositors in savings banks and building and loan institutions who used to get 4 percent on their life's savings and now 1½ percent—a loss of income on savings of 62 percent. Isn't this a fine commentary on the Government guaranty of bank deposits?

Then you have the social-security-card holders—35,000,000 of them—and the retired firemen, policemen, school ma'rms, ministers, and other pensioners trying to exist as cheap money drives up their cost of living in old age. Then you have the tens of thousands of loyal alumni of our hundreds of fine private colleges which are facing slow starvation as cheap money reduces income on their portfolios and crushing taxation liquidates their benefactors.

In words that bounce along the sidewalk, we must tell what makes money cheap and who is hurt, and how.

Make an appeal, also, to the moral sense of our people—the conscience of Americans. Ask our well-meaning but leftist clergymen why it is a crime for a candidate for office to use his own money to bribe A to vote for him, but right for the candidate to promise that if elected, he will take from B who has worked hard all his life and give to A, who has been a loafer.

"Thar's votes in them thar hills." Far more is involved than saving the savings of the thrifty. You save also our private property system, which can live and grow only in the savings of the thrifty. It is plain that the vampire of socialism lives only on political spending. Cut off the spending and you stop it in its tracks.

Whatever other arguments are used, we must unite on one point, easily understood, which touches the pocketbook nerve of millions of voters. This is the grand strategy of freedom.

Rotting money and a rotting republic go together. Lenin told us that—"debauch their money." As Jefferson said, we must make our choice "between economy and liberty or profusion and servitude." Give us sound money and a free country! You cannot resign from this struggle.

Emery A. Odell: A Great Newspaper Career

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the people of this country will never fully appreciate the work that has been done by pioneer newspapermen. One such outstanding individual is the owner and publisher of the Monroe Evening Times, Monroe, Wis. This distinguished citizen and newspaperman started to work in his father's shop at the early age of 10, and for 67 years he has been actively engaged in bringing vital news to his section of the State of Wisconsin.

Mr. Speaker, I am including as part of my remarks an article which was recently devoted to his career:

Sixty-seven years of newspapering have dulled none of the early enthusiasm of Emery A. Odell for his calling and for his community.

Monroe has grown considerably in those 67 years, and the Evening Times has paced progress for the last half century while its

founder and publisher kept a vigilant interest in both.

Mr. Odell was born in Janesville, October 25, 1871, son of John W. and Mary Christina Lincks Odell. He was only 10 when his father moved his printing plant to Monroe, in 1881, and founded the Weekly Gazette. The shop upstairs was in the Corson Building, on the east side of the square.

It was only natural that the son should take his place at the type case in his father's shop after a proper period of seasoning as a broom wielder. He swept the shop and once a week, on press day, turned the roller which distributed ink for the Washington hand press, shoving the inked roller across the type.

When he turned to setting type by hand it was necessary for him to place a thick Ayer's Newspaper Directory on a high printer's stool to reach the case. That directory years later was to show his Evening Times to be one of the outstanding small dailies of the Nation.

His pay as a novice typesetter was 50 cents a week, finally moving up to about $2 a week. He was learning a trade and he was learning the things which people found interesting to read.

At 17, he was ready to go out into the world to prove himself as a journeyman printer. First stop was Janesville, where he pegged away by kerosene lamplight through long nights setting type for the Janesville Recorder. A hand-set paper, it also used stereotyped plates received by express early each morning. Press time was daylight with a water-driven drum cylinder furnishing the power.

Part of the drudgery of every printer of that day was redistributing the type after printing. The faster type was put back into the case the sooner the printer could start setting his string for the night. Printers were paid by the combined length of proofs on completed composition. This method was a challenge to the ambitious and it developed Emery Odell into a "swift" at early age.

From Janesville he went to Madison, where in 1891 he saw the first Mergenthaler linotype machine in Wisconsin go into service. Printers were skeptical of the line caster, but it spelled the doom of hand-setting.

Mr. Odell moved on to Milwaukee in 1893 to the Morning Times started in opposition to the Sentinel. Milwaukee papers were still hand set. He was recognized as a top man in his trade by that time, having served as chairman of the typographical union chapel while at Madison.

A business depression folded the Morning Times summarily and the young printer took a trip to Chicago to the Columbian exposition, returning afterward to Monroe.

His father's weekly had become a daily and the son, after mulling over the changing outlook for typesetters, turned to the news side. In November 1893, he succeeded his father as editor.

From his study of big-town papers, he introduced lively headlines, enlarged on the local briefs of the weekly style and "made the home news whistle."

"People liked the signs of new life," he recalls.

It still was an age of merger, however, and with the advent of consolidations—recounted elsewhere in this edition—he eventually found himself editor, of the Daily Journal and no longer associated with his father's enterprise.

When his new employer refused to do anything about the weekly wage, Emery Odell left the editor's helm. After sounding out public reaction to his idea, he revived the Monroe Evening Times, dropped in the recent merger, on October 13, 1898.

Capital of the new paper was 99 percent ambition and optimism. Subsequent success indicates there was a generous reserve of integrity, character, and ability.

Knowledge of news interests of Monroe and Green County folk was coupled with a keen business sense which took the Times through its struggling days.

"The Times learned early that it had to have news, income, and business management. It went on a cash basis, has never made exchange agreements, and at the outset discontinued subscriptions on expiration. To this day it does not take due bills," Mr. Odell emphasizes.

Mr. Odell's marriage to Miss Amelia Burgy, daughter of Jacob and Barbara Luchsinger Burgy, took place December 14, 1898. Her father was a native of Switzerland and a pioneer Washington township stock raiser.

The publisher and editor of the Times during the lean years was no chair warmer.

"I was reporter, make-up man, manager, and collector," he recalls. "Daily I rattled around the boardwalk on courthouse square, climbed stairways to offices, legged it to the railroad depots, a half mile away in opposite directions, taking down notes, writing copy by pencil."

The few telephones were no help since no one involved in regular news beats had one.

He solicited the ads, prepared the copy, and generally kept the daily ticking by constant application. The Evening Times was a very personal enterprise.

But better days were ahead. Launching into the political battlefields, the Times supported the La Follette cause and gained attention by the strong role played on the local scene.

In 1910 came an unsought honor, appointment as postmaster. After 12 years of one-man journalism, Mr. Odell welcomed a change which stretched into 15 years of service. During much of that period he continued in charge of the paper's daily production, but there were other hands to write some of the news and other legs to climb the stairs for daily items.

Each progressive step in development of the Evening Times however, was planned and initiated by Mr. Odell. On the eve of the paper's twenty-fifth anniversary, he moved it into the present modern building.

The Lincoln Memorial, Washington, D. C.: An Inspiring and Perpetual Refreshment to American Ideals

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. DOYLE. Mr. Speaker, so few folks seem to visit the inspiring Lincoln Memorial right here in the midst of our beloved Capital and so few folks residing away from the District of Columbia seem to know much about its creation and what is inside of it—and since it is admittedly such a famous and everlasting inspiration to those who do have the pleasure of visiting it—that I am pleased to use this unanimous consent to give you who have not had the privilege of seeing the inside of the memorial or of reading the detail about it the following.

On the interior of the north wall of the memorial, engraved on the marble wall, appears Lincoln's second inaugural address, as follows:

Fellow countrymen, at this second appearing to take the oath of the Presidential office, there is less occasion for an extended address than there was at the first. Then a statement somewhat in detail of a course to be pursued seemed fitting and proper. Now, at the expiration of 4 years during which public declarations have been constantly called forth on every point and phase of the great contest which still absorbs the attention and engrosses the energies of the Nation, little that is new could be presented. The progress of our arms upon which all else chiefly depends is as well known to the public as to myself, and it is, I trust, reasonably satisfactory and encouraging to all. With high hope for the future, no prediction in regard to it is ventured.

On the occasion corresponding to this, 4 years ago, all thoughts were anxiously directed to an impending civil war. All dreaded it; all sought to avert it. While the inaugural address was being delivered from this place, devoted altogether to saving the Union without war, insurgent agents were in the city seeking to destroy it without war—seeking to dissolve the Union and divide effects by negotiation. Both parties deprecated war, but one of them would make war rather than let the Nation survive and the other would accept war rather than let it perish, and the war came.

One-eighth of the whole population were colored slaves, not distributed generally over the Union but localized in the southern part of it. These slaves constituted a peculiar and powerful interest. All knew that this interest was somehow the cause of the war. To strengthen, perpetuate, and extend this interest was the object for which the insurgents would rend the Union, even by war, while the Government claimed no right to do more than to restrict the territorial enlargement of it. Neither party expected for the war the magnitude or the duration which it has already attained. Neither anticipated that the cause of the conflict might cease with or even before the conflict itself should cease. Each looked for an easier triumph and a result less fundamental and astounding. Both read the same Bible and pray to the same God and each invokes His aid against the other. It may seem strange that any men should dare to ask a just God's assistance in wringing their bread from the sweat of other men's faces, but let us judge not that we be not judged. The prayers of both could not be answered—that of neither has been answered fully. The Almighty has His own purposes. "Woe unto the world because of offenses, for it must needs be that offenses come, but woe to that man by whom the offense cometh."

If we shall suppose that American slavery is one of those offenses which in the providence of God must needs come, but which, having continued through His appointed time, He now wills to remove that He gives to both North and South this terrible war as the woe due to those by whom the offense came, shall we discern therein any departure from those Divine attributes which the believers in a living God always ascribe to Him. Fondly do we hope, fervently do we pray that this mighty scourge of war may speedily pass away. Yet if God wills that it continue until all the wealth piled by the bondsman's 250 years of unrequited toil shall be sunk and until every drop of blood drawn with the lash shall be paid by another drawn with the swords, as was said 3,000 years ago, so still it must be said, "The judgments of the Lord are true and righteous altogether."

With malice toward none, with charity for all, with firmness in the right as God gives

us to see the right, let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations.

And on the south wall of the memorial appears Lincoln's Gettysburg Address, as follows:

Fourscore and seven years ago our fathers brought forth on this continent a new nation conceived in liberty and dedicated to the proposition that all men are created equal.

Now we are engaged in a great Civil War testing whether that nation or any nation so conceived and so dedicated can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field as a final resting place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But in a larger sense we cannot dedicate—we cannot consecrate—we cannot hallow—this ground. The brave men living and dead who struggled here have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here but it can never forget what they did here. It is for us the living rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this Nation under God shall have a new birth of freedom—and that government of the people, by the people, for the people shall not perish from the earth.

Then there has been, appropriately published by the United States Department of the Interior, National Park Service, Newton B. Drury, Director, National Capital Parks, the following comments about the memorial:

Had Lincoln been an ordinary ruler—even an ordinary hero—an ordinary monument would have sufficed and doubtless would have been built quickly. More than half a century elapsed before a fitting memorial was dedicated to this simple, heroic man whose name has penetrated to the ends of the earth and universally called to mind with reverence and hope wherever aspiration kindles the heart of youth, or tyranny oppresses mankind. The memorial, neither palace nor temple nor tomb but partaking of the nature of all, seems to gather within its marble walls the very essence of his upright character, steeped in tolerance and the belief that all people should be free—free to think, free to express themselves, and free to apply themselves to various enterprises.

INCEPTION AND HISTORY

The first concerted effort looking to the erection in Washington of a monument in honor of Abraham Lincoln appears to have been made about 2 years after his death by an act of Congress, approved March 29, 1867, which incorporated the Lincoln Monument Association. An appeal for subscriptions was sent out. Plans were submitted, but no practical results appear to have been accomplished from this legislation.

The next effort to secure authority from Congress for such a monument, or memorial, was made in December 1901. Numerous additional efforts were made in the following years, but it was not until February 1911, with the passage of a bill "To provide a commission to secure plans and designs for a monument or memorial to the memory of Abraham Lincoln," that these efforts were crowned with success.

The Commission created by the act held its first meeting on March 4, 1911. At its tenth meeting on February 3, 1912, the Commission decided to locate the memorial in Potomac Park on the axis of the Capitol and the Washington Monument, as recommended by the Commission of Fine Arts. After viewing designs prepared at its invitation by Henry Bacon and John Russell Pope, architects, of New York, the Commission at its fourteenth meeting selected Henry Bacon to prepare a final design, which Congress approved January 29, 1913. Ground was broken for the foundations of the memorial on February 12, 1914, and the cornerstone was laid February 12, 1915. At subsequent meetings, Daniel Chester French was selected as sculptor for the Lincoln statue, and Jules Guerin as architect to design and execute the murals for the end walls and the ornamentation on the bronze ceiling beams. The memorial was dedicated on Memorial Day, May 30, 1922.

THE ARCHITECTURE

The exterior of the Memorial symbolizes the Union of the United States of America. Surrounding the walls of the Memorial hall is a colonnade of the States of the Union, the frieze above it bearing the names of the 36 States existing at the time of Lincoln's death. On the attic walls above the colonnade are inscribed the names of the 48 States existing today. These walls and columns enclose the sanctuary containing three memorials to Abraham Lincoln. The place of honor is occupied by a colossal marble statue of the man himself, facing the Washington Monument and the Capitol. On the north wall to the right of the central space where the statue is placed, and separated from it by a row of columns, is inscribed Lincoln's Second Inaugural Address. Similarly, on the south wall the Gettysburg Speech is memorialized.

There are some architectural refinements not common in modern buildings. The columns are not vertical, but are slightly tilted inward toward the building, and the tilt of the corner columns is even more exaggerated. The outside face above the columns is also inclined inward, but less than the columns. The wall of the Memorial Hall inclines inward least of all. This was done to avoid the optical illusion of bulging at the top.

THE BUILDING

The foundations of the memorial rest upon bedrock from 44 to 65 feet below the original grade. The superstructure of white Colorado-Yule marble is approximately 80 feet high and rests on a base composed of three immense marble steps. Masonry approaches from the direction of the Washington Monument and the Capitol ascend a terrace retained by a 14-foot granite wall. This wall on the east and west sides is 256 feet 10 inches long and 187 feet long on the north and south sides. The walls of the memorial are enclosed by a continuous colonnade 188 feet 4 inches long and 118 feet 6 inches wide. The 38 columns in the colonnade, including the 2 standing in the entrance, are 44 feet high, 7 feet 5 inches in diameter at the base, and the shafts are composed of 11 drums each.

Greek ionic columns 50 feet high and 5 feet 6 inches in diameter at the base divide the interior of the memorial into three chambers. The walls of the interior are Indiana limestone, and the ceiling, which is 60 feet above the finished floor, is designed with bronze girders ornamented with laurel and pine leaves. The panels between the girders are of Alabama marble saturated with melted beeswax to produce translucency. The interior floor and the wall base are of pink Tennessee marble. The central chamber, containing the Lincoln statue, is 60 feet wide and 74 feet deep. The side chambers are each 63 feet wide and 28 feet deep.

The two tripods on the two buttresses flanking the steps leading up to the entrance to the memorial are each 11 feet high. Each is cut from a single block of pink Tennessee marble. The carving upon them was done by Piccirilli Bros., of New York. The decorative carving on the stonework of the building was executed by Ernest C. Bairstow, of Washington.

THE STATUE

The outstanding feature of the memorial is the statue of Abraham Lincoln designed and modeled by Daniel Chester French. It is placed in the central hall of the memorial where, by virtue of its imposing position in the place of honor, it predominates. The statue represents Lincoln as the war President seated in a great armchair 12½ feet high, over the back of which a flag has been draped. The gentleness, power, and determination of the man have been wonderfully expressed by the sculptor, not only in the face but also in the hands which grip the arms of the massive seat. Twenty-eight large blocks of Georgia white marble compose the statue, which is 19 feet high from head to foot. The extreme width, including the drapery over the chair, is 19 feet.

The carving of the statue was done by Piccirilli Bros. in their shops at New York, where it was also worked on by Mr. French personally. Some 6 years were devoted to the creation and execution of this work. The statue rests upon an oblong pedestal of Tennessee marble 10 feet high, 16 feet wide, and 17 feet deep, which in turn rests upon a platform of Tennessee marble. On the wall above the statue is the inscription: "In this temple as in the hearts of the people for whom he saved the Union the memory of Abraham Lincoln is enshrined forever."

THE MURALS

The two murals by Jules Guerin typify allegorically the principles which were evident in the life of Lincoln. They are affixed to the north and south walls above the memorial addresses and are each 60 feet long and 12 feet high. The piece of canvas upon which each was painted weighed 600 pounds, and about 300 pounds of paint were used. The mural above the Gettysburg Address (south wall) centers around a group portraying Emancipation. An Angel of Truth is freeing a slave. To the left and right are groups typifying justice and immortality. Above the second inaugural address (north wall) the mural has for its central theme, unity. An Angel of Truth is joining the hands of the laurel-crowned figures of North and South and is flanked by Fraternity (left group) and Charity.

ADMINISTRATION AND VISITOR SERVICE

The Lincoln Memorial is administered by the National Capital Parks for the National Park Service, Department of the Interior. All inquiries should be addressed to Irving C. Root, Superintendent, National Capital Parks, Washington 25, D. C. This national memorial is open daily from 9 a. m. to 9 p. m., closing only on Christmas Day.

Again, I respectfully urge each one of the Members of Congress to take the privilege and to receive the inspiration of personally visiting the Abraham Lincoln National Historical Park at Hodgenville, Ky. But, my colleagues, before you do that, be sure to go and personally pause amply in the presence of the great statue of Abraham Lincoln majestically resting in the interior of the Lincoln Memorial itself here within just a few minutes of where you and I have the privilege of working daily on the Hill.

UNIVERSITY OF MICHIGAN LIBRARIES

I am here privileged to present to you an outline furnished me, at my request, by the Legislative Reference Service of the Library of Congress. I know it contains much important and interesting data which may be known to some, but is not known to most of us:

SELECTED DETAILS CONCERNING ABRAHAM LINCOLN AS CONGRESSMAN

Abraham Lincoln was elected as a Whig to the Thirtieth Congress, March 4, 1847, to March 3, 1849, from the Seventh Illinois District, comprising the counties of Putnam, Marshall, Woodford, Tazewell, Mason, Menard, Cass, Morgan, Scott, Logan, and Sangamon.[1] The combined population of these counties in 1840 was 61,424, and in 1850 it was 93,428.[2] At the time of Lincoln's election to Congress, the population of the district might therefore be estimated as approximately 85,500.

Lincoln first came to Washington to serve in the Thirtieth Congress, arriving December 2, 1847.[3] The session opened December 6. Various conflicting accounts of the trip from Springfield, Ill., to Washington, D. C., have been published, and we are still dependent upon conjecture for part of the trip.

John W. Starr, Jr., Lincoln and the Railroads, imagines the trip thus:

"When he left his home in Springfield, in October 1847, to take his seat in the House of Representatives at Washington, Lincoln was eagerly looking forward to the journey, for it would be the first time in his life that he had been east of Ohio and Kentucky. He went by way of his native State, desiring to stop at Louisville to see his erstwhile Springfield friend, Joshua Speed.

"At that period of American history his passage from Springfield to Washington would necessarily have been made chiefly by other means than rail transportation. He would have gone by stage as far as Louisville, by way of Terre Haute and Vincennes, Ind. After leaving Speed the stage would again be made use of into Frankfort, where a short rail line operating between Frankfort and Lexington could have been used to the latter point. * * *

"From Lexington to Covington, Va., over what is known as the Boone Trail, the stage would again be used, as also from the latter point into Winchester, Va., by way of Staunton. Thence to Washington he must have gone by rail over what is now known as the Baltimore & Ohio Railroad, but which then followed a more roundabout route than that of today.

"When Lincoln went over it, the line running from Winchester to Harper's Ferry was called the Winchester & Potomac Railroad. Thence to Relay Station it was known as the Baltimore & Ohio; and from Relay Station into Washington, it was known as the Washington branch of the Baltimore & Ohio, having been built under a separate charter.

"Lincoln reached Washington * * * on December 2. We find his name registered on that day, at Brown's Hotel. As he had left his home in October, the trip, counting his visit with his friend, Speed, must have taken over 6 weeks." [4]

Some points in the foregoing account are clearly erroneous. Lincoln did not reach Kentucky by stage through Indiana, but went from Springfield to St. Louis and up the Ohio by boat. If he did not stop to visit his friend Joshua Speed near Louisville it may have been because he knew Speed to be in St. Louis. Speed was registered at the same hotel as the Lincolns in St. Louis when they were there.[5]

The journey from Lexington to Washington is conjectural and may or may not have been as outlined by Starr.

Another account is given by William H. Townsend, Lincoln and His Wife's Home Town:

"By the middle of October, he had completed plans for the journey to Washington. It was arranged that Mrs. Lincoln and the two children should accompany him, and that they should stop off at Lexington for a leisurely visit with the Todd relatives. * * * So, early Monday morning, October 25, Congressman Lincoln with his wife and two small boys, Bob, four, and Eddie, a year and a half old, climbed into the stage that carried them overland to St. Louis, where they boarded a steamboat for Louisville.

"The little party did not stop in Louisville, although Lincoln's intimate friend, Joshua Speed, lived nearby, but caught the first train east, and as the poky little locomotive puffed up the winding grades toward the Blue Grass, Lincoln could not help marking the contrast between his first visit to Lexington and the present journey.

"For the next 3 weeks, Abraham Lincoln enjoyed immensely the first real vacation of his life. * * *

"November days were drawing to a close. Senator Crittenden and other members of the Kentucky delegation were starting to Washington for the opening of Congress. On Thanksgiving Day * * * on the afternoon of that day, the Lincolns said goodby to Lexington and with their two little boys boarded the stage for Maysville, where they would take a steamboat up the Ohio on their journey to Washington." [6]

This account is also inaccurate. The Lincolns could not have "caught the first train east" out of Louisville, because the railroad between Louisville and Frankfort was not completed until 1851.[7] And no source is cited for the statement that they went from Lexington to Maysville by stage and thence up the Ohio by steamboat; this statement may be conjectural.

Beveridge also tells the story inaccurately:

"Then came the time for Lincoln to go to Washington and take his seat as Representative in Congress of the Seventh District of Illinois. Mrs. Lincoln and their son, Robert, now in his sixth year, accompanied him. They went by way of St. Louis, up the Ohio on a steamboat to Pittsburgh, and thence by rail to Baltimore and Washington."

A footnote adds:

"A regular stage carried passengers from Springfield to St. Louis (Sangamo Journal, December 13, 1848). The other route to Washington was by the Lakes to Buffalo, thence by rail to New York and Washington; but Mrs. Lincoln says that they did not take that route." [8]

Regarding this account it may be noted that Robert Lincoln would have been in his fifth year instead of his sixth; [9] there was no railroad from Pittsburgh east to Baltimore in 1847.[10] That this was the route taken may be an assumption arrived at by elimination of the route via Buffalo, referred to as "the other route to Washington." But Starr, quoted above, suggests a still different route, overland by stage to Winchester, Va., and this alternative is favored as probable by Benjamin P. Thomas, who was familiar with these variant suggestions." [11]

However, the route by Pittsburgh should not be ruled out too hastily. For "by 1829, with the opening of the Pennsylvania Canal, Philadelphia was brought within 3 days' travel of Pittsburgh at a passenger rate of 2 cents a mile." [12]

It seems likely that the Pittsburgh route by boat and train would be more desirable in point of comfort in the wintertime for a family with small children than the long stage trip through Virginia. If the Lincolns traveled by Pittsburgh they may have experienced the interesting complexities of travel described thus, only proceeding in the opposite direction.

"When the State-owned project was completed in 1834, Philadelphia was linked with Pittsburgh by an extraordinary combination of transportation facilities. Coaches fitted with flanged wheels were drawn by horses from various points in Philadelphia to the railroad in Fairmount Park. There they were hauled by a stationary engine to the top of what is now Belmont Plateau, and there hooked together for the trip to Columbia [by steam railroad]. After a 10-hour journey, passengers were transferred to a packet boat on the central division of the Pennsylvania Canal, traveling 172 miles up the Susquehanna and Juniata Rivers to Hollidaysburg, passing through 108 locks on the way. At Hollidaysburg they changed to coaches of the Portage Railroad, which were pulled up five inclined planes to the crest of the Alleghenies, almost 2,500 feet above sea level. * * * Five inclined planes on the western slopes of the mountain provided the descent to Johnstown, where the trip was resumed by canal to Pittsburgh. The entire journey from Philadelphia to Pittsburgh, over a route of 394 miles, required 4 days." [13]

In view of the conflicting accounts, about all we can be sure of is that the Lincoln family must have had an interesting trip, and traveled by stage, by steamboat, and by railroad, somewhere on the way.

fact must, of necessity, renew our determination to make it literally true that we assume the great task remaining before us and that the honored dead of our wars for democracy shall know that we dedicate an increased devotion to the cause for which they gave their lives and that, in like manner, we, at this birthday season, do again highly resolve that they shall not have died in vain and that we, as Members of the same Congress of the same great Nation which Abraham Lincoln served as a Member of Congress, shall daily dedicate our lives to the proposition that, because of our unselfish service to our Nation, that Nation shall have a new birth of freedom and that we shall make it truer than ever that "Government of the people, by the people, for the people shall not perish from the earth."

Democracy's Traitors

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Los Angeles Daily News of January 26, 1950, by Victor Riesel:

NEW YORK.—The same emotionless Communist lawyers who snared Alger Hiss out of a proud by rather impoverished and suicide-laden Baltimore family, and either for love or money got him to pass vital documents on to a Red courier ring, today are casually doing business as usual just a few streets from where this is being written. And they are whipping into shape a new network to help cripple the Nation if we go to war with—guess who?

How do I know? Well, it would be nice to pass on the vision of Riesel, the demon newsman in Hollywood fashion climbing into dark places, filching files and planting microphones. It would be nice. But it's more mundane than fire-escape clambering at midnight.

There are many of us who know—and it goes back to the years when our crowd was a lonely-hearts club and we belonged to one another because we knew the secrets of who was spying on what and who was keeping this country from putting guns and warplanes in the hands of young soldiers and kid pilots in trenches and in the air around Nazi Germany.

But few in the Government listened to us, so we talked to ourselves.

Now that jury after jury comes in with verdicts confirming what we've been saying for almost 15 years, this little group of newsmen, magazine writers and former foreign correspondents can sit back and say the Nation's catching up—and hope the people will listen next time. What made us so allwise? No great talents.

There's Hiss, for example. Some 10 years ago, our circle knew every detail of his activity. I ran into it at a small strategy session of newspapermen fed up with having their guild run by Communist party members.

We met, I recall, in the home of a radio editor whose father had been a leading Communist himself, before he broke personally with Joseph Stalin. Someone introduced a chap named Whittaker Chambers, from Time magazine. And we listened carefully as he told us of Communist techniques and how to counter them.

Later we walked for hours along New York's East Side and slowly, sensitively he told the story of his break with the spy ring and about Hiss and other Government officials, some still living, some dead, who secretly had terrific impact on the writings and thinking of the highest administration leaders. Chambers saw to it that we got on our way home and then disappeared into the crowd. Some of us tried to get action but no one would listen.

Then, in 1945, at San Francisco, I saw Hiss with Secretary of State Stettinius, and Truman—and knew whom the heavily-guarded V. Molotov invited to his new fashionable soirees, all under surveillance of trigger-happy OGPU agents.

I knew, too, that I would be marked as nutty if I tried to tell Chambers' story about the slim young man on the platform of the gilded San Francisco Civic Opera House as the UN held its first sessions. So, I, like the few others who knew, had to watch this Nation get the oldest double-cross in the world.

There were literally hundreds of such cases. One day, early in the war, we learned the entire Communist section of CIO was whooping it up for a strike at the four-motored bomber plant in Inglewood, Calif. We knew a Lew Michener, then a CIO Auto Workers' Union official, was a Communist and with others, back of the stoppage at the critical moment when we were trying to put bombers in the British skies.

So we screamed—and we were smeared. But, only a few weeks ago, Michener got on the witness stand during the Harry Bridges trial and admitted he was a Communist then.

We knew some pro-Communist Los Angeles CIO men worked closely with Hans Diebel of the German-American Bund there in distributing isolationist literature—and when we said this was the logical conclusion of the Russian-Nazi pact we were howled at. Then investigators proved we were right.

Each time we made charges, we did so on the basis of disclosures by men like Chambers, who could no longer stand the iciness of Stalinist corruption of their revoluntionary sentiments. And so they broke and sought us out, told us what they knew.

Therefore, it's worth heeding the warning that the same Communist lawyers who first moved into the Government service back in 1934 and migrated in waves from department to department are now working on creation of a new labor network for industrial sabotage and espionage.

They've subtly approached Albert J. Fitzgerald, head of the United Electrical Workers (independent) to lead it. But he won't fall for this secret maneuver. So they're looking for another innocent.

When they find him, they'll be in business again.

No More Cheese After the Trap Is Sprung—Workers Beware the Welfare State

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the Warner & Swasey Co., of Cleveland, Ohio, have made a pertinent observation on the welfare state in an ad that appears in Newsweek for February 6, 1950. The admonition contained in it should be clearly understood by every worker in this great Nation. The ad referred to follows:

THEY DON'T KEEP FEEDING YOU CHEESE AFTER THE TRAP IS SPRUNG

All welfare states are alike. They promise you anything and everything if you'll vote them into power—security, more money for less work, sharing the wealth, soaking the rich.

So you vote them the power—and then find you have voted away your freedom. You find that all such promises of something for nothing were false—as such promises must always be. For example:

One welfare state government (England) recently used troops to break a strike. Another (Russia) destroyed the importance of the very unions which had helped it to power, and, boasting of its love for the common man, cut the value of his money by nine-tenths, without warning.

Look out for all those promises of something for nothing. They don't put that cheese in the trap just because somebody loves mice.

No government, no individual, can give you anything worth having for long. The only thing you'll ever have and keep is what you yourself produce. And then you have your self-respect, too.

Whose Way on Rivers?

EXTENSION OF REMARKS
OF
HON. JOHN B. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the St. Louis Star-Times of Tuesday, February 7, 1950, entitled "Whose Way on Rivers?" which is a discussion of the Hoover Commission recommendation concerning rivers and harbors and flood-control work. It is a very thoughtful editorial, and I am making it available to my colleagues:

WHOSE WAY ON RIVERS?

The Mississippi Valley Association's annual meeting here runs true to the form of the last several years. The speeches and reports are carefully integrated into a blanket defense of the Army engineers' role in Federal river work.

That this again takes the form of all-out criticism of the idea of regional valley authorities is a matter of course. The Mississippi Valley Association took its position years ago against the socialism, the totalitarianism, and the superstate that its leaders see in the Tennessee Valley Authority. It doesn't want anything like a TVA to be imposed on the Missouri Valley or any other valley.

But since the last meeting of the association there has come a new threat to the Army engineers' way of building dams and levees. This was the Hoover Commission recommendation that the Army turn its flood-control and rivers and harbors functions over to a reorganized Department of the Interior.

And so some of the big guns of the Mississippi Valley Association now are trained on the Hoover Commission's effort to reorganize and streamline the executive branch of the Federal Government. An association committee has reported that removal of the Army engineers from river work would de-

stroy one of the most valuable and efficient operating agencies of the Federal Government. And Representative WILL M. WHITTINGTON, of Mississippi, came here to tell the meeting that he is for Government reorganization in general but against any meddling with the Corps of Engineers. "Often," he said "reformers, without supporting reasons, advocate the crippling if not the destruction of existing agencies that have proved their worth."

The best answer to the committee, to Representative WHITTINGTON and to the Mississippi Valley Association is in the words of the Hoover Commission. In its summary of reasons for transferring river work from the Army to Interior, the Commission gave these:

1. To secure coordinate policies in these fields.
2. Elimination of disastrous conflicts and overlaps which cost the taxpayer enormous sums annually.
3. Provision of a center for more energetic development in water resources.
4. Provision of a center for coordination of State and Federal action in these fields.
5. Elimination of competition for construction labor and materials.

Members of the Hoover Commission were not starry-eyed reformers, as Representative WHITTINGTON implies. They were asked to look for ways to improve Government and save money. They found glaring defects and inherent conflict in the present agencies concerned with river development.

In the end it is the taxpayer who is most concerned with this conflict. He must foot the bill for the projected multibillion-dollar river program. Whom should he believe—the Hoover Commission or the Mississippi Valley Association?

The choice should be easy.

Our Nation, the World Needs the Philosophy of Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. DOYLE. Mr. Speaker, February 12 is to be observed as the one hundred and forty-first anniversary of the coming to birth of Abraham Lincoln.

Ever since I was a small child, I have had an increasingly vigorous awareness of the fact that the birth, life, and death of Abraham Lincoln has been a definite blessing to my own humble experience. I can clearly remember that when I was an elementary-school boy the public-school teacher not infrequently came and cracked my knuckles with a ruler because she found me drawing pictures of the birthplace cabin of Abraham Lincoln instead of studying.

During the recent congressional recess my wife and I deliberately drove to Hodgenville, Ky., en route to Long Beach, Calif., in order that we might have the inspiration of being in the presence of that birthplace cabin of which I began to draw pictures on scratch paper when I was about 10 years of age.

Mr. Speaker, I have had the inspiration of being president of the Abraham Lincoln Club of my home city; and, being a Member of this great Congress during the Seventy-ninth and Eighty-first sessions, has made it possible for me to have the privilege and inspiration of serving as one of the directors of the Abraham Lincoln group of Washington, D. C. And this is an invitation to you, one and all, to attend the Abraham Lincoln anniversary program at the Lincoln Museum, 511 Tenth Street NW., Sunday, February 12, at 2:30 p. m. The outlined program is as follows:

Chairman, Hon. CLYDE DOYLE, Member of Congress, California.

Address: The Washington That Lincoln Knew, by Edward Boykin, director, National Capital Sesquicentennial Celebration.

Vocal concert: United States Army Band chorus.

Presentation of bust of Abraham Lincoln: Eloy Alfaro International Foundation.

Presentation of Lincoln Memorabilia: Washington Lincoln Group.

Benediction: Dr. Frederick Brown Harris, Chaplain of the United States Senate.

Under the unanimous consent approval extended me, I herewith call to your attention a portion of a very worthy editorial in the National Tribune—The Stars and Stripes, "the voice of the veterans of the United States," dated February 9, 1950. It should be significant, Mr. Speaker, that the masthead of this veterans' paper carries the following quotation on every one of its issues: "To care for him who shall have borne the battle and for his widow and his orphan." The following is the portion of the editorial to which I refer:

On next Sunday there will be observed the one hundred and forty-first anniversary of the birth of Abraham Lincoln, a man of humble beginnings who served as this Nation's Chief Executive during a period of its greatest trial. Having faith that right would create the strength to overcome immorality and defeat evil intentions, Lincoln furnished the inspiration needed to keep our country truly united. He was an inspired foe of injustice and malice. He was possessed of a charitable mind, and, resultantly, he forged the America of 85 years ago into a single whole after a long civil conflict that threatened to tear it asunder. In the clash of opposing ideals, he chose to support those that promised clearly the preservation of national solidarity as the only single means of defending the priceless liberties that had been won at frightful cost by our founding fathers. Indeed, Abraham Lincoln was in his day the savior of our country.

Every year, as we pause to learn anew the ageless lessons taught by Lincoln and his predecessors, we derive fresh courage from them. A glance around the troubled world of today brings home as never before the need for that union to which our sixteenth President devoted himself and for which he gave his life. If ever there was required the sensible and solid thinking of his time, it is wanted now, because other forces are intent upon dividing the house that has long been united on the solid foundation of freedom. Nation-wide organizations, led by astute and self-seeking spokesmen and supported by millions whose fervent desire for peace has blinded them to the wrongs which attend the movements they have joined, are directed toward objectives that would destroy forever the liberties they now enjoy. Too many, instead of fighting to hold what they have, would give up essential freedom to buy a little temporary safety, and in doing it, are threatened with the loss of both. * * *

Veterans also remember Lincoln as a short-time soldier, but as one who was so close to the servicemen of the great Civil War that he knew and understood their needs. Far from believing that war veterans should be classed with all others under a system of social equality, he recognized their special service to the country and many times voiced his concern about their security as a class and about the welfare of the dependents of their honored dead. We have moved ahead far as a nation during the past nine decades, and our thinking has had to be adjusted to new developments as they have occurred, but we believe that Lincoln would have protested in horror at advocates of social planning and world freebooting who would spend untold billions for impractical and liberty-destroying projects but practice penury when it comes to protecting those "who shall have borne the battle and for his widow and his orphan."

On this, another anniversay of the birth of Abraham Lincoln, the veterans of America think the time has come for a lot of people to unscramble their confused thinking and to dedicate themselves once more to the homely philosophy of Lincoln and others like him. Also attributed to the savior of our country is this remark: "You can fool some of the people all of the time, and all of the people some of the time, but you cannot fool all of the people all of the time."

Republic of Lithuania Day

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. MADDEN. Mr. Speaker, on Thursday, February 16, of this week, all Americans who believe in liberty and self-government will commemorate the Lithuanian nation for the outstanding fight its patriotic people are making to restore its former freedoms and self-government.

Gov. Henry F. Schricker, of Indiana, has issued a proclamation proclaiming February 16, 1950, as the Republic of Lithuania Day in the State of Indiana.

Mayor Frank J. Migas, of East Chicago, Ind., has also issued a proclamation setting aside February 16, 1950, as Lithuania Day in the city of East Chicago. There will also be held in the city of East Chicago commemorating services at St. Francis Church Hall, wherein prominent citizens will pay tribute to the fighting spirit of the Lithuanian people who will continue the battle against the communistic tyranny in an effort to save their country from slavery. The minds and hearts of all true Americans beat in unison for the Lithuanian people in their noble battle for freedom and independence.

I herewith present to the Members of Congress a radio address delivered by Petras Dauzvardis, consul of Lithuania at Chicago:

It gives me very great pleasure to express my official and personal gratitude to His Excellency Henry F. Schricker, Governor of the State of Indiana, for the proclamation of Republic of Lithuania Day in Indiana, Thursday, February 16, 1950, and for the

sentiments and wishes expressed in said proclamation.

In his proclamation the Governor recounts the historical facts and present appalling plight of Lithuania, and urges the citizens of Indiana to give serious thought to the sufferings the Lithuanians are undergoing, and to hope that all freedom-loving people will raise their voices to end the extermination of the gallant nation of Lithuania.

In conjunction with this proclamation and commemoration of the Independence Day of Lithuania, it is proper to make a few reflections upon Lithuania's past, and to glance at its present state. Lithuania is a many centuries old state; she was first occupied by Russia in 1795. That occupation and enslavement of the Lithuanian nation lasted for 123 years, and was terminated by the nation's constant fight for freedom and determination to be free and independent, and the resultant declaration of independence of Lithuania on February 16, 1918. Soviet Russia took cognizance of this declaration, renounced for all time all rights to the territory of Lithuania, and recognized Lithuania as a sovereign and independent state. The United States of America and other nations also recognized, and continue to recognize Lithuania's rightful independence and sovereignty.

The free and independent Republic of Lithuania made remarkable progress in every phase of its life, and was acknowledged as one of most cultured, progressive, industrious countries of the post World War I period.

Lithuania's independence was suspended and achievements destroyed when it was occupied by Russia for the second time in 1940. The Nazis wrested the occupation of Lithuania from the Soviets in 1941, continuing it until 1944, when the Soviets reoccupied the country, and continue to occupy and rule it by force to this day. The Nazi-Soviet occupations have deprived Lithuania of approximately one million people. Unremitting and aforethought genocidal acts by the Soviets threaten to annihilate the Lithuanian nation. Recent reports state that the 1941 Soviet plan to exterminate 700,000 (25 percent) of the Lithuanian nation has been amended so that 85 percent of the indigenous population of Lithuania is subject to elimination and liquidation.

Up to now the liquidation of Lithuanians was carried out by arrests, tortures, and deportations to the Soviet slave-labor camps of Lithuanians thus doomed to a lingering death. Mass purges and executions are now imminent, since capital punishment has been reimposed in the Soviet Empire.

Because of these ominous signs of a speeding up of the annihilation of the Lithuanian nation, Lithuanians throughout the world are joining Governor Schricker in the hope that freedom-loving people will raise their voices against the Soviets by protesting against the impending destruction of the Lithuanian nation and in demanding that the Soviet Union: (1) Halt the deportation and murder of Lithuanians; (2) return Lithuanian deportees from Russia to Lithuania, to their homes; (3) withdraw the Soviet army, police, officials, agents, and colonists from Lithuania; and (4) restore sovereign rights and self-government to the people of Lithuania. These demands are based upon international law, the Soviet-Lithuanian peace treaty, the Atlantic and United Nations Charters, and various wartime pledges and undertakings.

Should the Soviet Union disregard these demands and continue violating the law of nations, she should be proclaimed an outlaw aggressor and a perpetrator of the crime of genocide.

The tenets of man's inalienable rights, of law, and of the United Nations Charter must be given meaning and effect lest they become meaningless and subservient to totalitaristic might and brutality. Lithuania and the other Soviet-occupied and tyrannized countries afford a case for the test of right and democracy against might and slavery. May right prevail over might and thereby bring freedom, peace and security to all peace-loving countries, including Lithuania and the other two Baltic states.

Kosciusko, Like Lincoln, an Emancipator

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. O'HARA of Illinois. Mr. Speaker, yesterday in Lafayette Park, here in Washington, wreaths were placed at the inspiring statue of Tadeuz Kosciusko and in the memory of that great son of Poland and of liberty a magnificent audience gathered on the greensward facing the monument to listen to the tributes to the life and works of Kosciusko voiced by the Honorable SCOTT LUCAS, majority leader of the Senate, and three Members of the House, the Honorable CHESTER A. CHESNEY, the Honorable ALVIN O'KONSKI, and myself. Under leave granted, I am extending my remarks to include my address on that occasion:

Much has Poland given to the enrichment of mankind and the betterment of the world. Great has been the contribution of men and women of Polish blood to our own United States of America.

The story of the life of Tadeuz (Thaddeus) Kosciusko has been an inspiration to brave deeds and noble thoughts to the generations that have come and gone since, as is so well said in the marble lettering in the monument in Lafayette Park here in the Nation's Capital: "Freedom shrieked when Kosciusko fell." The influence of his life will be reflected in all the generations to come. His name is high on the roll of the heroes of immortal fame.

Today, which also is the birthday of Abraham Lincoln, I would dwell on a quality in character which the great son of Poland shared with the rail splitter from Illinois whose name with Kosciusko's is on that roll of immortals.

Kosciusko came to America on borrowed money. He remained here for 7 years of service, sacrifice, and danger. An engineering genius and perhaps the greatest master of the use and tactics of artillery of his day, no officer under Washington was a more vital part in the winning of the victory for independence. To him is attributed the triumph of American arms at Saratoga, the turning point in the long, painful struggle of the Colonies and the victory that decided the action of France in coming to the side of the American patriots. He directed the building of the defenses at Philadelphia and at West Point on the Hudson, guarding our line from an English advance which could have come from either the east or the north. Then, fighting as a guerrilla, the uniform and insignia of rank he discarded, the pride in his brilliant reputation he forgot, as well as all sense of danger and desire for personal security, and in the most hazardous situations battled as a private side by side with the most daring of the American guerrillas.

Thomas Jefferson said of him: "He is as pure a son of liberty as I have ever known, and of that liberty which is to go to all, and not to the few and rich alone."

And from the great Washington came this tribute: "To his care and sedulous appreciation, the American people are indebted for the defenses of West Point."

In recognition of his service of incalcuable value the Congress voted him a large tract of land in what is now the site of the city of Columbus, Ohio.

Here was the test of the character of Kosciusko. There is not in all of history a better example of self-abnegation nor a more stinging rebuke to those who question the sincerity and the lack of self-interest motivation in the heroes of action and of idealism who serve for country, freedom, and humanity.

Plutarch was his favorite author and his favorite character in the writings of the great Greek biographer was Timoleon who yearned to liberate his country, taking nothing in return.

Having spent seven hard and hazardous years of his life in aiding the liberation of the country to which later hundreds of thousands of Polish men and women were to come, he returned to Europe, taking nothing in return for his glorious and priceless service. He returned, still penniless, the money that he had borrowed to come to America remaining to be repaid from his labors after the 7-year intermission during which he aided so brilliantly in the liberation of the country now become the strength of the world. He took nothing from America for the much that he had given to America. Like that of Timoleon the name of Kosciusko will stand throughout the ages for pure unselfishness in the doing of great public works.

I return now to the lands on the present site of the city of Columbus, Ohio—lands given him by a grateful Congress and which well might have lifted his poverty and assured the security of his later years. This is the disposition he made of these lands; I read from his will:

"I, Tadeuz Kosciusko, being just on my departure from America, do hereby declare and direct that, should I make no other testamentary disposition of my property in the United States, I hereby authorize my friend, Thomas Jefferson to employ the whole thereof in purchasing Negroes from among his own slaves, or any others, and giving them liberty in my name; in giving them an education in trade or otherwise; in having them instructed for their new condition in the duties of morality, which may make them good neighbors, good fathers and mothers, husbands and wives, in their duties as citizens, teaching them to be defenders of their liberty and country, of the good order of society, and in whatsoever may make them happy and useful; and I make the said Thomas Jefferson executor of this. 5th of May 1798."

Two centuries have passed, and many mighty events have shaken the nations of the earth and the destiny of mankind, since a mother in Poland gave to the world the son who was to give his all for liberty and accept for himself nothing. Nothing except the glory which forever will attach to his name as an inspiration to noble deeds and one who is outstanding among the great characters in the world's history as a practitioner of the gospel of self-abnegation.

That which was given him for his service to the young American Republic he returned to purchase freedom for other Americans, of another race and another color and then slaves, and to provide for their education and training that they might be good neighbors, good fathers, and mothers, and sons, and daughters, and happy in their families and communities would be defenders of liberty and of their country.

He who loves liberty as did Kosciusko will not rest on his oars when liberty for himself and his own people has been attained but there are still peoples of other

races and of other nations remaining in bondage and lashed by the cruel whip of discrimination. Liberty like virtue to Kosciusko was priceless in itself and for itself—liberty, as the air itself, the common heritage of all men.

Two centuries or so after his birth—the exact date of which is not definitely established—I am thrilled to be an humble member of this magnificent gathering in the Capital of the world's mightiest Nation, the powerhouse of liberty, honoring his memory.

Ugly Spy Disclosures Indicate Administration Covered Up Dr. Fuchs—Information Available 5 Years Ago—Who Blocked FBI Investigation?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting as part of my remarks an outstanding article by Felix Morley which appears in the current issue of Human Events. The information Mr. Morley sets forth is grounds for impeachment of the President, in my opinion. I commend it to all Members who are interested in learning some of the hidden facts underlying the recent spy disclosures.

A chain reaction operates in the journalistic estimation of news value. The belated arrest in London of Dr. Klaus Fuchs on charges of atomic espionage did not of itself warrant the explosion of press and radio publicity that erupted over here. In the English newspapers a less-excited editorial judgment played the incident down.

It was much the same last September when President Truman announced portentously that a trial atomic bomb had been exploded in Soviet Russia. I happened to be in London at the time, and the universal reaction was "Why not?" In western Europe all well-informed people have long been aware of the subtlety of the Russian spy system and of the skill with which Communists are infiltrated into governmental posts where they can be most useful to the Soviet fatherland. It is different here, where this infiltration has gone very deep.

One of the charges against Dr. Fuchs is that in this country 5 years ago—in February 1945—he transmitted atomic-research information "useful to an enemy." That news is certainly not surprising.

An English Communist colleague of Dr. Fuchs, the physicist Allan Nunn May, was caught that same year in the Canadian atomic espionage disclosures and is now serving a 10-year jail sentence. The report of the special Canadian Royal Commission then pointed out that there were many connections between the Canadian spy ring, revealed by Cipher Clerk Igor Gouzenko, and the larger ring operating in the United States. All the Canadian information was made available to our Government by the personal orders of Prime Minister Mackenzie King. The subject was discussed when Mr. King came to Washington in November 1945 to consider atomic-energy problems with President Truman and Prime Minister Attlee.

So the mystery in the Fuchs case is not how secret atomic information could have been passed on to the ubiquitous Soviet agents. The detailed Canadian revelations long since disclosed the manner in which this business was handled, in this country as well as in the less-important Canadian cases.

The mystery is why it has taken years for the Truman administration to make even a tentative start on disclosures that the alert Canadians cleaned up at their end in a few months. And the unresolved question is why our responsible officials failed to follow the Canadian leads.

Evidence justifying the arrest of Dr. Fuchs has been available for exactly 5 years. But the FBI was not allowed to investigate atomic espionage until 1947 and is said to have been working on the Fuchs case for less than a year.

Why, and by whom, was the FBI blocked off from this and similar cases? That is the unrevealed story behind the story, justifying the headlines appropriate to a mystery affecting the safety of us all.

II

We know now that the Soviet spy ring in Canada was operating full blast, and very successfully, at least as early as June 1943. There is very good reason to suspect that an even larger and more efficient apparatus was then well established in the United States. Certainly the unknown person to whom Dr. Fuchs is accused of passing top-secret data in February 1945 was no casual stranger.

All Americans familiar with Communist techniques were at that time aware of the general outline of what was going on. But it was impossible to make the truth prevail over the strong pro-Soviet attitude of the Roosevelt administration. Indeed any attempt to do so, on the basis of definite evidence, was immediately countered as isolationist, or even as pro-Nazi. Human Events was greatly daring when it ventured to say, on March 8, 1944, that: "The administration seems to be the prisoner of the Communist Party."

And it was not merely the administration. Mr. Wendell Willkie, Republican candidate for President in 1940, made a hurried trip to Russia in the summer of 1942 and on his return told all, in a slap-happy compilation entitled "One World." In this he advised Americans (p. 86) not to be mistrustful of Communists. "Russia is neither going to eat us nor seduce us. * * * No, we do not need to fear Russia."

About a year later, Mr. Sumner Welles, Under Secretary of State until his split with Mr. Roosevelt in 1943, wrote the Time for Decision, appropriately chosen as the book-of-the-month for July 1944. It stood up for just about that length of time.

This book was in some respects critical of Mr. Roosevelt's leadership. But not where the President's faith in Soviet Russia was concerned. To call Stalin's Russia a dictatorship, said Mr. Welles (p. 309) is only "superficially true." Actually: "The Russian people today are satisfied that their government is devoted to the popular interest. * * * The Soviet Government today is guided by the popular will. * * * Certainly in the immediate future the foreign policy of the Soviet Government will continue to represent what the people want." It would be pleasant if we could say as much for the United States.

These samples of the stuff Americans were fed go far to explain why honest efforts to unmask Soviet espionage during its most active period were unavailing. Yet the attempt was conscientiously made, for instance by a small group of Congressmen headed by Representative Busbey, of Illinois, shortly before the election of 1944. To this President Roosevelt, in a speech on October 5, replied:

"It is a source of regret to all decent Americans that some political propagandists are now dragging red herrings across the trail of this national election."

III

This red-herring phrase, like much else in the Roosevelt bag of tricks, was used more lately, and less successfully, by President Truman. The revelations before the House Un-American Activities Committee which led to the indictment of Alger Hiss were also called a red herring, to keep the public from considering the bad record of the Eightieth Congress. Now that Mr. Hiss has been found guilty it is no longer possible to write off the effort to expose Communist infiltration as political propaganda. But it would not have become an issue, even in an election year, except for the strange behavior of Secretary Acheson, and perhaps not then except for the even more strangely retarded development of the Fuchs case.

Americans are a generous as well as a politically unsophisticated people. Throughout the country there has been much sympathy for Alger Hiss, wholly aside from the realization that a verdict in the court of first instance is subject to appeal.

Many were therefore willing to reserve their final personal judgment on Alger Hiss, and additionally were anxious to see the case kept out of politics. Come what may, this former high official of the State Department is now a broken man; his career is ruined and his fall is harder because his earlier pretensions were so great. The general desire, as one could see in editorials and private conversation, was to forget the whole miserable business.

And then Dean Acheson, with that strange ineptitude which so often afflicts clever men, suddenly made it impossible to drop this case. The Secretary of State, speaking in that capacity at an official press conference, made prepared remarks which, however guarded, could only be interpreted as an aspersion on the judicial process. Coming from a Cabinet officer, after the verdict, Secretary Acheson's defense of Hiss was actually executive infringement on the independence of the judiciary, and was promptly resented as such.

Before the echoes of this blunder had subsided—while the legislatures of Southern States were still voting resolutions demanding the resignation of Secretary Acheson—came the arrest of Dr. Fuchs in London. And thus was set off the chain reaction referred to at the outset of this analysis. This is big news primarily because of the growing realization that all these ugly disclosures fit together, and are part of a pattern of which much—perhaps by far the greater part—is still to be disclosed.

IV

The significance of the case of Alger Hiss might well have been forgotten. Now it will not be.

Simple people who have not given the matter much thought heretofore will now realize more fully that Hiss was convicted, in effect, of passing confidential State papers of the highest importance to active Communist agents. It will be recalled that he was subsequently at the center of activities which in the upshot have proved extremely helpful to Soviet Russia; extremely detrimental to the United States. Mr. Hiss gets much credit for the Yalta Agreement, which led directly and swiftly to the Communist conquest of China. He also gets much credit for securing approval of the Charter of the United Nations in a form that has made it easy for Russia to use that organization as a base for continued espionage, while insuring its worthlessness as an agency for the maintenance of peace.

There was at first no widespread suspicion over the alacrity with which high officials of the administration rushed to the defense of Alger Hiss. There is such suspicion now. And it is strengthened because there is as yet no explanation of why it has taken over 4 years to open up the case of Dr. Fuchs. A

lot of pieces in the jigsaw puzzle are still missing. Some of them seem to have been carefully swept under the carpet. But enough are being belatedly fitted together to give the pattern a certain shape. It is not a pleasant shape.

If a nation cannot clean its house of corruption, not even hydrogen bombs will give it security—the less so if the formulas have already been handed to the Kremlin. And that is why Communist infiltration is bound to become a political issue of the first magnitude—this year—in spite of popular reluctance to have it so.

St. Peter's Evangelical and Reformed Church, Buffalo, N. Y.

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. TAURIELLO. Mr. Speaker, recently, St. Peter's Evangelical and Reformed Church in Buffalo, N. Y., celebrated the one hundred and fifteenth anniversary of its founding.

This thriving parish, which is located in my home town, has had a brilliant history of over a century of splendid service to its country, its community, and its parishioners.

Since the establishment of this church, its ministers have labored diligently, competently, and fruitfully in giving of their faculties to advance the spiritual morale of their charges.

St. Peter's has attained an aura of venerability in the past century, but it is youthful in its ebullience and vigor. It occupies a respected and unique place in Buffalo and has achieved an enviable record in religious, educational, and community matters and in bringing about cooperation and mutual understanding among the churches of various denominations in western New York.

The seeds sown by its pastors have been productive of an abundant harvest, and its parishioners today carry with them the priceless inheritance bequeathed them by the founders of the parish over 115 years ago.

I want to join heartily with the people of Buffalo in offering to St. Peter's Church my heartiest congratulations on its anniversary and my sincerest wishes for many more years of good work for God and community.

Under leave to extend my remarks, I am including the following article from the Buffalo Courier-Express in connection with this historic event:

FAITH OF MAN HELD EFFECTIVE ACROSS WORLD

St. Peter's Evangelical and Reformed Church, the oldest church of its denomination in Buffalo, observed its one hundred and fifteenth annversary yesterday.

A keynote sermon was delivered at the morning service by the Reverend Willard A. Kratz, minister of Salem Church at Catasauqua, Pa., and vice chairman of the commission on Christian social action.

Referring to the Apostles' Creed, which was recited by the congregation, the Reverend Mr. Kratz said it is an ancient statement of man's conviction in the power of God to help him, as opposed to the destructive powers of what man called evil.

"The character of man has been affected by this conviction of his," he declared. "He has discovered that he is capable of imitating evil, which we call the devil, as well as being noble by the power of good, which is God in us."

The Reverend Mr. Kratz continued:

"The character of man as an individual affects his relationship to a community of individuals which we call the congregation and, when joined with people of like convictions, he is able to exert an influence beyond his own individual character. This witness of his faith is not only individual and local but it is world-reaching."

The Reverend Mr. Kratz paid tribute to the church's minister, the Reverend William H. Tempest; former pastors; and to Henry Eisenberger, superintendent emeritus of the Sunday school of the church, at Genesee and Hickory.

To Promote the General Welfare

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. KEATING. Mr. Speaker, from the pen of a distinguished clergyman, Rev. William H. Hudnut, D. D., pastor of the Third Presbyterian Church in Rochester, N. Y., comes one of the clearest expressions I have seen on the much-discussed subject of the general welfare.

Under leave to extend my remarks, it follows:

TO PROMOTE THE GENERAL WELFARE

The Constitution has a phrase that is an apt description of one of the necessary functions of government "to promote the general welfare." No responsible government can ever be insensitive to that, and most citizens believe in the welfare state in that sense.

Recently, however, a school of thought has arisen that would rewrite the Constitution at this point and make it read "to guarantee the general welfare." This is something that no democratic government can undertake without in the process impoverishing its citizens and becoming a dictatorship. It is one thing to promote the general welfare, it is quite another thing to guarantee it.

The moment government guarantees my job, food, clothing, and shelter, that moment it both pauperizes and enslaves me. If one employer is not free to fire me, another is not free to hire me. If I am not free to quit one job and seek another, I am bound indeed. But things like that are what guaranteeing the general welfare would involve. The necessary prelude to this kind of welfare state is a police state. All that freedom guarantees is change, insecurity, and choice; but those are priceless.

Remember that guaranteeing our welfare is something that God himself has never tried to do. God gives every bird its food, but He does not throw it into a nest. The bird must work for it and so must man. And as a man works, without every contingency foreseen, without every corner cushioned, and without his physical well-being from cradle to grave a guaranteed conclusion, a strange thing happens to him—he develops independence and character.

Representative WALTER JUDD, of Minnesota, is right when he observes that freedom from want, if interpreted as freedom from the necessity to struggle, would be a calamity if ever realized. This is not to say that there should be no planning by government for the good of all, but it is quite different from saying that there should be total planning. No nation can remain free whose citizens transfer to government the initiatives that are rightfully their own responsibilities.

The attempt to promote the general welfare makes men, the attempt to guarantee it makes masters—and puppets.

Was Lincoln a Reactionary?

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Altoona Tribune of February 11, 1950:

WAS LINCOLN A REACTIONARY?

One of the visible hallmarks of American institutions comes in pairs—a pair of portraits. They are to be found in all American public schools. They are to be found in public libraries, colleges, organizational meeting places, and, in fact, at every place where Americans gather, at home and abroad.

These portraits are of Abraham Lincoln and George Washington, whose birthdays are observed this month.

Abraham Lincoln was famous, among other things, for his clear understanding of his country's basic precepts, for his appreciation of the things for which his country stood. This understanding he was able to use to the benefit of posterity because of his rich gift of expression.

Observe some of the statements which have been the acme of American wisdom since the Civil War:

"You cannot establish sound security on borrowed money."

"You cannot help the poor by destroying the rich."

"You cannot build character and courage by taking away a man's initiative and his independence."

"You cannot help the wage earner by pulling down the wage payer."

"You cannot further the brotherhood of man by encouraging class hatred."

"You cannot keep out of trouble by spending more than you earn."

Last year the President of the United States, replying to criticism of his spending policies and his point 4 to spread American resources around the world, referred to his critics as reactionaries.

The criticism aimed at Mr. Truman was based upon just such Americanisms as those we have quoted from the wisdom of President Abraham Lincoln.

Perhaps that also would make the Great Emancipator a reactionary.

But if that is so, then we need more reactionaries in America.

If we are to accept the word with relation to Lincoln and in the meaning accorded it by the Communists, reactionaries are those who oppose communism and who stand for the American system.

Sadly, our American institutions and our American wisdom seem to mean less to us than they did two decades ago. Our statesmen pay lip service, but their acts belie their words.

What is government for except to preserve the freedom of the people? Beyond any doubt that is the primary purpose of government.

Big government ultimately serves only one major purpose: to build up a clique of big government officials, a class of government Mr. Bigs.

We see them arise wherever big government flourishes. They start out by promising every man a job, a pension, perpetual Federal care. Remember Hitler's speech of 1935, in which he promised every German one of the new people's cars?

Generally, we can see by the record, that political pledges of security and government care develop into realization only for the politicians who make the promises.

In this respect, notice our Government trend toward providing tax-free salaries, or expense accounts, for the President, and other top officials.

Our President now has a staff of 3 secretaries, a special counsel, 5 administration assistants, 3 armed service aides, and numerous persons of mere menial category, for a total of 225, exclusive of the aides, the Secret Service, and the police. The President also has at his service, a yacht, two other craft, including a cabin cruiser, a palatial airplane, the *Independence*, and a fleet of autos, soon to be supplemented by leased armored, bulletproof-glassed limousines.

Most of his staff also have their own Government-owned limousines.

All of this seems to be a world apart from Mr. Truman's socialistic programs to take away man's initiative and independence.

Americans never will have any real security that they haven't earned for themselves unless they are willing to accept servitude to a central government as a condition of security; and, as General Eisenhower said not long ago, the only real economic security available is that "enjoyed" by the inmates of penitentiaries. They don't need to worry about tomorrow, either.

With all this in mind, one more warning from Lincoln offers food for thought:

"If destruction be our lot, we ourselves must be its author and finisher. As a Nation of free men we must live through all time or die by suicide."

J. Edgar Hoover

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

FEBRUARY 6, 1950.

Mr. GERALD R. FORD,
Michigan Representative,
Washington, D. C.

DEAR MR. FORD: Sunday night, February 5, Walter Winchell made a plea to his radio audience in behalf of J. Edgar Hoover. It seems the FBI have been tapping Communist telephone lines which has brought about the request for the removal of Mr. Hoover from the Department. I hope I am just one of many thousands that heard this broadcast.

This sort of action, as Mr. Winchell stated, would be as stupid a reflection against our American people as the criticism made against our armed forces commanders in using flame throwers against the Japanese during World War II. What can our American people be thinking of by tearing down our means of protection against forces attempting to disrupt our country?

I am a veteran of World War II with 4½ years' service, 33 months of which were spent fighting the Japanese. It is my understanding the Thirty-second Division had more combat experience than our other fighting units so my basis in criticizing these people is not unfounded.

During the years 1941 to 1945, it seems to me the American public heard enough of the treatment of our boys in service that were unfortunate enough to be captured by the Japs alive. Do these very people ever stop to realize our boys also faced such things as flame throwers and other weapons of destruction that we alone were not guilty of using? Who is it that answers for the captured enemy equipment that was stamped "made in U. S. A."?

Those people not facing these things in reality and continually criticize our country's means of protection from aggression have much to learn.

Any method our FBI uses to stop this aggression inside our own country should be commended not condemned. Above all, we should not lose the one man who has headed this Department so intelligently in the past and most capable, in my opinion, to handle any future activities of our FBI. I must be wrong in thinking any American would think of taking such action for the protection we get from the FBI. These actions must have backings from only communistic organizations.

In such times as these, and with the crisis that faces our freedom today, our country should be protected at all costs be what they may.

Very truly yours,

JAMES W. WELLS.

GRAND RAPIDS, MICH.

Our Nation's Prayer

EXTENSION OF REMARKS

OF

HON. CHESTER A. CHESNEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, may I offer a patriotic prayer that was originated by one of my constituents, Rev. Francis C. Young, known as the poet priest, pastor of St. Juliana's Church in Chicago. This patriotic prayer was first presented by him 25 years ago at an installation of Portage Park Post of the American Legion at Chicago in my congressional district.

It has received the formal approval of Presidents Harding, Coolidge, Hoover, and Roosevelt and has been accepted by all patriotic Americans as indicative of our confidence in our country and in the Almighty. The prayer is as follows:

OUR NATION'S PRAYER

O Lord, a sacred peace we crave.
For this, with all our leaders brave
We pray that Thy almighty hand
Will guard and guide our wondrous land.
We'll melt with love the swords of men
To make of them the noblest pen.
With this, dear God, our hope and aim,
Let us enshrine Old Glory's fame.

For us our fathers died by sword
And loved ones spent their lives, O Lord.
Give us unselfish hearts like theirs
To prove our worth as loyal heirs.
Direct our thoughts to holy deeds,
Let love abide among all creeds;
Pray, keep us in Thy watchful care,
We seek, dear Lord, Thy help in prayer.
Amen.

The people of America, regardless of creed, in these days of national and international distress should raise united voices asking for His divine protection, guidance, and assistance.

The spirit expressed in Our Nation's Prayer has moved our national leaders and the people of America since the founding of our Republic.

Legislation From the Committee on Education and Labor Enacted at the First Session of the Eighty-first Congress

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. LESINSKI. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following address delivered by me over Station WJR, Detroit, Mich., on February 10, 1950:

Ladies and gentlemen of the radio audience, I want to give you a brief resumé of some of the important legislation that has been reported out of the House Committee on Education and Labor, of which I am the chairman, and was passed by the Congress in the first session of the Eighty-first Congress.

First, let's talk about the amendments to the Fair Labor Standards Act which went into effect January 25, 1950. A million and a half workers are now getting higher pay because this law provides that a worker must be paid not less than 75 cents an hour if he is employed in commerce or in the production of goods for commerce. No oppressive child labor can now be employed in commerce or the production of goods for commerce, and no children may be employed in agriculture during school hours. For the 22,000,000 workers who are covered by the Fair Labor Standards Act the 75-cent minimum wage means that they once more have real protection for their own living standard even though they may be getting much more than 75 cents an hour because they are now protected from the unfair competition of employers who were paying as low as 40 cents an hour and thus were undercutting all wages in the industry. The business health of the whole country is strengthened, and the children of this country are given greater protection. The entire country benefits from this advance in the improvement of the Federal law establishing minimum fair-labor standards.

The Fair Labor Standards Act of 1938 was made the law of the land by the Democratic Party under President Roosevelt and has been expanded and modernized in line with our changed economic conditions by the Democratic Party under President Truman. The Fair Labor Standards Act of 1938 has proved itself an effective instrument for carrying out its liberal aims and its beneficial economic purposes. It has been a good law for the worker and a good law for the employer. It went far to correct substandard labor conditions. It went far toward removing from the great majority of employers of this country who are fair-minded and who want to maintain decent labor standards the fear and the pressure of unfair competition from those who would seek to gain a market at the expense of their own employees. But conditions have changed greatly since 1938. We have moved to a $250,000,000,000 economy, and the 40-cent minimum wage had become out of date. It was

time to reexamine the law. This the Congress has now done under the leadership of a Democratic administration. The new minimum-wage rate of 75 cents an hour directly benefits a million and a half workers whose pay had lagged behind the times. Indirectly, it affords protection to the 22,000,000 workers who are covered by the law. And it is an additional protection of the Nation's economy. Under the Fair Labor Standards Act as it stands today there is vastly greater protection for the children of our country. For the first time oppressive child labor is prohibited in interstate commerce. This will prevent the exploitation of child labor in such fields as transportation and communication. The act now provides clearly and directly the authority needed to deal with the vicious aspects of industrial homework. The fair-labor standards amendments of 1949, is a great achievement and another step forward in our unceasing efforts to promote the general welfare of all the people.

However, I want to point out that in spite of the improvements in the wage-and-hour standards which were made in the past session, I do not believe that the duty of Congress was fully discharged in the field of fair-labor standards with the passage of the 1949 amendments. During the whole session in 1949 I fought for a minimum wage of at least $1 per hour with greatly expanded coverage which would have granted the benefits of this law to millions of additional workers. To this end I introduced H. R. 2033. I was not able to get these provisions in the bill which finally was passed but I am determined to continue the fight and I will not be satisfied until every worker covered by the wage-and-hour law is paid a wage of at least $1 an hour.

Another important bill which was reported out of the Committee on Education and Labor and was passed by the Congress in the last session is a law to provide for the education of children residing on nonsupporting, federally owned property, and children residing in localities overburdened with increased school enrollments resulting from Federal activities in the area. This law provides that assistance should be given only to those school districts that showed a deficit in their maintenance and operation program for this school year—that the total amount of funds available to the school district from all sources was not sufficient to provide a normal school program and that the deficit was caused by defense-incurred school enrollments or reduction in school revenue resulting from the acquisition or ownership of land by the Federal Government. The bill authorized an appropriation of $7,500,000, although the Congress actually appropriated only $7,250,000. Under this law eight school districts in this great State of ours applied to the General Services Administration for assistance. They are:

1. Warren Consolidated school district No. 1, fractional, Warren, and Sterling Townships, Macomb, Mich. Applied for assistance in the amount of $30,980 for the current school year.

2. Lavonia Township school district, Wayne County, Plymouth, Mich. Applied for $85,549.

3. School district No. 7, Nankin Township, Inkster, Mich. Applied for $73,185.

4. Ypsilanti township school district No. 1, fractional, Willow Run Village, Washtenaw County, Mich. Applied for $73,178.

5. School district of the village of Wayne, Wayne County, Mich. Applied for $99,151.

6. School district No. 2, fractional, Erin and Warren Townships, East Detroit, Macomb County, Mich. Applied for $132,959.

7. Romulus school district, Romulus Township, Wayne County, Mich. Applied for $85,295.

8. School district No. 6, Erin Township, Roseville, Macomb County, Mich. Applied for $16,944.

The final determination as to eligibility and approval of the amount of allotments has not yet been made. The General Services Administration must determine the total amounts needed by those eligible school districts that have been recommended for allotment and compare this to the $7,250,000 appropriated. It is the hope of the House Committee on Education and Labor, and my personal hope, that we can devise legislation at this session of Congress that will meet this problem on a permanent and uniform basis whenever and wherever it occurs. Such permanent legislation will permit local school authorities to make their plans in advance without waiting each year for the Congress to pass temporary relief legislation.

And now let me tell you about the Federal employees' compensation amendments of 1949. This bill was also reported out of the Committee on Education and Labor and passed by Congress in the last session. It is a law to provide for Federal employees who get injured as a result of their work. Who are these workers? Many of them are your neighbors and friends—the man who delivers your letters or from whom you buy your stamps at the post office is a Government employee. So is the food and drug inspector who protects you as a consumer against filthy food and impure drugs. So is the mechanic who works on airplane motors at a Government air base. So is the weatherman and the typist at the Census Bureau. Every year about 11,000 of these people have an accident on the job. They can't work while they are injured. They or their families would suffer if we didn't provide for their loss of wages. If you were laid up, could your family survive very long without help? Under the old law a permanently and totally disabled man could never receive more than $116 a month for himself and family. Many injured workers received much less. The first thing we did in the new law was to increase the benefits for injured workers and for their families in case of death. A man with a wife and children now can receive up to 75 percent of his former wages if he is completely and permanently disabled. If he is killed on the job his family has similar protection. Here's an actual case: A few months ago a postal employee picked up a parcel-post package. The package exploded in his hands. The employee, a 29-year-old veteran, lost both arms up to the elbows and the sight of both eyes. He will never work again but his wife and several young children will be protected under the new law. The second thing we did in this new law was to include postmasters and other groups of Government workers not covered under the old law. By the way, the old law hadn't been revised for 22 years, in spite of great increases in wages and living costs during that time. The third important thing in the new law is a schedule of payments for permanent disabilities such as injury to the face or head, loss of hearing, loss of a hand, a leg, or a thumb. It goes all the way from a 15-week benefit for loss of a fourth finger to a 312-week benefit for loss of an arm. This new law has been in operation for only several months. The first case decided under it was that of a 77-year-old disabled man who suffered complete loss of his right eye from a flying nail while working as a carpenter for an Army general depot in 1944. Under the amended law, his present benefit check will be doubled for the next 160 weeks, and he will continue on the Federal workmen's compensation rolls as long as he has a loss of wage-earning capacity due to his injury.

Another important piece of legislation which has been reported out of the Committee on Education and Labor is the FEPC bill. This prohibits discrimination in employment because of race, religion, color, national origin or ancestry and creates a Fair Employment Practices Commission to prevent discrimination. A great deal has been said about the efforts of southern Members of Congress to delay or prevent consideration of this bill. I would like to say now that it is my firm conviction that in spite of everything our opponents may do I will be able to force a vote on the FEPC bill at this session of the Congress and that it will pass the House.

Before closing I want to mention that since February 7 the Committee on Education and Labor has been in executive session considering a bill to authorize an appropriation of funds to assist the States and Territories in financing a minimum foundation education program of public elementary and secondary schools, and in reducing the inequalities of educational opportunities through public elementary and secondary schools and for the general welfare. This bill is better known as Federal aid to education. I believe that this bill will be reported out of the committee at this session.

Let's Deliver Two Blows for Democracy in the Pacific

EXTENSION OF REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. MANSFIELD. Mr. Speaker, the people of the United States of America have taken their stand at the head of the forces of freedom in the world's war of ideas. They look to us here in Congress—their spokesmen and representatives—to make the thrusts and lay home the blows which will win the fight for men's minds.

It occurs to me that some of us here in Congress are overlooking one of the most effective weapons we could use in the ideological war in the Pacific. It is a weapon which will cost us practically nothing yet will win us the good will of all of the people whose home shores border on or lie wholly within the vast Pacific Basin. I refer to statehood for Hawaii and Alaska.

The peoples of the Pacific know of Hawaii and Alaska. They know that they are parts of the United States. They know, too, that for many years the United States has held Hawaii and Alaska at arm's length and has denied them full fellowship in the great Republic of which they are a part.

We are in an all-out struggle with imperialistic Russian communism. The burden is on the United States to defend the democratic way of life. We must convince the world that freedom and democracy, not communism, is the road to a better future for the individual.

What good is it that we talk of equality under law while we continue to deny the full measure of democracy to many of our own people—the people of Hawaii and Alaska?

The Fifty-sixth Congress, which in its infinite wisdom, enacted legislation to annex Hawaii to the United States, saw the picture in the Pacific through the eyes of prophecy. The Fifty-seventh Congress, which in 1900 enacted Hawaii's

Organic Act, made Hawaii an integral part of the United States. Thus, the great Americans who occupied the seats of Congress at the turn of the century envisioned the future of democracy in the Pacific. They gave Hawaii a government of law after the pattern of the governments of the States and the Territories of the American Union. They incorporated Hawaii into the Union as a Territory—a State in being. They made the citizens of Hawaii American citizens.

The annexation of Hawaii occurred in 1898. The United States was then engaged in a war with Spain. We needed the islands as a forward base for operations against our then enemy. Spain was lodged in the Philippines and the small islands of the central Pacific. Hawaii was vital to our young Nation in its war with Spain.

Almost 50 years later, in World War II, the Territory of Hawaii again was vital to our survival in the Pacific. The attack on Pearl Harbor brought home to the people of the United States the knowledge that Hawaii is America. Without Hawaii our survival as a free Nation is threatened.

When the bombs fell on Pearl Harbor the American people cried:

"We have been attacked."

There was no one in America to say:

"Wait. Hawaii is not yet a State."

The 45 United States who welcomed Hawaii into their Union at the turn of the twentieth century have now increased to 48. Arizona, New Mexico, and Oklahoma, then Territories, have since been admitted to the Union.

The American flag has flown over Alaska since 1867. In 1912, the same year that Arizona and New Mexico came into the Union as States, Congress enacted Alaska's Organic Act.

In World War II when the Japs threatened the Aleutian Islands, they threatened the United States. Americans did not draw back and say, "Oh, no. The Japs haven't attacked the United States. They have merely attacked an organized territory."

Today, as we start the second half of the twentieth century, Hawaii and Alaska are far more vital to the United States than at any time in our history. Our only potential enemy is already strongly entrenched on the shores of the western Pacific and is making ominous movements into southeast Asia.

The great Americans who purchased the vast Territory of Alaska and who annexed the Hawaiian Islands saw the future of our great country better than many of us do today. They viewed democracy as an ever-expanding force always moving forward to greater horizons.

As we sit here in this, the Eighty-first Congress, and debate and discuss the admission of Hawaii and Alaska to statehood, more and more of the people on the shores of the Pacific are forsaking—involuntarily—the ways of freedom. While we look with hesitancy at the aspirations of our fellow Americans in Hawaii and Alaska, Russia through its satellites and puppets is taking the millions of Asia to its bosom.

Is it not logical, therefore, that these parts of the United States—Alaska and Hawaii—be taken to our bosom? Is it not logical at this juncture of history that we should bind our own people into our Union with all of the ties at our disposal?

Those who are joining up with the new Russian imperialism are the unwitting victims of a false ideology. They are succumbing to a new superweapon—a monstrously false philosophy which destroys the faith of men in the free way of life.

It is our job to fight this false ideology with the true ideology of democracy. There is no better weapon than truth and ever-recurring professions of faith in the things we stand for.

We must be careful, however, to see to it that what we do matches up to what we profess and what we say. And it is therein that I derive my zeal for immediate action on statehood for Hawaii and Alaska.

To my way of thinking, the time has come for Americans to make a profession of faith in democracy in language the world will understand. The time has come for us to get on the street corners of the world and announce that Hawaii and Alaska, at their own request, have been admitted into the American Union of sovereign States as equals. They have both earned this right.

Prayer at Lincoln Day Banquet at Lock Haven, Pa.

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include one of the most beautiful and inspirational prayers I have ever had the pleasure of listening to. It was offered by Rev. Burleigh Peters, pastor of St. Johns Lutheran Church, Lock Haven, Pa., at the Lincoln Day banquet sponsored by the Clinton County Republican Committee, Friday, February 10, at which our own beloved GEORGE A. DONDERO, of Michigan, was guest speaker:

Ever blessed God, our heavenly Father, through whose righteous will everyone of us is sustained and whose goodness is evident upon every hand, we truly call upon Thee at the beginning of this meeting. Let it not be in a perfunctory manner but rather with a deep sense of our great need of Thee and Thy wisdom and counsel as colaborers with Thee in the execution of Thy divine plan for good, sound government in our beloved land. Help us as instruments in Thy hand to raise up honest, God-fearing men as aspirants for public office. Endow those in office with a new clarity of comprehension to see, e'er the night time comes upon them and us, the exceedingly dangerous road we are traveling toward the socialistic welfare state. Teach us again, O God, to lift up our eyes unto the hills, for from whence shall our help come but from Thee? May our Nation truly turn from the materialistic gods of our day unto Thee, the true God, the God of our fathers, who can and will give again unto our people the good grain rather than the empty husks of glorified promises. As our forefathers trusted so implicitly in Thee in the forests primeval and in that faith so wisely laid the foundations of our great Nation and whose labors have been abundantly blessed with high honor, great integrity, and immense wealth among the nations of the earth, so give use now the wisdom, determination, and vision to arrest this tragic descent e'er we slip entirely from off that foundation into utter ruin. Be pleased, O our Gracious God, that never shalt Thou see nor history record, the collapse of the United States of America because she lost her faith in Thee.

May this meeting and all similar ones in this campaign be animated by the spirit of true statesmanship rather than just politics. The hour our Father, has arrived in our history when all true, wholehearted, God-fearing, Americans must stand up and be counted that this Government perish not from the earth. May all be done here tonight in the interest of good government.

Even the food of which we shall soon partake came from Thee. For it we are truly thankful, and may the deep interest in our good American heritage prevail now and henceforth. We pray in Jesus' name. Amen.

Roles of Alaska and Canada in National Defense

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. BARTLETT. Mr. Speaker, I call attention to the following editorial, under leave to extend my remarks, which appeared in the Norwich (Conn.) Bulletin:

JOINT DEFENSE WORK

Alaska is so close to Siberia that it is impossible to ignore the possibility of a drive into the North American continent at that point, and it is folly to set up a first line of defense in Europe without giving thought to what might happen if Alaska should be left unguarded or poorly so.

While Alaska is American territory, Canada adjoins it and cannot fail to recognize that any invasion of Alaska would, or could, mean the overrunning of Canada unless there are adequate means established to prevent it. The logical defense therefore lies in strengthening Alaska, but it is impossible for Canada to overlook the need of looking carefully to its defense plans in that direction.

Through the cooperative efforts of the two countries which have maintained peace for more than a century, and which have worked together loyally when they have had to face emergencies created by others, the means of preventing war through defense sufficiently strong to discourage an aggressor must be recognized on this continent as well as across the Atlantic. Much dependence will naturally be placed on the United States but there is a part which Canada should and doubtless will take. The joint maneuvers which have been arranged in Alaska indicate that the Dominion is giving thought to its responsibility.

Valley Authorities

EXTENSION OF REMARKS
OF

HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks, I include a statement on valley authorities from the Government Affairs Legislative Daily of the Chamber of Commerce of the United States of America for January 10, 1950, as follows:

A little cofferdam was thrown across the Tennessee River in Alabama before the close of the First World War.

Later—30 years and hundreds of millions of dollars later—it develops that the little dam was the start of the now controversial valley authority idea.

What happened?

In 1933 President Roosevelt told Congress that something must be done to protect what had become a great national investment in the Muscle Shoals area. He asked Congress to create a Tennessee Valley Authority which would have the "broadest duty of planning for the proper use, conservation, and development of the natural resources of the Tennessee River drainage basin and its adjoining territory for the general social and economic welfare of the Nation."

"If we are successful here," he concluded, "we can march on, step by step, in a like development of other great natural territorial units within our borders."

Congress, a little later that year, did create the TVA, avowedly for primary purposes of flood control and navigation.

In 1934, the President said that the valley authorities were going to be copied in every State in the Union before we get through.

Today, the Tennessee Valley Authority has developed into an octopus whose tentacles have spread over seven southeastern States.

Taxpayers in every State of the Union have contributed to a Government corporation which has fixed assets, before depreciation, of $811,300,000 as of June 30, 1948.

Most people are well acquainted with the activities of the TVA, the one existing valley authority. They know, for example, that TVA generates and sells power to consumers and industries in the valley; that the Authority administers flood control, navigation, and soil-conservation programs which in other parts of the country are administered by the Army engineers and the Department of Agriculture; and that the Authority subsidizes the production of fertilizer in competion with an established fertilizer industry.

The average person also knows that the economic function of generating electrical energy in the valley is performed by the Federal Government and not by people through their self-supporting business institutions, and that power is sold at about half its cost.

The earliest proponents spoke of the valley authority idea as an expression of the need for a body politic intermediate between the State and the Nation, as an expression of the inappropriateness of existing State boundaries, and as an outgrowth of the federalizing tendency which requires closer articulation between State and national activity.

The planners, however, saw no chance that State boundaries could be changed or that a regional body politic could be superimposed upon these States. They needed a way around these difficulties and the valley authority idea provided a method.

In 15 years, there has been no fundamental change in the thinking that lies behind the valley authority idea. The idea now, as then, is Federal-regional planning with the plans administered by a single agency directed by three men. Furthermore, those selected to direct this enterprise must start free from loyalties to competing Federal bureaus, and then, as now, it was considered imperative that the three men have a public, rather than a private point of view.

Fifteen years ago, the planners called for national control of all the running waters of the United States, from the desert trickle * * * to the rushing flood waters of the Mississippi. This is still a number one objective.

Thirteen years ago these planners were united in their opposition to the Corps of Engineers and the Bureau of Reclamation. "Neither the Corps of Engineers nor the Bureau of Reclamation," they wrote, "should be assigned to this new regional operating service." They believed that the idea that people and existing agencies could work together for the common good was an out-moded, tradition-bound, and static concept. Instead, the unique character of the task and its key importance called for the creation of a new and special Federal operating agency.

If the essence of the valley authority idea is three Federal appointees controlling a region, then there is a pattern for the future under which 48 States with their governors and legislative bodies are to be forced into the background to make way for government by 27 men to be appointed—and thereby controlled—by one man.

The question for all citizens to decide is whether under the pattern of the valley authority idea this Nation would still be the United States of America.

OMNIBUS LEGISLATION

The valley authority idea was incorporated in two different types of bills in the first session of the Eighty-first Congress—bills which are still pending, of course. The first is an omnibus measure which would create nine valley authorities to blanket the Nation.

Representative RANKIN, Democrat of Mississippi, introduced a bill (H. R. 894) which would create these regional operations:

Atlantic Seaboard Authority.
Great Lakes-Ohio Valley Authority.
Tennessee Valley Authority.
Missouri Valley Authority.
Arkansas Valley Authority.
Southwestern Authority.
Columbia Valley Authority.
California Valley Authority.
Colorado Valley Authority.

This omnibus bill is designed to (1) "develop, integrate and coordinate plans, projects and activities for or incidental to" navigation, flood control, reclamation, and generation, sale and distribution of electric power; (2) improve living conditions; (3) aid commerce among the States; (4) strengthen the national defense; (5) conserve water, soil and forest resources; (6) stabilize employment and relieve unemployment, and (7) otherwise protect and promote the national interest.

Under H. R. 894, the President would appoint an administrator for each authority, except TVA which would continue in its present form. The Authority could acquire by purchase, lease or condemnation any property it deems necessary. Regional policies would be made to conform to national policies with due regard for regional and local requirements. Each authority would consult and cooperate with the States insofar as practicable.

Should Congress approve any such project, the Authority could at once proceed with its construction and operation. To encourage wide use of power and water, the authority could acquire or build or maintain such canals and transmission lines as it deems necessary. Priority in purchase of the power would be given to States, districts, counties and municipalities.

Although each authority could determine how it kept its accounts, the United States Comptroller would be required to audit the accounts at least once a year. All receipts of the authorities would go into the United States Treasury.

One of the most important of the provisions appears near the end of the bill. It reads: "There are hereby authorized to be appropriated from time to time such sums as may be necessary to carry out the provisions of this act."

THE CVA BILL

The second type of enabling legislation that has been introduced is the actual bill for creation of one of these valley authorities.

It is S. 1645 which was introduced last spring by Senator Magnuson, Democrat, of Washington, for himself and Senators Kefauver, Democrat, of Tennessee; Humphrey, Democrat, of Minnesota; Chavez, Democrat, of New Mexico; Murray, Democrat, of Montana; Langer, Republican, of North Dakota; Douglas, Democrat, of Illinois; McGrath, Democrat, of Rhode Island; Pepper, Democrat, of Florida; Sparkman, Democrat, of Alabama; Hill, Democrat, of Alabama; Green, Democrat, of Rhode Island; Wagner, Democrat of New York; Taylor, Democrat, of Idaho; Gillette, Democrat, of Iowa; Johnston, Democrat, of South Carolina; and Johnson, Democrat, of Texas.

An examination of S. 1645 is appropriate because it could serve as a pattern for authorities for other sections of the Nation. It provides the basic legal structure for regional authority control, but leaves much to the uncertainties of administrative ruling and interpretation.

1. Declaration of policy: The Government's policy in the CVA would be to use the area's water, land, forest, and other natural resources for fostering commerce among the States, strengthening the national defense, developing the lands of the United States, and for promoting the general welfare. The area to be included would be the United States portions of the Columbia River, its tributaries and watershed areas, plus major portions of Washington and Oregon not in the watersheds.

2. Creation of a Government corporation: A Columbia Valley Administration would be created under the general supervision of the President of the United States. It would have all authority of the Federal Government and would me managed by a 3-man board of directors appointed by the President, who would name the chairman. Two of the three directors would have to be bona fide residents of the region and all members would have to profess a belief in the feasibility and wisdom of the act. The board would be responsible directly to the President—not to Congress.

3. State and local participation: The Valley Administration would seek the advice, assistance and participation of the people to the fullest practicable extent. There would be consultation with appropriate representatives of the people; advisory boards could be set up as may be necessary or appropriate and their comments shall be included in the annual report.

The Administration would be free from any State or local control even from the jurisdiction of State courts, for any proceedings brought against it in a State court could be transferred at once to a Federal district court. That provision is especially important where water rights are involved.

4. General powers: The Administration would construct, operate, and maintain projects for navigation, flood control, conservation of land, development of resources, and generation, transmission, and disposition of power and for the execution of such other

UNIVERSITY OF MICHIGAN LIBRARIES

responsibilities as are vested in the Administration pursuant to this act. To the extent found necessary or appropriate, the Administration could acquire real and personal property.

The Administration would undertake experiments and practical demonstrations. It would determine the necessity for the character and amount of its expenditures and how they should be paid. It could work with other agencies.

Construction work would be carried out by contract so far as practicable, but the Authority could do the work itself in emergencies or unusual circumstances, when no reasonable bids are received or where necessary to provide certain employment for maintenance crews.

5. Coordination of plans: The administration would prepare plans and projects and programs for consideration of the President and Congress. Such operations would provide for water use and conservation, improvements by irrigation and drainage, conservation of wildlife, recreational facilities, and for the use of the mineral, forest, land, water, fish, and other resources of the region as a balanced and stable economic development. The CVA directors would decide whether proposed projects are economically sound and in the public interest. All programs, projects, and activities would have to be effectively coordinated with related national policies and programs.

6. Sale of power: The Administration would sell electric energy so as to encourage its wide use at low rates, with preference to Federal agencies, States, and their political subdivisions, and to cooperatives. The CVA directors would build or acquire transmission lines. Sale of power to private utilities would be under contract, which contract could be canceled by CVA upon written notice (not more than 5 years) and which could contain such terms and conditions as the Administration may deem appropriate for carrying out the purposes of the act. Thus it would be possible to starve many existing companies.

7. Reclamation provisions: The Administration, the bill says, would proceed in conformity with State laws relating to the control, appropriation, use, or distribution of water used for domestic, irrigation, mining, or industrial purposes, and in the acquisition of land incident to the construction of dams, reservoirs, etc. But, nevertheless, it could condemn water rights appurtenant to such land. And the reclamation activities would have to be consistent with national agriculture policies.

The Administration would establish the maximum size of farm units within each project for the reclamation of lands * * * but no farm unit shall contain more than 160 or less than 10 acres of irrigable land. No benefits from such projects could be made available to owners of lands whose individual holdings exceed the maximum area unless the owners agreed to sell acreage in excess of maximum.

8. Financing: A Columbia Valley Administration fund, of unspecified size, would be created in the Federal Treasury with funds Congress would appropriate. The CVA could then tap those funds in such amounts as the Administration may deem necessary. The money would be repaid over a reasonable period of years, receipts from projects and activities may be used to repay project costs. No major project could be undertaken unless it was included in the CVA's annual budget program which Congress must approve, but need do nothing more.

9. Tax payments: The CVA would attempt to avoid impairment of the finances of a State because of removal of property from its tax rolls. In fact, the CVA could be required to make tax payments to States but under certain conditions which CVA directors would determine. CVA would be guided by, among other things, the amount of increase in taxable values and other benefits arising from the activities of the Administration. The CVA property franchises and income would be expressly exempted from any taxation. Here is a case where the taxpayer decides how much taxes are due, if any.

10. Personnel: The Administration would be required to employ and fix compensation of officers, employees, attorneys, agents, and consultants without regard to the civil-service laws.

11. Legal interpretations: This act shall be liberally construed to carry out the purposes of Congress to provide for the disposition of and make needful rules and regulations respecting Government properties entrusted to the Administration, provide for the national defense, improve navigation, control destructive floods and promote interstate commerce and the general welfare.

THE ISSUES

The Chamber of Commerce of the United States is strongly opposed to regional authorities.

It believes that if the Columbia Valley Authority were to be established, it could lead to creation of a network of authorities blanketing the country.

The valley-authority idea should be rejected for the following principal reasons:

1. The carefully developed and coordinated planning for resource development that has aided the Pacific Northwest over the years would be abandoned in favor of a three-man board of political appointees, responsible only to the President.

Eighty-six major power dams already operate in the Columbia Basin. There are 32 major irrigation dams. And there are 12 major multipurpose dams. More than 500 miles of flood-control levees protect the land. About 8,800,000 acres are under irrigation.

Seventy percent of the basin's forests are maintained on a scientific perpetual-yield basis. Sixty percent of all farms are in soil-conservation districts. A much higher percentage of farms are electrified than in the TVA. The average use of electricity is higher and the average price is lower.

Four years ago Federal and State agencies formed the Columbia Basin Interagency Committee to coordinate development of the area.

It is understandable, therefore, that the idea of creating valley authorities comes not from the people, except from some locals of the CIO and the Farmers' Union, but from the Federal Government. The Governors of Oregon, Idaho, Washington, Nevada, and Wyoming—five of the States that would be affected—have expressed opposition to CVA.

2. The Supreme Court has interpreted broadly the powers of the Federal Government involving water rights and reclamation development. It has decided (a) that the Federal Government has full power and authority over all navigable streams; (b) that Federal control of navigable streams extends to the entire basin of the streams; and (c) that if State laws conflict with Federal control over local waters, the State law need not be complied with and may be ignored. Thus, State rights could be obliterated. Directors of a valley authority could determine upon a course, consulting only as much as they deemed necessary with States, regional groups, and local communities. The value of interstate compacts could be wiped out.

Language in the various valley-authority bills is vague. So until the identities of the three board members became known and they had a chance to put their own interpretations on that language, it is difficult to appraise precisely the extent of the problems that would be created. As former Chairman David Lilienthal of the TVA once said publicly: "TVA, if it were politically managed, could become a curse to this valley."

3. Former Interior Secretary Harold L. Ickes, while favoring valley authorities under certain conditions, frankly told a Senate committee during hearings in 1945 on a Missouri Valley Authority bill: "There is before you a major step in the basic reorganization of the Government of the United States as we have known it for the 150 years. * * * It is a theory that strikes at the very roots of present Government organization."

4. An authority, in the form of a Federal corporation, having substantial autonomy, would be free of many of the legal and congressional checks and restraints.

Projects probably could be initiated at the will of the authority directors. Their purpose could be that of the directors only. Accounting methods would be determined by the directors. They could deal with whom they pleased. They would have broad powers of eminent domain and condemnation. They would not be subject to regulation by any State or Federal commission.

Usually Congress authorizes the construction of separate projects in an area. Subsequently it has to appropriate the actual money for them. The valley-authority idea would give Congress only one chance to gage the merit and cost of new construction. And Congress would be asked to set up a general authority found in the Treasury which CVA directors could tap at will.

5. Untold new billions of dollars in taxes would have to be raised. Estimates are that CVA would cost at least $3,000,000,000 for water projects only and the Missouri Valley Authority about $6,000,000,000 for water and agricultural projects. The valley-authority idea contemplates nine authorities to blanket the country.

6. Flood control versus power development: Anyone who can build dams can control floods. One of the first, if not the first, jobs of an authority is to supply power. The fuller the reservoir behind a dam, the more power. The emptier the reservoir when floods come, the more flood control. There's a major conflict—unless a dam is large enough to adequately serve both purposes.

NATIONAL CHAMBER POLICY

The Chamber of Commerce of the United States believes that the Federal Government has a responsibility for the development and use of water resources for navigation. So have the States and so has private enterprise. The chamber has repeatedly reaffirmed its advocacy of national legislative policies which recognize the interests and rights of the States in water utilization and control and afford full opportunity for States and their communities and private enterprise to participate in the development and operation of water-resource projects.

The national chamber holds that the Congress is responsible for the wise management of this Federal interest in water and that it should establish, and adhere to, a consistent and progressive water-resource policy for the United States, defining the scope of the duties and obligations which the Federal Government legally can and should assume. Only the Congress should authorize the projects and assign their construction and operation to the appropriate Federal agency.

The national chamber advocates such development only upon sound engineering and economical principles and in aid of well-defined purposes. Complete cost analyses should be maintained for all beneficial uses. Commercial uses, such as power, should provide for taxes, interest, and other cost factors common to business enterprise.

The Comptroller General should be vested with jurisdiction over the application of all

revenues for multipurpose projects, with authority to require the devotion of such revenues to the purposes prescribed by Congress.

All local agencies, both public and private, should, by participating in a regional power pool, have opportunity to distribute and sell surplus power at Government dams.

The national chamber believes that under the foregoing principles applicable to water-resource development, there is no place for regional authorities. Therefore, it has declared repeatedly that:

"Federal regional authorities are opposed. They substitute Federal controls over natural resources by encroaching upon or displacing State jurisdiction. The extension of the regional idea to the entire country would mean the eventual disregarding of State lines and a new subdividing of the United States on a regional basis. Local and State government would be subordinated to centralized Federal control, not only of the waters, but also, in large degree, of the national economy. The Federal Government should continue to use its regularly established agencies, operating on a national basis, for activities properly belonging to the Federal Government in relation to natural resources."

The Progress of Communism

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to enclose the following article from the Exeter News-Letter, Exeter, N. H., Thursday, February 2, 1950, by Mr. James P. Lynch:

THERE IS NO ROOM FOR INTOLERANCE

(By James P. Lynch)

If we were to tell some people that they were supporters of certain communistic doctrines they would be provoked. Yet in their everyday life, they unconsciously, by word and deed, embrace, to a certain extent, the progress of communism. The number is relatively small but, nevertheless, there are such contributors.

If these people would only realize that when they carry the torch of intolerance the only one who gains satisfaction is the master of the Kremlin. We have seen in the past several months many cases of intolerance among the wealthy and also among the poor. Internal friction in America is of grave concern to each and every one of us. Some have forgotten that we all are created equal.

The United States has been going forward and we cannot afford to allow intolerance to creep in and halt such progress. Our forefathers came here because they knew it was a land of freedom—a land of love and brotherhood. Regardless of what kind of blood ran in their veins—Irish, English, Scotch, French, Polish, Spanish, Swedish, or the many other nationalities—they left behind a land that could in no way compare with the freedom-loving United States. Here they were given opportunities. They were interested in tolerance. They had seen the pitfall of a Europe where the peoples from one nation were set against another. In fact, within the borders of their own states they were accustomed to disunity. Love thy neighbor was just three words to many of them.

The big gap between the words "hate" and "love" was quite descriptive of some of their homeland. When they arrived in this country they did not want the word "hate" accompanying them, they were interested only in the word "love."

When hate creeps in, regardless of the methods used, division follows. Harmony is in good company when it goes along with the word "freedom." However, when hate and fear step into the picture harmony steps out. Also the government weakens and as a result the future problems are similar to those that confronted the Old World.

Every American, whether he speaks in a small private group or in a large public gathering, should be denounced vigorously if he is guilty of committing the crime of intolerance. Race and creed hatred shall never be a substitute for love and respect.

Many months ago a young Jewish lad from Lynn, Mass., was the victim of assault by some of his little neighbors. The boy was beaten because he was a Jew. It was very unfortunate that such a deplorable incident occurred. To put the entire blame on these youngsters would be wrong inasmuch as the parents of these children were more to blame.

This case created considerable comment not only within the Commonwealth of Massachusetts but also throughout the country. People denounced the tactics. The remarks made by Oscar J. Toye, Massachusetts department commander of the Jewish War Veterans, were of an exceptional nature and they are a great contribution toward the much-needed promotion of tolerance in America. Toye sent a letter to the little Jewish boy, Laurence Goldstein, and gave him some real good American advice. In part of the letter he stated: "Your job and mine is to see to it that the few people who do not understand America do not get hold of it and spoil it."

That was advice from a prominent person to a little youngster. It was advice that each and every American should follow during his everyday life. We need not be reminded that during recent years there are certain radicals that have been doing their utmost to get in top positions throughout the Nation. One bad apple can spoil a bushel. This youngster's severe beating because he was a Jew should be a challenge to the people to stop the spread of the deplorable tactics used by those that have no love or affection for their fellow man.

No man or woman cares to have his religion or his ancestry torn to shreds. It is regrettable when people stoop so low that they are able to instill such debauchery into the hearts and minds of their little youngsters. This was the case in Lynn. We all realize children must be taught, and the youngsters that beat up this little boy because he was a Jew would never have acted as they did if they were not subjected to such slander in their own homes.

Commander Toye proved that instead of being intolerant, the best way to win your case is through love and affection. In discussing the uncalled-for assault he pointed out that the youngster received an undeserved beating at the hands of ill-bred and misinformed youngsters who were brought up in an unwholesome atmosphere.

Unwholesome atmosphere and ill-breeding is not necessarily confined to any certain section of a city or town. The rich and the poor sections alike can produce the condition.

It should not be necessary to remind those bigots that under the American way of life people make no distinction between Christian or Jew, white or colored. Also, we in America have the right to pray to God as we wish and to express our minds as freely as we want.

Toye tried to persuade the youngster of the dire need for love and kindness in winning the battles throughout life and to use force only when forced to do so. As he stated: "I am very much afraid that because of these boys who beat you and called you 'Jew,' you might be led to believe that you were assaulted by Christians. I want to say to yourself that these boys were not Christians. Christians do not hate others or beat them. The Christian religion, like the Jewish religion, teaches love for one another. I do not care of what parentage these boys are or to what church they go. When they did what they did to you, they took themselves out of the Christian faith and out of any other religion, and they have no further right to call themselves Christians."

This could be so aptly put in referring to a portion of the adults that go around, day after day, ridiculing people because of their religious beliefs. The time they spend on such a deplorable cause could be used to much greater advantage in attending to their business of bringing up their children in the spirit of love and respect for other human beings, regardless of race, creed, or color.

These religious and racial agitators more recently have used a form of approach that is below gutter level. It has been brought out by commentators and newsmen during the past few days. In all cases it has been denounced because of its filthy falsifications, and use of false signatures. It is a letter supposedly signed by a Catholic attacking some Protestant missionaries. However, the Official Catholic Directory has no record of a Catholic priest by the name employed. The directory lists every recognized Catholic ecclesiastical organization, as well as every Catholic priest in the Nation. The attempt to denounce the Catholic Church and to make use of such a vicious and false letter, the object of which is to foment bigotry and discord, has little place in the American scheme of things.

Unfortunate, too, for the promoters of tolerance, is the bickering of certain lecturers and preachers. We heartily agree that it is much wiser and much more beneficial to be for something than against everything.

Those that are willing to participate in spreading bigotry and the false teachings of hate are un-American. They belong to that small poisonous group of people who live in America but who are very definitely our real enemies.

Many people probably feel that these intolerant disciples will sooner or later quiet down and the threat will be just a memory. It would be far better to be assured that intolerance could be erased for the well-being of ourselves and the children of America. Check it before it is too late. The elimination of hatred in America will be a severe blow to those that desire to spread the communistic doctrine in our land. We could write a thousand laws to combat the infiltration of such wicked tactics but the greatest contribution to the cause is for the freedom-loving people to denounce such radicalism right in their own section, before it starts to spread.

Pottery Industry Faces Collapse

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. HILL. Mr. Speaker, a serious condition exists in one of the important segments of our vast and diversified field of industrial enterprise. It has developed as a result of the reciprocal trade agreements negotiated by the State Department at Annecy, France, last summer. It brings to our attention another example of the lack of vision and incom-

petence of the Department in handling economic affairs. As I will show you, the continuation of such policies will lead to a wider rupture of the industrial life of the Nation, with increasing unemployment and other economic distress.

The situation I particularly wish to emphasize and call to your attention concerns pottery and glassware. Factories manufacturing these products in Ohio are closing down. Many workers who have grown up and are skilled in this type of work are being forced out of their jobs. It is time for the Government to arouse itself. Japan and Europe are copying the designs and manufacturing pottery and glassware items, and sending them to this country. Because of the low tariff rates agreed to by the State Department, an unfair competitive situation has arisen which is putting our workers and factories out of business.

As you know, it also has been reported that 80 percent of the reciprocal-trade agreements made at Annecy affected farm commodities. When the farmers wake up to this, I am sure you will hear a roar of protests and demands for a quick reversal of this policy.

With this section of our industry already hard hit, it is the start of a trend which will grow from these ill-considered trade agreements.

Figures from the United States Tariff Commission of December 1949 clearly show what is happening. Total imports of table and art glassware for the first 11 months of 1948 amounted to $2,121,-305; for the corresponding period of 1949 they amounted to $2,665,692.

Is it any wonder the domestic glass business is folding up?

Before this snowballs into greater proportions and rolls into other fields of industrial activity, let us take action. And at the same time do something to help the workers and the glass and pottery industry.

I also wish to include with my remarks a copy of the letter I have written to my colleague, the Honorable WRIGHT PATMAN, chairman of the House Select Committee on Small Business, of which I am privileged to be a member, urging that the committee take the lead in investigating the reasons for the economic plight of the pottery business and initiate efforts to help all small business to assure us a strong, expanding economy.

The letter follows:

FEBRUARY 7, 1950.

Hon. WRIGHT PATMAN,
Chairman, Select Committee on Small Business, Washington, D. C.

DEAR COLLEAGUE: In this letter, I wish to express two things: First, my disappointment over the statements made in the release on Small Business Organizations.

I have two reasons for objecting to this: First, I never understood that the committee was authorized to release such a report. The copy of the minutes I have show that it was not authorized. The report also is superficial and makes unwarranted insinuations in regard to the firms investigated.

My second purpose in writing is: I believe the committee should take constructive steps to solve the problems of small business. For instance, the pottery and glassware industry in Ohio is closing down. Men are losing their jobs. I feel that part of the economic problems of this industrial enterprise can be laid at the door of the State Department as a result of reciprocal trade agreements entered into without knowledge, consent, or advice of Congress. When small business like this is being hurt, I think it is our duty to investigate the causes, and to help find a solution, if it is at all within our power. I contend that the committee's efforts should be along this line, rather than trying to pin a tag on some group of alleged business representatives. Our job is to help small business, and to see that legislative action is taken to assist this important part of our economy. Small business—no matter in what field it functions—is the backbone of our great economic heritage.

Because of the serious economic plight of the pottery and glassware industry, I am making a statement on the floor of the House bringing it to the attention of the Members. I believe that the Small Business Committee could be of great assistance by cooperating and taking the lead in starting an investigation to dig out the facts and, if possible, get this small-business enterprise back on its feet.

Thanking you for your interest and consideration, with kindest regards, I am,

Sincerely yours.

(Copy to Hon. CHARLES HALLECK.)

What Mr. Truman's Yearly Expenditures Mean to Each County in Nebraska

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. CURTIS. Mr. Speaker, in the tables listed below there are three columns that show each Nebraska county's share in this year's Federal expenditures, in the total national debt, and the 1948 assessed valuation of the land in each county.

Mr. Truman's budget calls for $42,439,-000,000. The proportionate cost of this spending budget for each county is based on the 1948 consumer-income figures.

The President estimated the Federal debt will be $263,300,000,000 at the end of the coming year. Each county's share of the national debt is based on population estimates of January 1, 1949, and a per capita debt of $1,759.

The assessed valuation for the farm lands shown in the third column is taken from State reports in the Library of Congress based on 1948 appraisals.

To illustrate what is involved in these tables let us take the case of my home county, Kearney. Based on that county's income they will have to pay $1,251,900 as their share of the coming year's spending of the Truman administration.

Kearney County's share of the national debt, on a per capita basis, is $11,081,700, while the value of all their farm land, and it is distinctly a farm community, is $9,890,745.

It is estimated that Lancaster County, with the greatest assessed land worth in my congressional district, will have to pay $38,220,200 as its share of 1 year of spending by the Truman administration. The value of the farm lands in Lancaster County—and they are very fine lands—is only $28,038,235. Lancaster County's share of the national debt, based on a per capita estimate, is $189,972,000.

It will be interesting for the citizens of Nebraska to inquire of their county treasurer how much tax he collects for schools, roads, townships, counties, and State governments in 1 year.

County	Share of fiscal 1951 Federal expenditures of $42,439,000,000	Share of Federal debt of $263,800,000,000 at end of fiscal 1951	1948 assessed land valuation

A Plea for Our Domestic Mining Industry

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. WHITE of Idaho. Mr. Speaker, a most critical situation exists in our domestic mining industry, and for the information of my colleagues I am appending hereto the statement of a representative of the small-mine operators of Idaho before the Committee on Ways and Means, House of Representatives, on February 9, 1950:

STATEMENT OF WILLIAM R. NEW BEFORE THE COMMITTEE ON WAYS AND MEANS, HOUSE OF REPRESENTATIVES, FEBRUARY 9, 1950

My name is William R. New, of Hailey, Idaho. I am secretary of the Idaho Small-Mine Operators Association and director of the bureau of public relations of the western division of mining activities.

Our entire national economy is based on the production of raw materials, the products of our farms, mines, and forests.

The combined income of agriculture and mining is always one-fifth of our national income; and every time there is a reduction of $1,000,000,000 in mining or agriculture, our national income must drop $5,000,000,000.

No segment of our society can escape the effect of this economic law. It affects the retailer, the wholesaler, the manufacturer, and wage earner alike.

Labor may think it can escape this law by keeping wages high, but the percentage of reduction in our national income will be reflected in unemployment.

The farmer may think he can escape it by subsidies, but unemployment will bring reduction in consumption and continue to pile up huge surpluses.

Seventy percent of our metal mines are now closed and this will adversely affect employment and every line of business.

While our own mines are being closed, we are importing foreign metals which will not be available to us in the event of war; and I want to say very frankly to you that unless something is done to put our mines in operation, we are going to lose the next war.

In closing, let me emphasize that rather than reducing the present depletion allowance of 15 percent, I believe it should be increased to at least 25 percent to compensate the mines for the exhaustion of their mineral resources.

Let me emphasize again the fact that unless legislation is enacted, making it possible for our mines to go into full production, we cannot hope to win the next war because we cannot depend on the importation of foreign metals.

Surrendering Just a Little

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, the one worlders, those who would commit us to some form of a united states of the world, are out in the open.

Here are excerpts from the testimony of Justice Roberts which would seem to indicate that, to him at least, the writers of the Constitution, those who have fought so hard to preserve us a Nation, have just been mistaken.

The testimony was given before a committee of the other body last week and is as follows:

STATEMENT OF THE HONORABLE OWEN J. ROBERTS, FORMER JUSTICE OF THE SUPREME COURT, PRESIDENT OF THE ATLANTIC UNION COMMITTEE, ON THE ATLANTIC UNION CHARTER RESOLUTION BEFORE THE SUBCOMMITTEE OF THE UNITED STATES SENATE COMMITTEE ON FOREIGN RELATIONS, WASHINGTON, D. C., SENATOR ELBERT D. THOMAS, CHAIRMAN OF THE SUBCOMMITTEE

Senator KEFAUVER. Mr. Justice Roberts.

Justice ROBERTS. I have proposed this statement more or less as a lawyer would prepare a brief. * * *

Senator WILEY. You are sure it is not a judicial decision, instead of a lawyer's brief. * * *

Justice ROBERTS. No, sir. It's an advocate's presentation. * * *

This resolution requests the President to appoint citizens delegates to such a convention and invites the other six nations who joined with us in the Atlantic Pact to send similar delegates. In other words, it is the old pact of the Convention 1787, when the States sent their citizens to discuss the thing and report back.

They are wondering when the Marshall plan runs out what is going to happen to them. They are wondering if we are going to be a little too late with military aid to them; in fact, I don't see how military aid to western Europe will prevent Russian overflow of the whole country, but, be that as it may, they are none too happy, and I think this sort of a great gesture would give moral courage all over the world.

Senator WILEY. You make yourself very clear. However, while your argument is persuasive in that regard, we had, of course, to fight the Civil War to determine whether we were a Union or not. South Carolina and other States made up their minds they had a right to step out, and do otherwise what we asked them to do. Now, you run into a situation that is apparent in Europe today, and I think it goes to the will and desire, and what you might call the faith of these people, who have been pounded through the centuries.

Senator THOMAS of Utah. I have only one question, Mr. Justice; it embraces all the others. Assume that you and I are appointed delegates to the conference, assume we have drawn up a constitution, or whatever you want to call it, and we have come back to report to our country. Will you dare come back with me if I go on the floor of the Senate and say that we have made arrangements whereby I have got to admit that the flag is removed from the Capitol?

Justice ROBERTS. I don't see why you should say that.

Senator THOMAS of Utah. I shall explain more, because it is the most important point of everything. The fact that the veto was put in the United Nations was made very, very emphatic by a speech in Congress that the flag remains on the dome of the Capitol. Now does it remain?

It remains because we have the power to veto any action suggested. Now, are you and I brave enough without that veto power? [Laughter.]

Justice ROBERTS. I am; come on. [Laughter.]

My goodness, now, listen Senator, if we are in the trenches on that——

Senator THOMAS of Utah. That is your whole point.

Justice ROBERTS. All right; if we are in the trenches on that, then God help you for finding the funds to support our national economy. Go to it, if you can. I don't think it can be done. Just because that flag means, you can't tell us what to do, ever, then we have got to play a lone hand in the world, we can't do it.

I come from a little country county called Chester County, Pa., and we have a slogan out in Chester County, and it is this: "The United States against the world, Pennsylvania against the Union, Chester County against the Commonwealth." We are still flying the flag of Chester County there. It isn't down off the courthouse, but we like the United States flag pretty well, too. We are liable to hang them both out of the same window.

Senator THOMAS of Utah. That is the point I want to make, Mr. Justice, that these ideas about a flag, and about the loss of sovereignty, about the inability to say "No" to something are purely fictional.

Justice ROBERTS. Absolutely.

Senator THOMAS of Utah. And they have been fictional ever since the concept or the naming of the concept of sovereignty came into existence but, at the same time they have occupied the minds of men to such an extent that we have been able to go forward.

Justice ROBERTS. Absolutely. Take another fictional thing: Suppose you and I come back from this convention and present a plan, a frame, think of the debate which will go on in this country—all the way down to the cracker barrel in the country store; my Senator is for it; mine is against it; mine is for it for this reason; mine is against it for that reason. We will have the greatest political debate, since the debate in the States when the Constitution of the United States was ratified, and we will have some real education and people will forget what you are talking about, that this flag is all-important, and nobody must ever tell us where to get off. It is fictional and they have got to learn and they don't know.

Senator THOMAS of Utah. Can anyone help me from this situation I got myself into. [Laughter.] I am exceedingly glad to have brought out the point.

Justice ROBERTS. Yes; I am glad you did.

Senator THOMAS of Utah. The objections of any union, whether it is under the auspices of this resolution or any other resolution, are objectives to prevent war, and the techniques which we will use will not be absolutely necessary in a practical way,

although they may be very new in a fictional way, and the world that you are trying to make a survey of is a world to find out if men are willing to give that much of their own which they have always given to bring about a better world.

Justice ROBERTS. That is right.

Senator SMITH of New Jersey. I may say, Mr. Justice, there is one problem you will have, of course, in getting the people convinced of the wisdom of this and that, and that Uncle Sam still might be paying the bill for the group instead of for himself.

Justice ROBERTS. That is a false position.

Senator WILEY. I just want to ask one question along the line that Senator SMITH brought out, because I am very much interested in this flag incident. To me, instead of "taking down the flag," if you bring about peace and security, you are raising the only flag in the world that stands for that.

Justice ROBERTS. Right.

Senator WILEY. Now, then, I assume that when you and Senator come back from that international pow-wow with the other folks, then you will come back with the rather restricted notions as to how you start out this big show with the idea that you could amend it, as we have amended our Constitution.

Justice ROBERTS. Certainly.

I don't know what strange poison there is in this nationalism, but even in military things you know how difficult it is to get the defense forces to agree on command, on policy, and material. The British have one idea, we have another, and they fight as they battle about it; in the meantime Rome burns, and when you get to economic things it is even worse. What is there in nationalism that so poisons the ability to be broad and to see the other fellow's point of view?

Senator MCMAHON. Mr. Justice, if you would have sat with me on the hearings on the Genocide Pact for 4 days—I am afraid that you might think that the difficulties in the way of bringing this proposal into being were superhuman in character, that is you need superhuman strength to overcome it.

Justice ROBERTS. As I said to Senator THOMAS, the chairman, I do not know what the poison is that is in nationalism, etc. I would be glad to have any Senator suggest any alliance that has worked satisfactorily for any length of time. They fall apart.

Senator KEFAUVER. I believe Dr. Urey is the witness. Before he proceeds may I say, Mr. Chairman, Senator GILLETTE is not on the committee but one of the sponsors. Senator GEORGE is expected to comment.

Justice ROBERTS. How long is our economy going to stand this—What will we do? I think that we will have to become a Fascist state with a Fuehrer, we will have to be regimented, and we will have to stop eating well. We will have to be rationed. In other words the Russian system is the perfect system for keeping your feet under you for military purposes, because you can starve the proletariat.

I question the propriety of Congress stating what is the foreign policy of the United States.

Mr. Speaker, there is also printed herewith a letter received by me, which refers to this same testimony:

NATIONAL SOCIETY OF NEW ENGLAND WOMEN,
Washington, D. C., February 8, 1950.

Hon. CLARE HOFFMAN,
House Office Building,
Washington, D. C.

MY DEAR MR. HOFFMAN: At last the true aims of the one-worlders has come to light as predicted by you in your able address of 1942, Don't Haul Down the Stars and Stripes.

On February 8, former Justice Owen J. Roberts, president of the Atlantic Union Committee, which advocates eventual world government and partial world government now, in testifying before a subcommittee of the Senate Foreign Relations Committee said that he would be willing to take the flag down from the Capitol. Chairman THOMAS asked him if he would be brave enough to return with him as delegates from such a proposed "Federal convention" without the veto power and prepared to take the flag down from the Capitol. Justice Roberts replied, "I would. People will forget this flag is all important, they've got to learn. I am completely puzzled by this poisonous nationalism."

This Owen Roberts and Joe Stalin are working toward the same goals. Both would take down the flag from the Capitol of the United States.

Once the American people understand that the aims of the one-worlders parallel the concurrent lines of the Communists and that it means unconditional surrender by the stroke of a pen, they will have no part of the scheme to sell America down the river.

There are many kinds of traitors. To work to break down the Constitution of the United States is treason. Benedict Arnold was a piker—he only betrayed West Point. This is a betrayal of the United States Government from within.

An investigation should be begun at once as to who these people are who want to haul down the Stars and Stripes millions of past and present patriots have given their lives and their sacred honor to raise and keep flying. Let our veterans' organizations know the true aims of the one-worlders and we predict the feeling of inspired nationalism and patriotism, the same spirit to which we owe the very existence of this great Nation, will overwhelm the poisonous traitors in our midst.

Very sincerely,

MADALEN DINGLEY LEETCH
(Mrs. William Dougal).

Socialism in Action Proves Disastrous

EXTENSION OF REMARKS
OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. SHAFER. Mr. Speaker, the administration's farm program, better known as the Anderson plan, is nothing in the world but socialism in action. It is the result of the Government interfering with the free market and the attempts of a few men to substitute their planning for the workings of a free market.

Everybody — literally everybody — is losing by such a stupid course on the part of our Government. Let us remember that the New Deal started these various "plans" to cut down acreage and, in effect, to kill little pigs and plough under cotton and corn. It was economically absurd then and everytime the so-called "farm program" is "improved upon," the whole thing becomes more and more absurd.

The taxpayer loses because he is taxed heavily, whether he is a city man or a farmer, to pay for support prices, and all this other foolishness. He also loses because he has to pay higher prices for the products he consumes. By running the price of food up, or holding it up, the Government is unjust both to the farmer and to the consumer in the city. Because laborers have to pay more for their food, they strike for higher wages. These higher wages are reflected in the cost of the manufactured articles which the farmer must buy. Hence, nobody wins in the long run, on the average. It is true that certain individual farmers and certain extremely fortunate union members, and labor leaders, win by all the confusion, and because of factors not here examined, but by and large everybody loses by the Government intervening in the free market.

Right now, we are witnessing a most amazing spectacle. The United States Department of Agriculture is engaged in a subtle campaign to make people angry at the present stupid farm program so that it can sell its even more stupid program—the Brannan plan. The Brannan plan is not a farm plan, but a plan further to socialize the farmer. Let's call it what it is.

The Republicans, instead of defending the present economic miasma, ought to use the Department of Agriculture statistics to sell a better way to the American people. That better way would consist of lowering support prices, or doing away with them in most instances, particularly on cotton, and to work toward a free market again in agriculture. That better way would consist of promoting the Department of Agriculture as a service institution, to carry on research to help farmers grow and market produce, not administer plans to rule the farmer and drive him into economic slavery. The Republicans should stand for freedom of price at every possible stage in the economy, for only by working back toward the free movement of goods and services can we get away from the present course, which is toward more and more control over every segment of the economy, and, of course, over every action of a man's life.

We are faced with a perfectly ridiculous situation today, because of the operations of the Fair Deal in the farm field. With close to 3¾ billions of dollars tied up in supporting crops—and more supporting to be done yet—the Government surplus problem continues to grow.

The plans to destroy up to 40,000,000 bushels of potatoes, while our tariff policies encourage the import of Canadian potatoes, simply serve to dramatize the troubles a policy of socialism in action brings about. At the same time, we learn that Uncle Sam will continue to buy eggs, to support the price, although the Government already has more than $100,000,000 worth of eggs.

Then we come to the problem of storage. This can be seen by looking at the situation in grains. The Commodity Credit Corporation is building still more of the huge storage bins which already dot the country. When the new wheat harvest starts, farmers will dump surplus grain grown in 1949 on the Government. The CCC, with 375,000,000 bushels of storage capacity, has all but 40,000,000 bushels of the space filled. So it will have to buy space for another 100,000,000 bushels.

All of these facts merely high light the utterly ridiculous economic position into which the Fair Deal has worked us. Mr. Brannan might think that he can sell

more socialism by peddling these facts to the newspapers, but the facts really indicate that Uncle Sam should be finding ways of getting out of the farm field, instead of getting deeper and deeper into the mess he has created. The object of a Federal program—if one ever is inaugurated by emergency or necessity—should be to restore some degree of normalcy and then to withdraw. As the New Deal and Fair Deal programs have worked through the years, they have pulled the Government more and more into the farm business until today the Federal Government has the greatest stake of any organization in the farm field. It has more employees than ever, more money invested than ever, and more problems than ever, because none of its programs ever has solved a problem, but merely have created new problems to compound the evils we face.

The Republicans ought to spend a great deal of time on a specific farm program that will assure farmers a fair income for a transition period, during which both the people and the Government will work to get the Government out of the farm business and to keep it out.

The Rest of This Century Belongs to the Mississippi Valley

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. HÉBERT. Mr. Speaker, Lloyd J. Cobb, president of New Orleans world-wide famous International House, recently made an address in St. Louis, which commends itself for consideration of the entire American people.

I commend it to you:

We are met today, here on the banks of the Mississippi, at one of its oldest ports, in a conference predestined to stand in history when the greatness of this gigantic valley is discussed. We are on the threshold of another half century of life on the Mississippi, reflecting on its past, considering its future, and planning actively for its continued present development.

With a sense of awe, I pause to consider with you the majesty, the vastness, the limitless wealth and indescribable power of this, the world's largest and richest river valley. Its potential is beyond the comprehension of mere man, and yet we are the trustees of its development and of its ultimate destiny.

Today, Old Man River is on the march in world affairs, from its headwaters in Minnesota to the bayous of the Louisiana Delta, with trains, trucks, and tows carrying the goods of the valley and the products of foreign lands up and down the Mississippi and its tributaries. New industries are locating on the banks of these same rivers, and river towns of a hundred years ago are rubbing the sandman's harvest from their eyes and stirring anew in the rebirth of river activity.

At the southern end of this great valley, the port of New Orleans is busy handling its foreign trade with the nations of the world, wharves loaded with five times the amount of cargo of 10 years ago.

This valley consists of two component parts, the Middle West, as you here call it, and the South, or as we call it, the "world of opportunity."

Your own intimate knowledge of the Middle West constrains me to pretermit a discussion of this vibrant area, but I do want to talk to you a little about the South. No true son of Dixie could or would pass up an opportunity to tell you with swelling pride and ringing voice about what is going on here today.

Many Americans unfortunately think of the South as too many of our national magazine editors picture it—a backward, unreconstructed and involuntary appendage to the Union. Without delving into conditions as they existed not so many years ago, I should like to tell you briefly about our new South.

First and foremost, we have dismissed our detractors and apologists and we have gone to work. Our people, both white and black, are on the march toward lofty horizons of desire and accomplishment. Together, under God's canopy of mutual understanding and good will, they are moving with reasoning and courage toward new goals of achievement not even imagined only a few years ago.

In agriculture, some of the greatest progress in this Nation is being recorded in an unspectacular but solid manner. At Louisiana State University is the world's greatest plant breeder, a horticultural genius surpassing Luther Burbank in the benefits he already has contributed to mankind. He is destined soon to be recognized as the most accomplished botanist the world has ever known. His influence has created hundreds of millions of dollars of new agricultural wealth throughout the South. Great scientist that he is, his work has been little publicized, but any southern planter, white or Negro, knows about Dr. Julian Miller and acknowledges almost with reverence the things already done to improve his standard of living.

The nostalgic, lackadaisical days of yesterday are fast being forgotten all over the Southland. Natchez was a catchword in a song for southern dreaminess a few years ago. Today it is a booming metropolis, and one of the South's future great industrial cities. The same holds true for Baton Rouge. Memphis will be as big as St. Louis now is within 20 years. Dallas, Atlanta, Birmingham, New Orleans, and Houston will pass a million population with a decade or two, and several will be as large, or larger, than the Chicago we know today long before the century is over. On the Gulf, Beaumont, Pensacola, Mobile, Corpus Christi, Lake Charles, Port Arthur, Tampa are all great cities and expanding fast.

There is more undeveloped rich farmland in Louisiana than in the entire United States, outside the South. Water—now scarce in many agricultural areas—is one of Louisiana's problems, too. But her problem is too much water—not a lack of it. When adequate drainage projects are fully established, millions of acres of rich delta soil, washed down from the Middle West, will flower into profitable agricultural production.

There is probably enough water daily flowing by New Orleans' door to irrigate all of the United States needing irrigation. Someday we will find the answer to this problem of too much water here and not enough there, and the South's water system will carry supplies by pipe line to areas now on the verge of exhaustion.

The forests of the South are being restored through intelligent reforestation, developed by our own people. Our universities are on the march, nurturing and training the leadership we so long lacked. Our natural and mineral wealth exceeds any other like area on the face of the earth.

The South is God's chosen land. It is on the threshold of its greatest years. Only an area so rich could have withstood the exploitation it has undergone, and yet Southern resources are practically untapped. In a large sense the South is still virgin country. We have the climate, the resources, the people, the energy, and now we have found the initiative to forge ahead intelligently.

We are doing so. Throughout Dixie the whistle of the donkey engine on the peckerwood sawmill has given way to the whistle of factories which have sprung up everywhere. There is an upsurge of industry in the South that will amaze you all when the 1950 census statistics have been analyzed.

Today we have virtually solved our greatest problem in the South—the Negro problem—but the solution has come without gratitude for many unwise, radical Northern influences. Unlike a decade ago we have Negro schools today, many of them new, which are just as fine and up-to-date as any white school, and infinitely superior to many white schools of a few years ago.

In New Orleans, or in any other large Southern city, you will find equal opportunities and impartial justice for both races. Age-old prejudices, fanned by intolerance, are being abolished. There are 25,000 registered Negro voters in New Orleans today, and in a recent city election, in which 90 percent of the city's registered voters, including these Negroes, went to the polls, there was not a single instance of molestation or interference. Here is a practical demonstration of tolerance and mutual understanding.

Our very progressive mayor did not spurn the Negro vote, nor did the other major candidate. Both spoke openly before Negro rallies and solicited this vote just as actively and intelligently as they did any vote. We still have as many problems as anyone else, and some of them are very hard ones, but we know or are working out the answers, and rapidly we are moving to set at rest our most vexing difficulties. We need patience, time, and tolerance, and we have it in 95 percent of our Southland.

All over Dixie today I can show you farm land that can be bought for thirty to fifty dollars an acre and which is just as rich and just as productive as the finest corn lands of Iowa.

The cattle population of the Nation is about 80,000,000 for approximately 150,000,000 people. Argentina has 40,000,000 cattle, or half as many, for only 16,000,000 people, or about one-tenth of our population. A benign climate, improved pasture, and solution of our traditional feed-deficiency problem today make the South the great cattle frontier of the future. No area on earth can produce better cattle or produce them as economically.

Cheap land in the South will not last long. The South is filling up rapidly with people who are finding out about these opportunities, are wondering why someone didn't tell them about these things a quarter or half century ago. In defense, if for no other reason, the southerners are digging in to take advantage of their opportunities.

Stop anywhere in the South today and you will find that city or town is on the march. Stop in any coastal town or city and you will learn that if it has no port, one is being planned. I know at least half a dozen Louisiana and Texas cities well in from the sea that are planning ports. The same is true in Mississippi, Alabama, and Florida.

Our South, and the Middle West, with which it is interdependent, form the world's greatest, richest valley—the true land of opportunity. This last half of the twentieth century belongs to us. Before it passes, the Gulf of Mexico will be our new frontier and Latin America our greatest market.

The Gulf coast is the real gold coast of America, the golden horseshoe cutting up from Mexico and running around to the Florida beaches. Within a few miles of its shoreline are sufficient resources, energy, and op-

portunity to enrich all of present-day America. Another few years and we will find a hundred million persons living adjacent to this coast and looking to it as their outlet to the sea.

Foreign trade to them is a reality today just as it will be for everyone in this Nation within a few years.

New Orleans calls itself the international city and has always had an international outlook. It is that viewpoint that I want to explain and pursue now to the conclusion of this talk. I will not be too long.

It is as the gateway to the rich Mississippi Valley—the link between that valley and the world—that New Orleans has thrived and prospered through more than two centuries. It was the Nation's leading port a century ago when the whole valley was piling its docks with cargoes of furs, grain, and cotton. It suffered with the rest of the South during and after reconstruction. It was only within the last decade that a reorganization of its administration along businesslike, nonpolitical lines, and a new awareness by its leading citizens of the importance of foreign trade combined to put into motion the international trade-development program which today serves the Mississippi Valley with New Orleans, the second port in the Nation.

You are all familiar with what we have been doing along these lines, but let me tell you about two results of this work which are of far-reaching consequence and importance throughout the valley.

The first has been to bring producers of this great heartland of ours closer to foreign markets and the producers of other lands. Time was when our Mississippi Valley was considered the home of isolationism, and our merchants and producers thought along jingoistic lines of "buy American" and let the world shift for itself. A great war and an atomic age have changed isolationist thinking. We thank our own efforts in bringing together men of good will and business desire from all over the world have had some part in changing the thinking of those who believed foreign trade meant nothing to them.

St. Louis, Minneapolis, St. Paul, Chicago, Little Rock, Kansas City, Louisville, Pittsburgh, Cincinnati, and the rest today are all just next door to cities all over the world.

It was my good fortune 3 weeks ago to lead a party of 40 fine midwestern and southern newspapermen to Panama and Peru on the occasion of new nonstop flight service from New Orleans to Panama. Returning, we had supper in Lima and 12 hours later, after only one stop, this regular service put us in New Orleans in time for breakfast. We could have lunched in St. Louis, Indianapolis, or Chicago. Today, a 3,000-mile flight is an overnight journey, like a pullman trip of a decade ago.

Within another decade every major city in the Mississippi Valley will be an international city, with an international airport or seaport. Using jet-propelled machines, flights will leave St. Louis with the first stop Brazil or Honolulu or take off from Minneapolis-St. Paul nonstop for Calcutta or Tokyo. Chicago will have direct nonstop service with Europe and Africa, and we will call the whole world neighbor.

This is not fantastic dreaming. These things are coming very soon, and it is well to consider them now. This shortening of distance and tightening up of the world is of greatest significance to our once isolationist Mississippi Valley area, especially in transportation and air-borne cargo.

International airports open all kinds of possibilities for our big cities, with international houses and trade marts similar, in their way, to our own twin organizations in New Orleans. Foreign trade zones also then become a possibility, where goods from abroad may enter and be stored, processed, or handled in any way short of manufacture without paying duty until taken out to enter, technically, the United States.

Our international development program at New Orleans is based entirely upon the productivity and buying capacity of the Mississippi Valley—not on our port itself. New Orleans is but a service station on the highway of international trade—a gateway, receiver, forwarder and handler. We are trustees for the great valley with our port, but without products of the valley to handle, or markets of the valley for goods from abroad, our foreign trade would wither like grapes on the autumn vine.

This land between the mountains which we call the Mississippi Valley is the future of America. This is our land, our valley, now coming into its own in development. Here is the last frontier of American industry—raw materials, labor and power. Here, too, lies the richest agricultural land under cultivation in the world. This is the heart, the backbone, the future of America. The east dominated the first half century. This second half belongs to us. This fact we accept with confidence and pride. We must lay our plans now for the next 50 years and the transcendental development which they will bring.

In the South we have great confidence in our Mississippi Valley as a trade area and area which will make our gulf ports the world's greatest. It is this confidence which has delineated our actions in New Orleans over the last few years and which has sent us on missionary trips through the valley selling world markets and foreign trade in the cities and towns of 24 States. As a result, thousands of firms, large and small, which had never thought of trade in anything but terms domestic, are now inquiring about foreign markets, channeling part of their production abroad and imparting noncompetitive goods. We are balancing the world's trade picture and bringing about a true and lasting peace based on mutually profitable world commerce and international understanding at both a business and cultural level.

The second result of our efforts is that this new interest is not all one-sided. The nations of Europe, Asia and Latin America are, in turn, taking a second look today at the great Mississippi Valley and realining their trade plans, both export and import to include this area. Habitually through the years they have thought too much of America in terms of the Atlantic seaboard and New York. This great interior of ours was an unknown quantity which they felt was little interested in them and in which they, in turn, were little interested.

But the Mississippi Valley today is very much in the minds of foreign nations as a market place for their goods and source of supply for products they need. The valley, in its great industrial cities, produces everything these nations are seeking—farm machinery, heavy equipment, automobiles, appliances, textiles and a host of other products eagerly sought in the markets of the world. At the same time, these nations' industry is underway again and they are eager to place their goods in our rich valley markets.

Trade commissions which had comfortably established themselves in New York are awaking to the tremendous trade potential of this valley. Numerous consulates—Sweden, Belgium, Italy, Great Britain, Norway, Switzerland, to name only a few—have opened trade offices in connection with their consulates in New Orleans and are sending men up the valley to study and develop new markets in our towns and cities. Harold Wilson, president of Great Britain's Board of Trade, recently made a swing through the valley, and in speeches in England now urges his nation's exporters to "go West" when they seek to sell in the United States.

Belgium is a graphic example of this new interest in the valley and how it is paying off. A year ago its exhibit opened at the International Trade Mart. So successful were Belgian exhibitors that this year the exhibit's size doubled, additional exhibits were opened in Chicago, Kansas City, and Dallas, a new consulate was established in Kansas City, and a band of twelve trade prospectors has been hired to comb the valley from north to south to develop additional markets.

Too long the world has considered the United States as one market, rather than a series of markets with different likes and dislikes. Now it is awakening to this thriving and prosperous valley of ours, and we are awakening to foreign trade. You need only look about at the international clubs, trade organizations, language classes and other manifestations of this interest in your own cities to sense the new international feeling. The Mississippi Valley World Trade Conference, now in its sixth year, brings hundreds of foreign traders from all over the valley to New Orleans annually, when a decade ago such an organization probably could not have mustered a hundred, or even be organized.

Here again, it has been the great Mississippi system of inland arterics which has enabled us to carry out this program of an awakening of international trade. Millions of tons of foreign trade move down the Mississippi and its tributaries annually to the wharves of New Orleans, and other millions of tons move up river to new industries along its banks, using the rubber from Africa, copper from Chile, tin from Bolivia, bauxite from Guiana, mahogany from Central America and Africa, and numerous other raw products.

A network of transportation services at favorable freight rates prevails in the valley basin and gives this area an added advantage in developing trade with foreign nations.

Four ideas that have enriched the life of this valley in the past quarter century came out of New Orleans, spawning ground of ideas. Now I seize upon this opportunity to suggest another.

Three of these ideas are realities. I refer to this very association, born and nurtured through infancy in New Orleans, then transferred to St. Louis. The same is true of the great National Cotton Council, the most successful venture in public relations for greater consumption of a crop that the world has seen. It, too, came out of New Orleans and is now domiciled in Memphis.

The third was International House, permanently located in New Orleans. Only 5 years old, it is the South's most famous civic institution, known and respected throughout the world, a vibrant new business voice of the South and the envy I assure you, of a great many cities in our own and other nations.

The fourth great idea has yet to flower. It is as great as the rest and it affects all of us. I refer to the Alexander seaway at New Orleans—the Tidewater Channel to the sea which this association has endorsed and which everyone has been busily engaged in promoting for nearly a decade. It is still on the drawing boards, unfortunately, desperately as it is needed. The Corps of Engineers has approved and recommended its construction but it has been put in deep freeze by the Bureau of the Budget. The Director of the Bureau of the Budget has taken such action in direct opposition to the recommendations of all the engineers involved in the study of the construction and, apparently, the needs of commerce in the area which is served by the port of New Orleans, and the requirements for national defense have also been given very little consideration. But I sincerely believe that we have the intelligence, the initiative, and the drive to bring this plan to reality within a few years. We then will see ships of any

draft moving out of the port of New Orleans through a man-made canal not subject to the power and vagaries of the great Mississippi River. This channel, when finished, will unlock the greatest port of this Nation, the port of New Orleans, your port and the great natural port of the Middle West and valley.

I come now to the fifth idea, which I shall preface by quoting briefly from a description I read recently by E. L. Corthell on the Mississippi River region, which was originally published in 1881. Corthell said:

"That giant stream (the Mississippi River), with its head shrouded in Arctic snows, and embracing half a continent in the hundred thousand miles of its curious network, and coursing its majestic way to the southern Gulf, through lands so fertile that human ingenuity is overtaxed to harvest their productiveness, has been given by its immortal architect into the jealous keeping of this Republic. The garden which it beautifies and enriches, contains 768,000,000 acres of the finest lands on the face of the globe; enough to make more than 150 States as large as Massachusetts. * * *

"This great valley lies between those parallels of latitude that are known to be most conducive to health and to the development of the mental and physical energies of man. In its capacity to produce the cereals, grasses, cotton, sugar, tobacco, hemp, vegetables, and fruits of every kind; in the richness and variety of its mineral wealth, the grandeur and value of its forests, its inexhaustible quarries; in a word, in all the natural resources which conspire to increase the wealth and power of a people, the bounty of providence has been most wonderfully manifested.

"The stream which in every direction penetrates this favored region, and is the grandest natural feature of North America, holds in its embrace the destinies of the American people. Sooner or later it must give to the dwellers within this valley, power and dominion over this whole immense continent. * * *

"The commerce of this great empire will, in time, certainly exceed that of any other in Christendom."

In our very early history the Mississippi River was recognized as the heart of America and most dominant trade artery within the Nation. It seems to me it is high time we commemorated and honored this great stream which has played such a vital part in our history, and I know of no better way to do so than for the forward-looking businessmen of St. Louis and New Orleans to get together and work out a plan.

Over half this great valley was acquired 147 years ago through the foresight of one of our great Americans, a man who constantly thought beyond his time or even the time of his children's children. I refer to Thomas Jefferson, who purchased the Louisiana Territory in 1803.

It seems fitting that we should begin to consider now some sort of celebration or observance of the one hundred and fiftieth anniversary of this act in 1953, and I have in mind an international-Mississippi Valley-trade fair linking St. Louis and New Orleans, two great cities which have grown from that purchase and from the river—the one with its industry and as the gateway to the West; the other with its foreign trade and as the financial center of the South and gateway to the world.

This is a project to which all of us in the valley might well give serious consideration. It would be the opportunity to show, alike, the wealth and progress and future greatness of our valley, and exhibit the products of the world which flow in foreign trade into this great area. St. Louis, now a seaport with steamships coming up the river to load and discharge cargo, could open the fair in the spring and summer, and it could close in New Orleans in the fall and winter, with the actual ceremony reenacted in Jackson Square on the same flagpole which bore aloft the Stars and Stripes in 1803 when the French Tricolor was hauled down.

It would be a time for a rededication of ourselves and efforts to a greater Mississippi Valley, and for proclaiming to the world that the Mississippi Valley has come into its own. The rest of this century belongs to us.

Statehood for Alaska and Hawaii

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Denver Post of January 16, 1950, by Secretary of the Interior Oscar L. Chapman, on the timely subject of statehood for Alaska and Hawaii:

Statehood for Alaska and Hawaii has been urged and reiterated until now the question is clearly posed before the United States. The addition of two new States is important everywhere but the expansion of the West through the addition of Alaska and Hawaii is of utmost importance to the Rocky Mountain empire and the Pacific Coast States.

The distance between Washington and Juneau or Washington and Honolulu might have been considered a barrier at one time, but today with our rapid communications it cannot seriously be considered an argument against statehood for either of our two great Territories. News travels in a flash. Messages can be delivered in an hour. A man can make the trip by regularly scheduled airplanes to either of the Territorial capitals in less than 24 hours. When Oregon and California were admitted to the Union and for scores of years thereafter, Sacramento and Salem were days and even weeks of travel farther away from Washington.

The populations of Alaska and Hawaii are thoroughly American. Alaska has been United States territory for more than 80 years and Hawaii for more than half a century. The English language is used throughout both Territories and each has a fine record in two world wars. The population of Alaska is about 100,000, which is twice as many as some of the States had at the time they entered the Union. Hawaii has more than half a million.

Both the islands and the northern territory are important to the United States. They have resources that enhance our economy. They hold promise of further development and, without question, can play a mature role in the family of States that make up our Federal Union.

In the West, the bestowal of statehood on a territory has deep significance. It has not been so long since 1912 when Arizona and New Mexico were admitted. The thrill that the people of a territory feel when this milestone in American progress is reached can still be remembered here. Reaching statehood, the bringing of responsible local government home to the people to be operated by them is an essential to the maturing of any part of our country.

In the Interior Department, which traditionally has been the sponsor of our Territories before the country, evidence crosses my desk nearly every day that shows the disadvantages of the territorial form of government to the people living there. Too many things have to be done by extremely long arms reaching out of Washington when the responsibilities of statehood have not been imposed. This deters the economic development of a region and it restrains the political development of the people. In a democracy, both of these results are bad.

The community of interest which binds Hawaii and Alaska to the West and to western attitudes is an established fact. For this reason, the Western States should take strong positions in support of the ambitions of the "little brother" Territories.

The southern terminus of the Alaska Highway is at Great Falls, Mont. The principal airlines operating to Alaska use the Seattle-Tacoma airport and the Minneapolis-St. Paul airport as points of departure. The shortest routes to the Orient are along these lines and through Alaska. In the future there will be air routes over the short route across the pole, again through Alaska. All of the new developments of the twentieth century have bound Alaska and Hawaii closer and closer to the States. There will be no reversal of this trend.

For all of these reasons, the slogan is "50 States in 1950."

Woodland Conservation

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony by me before the Agricultural Subcommittee of the House Appropriations Committee, Friday afternoon, February 10, 1950:

Mr. TALLE. Mr. Chairman and members of the committee, I appreciate this opportunity to appear out of turn in behalf of the forestry activities of the Department of Agriculture.

On other occasions I have stressed the importance of forests and forest products to the well-being and prosperity of our Nation. I know you are pressed for time, and I will go direct to the forestry measures which I consider of paramount importance today. I want to refer specifically to the items listed on page 448 in the budget for the fiscal year 1951, under the heading "Farm and other private forestry cooperation." I note that the Budget Bureau allowed an increase of about $850,000 for cooperation with the States in the procurement, production, and distribution of forest-tree and shrub seeds and plants. In Iowa we have one State-operated nursery at Ames cooperating in this program. There are similar State-operated nurseries in 40 other States growing trees for distribution to farmers and other private woodland owners. The tree-planting needs are tremendous—over 62,000,000 acres on private lands nationally and 650,000 acres in my State, Iowa. We are just now beginning to assume a fair share of the responsibility on behalf of the Federal Government. This increase, if allowed, will give added stimulus to a program which must be vigorously pursued each year if we are ever to plant the millions of idle and unproductive acres now found on our farms, ranches, and other privately owned properties that are suitable only for the growing of trees.

My State, Mr. Chairman, through the land-grant college at Ames—Iowa State College—is cooperating with the Department of Agriculture in an educational program which consists of demonstrating to the farmers the

advantages of wise management and careful protection of their woodland acres. We have two extension foresters now cooperatively employed. I heartily endorse this kind of educational effort and am most pleased to note that the Budget Bureau allowed an increase of some $150,000 for expansion of the work nationally.

I am disappointed, however, to see that the Budget Bureau did not allow an increase for farm foresters to work with the small woodland owners and thus make this educational work more effective. This cooperation with States and private forest owners in forest-management service work is essential if we are ever to secure good forest-management practices on the 261,000,000 acres of small, privately owned woodlands throughout the Nation. In my own State, we now have three farm foresters that go direct to the woods and advise the woodland owner in the proper husbandry of his tree crops. We have almost 80,000 small woodland owners in need of this direct service type of assistance.

Last year I introduced H. R. 2952 which gave special attention to the work of the farm foresters. A similar bill, H. R. 2296, was enacted and is now known as Public Law 392 of the Eighty-first Congress. The legislation provides increased authorizations for tree planting, extension educational work, and cooperative fire protection; but I regret to report that the section dealing with farm forestry which was approved by the House was dropped by the Senate. Fortunately, there is existing authority under the Norris-Doxey Act to provide additional farm foresters, and it is my considered judgment that any action this distinguished committee might take to increase the appropriation for farm foresters would be a step in the right direction. The in-the-woods type of service provided by the farm foresters appeals to me as the practical way of helping millions of woodland owners throughout the Nation to learn good forest-management practices.

Mr. Chairman, many people think of Iowa as being a prairie State with only fringe woodlands bordering the streams. But this is by no means the case. The value of Iowa's standing timber alone is over $75,000,000. Each year the woodland owners harvest more than $20,000,000 worth of forest products. Recreation, much of which centers in Iowa's wooded areas, is a $35,000,000 business annually. Moreover, the protection that Iowa woodlands afford the watershed of the Mississippi and other rivers is inestimable. Fire protection of a resource so valuable is only good common sense. Some 2,000,000 acres of the woodland in my State are now receiving organized protection under the provisions of the Clarke-McNary Act, but much of the timberland needs more intensive protection. Many forested areas in other States likewise have inadequate protection or none at all. Consequently, I am pleased to note that the Budget Bureau has allowed a $1,000,000 increase in cooperative forest-fire protection. I heartily endorse this cooperative effort by the States and the Federal Government. Our woodlands serve all of our people. Their products are found in every corner of the Nation. Protecting this great resource is an obligation we cannot afford to take lightly.

At this point I should like to read some brief excerpts concerning the need for increased funds for forest research and farm forestry which I have taken from a recent letter addressed to me by a distinguished conservationist, Mr. Don C. Kern, chairman of the forestry committee, Iowa division of the Izaak Walton League of America, as follows:

"The President's budget provided increases for some forestry activities, but it largely overlooked the needs for expanding forestry research and farm forestry. This is hard for us to understand since research must lead the way in all improvements in forestry practices. Also because farm forestry is the means for getting good forestry practices applied on over 50 percent of our country's commercial timberland which is a part of farms or in small forest properties mainly intermingled with farm lands. * * * Surely, if we are to undertake, with private and public funds, the restocking of our denuded lands with trees and grasses—the rehabilitation and maximum utilization of our forests and woodlands—we must first acquire the best possible knowledge of the most practical methods for doing the enormous tasks discussed above. Such knowledge can be secured only through intensive research—research that precedes and keeps ahead of the actual application of technological advancements in the woods and on the range. * * * The farmer and the man-on-the-street are talking economy and reduction of Government spending; but their thinking does not consider or imply that false economies in funds for restoration and conservation of such natural resources as our forests, lands, and waters should be imposed upon the people of America."

There is one other forestry item, Mr. Chairman, to which I wish to direct attention at this time. I refer to the deadly disease known as oak wilt which is spreading unchecked through the upper Mississippi River Valley. Cities as well as undeveloped regions are threatened with the extinction of their oaks. For example, in Cedar Rapids, Iowa, the city arborist estimates that 500 oak trees are dying annually—since 1941 this community has lost 40 percent of its oaks. The disease is destroying all species of oaks in Iowa, Minnesota, Wisconsin, Illinois, Indiana, and Missouri. Michigan's valuable timberland as well as the Ozark Mountain forests will be next to suffer from this devastating blight unless forceful steps are taken promptly to check it.

It is known that the disease is caused by a fungus which grows in the sapwood of the trees, but it is not known how the disease spreads. Insects, animals, and birds, or the wind may be the carriers; possibly it is spread through root contacts, or perhaps a combination of all these. In any event, for lack of funds the Department of Agriculture is unable to conduct the necessary research. Some work has been carried on in Iowa State College at Ames and in the University of Wisconsin at Madison. Also, the Iowa State Conservation Commission and other State conservation agencies have subsidized oak wilt studies. But the problem is so large and complex that individual organizations cannot set up a program of sufficient scope to meet the challenge. Furthermore, much valuable time can be conserved, and thousands of trees thereby saved, if duplication of research is avoided and if the Department of Agriculture and the various State conservation agencies are enabled to coordinate their efforts. The following extract from a letter addressed to me by Mr. R. K. Alman, city arborist, Cedar Rapids, Iowa, several months ago, offers a logical solution:

"The National Shade Tree Conference, the Illinois Association of Nurserymen, the American Association of Nurserymen, the Illinois Academy of Science, and the State Foresters of all the States where oak wilt disease is found are deeply concerned with this problem. We feel that an appropriation for research work on the control of oak wilt disease is of vital necessity, both to protect our shade trees and our forest resources in the upper Mississippi Valley. We feel that the appropriation should amount to $60,000, one-half of which would be used by the Division of Forest Pathology and one-half by the Division of Forest Insect Investigation of the Department of Agriculture. Your interest and assistance in obtaining these funds will be appreciated, both personally and by the associations mentioned above."

In line with this suggestion, I propose that your committee make the following increases in the Budget Bureau's recommendations: On page 423 of the Budget, under the item "Forest diseases," there is ample authority for the Forest Pathology Division of the Bureau of Plant Industry to make an investigation of oak wilt. I urge, therefore, that the committee provide $30,000 to be used by the Forest Pathology in studying the problem. On page 427 of the Budget, under the item "Insect investigations," there is ample authority for the Bureau of Entomology and Plant Quarantine to conduct oak-wilt research. I urge, therefore, that the committee provide an additional $30,000 for this Bureau to carry on similar studies in its field.

I want to impress upon the committee that the oak is extremely important as a lumber-producing tree, to say nothing of its value as an ornamental tree. As just one example of its importance, I may say that a friend of mine who recently visited the naval shipyards at Bremerton, Wash., in Puget Sound, informs me that the oak is still the chief material used in the construction of the superstructure of our small naval craft. I mention this merely to call attention to the importance of the oak in one of our national-defense items. It is used, of course, in thousands of other products with which we come in daily contact.

In conclusion, Mr. Chairman, I want to express again my appreciation for this opportunity to testify on the forest items which are of most urgent importance to Iowa and the other Central States. I speak for the people of the great agricultural Midwest in urging your thoughtful consideration of these problems. By taking adequate steps to preserve our forest resources we will not only insure an abundant supply of timber for future generations but we will also help to promote the conservation of our soil, our water, and our wildlife.

Abraham Lincoln's Philosophy of Government Should Guide Us

EXTENSION OF REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. CROOK. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD pertinent to what the birthday of Abraham Lincoln should mean to every Member of this Congress and every citizen of the United States.

Abraham Lincoln said:

The strongest bond of human sympathy outside of the family relation should be one uniting all working people of all nations and tongues and kindreds.

Abraham Lincoln was born of humble parentage; his log-cabin homes in Kentucky, Indiana, and Illinois were open-faced to partake of the invigorating elements of the wilderness and out of his arena of poverty his body, mind, and soul grew saturated with the essence of modesty, freedom, democracy, and an indefinable love for the integrity of the human soul and the sterling brotherhood of all mankind.

On this birthday of Lincoln, few statesmen, but many politicians, have extolled the virtues of Mr. Lincoln in their orations and have conspicuously

expanded their chests in claiming him as the pioneer of their philosophy, political policies, and their way of living.

Words are yet to be designed that would permit me to adequately describe the incalculable contribution that Abe, the orator, statesman, humanitarian, and emancipator made to our beloved Nation as he unconsciously groomed himself to die a martyr for the cause of liberty and humanity.

So, to the politicians that find such a revered character to eulogize, I extend my profound respect for your appraisal of Mr. Lincoln, just trusting that you will be fully stimulated to practice Mr. Lincoln's philosophy down the pathway of life in every day of living, be you Republicans or Democrats. If you will only follow Abe's doctrines, selfishness, greed, exploitation, deception, prejudice, and human slavery will fast vanish from our land to make way for honesty, righteous living, contentment of the minds, enhanced standards of living for all, respect for the integrity of the human soul, reenforcement for democracy and the economy of our Nation, conditions conducive to promoting a just and lasting peace for the troubled world and a brotherhood of man the like of which our Creator intended. Surely we should be willing to practice what we preach about Mr. Lincoln on February 12 of each year. Ladies and gentlemen, Abe, obsessed with unimpeachable ideals, pioneered the trail of unselfish and righteous living. May we, in our humble wisdom, follow his well designed concepts of government dedicated to the general welfare of all classes of citizens, regardless of race, color or creed, and continue to build our bulwark of democracy more grand and stately.

Lincoln, Jackson, and Jefferson Would Turn Over in Their Graves—FEPC in New York—White Americans Betrayed

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. RANKIN. Mr. Speaker, if Lincoln, Jackson, and Jefferson could come back here today and see what is going on, and what misrepresentations are being made in their names; see the attempts to destroy America by insidious communistic movements which they attempt to justify by misapplying quotations made by them, what a shock it would be to those great leaders.

You have just heard one Member speak here and quote Jefferson, whose words Lincoln used in his Gettysburg address, to the effect that all men are created equal. Jefferson was a slaveholder, and his words would not have been construed at that time to mean that there is no difference between the races.

I received an invitation to attend a Jackson Day banquet by paying the small amount of $100. If Andrew Jackson could come back here today and see the attempts being made in his name to further the cause of communism through the so-called civil-rights bill, or FEPC—the most dangerous piece of communistic legislation with which this country has ever been threatened—he would be shocked beyond measure.

If Abraham Lincoln could come back and read that communistic monstrosity, which certain individuals are trying to force upon the American people, and hear his name used in their arguments for its support, he would spurn such a proposition with utter contempt.

YIDDISH COMMUNISM VERSUS CHRISTIAN CIVILIZATION

These individuals who prate about slavery do not hesitate to join in this communistic movement to enslave the white people of America, to destroy the American way of life and to wreck everything for which the great mass of the American people stand.

You have an illustration now. Our Yiddish Solicitor General has taken it upon himself to go into the Supreme Court and misrepresent the American people by filing a brief in the Henderson case, for the purpose of trying to wipe out all segregation, and destroy our separate schools throughout the country. He pretends to be doing this for the benefit of the Negroes. He and his gang do not give a tinker's dam about the Negroes. They are doing the Negroes infinitely more harm than good. This is a part of the communistic program, laid down by Stalin approximately 30 years ago. Remember, communism is Yiddish. I understand that every member of the Politburo around Stalin is either Yiddish or married to one, and that includes Stalin himself.

They have murdered more white Christians in the Ukraine in the last 30 years than have been killed in all the rest of the world since the crucifixion.

Washington has just read the disgusting report of a little Yiddish woman lawyer here by the name of Ruth Weyand. A Negro woman sued her for alienating her husband's affections. She comes back now and says she has been married to this Negro for years.

This same Ruth Weyand has filed a brief in the Supreme Court of the United States in the Henderson case, trying to tell the decent white people of America what to do. I wonder if the Supreme Court of the United States is going to be misled by this element.

I was glad to note that my friend, Lloyd Benford, of Memphis, has banned the showing of any pictures of Ingrid Bergman. I hope the Christian people of America will all join in protecting their children from having her loathesome pictures paraded before their eyes now and hereafter.

Mr. Speaker, it is ridiculous for Members of this House to use the names of Lincoln, Jackson, and Jefferson in their argument for the passage of this infamous FEPC—as I said, the most dangerous piece of communistic legislation with which this country has ever been threatened.

In my speech to the House on February 13, 1947, I called attention to the fact that they had put this measure on the ticket in California and let the people vote on it. They beat it by a clear majority in every single individual county in California. The majority against it throughout the entire State was more than a million.

In that speech I said:

You simply destroy business with a measure like this. That is what the FEPC did here. Men have gone out of business all over the country in the last few years because of the persecution that was carried on by this outfit here in Washington, the personnel of which I shall insert later on.

A few people are going around urging us to pass it as a national law, to put everybody else in the same predicament. These people who are carrying on this racial agitation are using the Negro as a smoke screen. They do not give a tinker's dam about the Negro. They are not trying to help the Negro. They are doing them more harm than anybody has in the last 50 years, and the decent law-abiding Negroes know it.

But let me show you what they have done in New York, and let me give you some of the regulations or rulings, as they are called, and ask you if you would like to have them in your State. I want to ask the gentleman from Illinois, Mr. Dirksen, how he would like to have them in Illinois, or how you would like to have them in Ohio, Indiana, Pennsylvania, or in Missouri, or in any other State in the Union.

Here are the regulations, or rulings, issued by the State of New York. They are headed:

"State of New York Executive Department. State commission against discrimination. Rulings."

Here are the rulings:

I want to show you some things you cannot ask in the State of New York when you go to employ a man.

Remember that State has no gas, coal, or oil, and very little water power. The rest of the country does not have to go to New York, or to any other State to get what it needs in the years to come. The American people in every section of this country are in a position now to take care of themselves. You put this measure on in one State after another and you will simply penalize those States beyond reason, and when they ask you to pass it for the whole United States and put it on the entire American people, after the fiasco they have made of it here in Washington in the last few years, it is simply unthinkable to a man who knows what he is doing and has the interest of the people of the country at heart.

Here are some of the things you cannot do under the law of New York:

UNLAWFUL EMPLOYMENT PRACTICES BEFORE HIRING ANYBODY

Those words are written in capitals. Here is the first unlawful practice:

"Inquiry into the original name of the applicant for employment, whose name has been changed by court proceedings or otherwise."

If you inquire as to his name or what his name used to be you violate the law. You commit an unlawful practice. For instance, take this man who writes for PM, who calls himself I. F. Stone. His name was Isadore Feinstein, as Cordell Hull once pointed out. Suppose he comes to you asking for employment and you ask him that question. Then you will have committed an unlawful act.

Here is the next one:

It would be unlawful practice to make—

"Inquiry into the birthplace of the applicant for employment, the birthplace of his parents, spouse, or other close relative."

How would you like that in Iowa, Illinois, Texas, or Nebraska? In California I know

you do not like it, because you have just voted on it.

Here is the next "unlawful practice":

"Requirement that the applicant for employment produce a birth certificate or baptismal certificate."

That would be an unlawful practice under this FEPC Act in New York.

I was surprised to see Governor Dewey get his mustache in the wringer on this proposition. I do not see how he is ever going to get loose from it.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. What about this requirement during the war that every person employed in certain industries had to prove that he was born here before he could get a job?

Mr. RANKIN. Certainly. If we had had this law all over the country then, the Japs would have had a spy at the elbow of every man in a key position; so would the Germans, and so would every other enemy country.

I thank the gentleman from Illinois for his timely suggestion.

It is an unlawful practice in New York, under this law, to make—

"Inquiry into the religious denomination of an applicant for employment, his religious affiliations, his church, parish pastor, or religious holidays observed. Inquiry into whether an applicant for employment is an atheist."

Inquiry into whether an applicant for employment is an atheist is forbidden, although you may be publishing literature for the Methodist Church, the Baptist Church, or any other denomination.

Another thing, an applicant for employment—and I am reading from the rules laid down by this Commission:

"Applicant for employment may not be told that this is a Catholic, Protestant, or Jewish organization."

In other words, if you are in the business of publishing religious literature, you cannot even give him that information under this law which the gentleman from Illinois, Mr. Dirksen, now proposes for the whole country, including Illinois.

Here is another unlawful practice:

"An applicant for employment may not be told that the following holidays will be observed by the firm and no others, naming the holidays; e. g., Decoration Day and the Fourth of July, etc."

You cannot tell them under the laws, rulings, and regulations of the State of New York that they may observe the Fourth of July.

Here is another unlawful practice:

"An applicant for employment may not be told that employees are required to work Rosh Hashana and Yom Kippur."

Frankly, I did not know there were any such days until the last few years.

Another thing, it is an unlawful practice under this New York law to make "Inquiry into the complexion of an applicant for employment."

Inquire into his complexion and you are likely to get yourself tangled up with the law of the State of New York.

Here is another unlawful practice:

"Requirement that an applicant for employment annex a photograph."

That would be an unlawful employment practice. You are not supposed to know how he looks.

Remember, this is not in Russia, but in New York.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. And yet the State Department in order to grant a visa requires a photograph of the person to be presented with his application.

Mr. RANKIN. Certainly; and they ought to do so. Much as I respect the distinguished gentleman from Illinois [Mr. MASON], I certainly would not want to employ him unless I knew how he looked. If I had never seen him, I would certainly want to see his picture.

Here is another unlawful practice:

"Inquiry whether an applicant for employment is a naturalized or native-born citizen; the date when the applicant acquired citizenship; whether the applicant's parents or spouse are naturalized or native-born citizens of the United States; the date when such parents or spouse acquired citizenship."

You cannot inquire into those questions under this FEPC law in New York.

Here is another unlawful practice:

"Requirement that an applicant for employment produce his naturalization papers or first papers."

He may lie to you and tell you that he is a naturalized citizen, but you cannot ask to see his papers.

Another unlawful practice in New York is to—

"Inquire into the lineage of an applicant for employment, his ancestry, or national origin."

You remember a few years ago the Dallas News inserted an advertisement for a colored janitor, and this FEPC outfit down the street, ordered them to take it out, said it was an unlawful practice.

One member of this FEPC outfit here in Washington went into the office of Swift & Co., in Chicago. This FEPC man asked them: "How many Negroes do you have on your board of directors?"

The answer was "None."

Then the FEPC man asked him: "Why haven't you?"

That was the FEPC down here in Washington a few years ago before it died because a few radicals could not browbeat Congress into perpetuating it.

But it is now in force in the State of New York.

Here is another unlawful practice under the New York law:

"Inquiry into the location of places of business of relatives of an applicant for employment."

It is an unlawful practice to make—

"Inquiry into the place of residence of the parents, spouse, or other close relatives of an applicant for employment."

I am reading from the records at Albany.

Here is another unlawful practice:

"Inquiry into the maiden name of the wife of a male applicant for employment and/or inquiry into the maiden name of the mother of a male or female applicant for employment."

The other day we had the Eislers down here. One of them has been shown to be representing the Comintern, according to his sister's testimony. He has a brother out in California, who seems to be poisoning the public mind through the moving-picture industry. He tries to defend his brother and refers to this woman as "my former sister." If you wanted to employ any of them and check the name of at least one of them as given here, you could not inquire into those names at all—if you are trying to do business in the State of New York—even though one of them has a half dozen aliases. You could not even ask where they came from or when they got here or when they changed their names.

Here is another unlawful practice, in New York:

"Inquiry into the general military experience of an applicant for employment."

I wish every ex-serviceman could read that, and the next one.

Here it is. It is an unlawful practice to make—

"Inquiry into the whereabouts of an applicant for employment during the First World War, that is, during the period from 1914 to 1919."

In other words, inquiry as to his whereabouts in the period from 1914 to 1919 is forbidden as an unlawful practice in the State of New York.

Is that what you want in Colorado? Is that what you want in Masachusetts?

Mr. GIFFORD. We have it.

Mr. RANKIN. Get rid of it, and we will help you.

Is that what you want in Kansas, in Ohio, and in other States?

Let your States vote on it. Michigan is going to vote on it right away. If you will tell the people of Michigan the whole truth, let them know the whole truth about this monstrosity, I will guarantee you they will beat it worse than they did in California.

Here is another unlawful practice:

"Inquiry into the organizations of which an applicant for employment is a member, including organizations the name or character of which indicates the religion, race, or national origin of its members."

I presume, if they should ask me if I am a member of the Masonic lodge, I could have them jerked up and brought before this inquisition board or probably prosecuted at various places throughout the country.

Mr. Speaker, I am not criticizing the people of New York. I have long since learned in going from one State to another that real Americans are about the same everywhere. I believe if they had a vote on it the people of New York would beat it, just as they did in California.

They are having a vote on it in Michigan because a little minority group has been attempting to browbeat the Legislature of Michigan into passing it. I dare say when it goes on the ballot in Michigan and the people of Michigan understand what it means they will defeat it more thoroughly than they did in California. The same thing would happen in probably every other State in the Union.

Mr. AUGUST H. ANDRESEN. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Minnesota.

Mr. AUGUST H. ANDRESEN. Will the gentleman tell us what the penalties are in New York?

Mr. RANKIN. In addition to being harassed to death with orders and directives to cease, desist, rehire, and so forth, there is a punishment provided of "imprisonment in a penitentiary or county jail for not more than 1 year or by fine of not more than $500, or by both."

Mr. GIFFORD. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Massachusetts.

Mr. GIFFORD. I want to remind the gentleman that we have that law in Massachusetts.

Mr. RANKIN. I was afraid of that.

Mr. GIFFORD. I was thoroughly amazed when I looked into it; I had not learned what the rules were. But perhaps we carried it too far. I am so sorry, and I have been, and I am not in favor of this, I can assure the gentleman.

Mr. RANKIN. I know the gentleman is not, and I am sure the people of Massachusetts would not favor it if they had a vote on it.

Mr. GIFFORD. Employers always inquire and must know whether you come from a respectable family or not. They are so careful. Perhaps they overdid it. But I think a man ought to be able to find out whether he came from a respectable family.

Mr. RANKIN. There are a great many questions that should be asked, which are forbidden under this law.

Mr. Speaker, in order to give the new Members an idea of what a mess this FEPC was

here in Washington during its existence under Executive order, I insert a speech I made on this subject in 1945.

It reads as follows:

"FEPC A BETRAYAL OF WHITE AMERICANS

"(Speech of Hon. JOHN E. RANKIN, of Mississippi, in the House of Representatives, Thursday, July 12, 1945)

"Mr. RANKIN. Mr. Chairman, the passage of a law at this time legalizing this so-called FEPC would be a betrayal of the white people of the country. If every individual in the United States could understand just what it means, there would be such a roar of protest coming from every State in this Union that it would never see the light of day.

"If every Member of Congress would 'screw his courage to the sticking place' and vote his convictions on this so-called FEPC, it would not get 50 voter out of the entire membership of 435.

"It is a most dangerous and brazen attempt to fasten upon the white people of America the worst system of control by alien or minority racial groups that has been known since the crucifixion.

"When I read the names of the personnel of this outfit you will understand what I mean.

"To sanctify this organization by law would give the lie to everything we have told our American boys they were fighting for. Instead of coming back to liberty, freedom, and democracy, they would find themselves sold into this bondage, herded, humiliated, and regimented by alien influences directed by a foreign comintern representing the deadly doctine of Karl Marx that is based upon hatred for Christianity and for everything that is based on Christian principles.

"It is a manifestation in legislative form of that infidelity that has closed thousands of Christian churches in Europe and been responsible for the murder of untold millions of Christian human beings.

"This measure is not directed altogether at the white people of the South. If it were, you folks in the North would not have so much ground for alarm. We in the South know how to combat subversive elements. As Henry Grady once said, we wrested the South from such domination 'when Federal drum beats rolled nearer and Federal bayonets hedged closer to the ballot box of the South than it ever will again in this Republic.'

"But you people in the North have not had that training, and this FEPC is likely to bring grief, strife, hatred, race riots, and chaos in your northern cities if this vicious agency is perpetuated and sanctioned by your votes.

"Do not forget that the returning servicemen know what this thing means, and they are going to call you to account next year—beginning with the primary. They are not going to wait until the general election.

"Do not forget that every businessman, every farmer, every professional man, and every other independent individual whose blood glows with the instinct of American liberty is going to join these men, and those other patriotic forces that are fighting to save American institutions for which these boys have been fighting and dying upon every battlefield in the world.

"If every man and every woman in the United States could just read the list of individuals that compose the personnel of this crazy FEPC, and its subdivisions throughout the country, I dare say there would not be enough of you left who vote for it, even if nominated in the primaries next year, to form a corporal's guard.

"For your information, and for the information of the American people generally, I am going to read you the official personnel as it exists today. Remember, this list is taken from the official record. This is the group that wants to nose into and control every business in the United States. Remember, they can search the files and records of every business establishment in America where some disgruntled individual is willing to trump up a charge of discrimination. They can drag them all over the country and try them, and in that way destroy any ordinary business concern.

"The next thing they are going to try to do is get control of your schools and force their communistic henchmen into the schools and teach your children their subversive doctrines.

"Read these lists carefully, which, as I said, are taken from the official records here in Washington, and you will see that not one out of ten on these rolls is a white Gentile American.

"Here is the official list:

"Committee on Fair Employment Practice, Washington, D. C., Office of the Chairman

Incumbent	Title	Race	Salary
Ross, Malcolm	Chairman	White	$8,000
Johnson, George M.	Deputy Chairman.	Colored	8,000
Hubbard, Maceo	Hearings examiner.	do	5,600
Bloch, Emanuel	do	White	5,600
Copper, Evelyn	do	do	5,600
Berking, Max	Assistant to Chairman.	do	3,800
Alexander, Dorothy	Secretary to Chairman.	Colored	2,600
Clifton, J. Jeanne	Secretary to Deputy.	do	2,000
Brooks, Mary	Clerk-stenographer.	do	1,800
Banting, Myra	do	White	1,800

"You will note that in this office of the chairman, consisting of 10 people, there are 5 Negroes and 5 white people, most of whom have foreign names. One of the whites is a stenographer who receives the smallest salary of anyone on the list.

"Remember that the members of this group preside over the destiny of every business enterprise in America, and are using their assumed powers to harass white Americans out of business.

"This is the organization Members of Congress are being asked to perpetuate by the passage of this bill.

"FIELD OPERATIONS

"Here is the Division of Field Operations:

"Field operations

Incumbent	Title	Race	Salary
Maslow, Will	Chief	White	$6,500
Mitchell, Clarence	Principal fair-practice examiner.	Colored	5,600
Davidson, Eugene	do	do	5,600
Beall, W. Hayes	Senior fair-practice examiner.	White	4,600
Mercer, Inez	Fair-practice examiner.	do	3,800
Rogers, Eleanor	Clerk-stenographer.	Colored	1,800
Saito, Otome	do	Japanese-American.	1,800
Thompson, Mildred	do	Colored	1,800
Cornick, Emma	do	do	1,620

"You will note that it consists of nine people—five Negroes, one Japanese, and three others—two of whom have records of affiliations with Communist-front organizations, according to the reports of the Dies committee.

"Imagine this group going about over the country riding herd on the white American businessmen of the Nation, telling them whom they shall employ, whom they shall promote, and with whom they may associate.

"It would be interesting, and probably enlightening, to check up on these people and see how many of them are native-born Americans.

"Members of Congress had better do this now, before they get caught in this trap, because this question of un-American activities is going to be an issue in every congressional district next year, beginning with the primaries.

"The people are not going to wait until the general election for someone who holds a commission as a result of the pernicious activities of Sidney Hillman and his gang to wrap the party cloak about him and shout to the people of his district that 'I am a Republican' or 'I am a Democrat.'

"More than 2,000,000 young men have already been discharged in this war, and they are organizing now to try to save America for Americans. They are going to read your records, and they are likely to ask you some very embarrassing questions when you get home.

"REVIEW AND ANALYSIS DIVISION

"Now look at this list and see who reviews all these records of racial discrimination when they come to Washington, and you will understand how the editor of the Dallas News felt and how other white gentiles feel, including Cecil B. DeMille, the great American movie producer, when they are harassed out of business.

"Here is the list:

"Review and Analysis Division

Incumbent	Title	Race	Salary
Davis, John A	Chief	Colored	$5,600
Lawson, Marjorie	Research analyst.	do	3,800
Golightly, Cornelius	Compliance analyst.	do	3,200
Hemphill, India	do	do	2,600
Coan, Carol	do	White	2,600
Davis, Joy P	do	Colored	2,600
Hoffman, Celia	Clerk-stenographer.	White	1,800
Spaulding, Joan	do	Colored	1,800

"You will note that it consists of six Negroes and two white people, one of whom is named Carol Coan and the other Celia Hoffman, a white stenographer receiving the lowest salary on the list.

"Now, if you sign the petition to bring out this bill or vote for this monstrosity, do not forget that when you get home those white American businessmen who help to sustain this Nation in time of peace and whose sons are fighting its battles in time of war are going to want to ask you some questions that you may not be able to answer.

"LEGAL DIVISION

"But if you want a real laugh, look at this Legal Division.

"Legal Division

Incumbent	Title	Race	Salary
Reeves, Frank D	Attorney	Colored	$4,600
Stickgold, Simon	do	White	4,600
Gordon, Jernevive	Clerk-stenographer.	Colored	1,800

"You will note that this so-called Legal Division consists of two Negroes and a Simon Stickgold.

"INFORMATION DIVISION

"Now we come to the Information Division. If you want information about this outfit, write to this Division:

"Information Division

Incumbent	Title	Race	Salary
Bourne, St. Clair	Information specialist.	Colored	$3,800
Whiting, Margaret	Clerk-stenographer.	do	1,800

"You will note that it consists of two Negroes, one registered as an information specialist and the other as a clerk-stenographer.

"BUDGET AND ADMINISTRATION

"Now we come to the Budget and Administration Division. This Division not only makes up the budget but administers the regulations. Here is the list:

"Budget and Administration

Incumbent	Title	Race	Salary
Jones, Theodore	Chief	Colored	$5,600
Jeter, Sinclair	Assistant administrative officer.	do	3,200
Baker, Vivian D	Clerk-stenographer.	do	2,000
Jackson, Rosales A	Clerk-typist	do	1,620
Paynter, Minnie A	do	do	1,620
Holloman, Irving	Clerk	do	1,440
Selby, Ralph R	Chief, fiscal	do	2,600
Ross, Sylvia B	Voucher auditor	do	2,000
Nelson, Otelia	Accounting clerk	do	1,620
Carpenter, Elizabeth.	do	do	1,620
Brent, Pearl T	do	do	1,620

"This outfit, which is composed of 11 Negroes, and no whites at all, not only makes up the budget for financing this aggregation, but it seems to have the power of administration. I hope you will read this list to your white businessmen, farmers, and exservicemen at home when you get back and ask for renomination in the primaries next year.

"MAIL AND FILES DIVISION

"Now, here are the ones that have control of the mails and filing system:

"Mail and Files

Incumbent	Title	Race	Salary
Douglas, Lela	Chief, Mail and Files.	Colored	$2,000
Welch, Selena	Docket clerk	do	1,800
Gamble, Jessie	File clerk	do	1,620
Phillips, Rose	do	do	1,440
Reed, Charles	Messenger	do	1,380
Mitchell, Regina	File clerk	do	1,440

"You will note that this division is composed entirely of Negroes—six Negroes, and no whites at all. I wonder why they discriminated against the white race in setting up these two powerful branches of this most dangerous agency?

"REGIONAL OFFICE, NEW YORK

"Now, let us turn to the regional offices and see who is going to harass the business people back in the States. Here is the list for the State of New York:

"Regional office, New York

Incumbent	Title	Race	Salary
Lawson, Edward H.	Regional director.	Colored	$5,600
Jones, Madison S	Fair-practice examiner.	do	3,800
Jones, Robert G	do	do	3,800
Donovan, Daniel R	do	White	3,800
Irish, Miriam	Clerk-stenographer.	Colored	2,000
Aspha, Tillie	do	White	1,620
Schwartz, Sonia	do	do	1,620

"This is the list that is going to help Governor Dewey harass the white American businessmen of the Empire State. You will note that it is composed of four Negroes and three white people. Please read the names of the three white people and see if you can figure out their antecedents.

"Businessmen of New York are going to have a hard time after this war without having all this communistic conglomeration to deal with, to say nothing of the one which Governor Dewey and his political henchmen have now heaped upon them.

"REGIONAL OFFICE, PHILADELPHIA

"Now, let us turn to Philadelphia, the birthplace of the Constitution—the City of Brotherly Love. At the risk of causing glorious old Benjamin Franklin to turn over in his grave, I read you the list:

"Regional office, Philadelphia

Incumbent	Title	Race	Salary
Fleming, G. James	Regional director.	Colored	$5,600
Greenblatt, Mildred.	Fair-practice examiner.	White	3,800
Manly, Milo A	do	Colored	3,800
Risk, Samuel R	do	White	3,800
Grinnage, Willard	do	Colored	3,200
Gorgas, Helen	Clerk-stenographer.	do	1,800
Klinger, Karyl	do	White	1,800
Brown, Grayce	do	Colored	1,440

"You will note that it is composed of eight individuals—five Negroes and three whites, Mildred Greenblatt, Samuel R. Risk, and Karyl Klinger.

"Don't you know there will be some brotherly love when that crowd gets going on the businessmen of the Philadelphia area?

"REGIONAL OFFICE, WASHINGTON, D. C.

"Now, here is the regional office in Washington, D. C., the Nation's Capital, where there has been so much persecution of white gentiles in the last few years. Here is the list:

"Regional office, Washington, D. C.

Incumbent	Title	Race	Salary
Evans, Joseph	Regional director.	Colored	$5,600
Houston, Theophilus.	Fair-practice examiner.	do	3,200
Kahn, Alice	do	White	2,600
Chisolm, Ruby	Clerk-stenographer.	Colored	1,800
Urback, Dorothy	do	do	1,620

"You will note it consists of four Negroes and Alice Kahn. Just what chance a white gentile will have with this group is entirely problematical, to say the least of it.

"REGIONAL OFFICE, CLEVELAND

"Now, let us move out where the West begins and take a look. Here is the list in the Cleveland regional office:

"Regional office, Cleveland

Incumbent	Title	Race	Salary
McKnight, William.	Regional director.	Colored	$4,600
Abbott, Olcott R	Fair-practice examiner.	White	3,800
Glore, Lethia	do	Colored	3,200
Kelley, Berniza	Clerk-stenographer.	do	1,620
Wasem, Edna	do	White	1,800

"You will note that this group is composed of three Negroes and two whites, Olcott R. Abbott and Edna Wasem.

"Don't you know the white people of Cleveland will enjoy being dominated by them?

"CINCINNATI REGIONAL OFFICE

"Cincinnati seems to be largely under the jurisdiction of the Cleveland office since it only has two people:

"Cincinnati

Incumbent	Title	Race	Salary
James, Harold	Fair-practice examiner.	White	$4,600
----------	Clerk-stenographer.	----------	1,800

"DETROIT REGIONAL OFFICE

"Now let us move on to Detroit, Mich. Here is the regional office for Detroit:

"Detroit

Incumbent	Title	Race	Salary
Swan, Edward	Examiner in charge.	Colored	$4,600
Sese, Doris K	Clerk-stenographer.	Japanese-American.	1,620

"You will note that it is composed of one Negro and one Japanese. I know the businessmen of Detroit are grateful for this consideration.

"I should like to hear some of the comments they will make to you gentlemen from Detroit when you get home next summer, if you support this vicious measure.

"REGIONAL OFFICE, CHICAGO

"Here is the list of the regional office in the Windy City:

"Regional office, Chicago

Incumbent	Title	Race	Salary
Henderson, Elner	Regional director.	Colored	$5,600
Gibson, Harry H. C.	Fair-practice examiner.	do	3,800
Schultz, Joy	do	White	3,800
Williams, Le Roy	do	Colored	3,200
Zeidman, Penny	Clerk-stenographer.	White	1,800
Ingram, Marguerite S.	do	Colored	1,620

"You will note it is composed of four Negroes, Joy Shultz, and Penny Zeidman. I am told that a representative of this group went into the office of Swift & Co. and asked how many Negro members they had on their board of directors. The answer was, 'We have no Negro members on our board of directors.' Then the question came back 'Why haven't you?' This just shows what this supergovernmental set-up is driving at. They want to communize America and destroy everything which our glorious ancestors have left us and for which our boys are now fighting and dying all over the world.

"REGIONAL OFFICE, ATLANTA

"Here is a list of the Atlanta office:

"Regional office, Atlanta

Incumbent	Title	Race	Salary
Dodge, Witherspoon.	Regional director.	White	$4,600
Hope, John	Fair-practice examiner.	Colored	3,800
McKay, George D	do	White	3,200
Chubb, Sally	Clerk-stenographer.	do	2,000
Ingram, Thelma	do	Colored	1,800

"You will note that it consists of two Negroes and three whites; the most important post in this office, that of examiner, is held by a Negro. I wonder how the people of Georgia enjoy the domination of this

group. I may have more to say about them later.

"REGIONAL OFFICE, KANSAS CITY

"Here is the list of the Kansas City office:

"Regional office, Kansas City

Incumbent	Title	Race	Salary
Hoglund, Roy A.	Regional director.	White	$5,600
Ormabee, Eugene	Fair-practice examiner.	do	3,800
Jones, Mildred	Clerk-stenographer.	Colored	1,620
Schlien, Helene G.	do	White	1,620

"You will note that this office force consists of three whites and one Negro. You can read the list of whites yourself and then judge how many of them really represent the people of that area.

"ST. LOUIS REGIONAL OFFICE

"Here is the list of the regional office at St. Louis:

"St. Louis

Incumbent	Title	Race	Salary
Theodore Brown	Examiner in charge.	Colored	$3,800
Morris Levine	Examiner	White	3,200
Armatha Jackson	Clerk-stenographer.	Colored	1,620

"You will notice that it consists of two Negroes and Morris Levine. Just how they came to select these particular individuals to preside over the destiny of the white businessmen of the great State of Missouri I cannot understand.

"REGIONAL OFFICE, DALLAS, TEX.

"The members of the regional office at Dallas are as follows:

"Regional office, Dallas

Incumbent	Title	Race	Salary
Castenada, Carlos	Regional director.	White	$4,600
(Vacancy)	Fair-practice examiner.		3,200
Gutleben, Willetta	Clerk-stenographer.	White	1,800

"You will note there is one vacancy. Last year that position was held by a Negro, namely, Roy V. Williams. The other two members, Carlos Castenada, the regional director, and Willetta Gutleben seem to be in charge of the office at the present time. This is the regional office that attacked the Dallas News last year for carrying an advertisement for a Negro janitor. This fellow Castenada, the director, held the same position that he holds now. If this set-up is made permanent, then I presume the rest of the white American businessmen in Texas may expect to be harassed just as the Dallas News was.

"REGIONAL OFFICE, NEW ORLEANS

"The regional office at New Orleans consists of the following members:

"Regional office, New Orleans

Incumbent	Title	Race	Salary
Ellinger, W. Don	Regional director.	White	$3,800
Morton, James H.	Fair-practice examiner.	Colored	3,200
Ronning, Evelyn	Clerk-stenographer.	White	1,800

"You will note that there are two whites and one Negro in this office. As the Negro is the fair-practice examiner, just what the decent people of Louisiana may expect at the hands of this outfit is something to contemplate.

"REGIONAL OFFICE, SAN FRANCISCO

"The San Francisco office consists of the following individuals:

"Regional office, San Francisco

Incumbent	Title	Race	Salary
Kingman, Harry L.	Regional director.	White	$5,600
Rutledge, Edward	Fair-practice examiner.	do	4,600
Ross, Bernard	do	do	3,800
Seymour, Virginia	Administrative assistant.	do	2,000
Mazen, Jewel	Clerk-stenographer.	do	1,800

"This is the only office we have found yet that consists entirely of white (?) people. Just what the background of each one of them is I am unable to say.

"LOS ANGELES REGIONAL OFFICE

"The Los Angeles regional office consists of the following:

"Los Angeles

Incumbent	Title	Race	Salary
Hunt, A. Bruce	Hearings examiner.	White	$5,600
Brown, Robert E.	Fair-practice examiner.	Colored	3,600
Lopez, Ignacio	do	White	3,800
Vetter, Vera G.	Clerk-stenographer.	do	1,800
Lerna, Marie	do	do	1,620

"You will note that there are four whites and one Negro in this office, the Negro being the fair-practice examiner. I do not know what consideration the white businessmen of the Los Angeles area are receiving at the hands of this group, but from what I can hear there is considerable gnashing of teeth over the situation.

"Mr. Chairman, this FEPC is a supergovernment of commissars, with more power for evil than any other agency that has ever been created in this country. If Congress should ratify it and make it the law of the land, then we will have sacrificed and destroyed that sacred freedom for which our brave men are now fighting and dying on every battle front in the world.

"We have no right to pass such a drastic, revolutionary measure that literally changes our way of life, as well as our form of government, while these boys are away from home in uniform, fighting to sustain American institutions.

"As I said before, we are going to carry this battle against such un-American activities into every congressional district in the United States next year, in the primary, so that no one can crawl behind the party cloak and claim immunity at the hands of any segment of our people.

"This is a battle for the survival of free constitutional government, for the survival of the American way of life, for the survival of free enterprise, for the survival of American liberty itself.

"It is a battle to save America for Americans."

Poland Will Rise and Live Again

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. O'KONSKI. Mr. Speaker, it is most fitting and proper that on this day we honor the memory of Abraham Lincoln. February 12, however, is the birthday of another apostle of freedom, Thaddeus Kosciusko. Providence works in strange and devious ways. It is more than coincidence that Lincoln and Kosciusko—two outstanding champions of freedom from two different continents, and from two different generations—should be born on the same dates.

Hence, while honoring the memory of Abraham Lincoln on this day, let us also honor the memory of Thaddeus Kosciusko—the heart, the blood, the spirit, and the inspiration of millions of Poles scattered throughout the globe. Today, more than ever, the name of Kosciusko is dear to the hearts of freedom-loving people the world over. Because today, like during the days of Kosciusko, Poland is the sad victim of betrayal by its friends—the memory of Kosciusko is heavy on all the hearts of Poland.

Providence directed that Lincoln and Kosciusko be born on the same date, even though more than a generation apart. Providence must have directed this because the two had everything in common. To both—freedom was their life work.

Lincoln emancipated the enslaved in America. Yet, long before that time Kosciusko gave of his possessions to buy freedom for the enslaved. It was with funds from Kosciusko's will that there was built the first trade school in America at Newark for Negroes.

Kosciusko came from Poland to America and for 6 years fought to create our Union. Lincoln more than a generation later fought to preserve that Union.

Whenever any nation anywhere in the world was threatened by dismemberment by bigger and corrupt neighbors—Kosciusko was always ready to help the unfortunate victims. Lincoln, as our President, by his force for good had always used his offices to protect the weak and small nations from their greedy and corrupt neighbors. To Lincoln and Kosciusko appeasement was the lowest form of betrayal.

Lincoln is known the world over for his philosophy that "a house divided against itself cannot stand." Kosciusko's philosophy went beyond that. His was the belief that a world divided against itself cannot stand. Lincoln believed that if freedom was in danger in one part of our Union, it was in danger all over the Union. Kosciusko believed that if freedom was in danger in one part of the world, it was in danger all over the world.

A close examination of the lives and works of Kosciusko and Lincoln will reveal their likeness and greatness in almost every respect. It is easy to see the hand of providence in that their birthdays come on the same date.

Mr. Speaker, I beg your indulgence in order that I might briefly review Kosciusko's contribution to the cause of freedom—freedom not only for Poland but our own freedom—and freedom for the world.

When our Union was engaged in the struggle that gave it birth in 1776, there came from a strange and far-away land a young man who gave his fortune and life to our cause. Then, like now, Poland was always a champion of freedom. Polish land, way back at that time, already was drenched with blood in its traditional fight for freedom. When the people of Poland heard of our struggle in 1776 they became gravely concerned. Every heart and every breast of Poland prayed for the Union's success. It was this universal wish among all of the people of Poland that sent Thaddeus Kosciusko to America to help us gain the freedom for which Poland on many occasions bled and died.

In the beginning things did not go so well in our Union's struggle for freedom. With justified pride Poles regard the role played by Kosciusko in the victory at Saratoga, a victory which won for America not only a battle but France's recognition of our independence. This was one of the turning points of the War for Independence.

In our Union's fight for freedom, the question of the defense of the Hudson had been of paramount importance. Kosciusko was assigned that responsibility. He choose West Point for its commanding position. Little is now left of the fortifications, but the monument erected to his memory by American youth will remain a grateful tribute forever. That America today can regard West Point with pride is, in large measure, due to Kosciusko, who first suggested for a national military school the spot where it now stands.

In the summer of 1780, Kosciusko was transferred to the South. Here he saw the Negroes at close quarters and was brought face to face with the Negroes in slavery. It was then that, with his keen susceptibility to every form of human suffering, he acquired that profound sympathy for the American Negro, which 17 years later was to dictate his parting testament to the New World.

Kosciusko was present through the whole campaign of the Carolinas and was regarded with strong affection and admiration by General Greene. When the campaign changed to one of guerrilla warfare, he fought as a soldier, not as an engineer. At length Charleston fell, and on December 14, 1782, the American Army entered the town in a triumphal procession, in which Kosciusko rode with his fellow officers, greeted by the populace with flowers and cries of "Welcome."

Peace soon followed. Our Union was born. Kosciusko helped give our Union its birth. The prayers of the people of Poland were answered. America was free. Poland, a country to whom freedom means more than life, helped make our Nation free.

Kosciusko had fought for 6 years in the American Army. Nathaniel Greene best sums up what the Pole had done for America and what he had been to his brother soldiers:

Colonel Kosciusko belonged—

Wrote Greene—

to the number of my most useful and dearest comrades in arms. I can liken to nothing his zeal in the public service, and in the solution of important problems nothing could have been more helpful than his judgment, vigilance, and diligence. He was fearless of every danger. He never manifested desires or claims to himself, and never let the opportunity pass of calling attention to and recommending the merits of others.

Congress, in 1783, belatedly conferred upon Kosciusko the rank of brigadier general with an acknowledgment of its high sense of his long, faithful, and meritorious service.

In the fall of 1784, Kosciusko returned in his native country. For the next 12 years he remained in Europe—through the infamous partitions of Poland and the many battles fought in connection therewith. It was in 1794 that Kosciusko was seriously wounded in battle and was taken prisoner by Russia, not to be released until 2 years later. Then, like now, Poland became the prey of the Muscovite Bear—while the rest of the world looked the other way. Then, like now, Poland was the pawn of hyprocrites and betrayers.

Wounded, sick at heart and body, on the 19th of December 1796, Kosciuski left St. Petersburg to go back to America. In good time he arrived in Stockholm, where he was greeted with enthusiasm. Later, Kosciusko embarked and after a 3 weeks' passage landed in London.

The Gentlemen's magazine announced: "Kosciusko, the hero of freedom, is here."

The whole of London made haste to visit him. Politicians, men of letters, and the rules of fashion, all alike thronged to his rooms. To Walter Savage Landor, then a mere youth, the sight of Kosciusko awakened a sympathy for Poland that he never lost, and to which English literature owes one of his Imaginary Conversations. More than half a century later he looked back to the moment in which he spoke to Kosciusko as the happiest of his life. The Whig Club presented Kosciusko with a sword of honor; the Duchess of Devonshire pressed upon him a costly ring, which went the way of most of the gifts that Kosciusko received—he passed them on to his friends. Tokens of admiration had counted for nought in Kosciusko's life. They were the merest baubles to him who had seen his own country fall. In the portrait that without his knowledge Cosway painted, we see him lie with bandaged head in an attitude of deep and sorrowful musing—for his native Poland.

Bristol was at that time the English port for sailing to America and it was there that, after a fortnight's stay in London, Kosciusko betook himself. He found in Bristol old friends of American days, and now was the guest of one of them, at that time United States consul. A guard of honor received him, processions of the townsfolk flocked to catch a glimpse of the hero, a military band played every evening before the consulate, and he received as the gift of the city a handsome silver service. One who visited him here records his impression of a soul unbroken by misfortune, by wounds, poverty, and exile.

The journey down the Avon to where Kosciusko's ship lay at anchor was a triumphal progress. He was accompanied by English officers in full dress, by the American consul, and hosts of well-wishers. All heads were bared as he was carried on board. The whole length of the river handkerchiefs were waved from the banks. Farewell resounded from every rock and promontory, where spectators had crowded to see the last of the Polish hero. Boats shot out from the private dwellings on the waterside, laden with flowers and fruits for the departing guest. Not a few men and women boarded the ship and accompanied Kosciusko for some distance before they could bring themselves to part with him.

The ship had sailed on June 18, 1797. For 2 months Kosciusko and his Polish companions tossed on the Atlantic, on one occasion near shipwreck. Philadelphia, their destination, they reached on August 18, 1797. Claypole's Advertiser for August 19, 1797, reported:

In the ship *Adriana*, Captain Lee, arrived here last evening, from Bristol, came passenger, that illustrious defender of the rights of mankind, the brave but unfortunate Kosciusko, the Polish general. On his landing he was received with three cheers. And, as a further mark of popular respect for this great character, the citizens insisted upon drawing him to his lodgings. The general appears to be in good spirits, but has suffered very materially from his wounds and inhuman imprisonment. We trust, however, he will long live to enjoy in these peaceful shores, that liberty and happiness which he assisted in fighting for, but which he fought in vain to obtain for his native land.

Eight days later Washington, from Mount Vernon, congratulated Kosciusko on his safe arrival and welcomed him to the land whose liberties he had been instrumental in establishing.

No one—

Said Washington—

has a higher respect and veneration for your character than I have, and no one more sincerely wished, during your arduous struggle in the cause of liberty in your country, that it might be crowned with success. But the ways of providence are inscrutable and mortals must submit. I pray you to believe that at all times, and under all circumstances, it would make me happy to see you at my last retreat, from which I never expect to be more than 20 miles.

Kosciusko was, however, never able to visit his commander at Mount Vernon.

At this time Kosciusko drew into great intimacy with Thomas Jefferson, at that time Secretary of State. Jefferson wrote to Gates:

I see Kosciusko often. He is the purest son of liberty among you all that I have ever known.
